Adverse Decisions in Interference.

PATENT No. 1,079,679.

Pursuant to a mandate of the Supreme Court of the United States, the Court of Appeals of the District of Columbia on May 1, 1920, rendered a decision that John A. Wintroath was not the first inventor of the subject-matter covered by claims 2, 3, and 4 of his Patent No. 1,079,679.

PATENT No. 1,097,589.

On May 28, 1920, a decision was rendered that Albert F. Jones was not the first inventor of the subject-matter covered by claims 5, 6, 7, 8, and 9 of his Patent No. 1,097,589, subject, "Counter-forming machines," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,184,741.

On April 27, 1920, a decision was rendered that Charles L. Goodrum was not the first inventor of the subject-matter covered by claims 1, 4, 7, and 8 of his Patent No. 1,184,741, subject, "Telephone-exchange systems," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,224,698.

On June 4, 1920, a decision was rendered that Lothar R. Zifferer was not the first inventor of the subject-matter covered by claims 8 and 9 of his Patent No. 1,224,698, subject, "Expansion device," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,260,034.

On June 20, 1920, a decision was rendered that Angelo Perri was not the first inventor of the subject-matter covered by claim 49 of his Patent No. 1,260,034, subject, "Lasting-machine," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,267,367.

On June 5, 1920, a decision was rendered that John H. A. Bousfield was not the first inventor of the subject-matter covered by claims 3 and 8 of his Patent No. 1,267,367, subject, "Dial-scale," and no appeal having been taken within the time allowed such decision has become final.

NOTICE.

PAYMENT OF PATENT FEES—ACT OF MARCH 6, 1920.

Department of the Interior,
United States Patent Office,
Washington, D. C., June 25, 1920.

This Office has been advised by the Assistant Secretary of the Treasury that a circular letter is being forwarded to the Treasurer and Assistant Treasurers of the United States, Federal Reserve Banks, and National Bank depositaries calling attention to the act of Congress approved March 6, 1920, which requires that patent fees be paid directly to the Commissioner of Patents. (See 272 O. G., 379.)

J. T. NEWTON,
Commissioner.

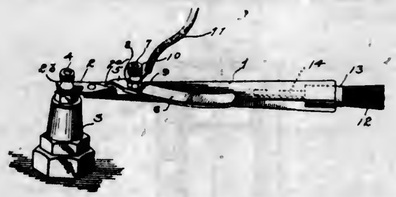
APPLICATIONS UNDER EXAMINATION.

Condition at Close of Business June 26, 1920.

Room No.	Divisions and subjects of invention.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
314	1. Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders; Trees, Plants, and Flowers.	Feb. 24	Mar. 1	472
128	2. Bee Culture; Curtains, Shades, and Screens; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco.	Nov. 1	Feb. 1	973
175	3. Electric Heating and Rheostats; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Oct. 23	Jan. 5	686
234	4. Conveyers; Elevators; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pneumatic Despatch; Pushing and Pulling Implements; Railway Mail Delivery; Store-Service; Traversing Hoists.	Oct. 29	Apr. 15	1,378
167	5. Book-Making; Books, Strips and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Mar. 31	Apr. 12	350
318	6. Bleaching and Dyeing; Chemicals; Explosives; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Feb. 19	Apr. 28	505
312	7. Games and Toys; Optics; Photography; Velocipedes	Mar. 1	Apr. 7	857
131	8. Beds; Chairs and Seats; Flexible-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	Apr. 23	May 29	381
221	9. Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Feb. 4	Jan. 23	543
235	10. Carriages and Wagons; Land-Vehicles; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping; Motor Vehicles.	Jan. 14	Apr. 7	949
154	11. Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Spring Devices; Whips and Whip Apparatus.	Feb. 17	Mar. 11	760
222	12. Machine Elements	Nov. 8	Apr. 16	1,166
329	13. Bolt, Nail, Nut, Rivet, and Screw Making; Button Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	Nov. 1	Apr. 23	1,176
323	14. Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire-Working.	Jan. 5	Mar. 3	649
308	15. Bread, Pastry, and Confection Making; Coating; Fuel; Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation: Plastic Block and Earthenware Apparatus; Plastics.	Oct. 22	Apr. 1	1,097
111	16. Radiant Energy; Telegraphy; Telephony	Oct. 31	Dec. 11	868
307	17. Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	Apr. 20	May 6	235
229	18. Fluid-Pressure Regulators; Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	Jan. 15	Jan. 20	998
236	19. Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems: Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	Oct. 13	Jan. 10	576
179	20. Artificial Body Members; Builders' Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	Mar. 17	Apr. 7	708
212	21. Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Dec. 19	May 14	426
219	22. Aeronautics; Firearms; Ordnance	Apr. 2	Apr. 21	257
217	23. Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Dec. 22	Apr. 12	668
144	24. Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines	Jan. 5	Apr. 22	623
315	25. Agitating; Butchering; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	May 3	May 15	210
105	26. Electricity, Generation; Motive Power; Prime Mover Dynamo Plants	Nov. 3	Nov. 20	728
214	27. Brushing and Scrubbing; Grinding and Polishing; Laundry; Washing Apparatus	Feb. 19	Apr. 2	613
225	28. Internal-Combustion Engines	Feb. 2	Apr. 15	586
147	29. Boring and Drilling; Chucks or Sockets; Coopering; Rod Joints or Couplings; Wheelwright-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking Tools.	Nov. 12	Apr. 28	683
152	30. Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines	Jan. 8	May 20	1,034
172	31. Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	Oct. 18	Jan. 12	1,097
278	32. Gas and Liquid Contact Apparatus; Heat Exchange; Refrigeration	Oct. 10	Mar. 26	1,211
70	33. Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Feb. 2	Apr. 3	509
301	34. Railways; Railway Rolling Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Track-Sanders; Vehicle-Fenders.	May 24	June 9	158
57	35. Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet	May 17	June 1	525
201	36. Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring	Feb. 9	Mar. 3	1,148
107	37. Electric Lamps; Electricity, Circuit Makers and Breakers; Electricity, General Applications	Feb. 17	Feb. 4	1,249
378	38. Animal Husbandry; Earth Boring; Fishing and Trapping; Mining, Quarrying, and Ice-Harvesting; Stationery; Stone-Working; Wells.	Jan. 29	Apr. 22	657
220	39. Fluid Sprinkling, Spraying, and Diffusing; Joint Packings; Multiple Valves; Packed Shaft or Rod Joints; Pipe Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	Oct. 15	Nov. 14	1,090
273	40. Baggage; Bottles and Jars; Check-Controlled Apparatus; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Dec. 29	Feb. 25	829
125	41. Resilient Tires and Wheels	Nov. 3	Mar. 10	837
114	42. Electricity, Conductors; Electricity-Transmission to Vehicles; Electricity, Conduits; Electric Signaling.	Jan. 6	Jan. 27	1,109
332	43. Baths and Closets; Dispensing; Dispensing Beverages; Electricity, Medical and Surgical; Fire-Extinguishers; Sewerage; Surgery; Water Purification.	Dec. 8	Mar. 5	803
253	44. Air-Guns, Catapults, and Targets; Ammunition and Explosive Devices; Ammunition and Explosive Charge Making; Boats and Buoys; Filling and Closing Portable Receptacles; Marine Propulsion; Railway Draft Appliances; Ships.	Feb. 20	Apr. 13	298
379	45. Clutches; Journal-Boxes, Pulleys, and Shafting; Lubrication; Motors	Jan. 8	Mar. 6	819
332	46. Educational Appliances; Fire-Escapes; Ladders; Paper Files and Binders; Railway-Brakes; Wooden Buildings.	Nov. 24	Jan. 19	807



Oldest new case, Oct. 10. oldest amended, Nov. 14.

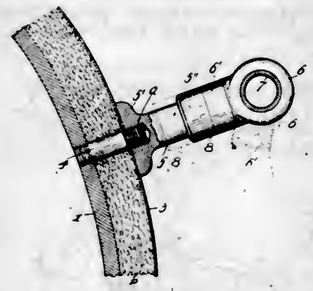
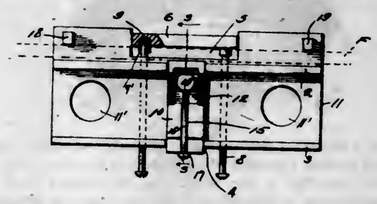
PATENTS



GRANTED JULY 6, 1920.

1,345,337. TOOL FOR TESTING SPARK-PLUGS. GEORGE H. AINGE, Springfield, Ohio. Filed Apr. 15, 1918. Serial No. 228,516. 2 Claims. (Cl. 175—183.)

1. In a device of the character described, a handle of insulating material, an electric switch located thereon consisting of a stationary member and a movable member, said stationary member having a bifurcated portion to receive the binding post of a spark plug and a contact point, said movable member having a pivoted connection with said handle so as to be laterally swingable relatively thereto, said movable member also having a contact point to coöperate with the contact point of said stationary member, and a binding post associated with said movable member to receive the spark plug conductor wire, said handle being extended beyond said switch members and binding post a sufficient distance to permit the same to be conveniently grasped by the hand of the operator and said movable switch member being projected in the general direction of said handle extension to allow for its ready manipulation.

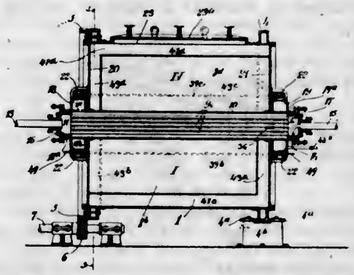


1,345,338. HANDRAIL-COLUMN. CLOICE B. BAKER, St. Louis, Mo., assignor of one-half to William Bawden, St. Louis, Mo. Filed Apr. 8, 1920. Serial No. 372,258. 7 Claims. (Cl. 105—457.)

5. A hand rail column comprising two sections having adjacent ends in abutting relation, and a peripheral coupling member spanning the joint between the sections.

1,345,339. SAW-GAGE. NEWTON ALLEN, Lyons, Oreg. Filed Jan. 3, 1919. Serial No. 269,394. 1 Claim. (Cl. 33—202.)

In a device of the character described, the combination of a body having an elongated opening extending therein from its upper edge, a block extending longitudinally of said opening, screws threaded through the body and extending into said opening, whereby the screws will not be exposed upon either side of the body and will thus be protected from injury, said screws having heads upon their upper ends, sleeves surrounding the screws contiguous to said heads and being carried by said block,



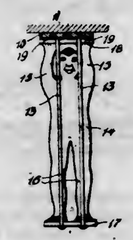
whereby as the screws are rotated, said block may be moved within said opening as desired.

1,345,340. CURTAIN-ROD AND SHADE-ROLLER SUPPORT. GILBERT E. ALPHIN, Norwood, N. C. Filed Nov. 4, 1919. Serial No. 335,621. 14 Claims. (Cl. 156—23.)

14. A curtain-rod-bracket formed of a springy sheet-metal blank and comprising two spaced arms and an attaching plate, the latter being centrally slotted for attachment to a headed fastener, the attaching plate being concavo-convexed and having its convex surface facing toward the space between the distant ends of said arms so that the plate exerts a spring-pressure against the head of said headed fastener and against a door or window which holds said fastener, each of said arms being provided with a plurality of shade-roller-bearings of different sizes and located different distances from said attaching plate, each of said arms also being formed with curtain-pole seats of different sizes.

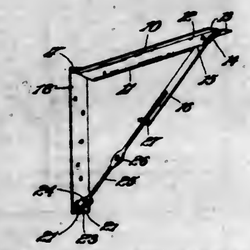
1,345,341. METHOD OF AND APPARATUS FOR TREATING GOODS WITH FLUIDS. HANNS R. ANDERS, Perth Amboy, N. J., assignor to The Roessler & Hasslacher Chemical Co., New York, N. Y., a Corporation of New York. Filed Dec. 1, 1916. Serial No. 134,481. 10 Claims. (Cl. 8—18.)

1. The method of treating goods with fluids, consisting in packing the goods in separate compartments within a



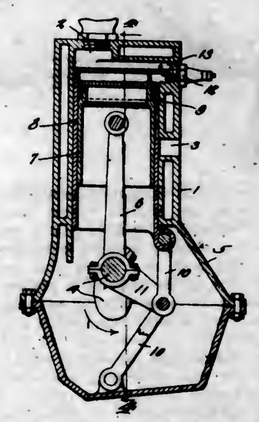
rotary vessel, introducing the fluid into one compartment and thence circulating it to another compartment and causing it to percolate through the goods in the several compartments.

1,345,342. STRAINER. WALTER W. BEALL, Philadelphia, Pa. Filed Mar. 13, 1920. Serial No. 365,437. 2 Claims. (Cl. 53—7.)



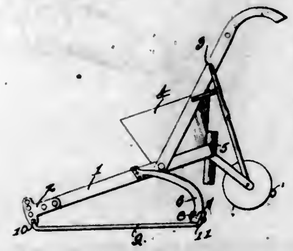
1. In a device of the character stated, a strainer, having a raised bottom provided with an outer annular solid ring and an inner disk of fine mesh, and an annular solid wall projecting from said solid bottom ring and terminating in an annular upper mesh wall.

1,345,343. TOY. GILBERT G. BEITHON, Bismarck, N. D. Filed July 28, 1919. Serial No. 313,682. 2 Claims. (Cl. 46—40.)



1. A toy of the character described comprising a supporting block adapted to be secured in horizontal position, a slidable member associated with said block and having a projection extending below the bottom face thereof, a figure associated with said block, pairs of flexible members connected at one end to said block and at their other ends to the ends of said figure whereby said figure may be suspended successively from the different ends of said block, a flexible member connected with said sliding member and said figure whereby said sliding member will be simultaneously moved with the movement of said figure, a projection on said sliding member serving as a fulcrum when engaged by said figure upon movement thereof into substantially horizontal position, and means for moving said figure.

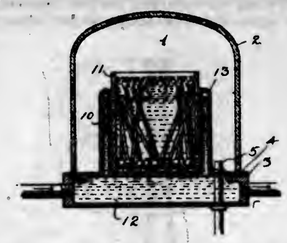
1,345,344. ADJUSTABLE BRACKET. GEORGE G. BLANDFORD, Herring Neck, Newfoundland. Filed June 17, 1919. Serial No. 304,970. 2 Claims. (Cl. 248—19.)



1. An adjustable bracket, comprising a vertical member having an eye at its upper end, a horizontal member consisting of a single piece of metal doubled along its longitudinal medial line, with its marginal portions constituting laterally extending wings, the wings at one end being bent with resultant eyes between which the first named eye is pivotally engaged, the horizontal member at its end opposite to the eyes being longitudinally slotted on its medial line, and an adjustable brace disposed through said slot and pivoted to the doubled portions of the metal, and having its other end pivotally connected with the lower end portion of the vertical member.

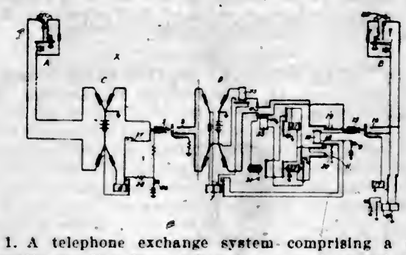
1,345,345. GAS-ENGINE. WYATT BOYD, Dayton, Ohio. Filed Jan. 4, 1919. Serial No. 269,643. 1 Claim. (Cl. 123—50.)

In a two cycle engine the combination with a cylinder having an end inlet and a side exhaust, of an outer hollow piston having side openings movable into communication with the exhaust port, an inner piston within and movable relative to the outer piston, a crank, a toggle anchored at one end and connected to the outer piston at its other end, a link connection between the crank and the toggle, and a pitman connection between the crank and the inner piston.



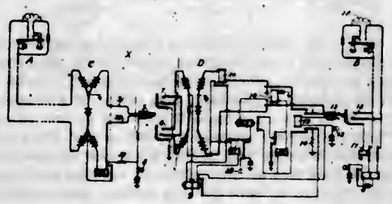
1,345,346. FURROW-CLEANER. JOHN H. BUFORD, New Hope, Ala. Filed May 6, 1919. Serial No. 295,200. 1 Claim. (Cl. 97—1.)

A furrow cleaner for material distributers comprising a frame having a depending standard, a tapered inclined bar adapted to ride through the furrow, a hook on the front end of said bar for attachment with the frame, and an upwardly extending portion on the opposite end of the bar for attachment with said standard.



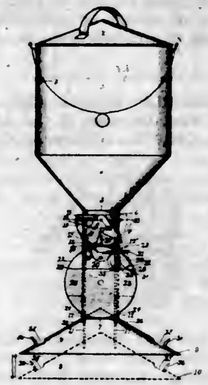
1,345,347. METHOD OF FILLING THERMOMETER-TUBES AND THE LIKE. LEE F. CHANEY, Springfield, Ohio. Filed Dec. 20, 1918. Serial No. 267,704. 1 Claim. (Cl. 226—21.)

The method of filling thermometer tubes and like receptacles, consisting of creating an area of low pressure within the receptacle, heating the filling liquid, and then creating an area of greater pressure than that within the



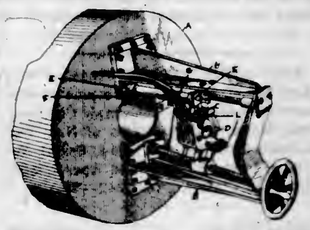
tube outside thereof, and interposing a body of filling fluid between said high and low pressure areas, substantially as specified.

1,345,348. TELEPHONE-EXCHANGE SYSTEM. HENRY P. CLAUSEN, Mount Vernon, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 25, 1917. Serial No. 176,808. 10 Claims. (Cl. 179—46.)



1. A telephone exchange system comprising a trunk circuit extending from a first to a second switchboard, a link circuit at the first switchboard connected with the trunk circuit, a source of ringing current, a telephone line, apparatus responsive to the connection of the trunk circuit with the telephone line for preventing the connection of the source of ringing current to the telephone line, a switch at the first switchboard, means responsive to the actuation of the switch to connect the source of ringing current to the line, and a relay energized upon the closure of the telephone line to disconnect the ringing current therefrom.

1,345,349. TELEPHONE-EXCHANGE SYSTEM. HENRY P. CLAUSEN, Mount Vernon, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 25, 1917. Serial No. 176,809. 4 Claims. (Cl. 179—46.)

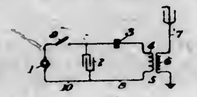


1. A telephone exchange system comprising a trunk circuit extending from a first to a second switchboard, a link circuit at the first switchboard, a trunk relay energized upon the connection of the link circuit with the trunk circuit, a telephone line terminating at the second switchboard, a local relay, an energizing circuit therefor including a contact of the trunk relay completed upon the connection of the trunk circuit with the telephone line, an operator-controlled switch at the first switchboard, a control relay responsive to the actuation of the switch, and a source of ringing current connected with the telephone line through contacts of the local and the control relay.

1,345,350. AUTOMATIC MATERIAL-DISPENSING DEVICE. DOUGLAS DUVAL CORNING, Lynn, Mass. Filed June 21, 1916. Serial No. 105,054. 5 Claims. (Cl. 119—56.)

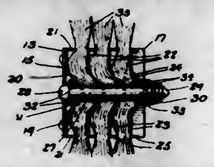
1. In combination with a receptacle having a discharge opening, a valve controlling said opening, a rod slidably mounted relative to said receptacle and carrying said valve, a pivoted plate adapted to be releasably engaged with said slidable rod, and a support pivoted below said plate and having a supporting and a non-supporting relation thereto.

1,345,351. JOURNALED CABLE-CLAMP. EDWIN L. CROSBY and OLIVER J. MARSHICK, Detroit, Mich. Filed Oct. 31, 1919. Serial No. 334,719. 6 Claims. (Cl. 204—64.)



2. In combination with the electrode frame of a rotatable refractory furnace, an apertured roller member journaled therein substantially parallel to the axis of rotation thereof, and a plurality of cables leading from an external point through the apertures in said roller member to connection with said electrode frame, being so positioned by their engagement with said roller that the strain on their several points of connection due to the rotative movement of said frame is rendered negligible.

1,345,352. WIRELESS TELEGRAPHY. FULTON CUTTING, Tuxedo Park, N. Y., and BOWDEN WASHINGTON, Cambridge, Mass. Filed Dec. 4, 1916. Serial No. 134,812. 17 Claims. (Cl. 250—37.)

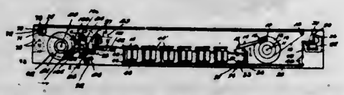


1. Apparatus for producing electrical oscillations having an audible group frequency, comprising, an oscillation circuit, and means for producing oscillations therein comprising a discharge circuit coupled with the oscillation circuit and including a condenser and a discharge gap, and means for supplying a pulsating feed current to

the condenser, the capacity of the condenser and the break-down voltage of the gap being so proportioned that a sufficient number of condenser discharges occur for

each pulsation of the feed current to produce a radiated power wave having an envelop of substantially the same shape as that of the feed current pulsation, substantially as described.

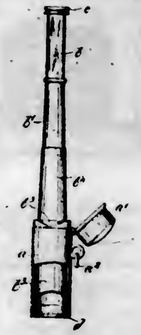
1,345,353. REVERSIBLE BROOM AND THE LIKE. PAUL DEVARCO, West Hoboken, N. J. Filed May 10, 1919. Serial No. 296,070. 4 Claims. (Cl. 15—19.)



1. A device of the class described comprising a yoke-shaped frame provided centrally of the cross head thereof with a handle member, a clamp head detachably connected with the free end portions of said frame and comprising side members connected by a plate member, the free ends of said yoke-shaped frame being adapted to pass through and detachably secured to said side members, other plate members mounted between the side members of the clamp head, and bolts passed through all of said plate members and adapted to secure brush or similar material between said plate members.

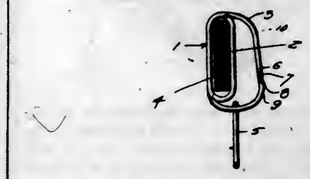
1,345,354. LACQUER ENAMEL. WILLIAM F. DOERFLINGER, Arrochar, N. Y. Filed Feb. 6, 1919. Serial No. 275,328. 7 Claims. (Cl. 134—79.)

6. An enamel lacquer containing sufficient suspended tannic oxid to render the dry film formed on evaporation of a layer of the lacquer enamel opaque to actinic light.



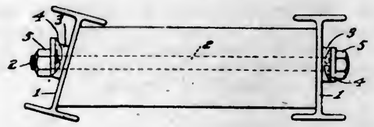
1,345,355. SIGNAL-RECORDER. HERMAN W. DOUGHTY, Binghamton, N. Y., assignor, by mesne assignments, to The Gamewell Fire Alarm Telegraph Company, Newton Upper Falls, Mass., a Corporation of New York. Original application filed Nov. 30, 1914, Serial No. 874,732. Divided and this application filed Apr. 3, 1917. Serial No. 159,407. 18 Claims. (Cl. 242—55.)

7. In a strip winder for a signal recorder adapted for intermittent operation, the combination of a record tape, a pay-out reel and a take-up reel for said tape, and means for winding a predetermined length of tape on said take-up reel at each operation of the recorder comprising power-actuated driving mechanism for said take-up reel, starting and stopping means for said driving mechanism, and governing means for said starting and stopping means governed by variation in diameter of the tape-roll on the take-up reel.



1,345,356. RECEPTACLE FOR CIGAR OR CIGARETTE HOLDERS. ALFRED DUNHILL, London, England. Filed June 10, 1919. Serial No. 303,082. 3 Claims. (Cl. 206—37.)

3. The combination with a holder and container therefor, in which the holder comprises a plurality of tapering sections adapted to telescope with respect to one another so that the device can be collapsed within the container with the smallest section coming within the next larger section, and having an enlarged portion thereon projecting above the container, and means within the container

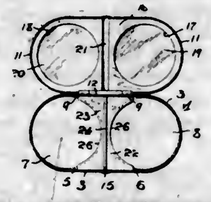


for engaging the largest section only of the holder and causing the holder to be simultaneously drawn into extended position as the enlarged portion thereof is grasped and withdrawn from the container, substantially as described.

1,345,357. KEY-RING CLIP. WILLIAM EVANS, Uvalde, Tex. Filed Oct. 15, 1919. Serial No. 330,693. 3 Claims. (Cl. 24—3.)

1. A key ring clip comprising a loop member adapted to receive a belt, a second loop member formed integrally with the first loop member and having its ends overlapped to receive a key ring.

1,345,358. CLAMPING DEVICE. SILAS STILLMAN FULLER, Lewiston, Me. Filed June 2, 1919. Serial No. 301,283. 6 Claims. (Cl. 189—36.)

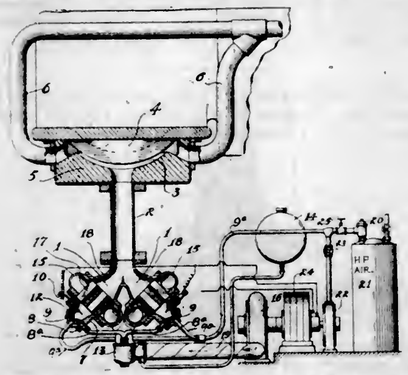


1. A clamp for rigidly connecting spaced structural elements, comprising a tie extending between said elements, a relatively stationary abutment member applied to said tie in abutting relation to the outer face of one of said spaced elements and having an outwardly disposed surface of concavity, and a clamping member applied to said tie beyond said abutment member and having a surface of convexity opposing said surface of concavity and automatically self-adjustable thereon to provide a clamping range effective to permit the spaced elements to be rigidly connected without bending or straining the tie.

1,345,359. CONTAINER. FREDERICK GOERTZ, Newark, and RUSSELL WHITCOMB, Elizabeth, N. J., assignors to August Goertz and Company, a Corporation of New Jersey. Filed June 6, 1919. Serial No. 302,205. 4 Claims. (Cl. 220—22.)

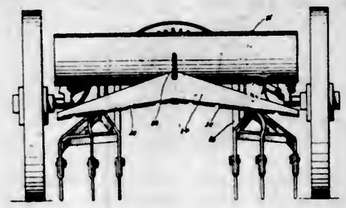
1. A powder-box comprising a main box or case having side-walls and a dividing wall-member arranged to provide

a plurality of compact-receiving compartments, and a retaining member within said box or case comprising oppositely extending side-flanges and a centrally disposed and channeled supporting member adapted to be mounted upon



the upper edge of said wall-member, combined with a lid or cover for said box or case, said lid or cover being provided with a channel with which the said supporting member is adapted to be brought into registration when said lid or cover is closed.

1,345,360. CONTAINER. FREDERICK GOERTZ, Newark, and RUSSELL WHITCOMB, Elizabeth, N. J. Filed Feb. 12, 1920. Serial No. 358,093. 6 Claims. (Cl. 132—32.)

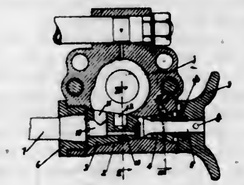


1. A box having a lid for closing the same, partition means within said box to divide the same into a plurality of compact-receiving compartments, and said partition means having arranged therewith a resilient sealing strip adapted to engage and co-act with the inner side of said lid to seal said compartments one from the other when said lid is closed.

1,345,361. HEATING APPARATUS. JOHN GOOD, Brooklyn, N. Y., assignor to Good Inventions Co., Brooklyn, N. Y., a Corporation of New York. Filed Feb. 8, 1916. Serial No. 77,109. 19 Claims. (Cl. 158—28.)

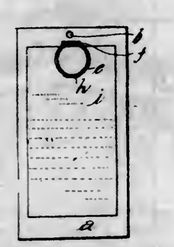
1. Inclosed liquid fuel combustion apparatus comprising a flame passage entirely closed to atmosphere at its fuel receiving end and at such end provided with a plurality of closed forced draft burners each comprising a fuel and air mixing space, a connection to each said space for admitting air under pressure in distributed relation to a fuel spray in said space, means for spraying liquid fuel into each of said spaces, one of said burners containing an electric igniter disposed in a part of the fuel spray therein which is relatively undiluted with air, in combination with a single source of air pressure for said air connections and means for simultaneously supplying air therethrough to all said mixing spaces and coincidently actuating said spray means and igniter.

1,345,362. SEEDER. BERNHARD F. C. GUELDENHAAR, Flanagan, Ill. Filed July 11, 1919. Serial No. 310,152. 3 Claims. (Cl. 275—2.)



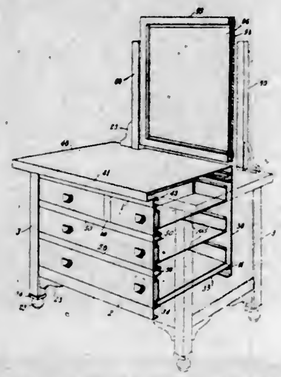
1. A seeding attachment for a cultivator comprising a seed container having a seed discharge opening in the center of the bottom thereof, and a double-incline chute mounted below said opening for receiving seed from the container and arranged for automatic rocking movement to discharge said seeds from both ends thereof to the ground.

1,345,363. BOTTLE-CLOSURE. CHARLES HAMMER, Queens, N. Y., assignor to American Metal Cap Company, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 19, 1918. Serial No. 258,879. 4 Claims. (Cl. 215—9.)



1. A bottle closure comprising a body formed of a metal strip bent in the form of a cylinder with the ends secured together, such securing means comprising one end of the strip being bent back inwardly to form a channel, the other end being first doubled back flat on itself on the inside, with the end portion bent forward to form a channel that has the edge bent inward a short distance, the said other bent edge being inserted in said channel portion to have its bent edge engaged in the said bent edge and all said bent portions being flattened together to interlock with the edges concealed in the joint, said body having the top and bottom margins extended beyond the said joint, a disk closing one end of the body that has its margins interlocked with said extension of the body, the open end of the closure having the projecting margin bent back outwardly to form a bead, the said strip having an extension at the joint that is bent outwardly to form a part of said bead at the open end.

1,345,364. THROTTLE-VALVE. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 24, 1918. Serial No. 255,466. 3 Claims. (Cl. 121—10.)

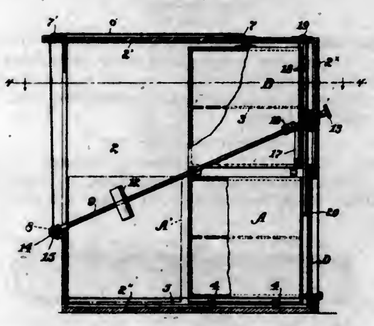


1. A throttle valve for percussive drills, adapted to control the admission of motive fluid to the tool and cleansing fluid to the drill steel, comprising a casing having alined oppositely tapered valve seating portions, tapered valves seated in said portions, a spring adapted to press both of said valves against their seats and means for simultaneously operating said valves.

1,345,365. FILE FOR LOOSE SHEETS. NORMAN FIELD HUTCHISON, Balwyn, near Melbourne, Victoria, Australia. Filed Apr. 10, 1918. Serial No. 227,635. 1 Claim. (Cl. 129—20.)

A loose sheet supporting sheet having an elongated horizontal slot adjacent the upper edge thereof; and a spring clip comprising two coils connected together integrally at their tops, the connecting portion of the clip passing through said elongated slot and engaging the lower edge of the slot whereby the clip is suspended from the lower edge of the slot, the coils of the clip having a normal tendency to move toward each other to hold loose sheets placed under the coils to each side of the supporting sheet, the lower edge of each coil being straight and upturned to facilitate the entrance of the edges of loose sheets between the supporting sheet and the coil.

1,345,366. FURNITURE. ADOLF B. JIPPSON, Cleveland, Ohio, assignor to The Ohio Blower Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 3, 1917. Serial No. 152,429. 39 Claims. (Cl. 45—5.)

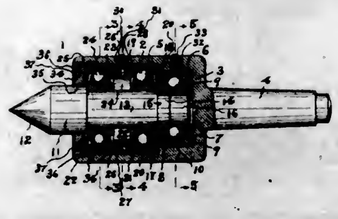


1. In an article of furniture, the combination of an upper and a lower frame, and members having panel sections fitting between and engaging the frames and upper and lower extensions secured to the frames for holding the frames against the panel sections.

15. In a leg construction for articles of furniture of the class described, the combination with a frame, of a plate of angular formation embracing the corner of the frame and extending below the same, the edges of said plate being turned inward beneath the frame, and a second angle plate the vertical edges whereof interlock with the corresponding inturned edges of the former plate and having its upper end arranged for connection with the underneath side of the frame.

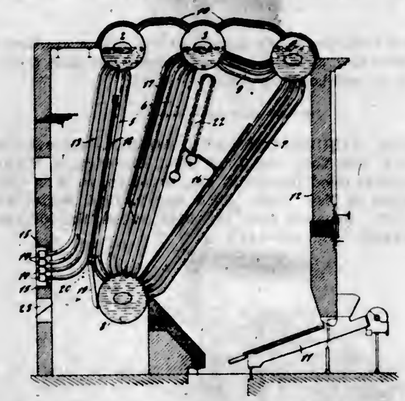
37. A mirror support for articles of furniture of the character set forth comprising front and side walls formed of an integral sheet, a rear wall having its side edges interlocked with the rear edges of the side walls, one of the walls having its upper end turned over to constitute a top for the support, and a connecting device situated at the lower end of the support.

39. In an article of furniture of the character set forth, the combination of a frame constituting the upper end of the body portion of the article, and a sheet metal top having a peripheral depending flange and an inwardly directed portion therebeyond arranged to rest upon the frame, a part of the inwardly directed portion being turned downward to engage the inner edge of the frame thereby to properly position the top with respect to the frame.



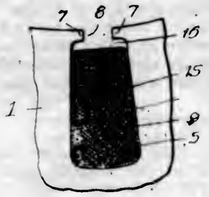
1,345,367. ADJUSTABLE SHOW-CASE. ALBERT O. JOHNSON, Northwood, Iowa. Filed Sept. 22, 1919. Serial No. 325,350. 7 Claims. (Cl. 211—16.)

1. In combination a main housing, a pair of cases therein for containing goods, one arranged above the other at the front of the housing, the lower case being movable toward the rear and the upper case being vertically movable, flexible connections for suspending the upper case, a shaft pivotally mounted near its front end and screw threaded and having a weight thereon, said screw shaft being connected with the flexible connection.



2. In combination a main housing, two goods-containing cases therein, one movable to the front or rear and the other movable vertically, flexible connections suspending the vertical movable case, a pair of screw shafts pivotally mounted near their ends, weights adjustable on the screw shafts, means for interconnecting the shafts, said shafts being connected with the flexible suspending means.

1,345,368. CENTER-POINT DEVICE FOR LATHES, &c. JACOB KELL, Newark, N. J. Filed July 17, 1919. Serial No. 311,624. 8 Claims. (Cl. 82—33.)



1. In a device of the kind described, a rotatable center-point member, a holder having an inwardly extending chamber for the reception of the rearward portion of said center-point member, a thrust ball-bearing device seated in the rear end of said chamber with which the inner end of said center-point member coöperates, a pair of longitudinally spaced inner race-rings fixed on said center-point member, anti-friction balls riding on said inner race-rings, a pair of outer race-rings against which said balls run, a separator ring between said outer race-rings, a cap-plate threaded to screw into the outer open end of said holder to bear against the forward outer race-ring to impart an adjusting movement to the latter and through said separator ring to the rearward outer race-ring, and said cap-plate having a central opening through which the forward end of said center-point member projects.

1,345,369. ECONOMIZER FOR TRANSVERSE-DRUM BOILERS. HOWARD J. KNAB, Bayonne, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed May 4, 1918. Serial No. 232,478. 7 Claims. (Cl. 122—444.)

1. A boiler of the general Stirling type having transverse upper drums connected by banks of tubes to a lower transverse drum or drums, baffling arranged to give the gases serial up and down passes over the tubes, a rear economizer having tubes within the setting and their upper ends connected to one of the upper transverse drums, and their lower ends bent rearwardly, and a plurality of cross boxes located at the rear of the setting to which the lower ends of the economizer tubes are connected.

1,345,370. DYNAMO-ELECTRIC MACHINE. AUSTIN KIMBLE, Wausau, Wis., assignor to Marathon Electric & Manufacturing Co., Wausau, Wis. Filed Mar. 19, 1919. Serial No. 283,554. 2 Claims. (Cl. 171—206.)

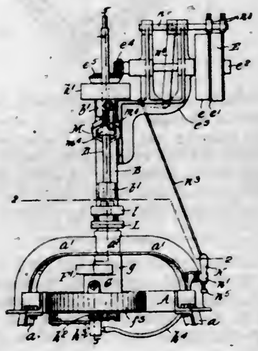
1. The method of providing an air passageway through a core slot adjacent to the teeth and windings, which consists in placing a key in the slot parallel with the windings in tight-fitting relation thereto, and in engagement with the adjacent teeth for securing the windings initially, applying a hard setting material to the windings, and then removing the key after the material has set.

1,345,371. MOLD FOR HOLLOW WALLS. OTTO KOFSTAD, Warroad, Minn. Filed Mar. 14, 1919. Serial No. 282,722. 4 Claims. (Cl. 25—131.)

1. A mold for concrete hollow wall construction, the same comprising parallel flat vertical mold members adapted to form the inner and outer sides of the wall, a collapsible core spaced between said mold members, and means for holding the mold members and the core in the desired relation and position; said core composed of two parallel flat core members and a series of removable spacing rods inserted between said core members; said core having a cover over the space between its members, and said spacing rods being suspended through holes in the

cover and having their upper ends provided with means for engaging the cover to suspend the rods and to serve as handles in removing the rods.

1,345,372. LUBRICANT-LEAKAGE-PREVENTING DEVICE FOR COMPRESSORS. GUSTAV A. KRAMER, New York, N. Y., assignor, by mesne assignments, to Balsa Refrigerator Corporation, New York, N. Y., a Corporation of New York. Original application filed Jan. 4, 1917. Serial No. 140,509. Divided and this application filed Jan. 7, 1919. Serial No. 270,015. 4 Claims. (Cl. 286—11.)



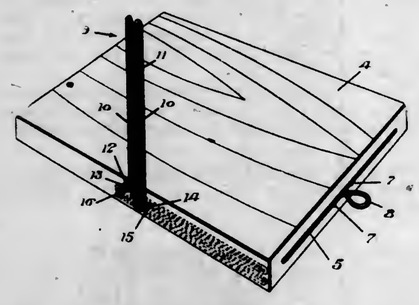
1. The combination of a fluid containing chamber, a shaft extending through a wall thereof, a stuffing gland including a member fixed relatively to the shaft and a member movable relatively thereto, said members having coöperating rigid fluid-tight faces, means for holding the members in fluid-tight relation under normal fluid pressure, and separate means for assisting the holding means under increased fluid pressure.

1,345,373. PROCESS OF PRODUCING HALOGENATED HOMOLOGUES OF BENZENE. LUCAS PETROU KYRIDES, New York, N. Y., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed July 26, 1917. Serial No. 182,873. 6 Claims. (Cl. 23—24.)

1. The process which comprises maintaining toluene in reactive relation with chlorin in the presence of sulfur chlorid substantially as and for the purpose described.

1,345,374. POLISHING-MACHINE. WILLIAM LA HODNY, Buffalo, N. Y. Filed Aug. 27, 1917. Serial No. 188,274. 10 Claims. (Cl. 51—11.)

1. The combination of a frame, a rotary polishing member journaled on said frame, a rotary work supporting



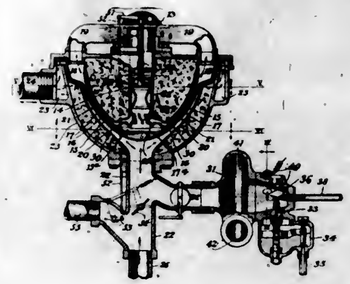
member arranged on said frame to turn in a plane substantially parallel with the plane of rotation of the polishing member, and means for adjusting said work supporting members relatively to said polishing member for varying the eccentricity of the work supporting member in regard to said polishing member.

1,345,375. SPLICING-MACHINE. HENRY A. LEMAY, Brooklyn, N. Y. Filed Dec. 9, 1919. Serial No. 343,484. 9 Claims. (Cl. 28—21.)

6. A machine of the class described comprising a frame, a shaft rotatably mounted therein, gears mounted on the opposite ends of said shaft, thread holding members mounted in the frame and geared in connection with said first named gears in such manner as to rotate in opposite directions, means for securing the end portions of separate threads in said members, means for securing the ends of said threads to the frame, a rack movably mounted in the frame and adapted in one movement thereof to rotate said members in opposite directions to unwind the end portions of said threads, and means operated through said rack for holding the unwound end portions of said threads together.

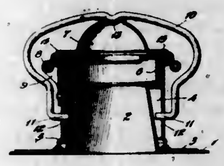
1,345,376. BREAD-SLICING BOARD. CASWELL LEE LEONARD, Corinth, Miss. Filed Feb. 27, 1920. Serial No. 361,612. 4 Claims. (Cl. 146—12.)

1. A bread board, and a knife guide bent from wire having its terminals disposed adjacent to one edge of the board and disconnected, one terminal being pivoted to said edge of the board for the swinging movement of the guide along said edge or to a position at an angle with the board, the other terminal and edge of the board having means to interengage for holding the guide in position.



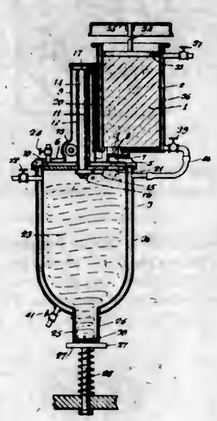
1,345,377. REFRACTORY ARTICLE AND METHOD OF MAKING THE SAME. SILAS C. LINBARGER, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of New York. Filed Oct. 31, 1918. Serial No. 260,449. 4 Claims. (Cl. 18—60.)

1. A refractory article having a body portion consisting substantially of fireclay, a facing portion containing a substantial portion of silicon carbid, and an intermediate portion containing silicon carbid in such decreasing



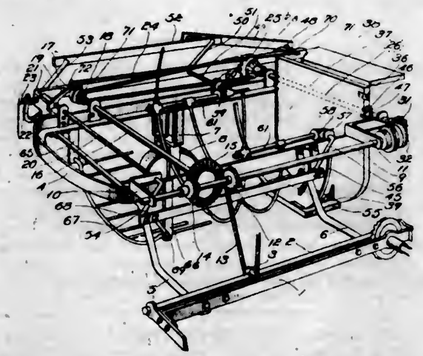
amounts from the facing portion as will give a graduated and increasing coefficient of expansion from said facing portion to said body portion.

1,345,378. LIQUID-FUEL CARBURATION. CHARLES E. LUCKE, New York, and JOHN GOOD, Brooklyn, N. Y., assignors to Good Inventions Co., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 9, 1914, Serial No. 830,705. Renewed June 24, 1919. Serial No. 306,429. 4 Claims. (Cl. 48—219.)



1. The method of making combustible gaseous mixtures consisting in combining air and liquid fuel in predetermined proportions suited for complete combustion of the fuel, depositing the liquid as a thin, extended film upon a heated surface, and coincidently forcibly removing the vapor from such heated liquid film by advancing the air in the form of a stream of high velocity over and in frictional contact with the surface thereof while maintaining the temperature of said film lower than that which decomposes the liquid.

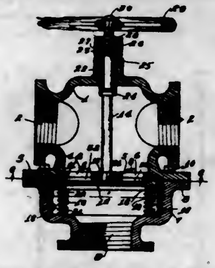
1,345,379. RADIATOR-CAP. WARREN MCARTHUR, Jr., Phoenix, Ariz. Filed May 2, 1919. Serial No. 294,240. 9 Claims. (Cl. 220—86.)



1. A cap for radiators having, in combination, a sleeve open at the bottom and top, means at the top of the sleeve for securing the same to the neck of the radiator, the sleeve depending thence free of and housing the lower part of the neck, and a cover for the top of the sleeve hinged directly to the upper end of the same.

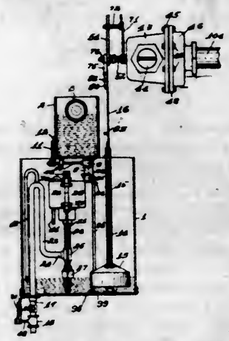
1,345,380. APPARATUS FOR CANNING. FRANCIS P. MCCOLL, Ridgewood, N. J., and WALTER WILLIAM WILLISON, New York, N. Y., assignors to Thermokept Products Corporation, New York, N. Y., a Corporation of Maine. Filed Jan. 7, 1919. Serial No. 270,095. 4 Claims. (Cl. 99—2.)

3. In a vacuum apparatus the combination of a vacuum kettle a reservoir for the articles to be treated and a perforated plate to permit the article to be drawn or sucked from the reservoir into the vacuum kettle by the vacuum maintained in said kettle.



1,345,381. SHOCKER ATTACHMENT FOR GRAIN-BINDERS. JAMES A. MCELROY, Kansas City, Mo. Filed Dec. 20, 1918. Serial No. 267,580. 17 Claims. (Cl. 56—423.)

1. A shocker attachment for binders comprising a frame connected to the binder, shock holding means, shock compressing means, means for initially imparting a relatively slow movement to the compressing means, and means for increasing the speed of the compressing means.



1,345,382. VALVE. ALEXANDER MCKIBBIN, Chicago, Ill. Filed July 18, 1918. Serial No. 245,516. 4 Claims. (Cl. 251—90.)

1. The combination of a valve casing having an inlet and an outlet, and a perforated partition between the inlet and outlet, a packing disk bearing against the partition and having perforations adapted to register with the perforations of the partition, a valve disk provided with perforations therein and having means at the exterior of the casing for operating the valve disk to control the passage of fluid through the perforations, a ring engaging the valve disk, means for resiliently pressing the ring against the valve disk so as to maintain the packing disk

between the partition and the valve disk under sufficient pressure to effect a tight joint.

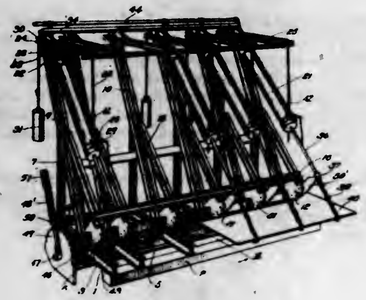
1,345,383. AUTOMATIC CONTROLLER. ALEXANDER MCKIBBIN, Chicago, Ill. Filed July 31, 1918. Serial No. 247,701. 24 Claims. (Cl. 161—1.)

1. In an automatic controller, the combination of a receptacle having a float therein adapted to control the operation of a mechanism, an an inlet valve and an outlet valve for the receptacle, each being provided with a graduated scale for effecting adjustments of the valves to fill and empty the receptacle during predetermined intervals of time to regulate the operation of said mechanism.

1,345,384. MARINE-ENGINE-OPERATION INDICATOR. JOHN MCRAE, Vancouver, British Columbia, Canada. Filed July 25, 1919. Serial No. 313,231. 1 Claim. (Cl. 116—21.)

An indicator of the character described comprising a rotatable body provided with a pointer normally vertical, a flexible element secured to the end of said pointer terminating in an indicator, and operating means for rotating said body to carry said pointer to horizontal positions respectively on either side of its vertical center line.

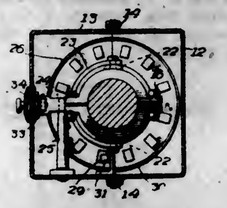
1,345,385. PLAYGROUND-SWING. PHILIP S. MEDART, St. Louis, Mo., assignor to Fred Medart Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 17, 1920. Serial No. 352,064. 2 Claims. (Cl. 155—58.)



1. In a swing, the combination of a seat, a pair of flexible suspension members, and attachments between the seat

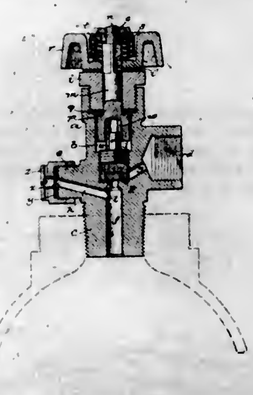
and suspension members, each attachment comprising an angle-bracket having a horizontal attaching flange, a vertical flange formed with a pair of out-turned orificed ears,

and a clevis pivotally attached to said ears and to the lower end of a suspension member, the respective pivot axes having a right-angle relation.



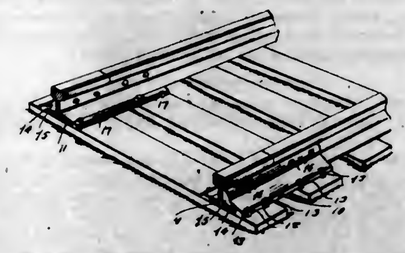
1,345,386. PLATE-BENDING MACHINE. ALFRED M. MEYERS, Merriam, Kans. Filed Apr. 6, 1918. Serial No. 226,992. 6 Claims. (Cl. 153—32.)

5. A plate bending machine comprising in combination, a base, a plurality of form members on said base, means on said form members for varying the curvature thereof, means opposite said form members and spaced therefrom to receive the edge of the plate to be bent, flexible members each secured at one end to said base and disposed around the free edge of the plate to be bent, and power means to operate the flexible means to draw the plate against said form members.



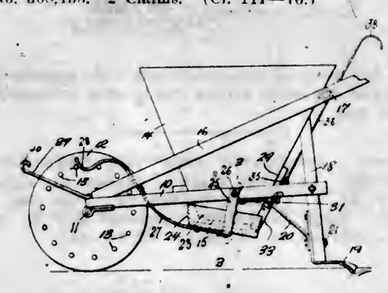
1,345,387. AUTOMOBILE-ALARM. WALTER R. MORAN, Worcester, Mass., assignor of one-half to Alexander Goldstein, Worcester, Mass. Filed Aug. 4, 1919. Serial No. 315,337. 3 Claims. (Cl. 116—33.)

3. An automobile alarm having, in combination, a resonant disk having a plurality of projections thereon, a member effective to directly and positively engage said projections, means to rotate one of said parts about the



axis of said disk and locking means to cause coöperative engagement of said parts to sound an alarm.

1,345,388. VALVE FOR HIGH-PRESSURE-FLUID CONTAINERS. RUDOLPH J. J. MUELLER, Sheboygan, Wis., assignor to Universal Oxygen Company, Sheboygan, Wis., a Corporation of Wisconsin. Filed Jan. 10, 1918. Serial No. 211,129. 1 Claim. (Cl. 251—47.)



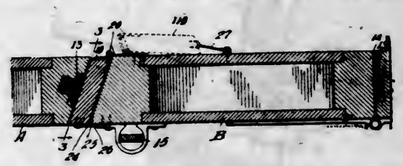
In a valve for high pressure fluid containers the combination of a valve case formed with a chamber, inlet and outlet passages and a seat surrounding the opening of the inlet passage into said chamber, a valve head threaded in said chamber and adapted to close on said seat, and a stem rotatably mounted in the case in axial alinement with said head, the stem and head being formed axially one with a socket and the other with a tongue of corresponding shape freely fitting the socket and consisting of a cylindrical central portion intersected by cylindrical wings of smaller diameter on opposite sides thereof.

1,345,389. RAILWAY-TRACK EQUIPMENT. ARCHIBALD C. MUIR, Brilliant, N. Mex. Filed Nov. 2, 1918. Serial No. 260,887. 1 Claim. (Cl. 238—210.)

A device of the character described comprising rail engaging members each having a base plate for fitting beneath the base of a rail and cut out longitudinally to provide a rail receiving seat, an overhanging shoulder formed integrally with the outer portion of the base plate for engaging the upper face of the base of a rail and having an upstanding extension for engaging the web of a rail and provided with nut receiving openings, a bracing bar extending between the rail engaging elements and fitting beneath the inner ends thereof, and securing elements extending through the inner end portions of the rail engaging elements and through the end portions of the bracing bar.

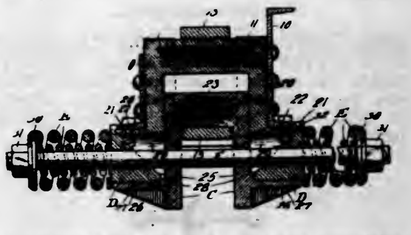
1,345,390. FERTILIZER-DISTRIBUTER. BLOUNT T. NOBLES, Winterville, N. C. Filed July 3, 1919. Serial No. 308,453. 2 Claims. (Cl. 111—76.)

1. A fertilizer distributer including a wheeled frame, supporting a hopper, a distributer having an open end beneath the discharge end of the hopper, a bail pivoted to the frame and extending beneath and secured to the distributer for swingingly mounting the same, means connected with the distributer and engaging the wheels on the frame for agitating the distributer, an adjustable closure for the open end of the distributer carried by the hopper, and a plate valve slidably mounted on the closure for periodically cutting off the discharge of fertilizer from the distributer.



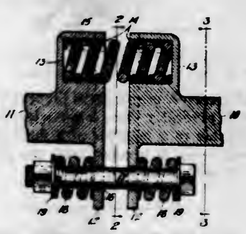
1,345,391. INSULATION FOR REFRIGERATOR-CARS AND THE LIKE. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Dec. 20, 1916. Serial No. 137,962. 1 Claim. (Cl. 20—69.)

An insulation for refrigerators and the like which comprises, in combination, a member having a groove with a plain bottom extending longitudinally along one edge thereof, a layer of flexible material bridging said groove, and a spring plate loosely mounted within said groove, said spring plate being of substantially S-shape in cross section with each edge curled, said curled edges being normally of such diameter as to each have longitudinally extending line bearing against the bottom of the groove and against the flexible material to force the latter along two lines outwardly beyond the edge of said member, said curled edges being compressible and thereby maintaining said line bearing contacts between the flexible material and the spring plate and between the spring plate and the bottom of the groove.



1,345,392. REFRIGERATOR-CAR DOOR. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Jan. 8, 1918. Serial No. 210,881. 2 Claims. (Cl. 20—16.)

2. In a railway refrigerator car having a side door opening through which the car is adapted to be loaded or unloaded, of a pair of pivoted, insulated doors adapted to close said opening when the doors are in closed position, said doors having vertically extending meeting edges, one of said doors having a section at its free edge movably attached to the main portion of said door, said section

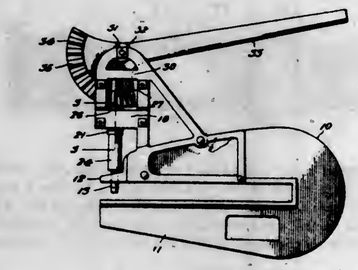


being adapted to be moved to a position overlying one face of the main portion of the door of which it forms a part to thereby leave a ventilating opening between the edges of the two doors when the latter are both in closed position, and means for locking said doors in closed position.

1,345,393. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Jan. 20, 1919. Serial No. 271,943. 7 Claims. (Cl. 213—64.)

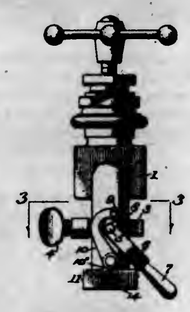
5. A friction shock absorbing mechanism comprising; a pair of wedge end blocks, an interposed pair of relatively movble friction members, spring means supported by one of said friction members, and friction wedge means interposed between said spring means and the other of said friction members.

1,345,394. FLEXIBLE COUPLING FOR SHAFTING. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Sept. 5, 1919. Serial No. 321,752. 4 Claims. (Cl. 64—96.)



1. A flexible coupling comprising, rotatable driving and driven mebers having adjacent ends, means interposed betwen said members tending to yieldingly separate the same, and means associated with said members tending to yieldingly move said members toward each other, both of said means being arranged to permit relative rotation betwen said members for a limited extent.

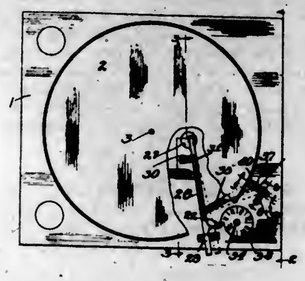
1,345,395. ELEVATOR-BELT PUNCH. JOSEPH ARTHUR PACKHEISER, Picher, Okla. Filed Aug. 19, 1919. Serial No. 318,439. 2 Claims. (Cl. 164—101.)



1. In a belt punch, a frame including an anvil arm and an upper arm overlying the anvil arm, a threaded boxing

carried by the upper arm, a threaded shaft engaging said boxing, a bit guided through an opening in said arm, a chuck sleeve having a locking engagement with the bit and

removably connected to the lower end of the shaft, and means for imparting motion to the shaft whereby a simultaneous rotary and longitudinal movement is imparted to the bit.

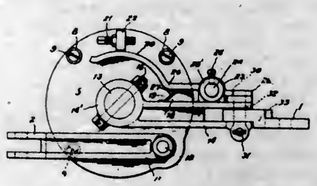


1,345,396. DEVICE FOR CLAMPING FLUID-HEATERS WITH SUPPLY MEMBERS. ANTONIO PAPINI, Philadelphia, Pa., assignor to A. Mecky Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 11, 1919. Serial No. 316,554. 3 Claims. (Cl. 285—107.)

1. A fluid receiver, crank arms pivotally connected therewith, a lever pivotally connected with said arms, and a clamp detachable to a member of a fluid-supply device and to which said lever is pivoted with its pivot intermediate the pivots of said lever and arms.

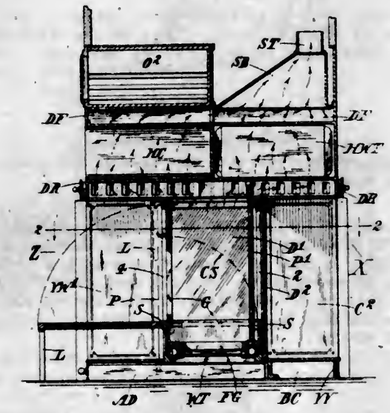
1,345,397. BRAKE FOR PHONOGRAPHS. ARCHIE E. PARNALL, Chicago, Ill., assignor to Frank W. Williams, Chicago, Ill. Filed Aug. 21, 1917. Serial No. 187,391. 2 Claims. (Cl. 74—46.)

1. The combination with the record playing disk and governor disk of a phonograph, of a pivotally mounted lever, a downwardly projecting arm integrally formed thereon, a brake shoe on the end of said arm disposed adjacent said governor disk, a starting lever connected with said first mentioned lever, means pivotally supporting the starting lever, an angled lever pivotally connected to sad starting lever, a brake shoe thereon disposed to the outside of the periphery of said record playing disk, guide means for said angled lever, and slotted means supporting the outer end of said starting lever and permitting a shifting movement thereof to simultaneously actuate said first mentioned lever and said angled lever to move said brake



shoes into frictional engagement with said respective governor disk and record playing disk to bring the same to a sudden stop.

1,345,398. AUTOMATIC STOP FOR TALKING-MACHINES. ARCHIE E. PARNALL, Chicago, Ill., assignor to Frank W. Williams, Chicago, Ill. Filed Aug. 21, 1917. Serial No. 187,392. Renewed May 22, 1920. Serial No. 383,544. 1 Claim. (Cl. 74—46.)



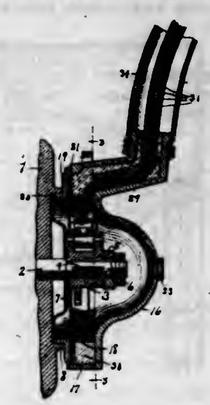
A talking machine mechanism embracing a base plate, an arm pivoted thereon, a latch and a brake shoe on said arm on opposite sides of the pivot point of sad arm, a spring on sad base plate connected with said arm for normally holding the same in braking position, a shaft pivoted on said base plate, a clamping bracket engaged on said shaft, an actuating lever secured therein, a member secured to ts said shaft, and a spring engaging around said shaft and attached to said base plate and to said member, said arm being adapted to be pulled outwardly against the action of said arm spring to permit said latch to lockingly engage said member to hold said lever in a set position whereby said brake shoe is held in a retracted position.

1,345,399. DRAW-BAR. FRANK A. PECK and JAMES E. A. MOORE, Cleveland, Ohio. Filed Nov. 25, 1918. Serial No. 264,048. 11 Claims. (Cl. 213—67.)

1. A draw-bar comprising, an element adapted for attachment to a tractor; an element adapted for attachment to an implement; a torsion spring secured at its ends relatively to said elements, respectively; and a trip adapted to be moved proportionately to the stress imposed upon said spring, a predetermined movement of said trip being adapted to render the tractor non-effective.

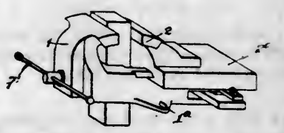
1,345,400. DOMESTIC HEATING AND COOKING APPARATUS. NOEL PEMBERTON-BILLING, Hertford, England. Filed July 23, 1919. Serial No. 312,852. 20 Claims. (Cl. 126—4.)

20. A heating apparatus, comprising a rectangular shaft having a plurality of doors therein, and vertical webs extending radially from the corners of said shaft and adapted to coöperate with said doors to protect the same when in open position, substantially as described.



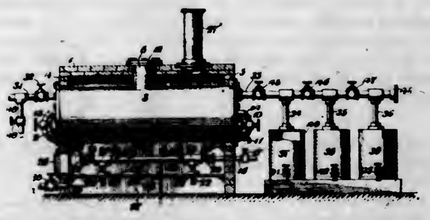
1,345,401. DISH-RACK FOR WASHING-MACHINES. AARON RATNER, New York, N. Y. Filed June 6, 1919. Serial No. 302,333. 4 Claims. (Cl. 141—9.)

1. A dish supporting rack comprising end walls, supporting rods interconnecting the lower portions of said end walls, side rods interconnecting the side portions of said end walls, a plurality of transverse partition members slidable on said side rods, said partition members each comprising upper and lower cross-bars having eye-portions at their ends in embracing slidable relation to said side rods, and vertical rods interconnecting said upper and lower cross-bars.



1,345,402. TIMING DEVICE. JAMES D. REED, Eagle, Mich. Filed May 2, 1919. Serial No. 294,168. 3 Claims. (Cl. 200—24.)

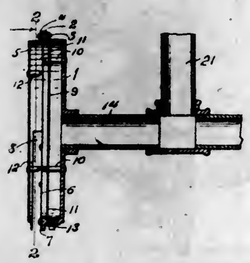
2. In a timing device for internal combustion engines, the combination of a flanged base and a timing shaft supporting a contact roller, a cap having a hollow neck, an L-shaped non-conducting timing ring secured within the cap and so formed as to leave a circular chamber, a series of contact plates mounted in the ring in the path of the roller, a stem for each contact plate extending through the ring into said circular chamber, a wire extending from each stem out through the neck of the cap, fusible non-conducting material filling the circular chamber and neck of the cap and in which the wires are embedded, a bearing ring mounted in said cap and having a flange fitting the



flanged base, and means to secure the cap, timing ring and bearing ring together.

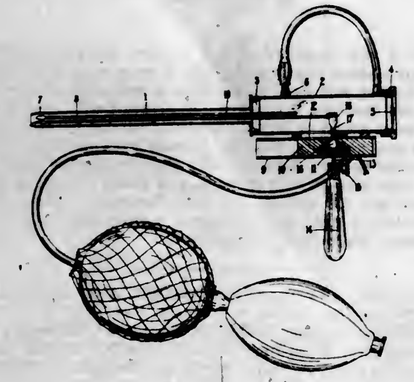
1,345,403. BENCH-SCREW. HUGO REISIGER, Rotterdam, Netherlands. Filed Aug. 14, 1919. Serial No. 317,574. 2 Claims. (Cl. 81—17.)

2. A vise, comprising a pair of jaws, one fixed and the other slidable relatively thereto, a cross member slidably carried by said fixed jaw, a pair of rods slidably carried by the fixed jaw in operative engagement with said cross member, a pair of clutches pivotally carried by said fixed jaw and pivotally connected to said cross member, a depending member carried by said slidable jaw and adapted to slide between said clutches, and means carried by the fixed jaw for sliding said rods thereby to cause said clutches to grip said depending member and force the slidable jaw toward the fixed jaw.



1,345,404. DISTILLATION-RETORT AND SEPARATING-TANK. GEORGE F. RENDALL, New York, N. Y., assignor to Carbon Products Company, a Corporation of Delaware. Filed June 13, 1917. Serial No. 174,437. Renewed May 26, 1920. Serial No. 384,508. 2 Claims. (Cl. 158—7.)

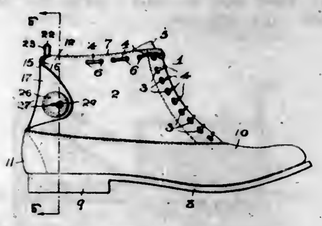
1. An apparatus of the character described, comprising a combustion chamber, a material containing retort therein, an air chamber, a perforated partition separating said combustion chamber from said air chamber, burners adjustably supported on said partition in said combustion



chamber, regulator caps on said burners for the admission of preheated air into said burners, and a gas supply pipe communicating with said burners from without the combustion chamber.

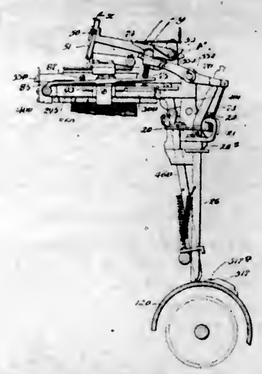
1,345,405. DUST-ARRESTER FOR AIR-COMPRESSORS. JAMES R. RICKETTS, Kansas City, Mo. Filed Dec. 16, 1918. Serial No. 266,877. 5 Claims. (Cl. 183—58.)

1. In a dust arrester, a casing having an opening in its lower side communicating with the atmosphere and having a cleanout opening and a removable closure normally closing said cleanout opening, and a vertical screen extending transversely across said casing intermediate of said openings and disposed so that dust dropping from the outer side of the screen will pass through the first named opening.



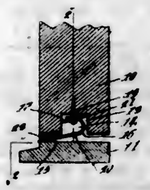
1,345,406. URETHROSCOPE AND LIKE SURGICAL INSTRUMENT. MARK CUBBON RIMMER, London, England. Filed Oct. 30, 1919. Serial No. 334,413. 4 Claims. (Cl. 128—6.)

4. A surgical instrument of the kind referred to having a spindle passing through a lateral opening therein, means for reciprocating said spindle axially of the instrument, an operating instrument secured to said spindle, and means for preventing escape of fluid through said lateral opening.



1,345,407. SHOE. ADOLF J. SCHNEIDER, Brooklyn, N. Y. Filed Dec. 3, 1918. Serial No. 265,097. 1 Claim. (Cl. 36—50.)

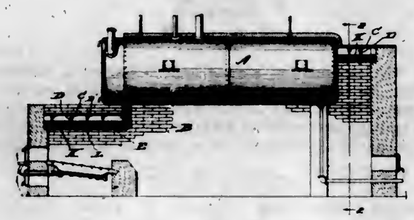
A shoe having its quarters separated in the rear so as to provide an opening, one of said quarters having a rearwardly extending portion forming an integral part of said quarter and providing an inner closing flap, the other quarter having a straight marginal edge-portion, and an outer flap comprising a main body-portion and a flap-portion, said outer flap being secured by sewing along said straight marginal edge-portion diagonally across said outer flap on an imaginary line between the body-portion and



the flap-portion of said outer flap, substantially as and for the purposes set forth.

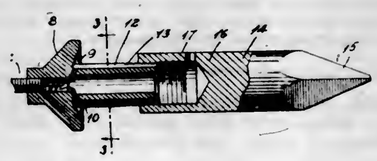
1,345,408. WEB-HOLDER MECHANISM FOR KNITTING-MACHINES. ROBERT W. SCOTT, Babylon, N. Y., assignor to Scott & Williams, Incorporated, a Corporation of Massachusetts. Original application filed Dec. 31, 1914. Serial No. 879,887. Divided and this application filed Sept. 30, 1919. Serial No. 327,392. 17 Claims. (Cl. 66—26.)

12. A knitting machine having therein, in combination, yarn feeding means including a yarn-guide pivoted to swing down into and up out of operative relation to the needles; web-holder actuating mechanism including a lever and cam pivoted to swing down into and up out of operative relation to web-holders; a pattern-surface, and means between said pattern surface and said yarn-feeding and web-holder actuating mechanism including a lever for simultaneously swinging said yarn-guide and web-holder cam up and down.



1,345,409. WEATHER-STRIP. CHARLES D. SHAFER, Escatawpa, Miss. Filed Mar. 12, 1918. Serial No. 221,976. 2 Claims. (Cl. 20—65.)

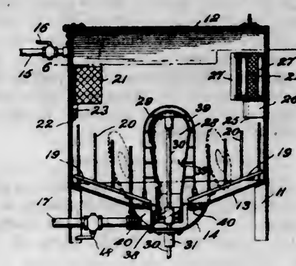
1. In combination with a closure having a groove in an edge thereof, a weather strip comprising narrow and wide elements spaced apart and connected at corresponding edges, the connecting portions being rounding, the wide element overlapping an edge portion of the closure at one side of the groove and the narrow element and rounded



connecting portion being disposed within the said groove, and fastening means connecting the narrow element with the bottom of the groove to admit of the weather strip having both a tilting movement and a movement toward and from the grooved edge of the closure.

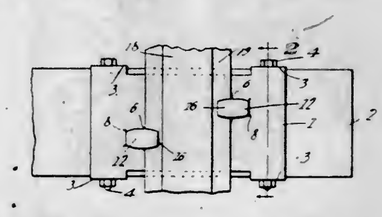
1,345,410. BOILER ARCH AND WALL AND MEANS FOR SUPPORTING SAME. LUTHER S. SHAW, Detroit, Mich. Filed May 31, 1919. Serial No. 300,897. 6 Claims. (Cl. 25—157.)

1. In a boiler setting, the combination of a plurality of beams suitably supported, a plurality of bolts suspended from said beams fitted with relatively large disks, or nuts for supporting an arch or wall, a platform for temporarily supporting an arch or wall of unburned fire brick material, a plurality of bolts detachably connected with said first named bolts by said disks for suspending the platform during the process of burning the fire brick material, and an arch or wall suspended from said first named bolts, formed of unburned fire brick material upon said platform and baked while temporarily supported thereby.



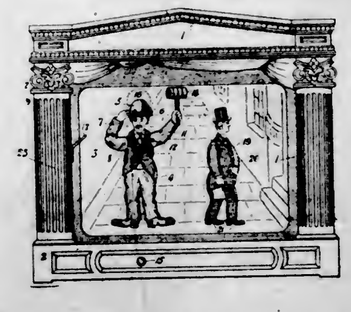
1,345,411. SELF-HEATED SOLDERING-IRON. HYMAN SILVER, New York, N. Y. Filed May 6, 1919. Serial No. 295,182. 1 Claim. (Cl. 158—26.)

A self-heating soldering iron including a head having a longitudinally extending bore in one end forming a combustion chamber, a burner tube having one end inserted into the bore for a predetermined distance, said burner tube having an annular series of spaced longitudinal flutes in its periphery to permit the escape of consumed gases from the combustion chamber, each flute having a relatively small opening in its bottom wall adjacent the shield through which an auxiliary supply of air is introduced into the fuel just prior to its combustion, a shield formed at the opposite end of the burner tube, a fuel inlet pipe connected to the shield in alinement with the burner tube, a handle on said pipe and means to introduce a supply of air and gas to the burner tube through the pipe.



1,345,412. DISH-WASHING MACHINE. STEPHEN G. SMITH, Brooklyn, N. Y. Filed Jan. 2, 1919. Serial No. 269,314. 5 Claims. (Cl. 141—9.)

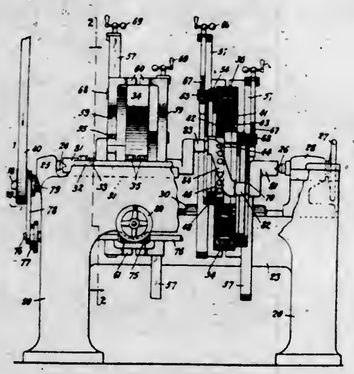
1. A washing machine comprising in combination a container, a central revoluble distributer within the same, and means surrounding the distributer, for supporting the articles to be washed; said distributer comprising a single upright hollow perforated shell having an open neck at the bottom of smaller diameter than said shell and provided with blades within said neck adapted when revolved to project water upward against the inner wall of said



shell, whereby the water may be ejected by centrifugal action.

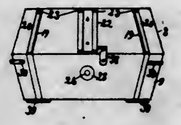
1,345,413. TIE-PLATE. FRENK SOWINSKY, Washington, D. C. Filed Dec. 27, 1919. Serial No. 347,711. 1 Claim. (Cl. 238—295.)

In a device of the class described, a plate having an opening, there being slits in the plate at the ends of the inner edge of the opening and at the ends of the outer edge of the opening, the slits forming bendable upwardly slanting tongues extended along three edges of the opening; and a spike including a head, a body, and a reduced neck connecting the head and the body and defining a groove extended along three sides of the spike and adapted for the reception of the tongues, the fourth side of the spike being smooth for sliding engagement with the plate at the inner edge of the opening.



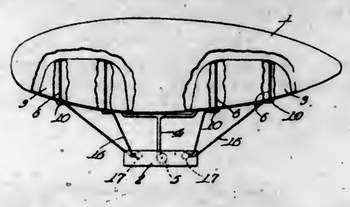
1,345,414. COMBINED TOY AND SAVINGS-BANK OR COLLECTING-BOX. ROBERT EASTWOOD STARKIE, Burnley, England. Filed Mar. 2, 1920. Serial No. 362,669. 1 Claim. (Cl. 46—36.)

In a toy, a vertical supporting screen having the picture of a partial human figure on its front surface, a right arm for the said figure pivoted to the screen against



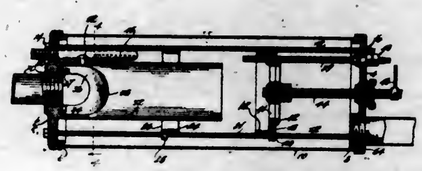
its front surface and provided with a hand holding a receptacle for a coin which also forms a hat for the said figure, a left arm for the said figure also pivoted to the screen against its front surface, levers secured to the pivots of the said arms and arranged at the rear side of the screen, means for normally holding the said arms in raised positions with the hat on the head of the figure and for moving the said arms and lever simultaneously in opposite directions, and a receptacle for receiving the coin when the right arm is moved pivotally by hand to discharge it from the receptacle.

1,345,415. APPARATUS FOR TURNING CRANK-PINS ON ENGINE-SHAFTS. AUGUST THOMAS, New York, N. Y., assignor to Elizabeth A. Baltensperger, New York, N. Y. Filed Mar. 4, 1919. Serial No. 280,666. 4 Claims. (Cl. 82—9.)



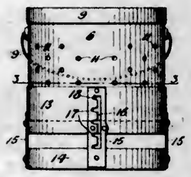
1. An apparatus of the kind described comprising a support, means thereon for rotatably supporting a crank-shaft having a plurality of integral crank-pins, a carriage adjustable on said support and forming a housing, an annular gear mounted in said housing, a drive shaft, a pinion thereon in mesh with said gear whereby the latter is driven, a gripping member within said gear and rotatable therewith, said member being arranged to detachably grip the crank-shaft, cutting tools, and means mounted upon said annular gear and carrying said cutting tools whereby the latter are caused to follow the movements of said crank-pins and to remain in cutting relation thereto as said annular gear is actuated.

1,345,416. BOAT AND TRUNK COMBINED. EMMET R. THOMAS, St. Paul, Minn. Filed Dec. 14, 1918. Serial No. 266,726. 6 Claims. (Cl. 190—1.)



1. A collapsible boat partly tapered toward both ends and divided transversely into four hollow sections, the two middle sections being hinged together at the upper edges and therebelow provided with means for holding said sections rigid at the hinges when the sections are unfolded; the end sections of the boat being detachably secured to the hinged sections and of a size and shape permitting them to be placed one inside of each of the hinged sections, and means for holding the hinged sections folded with their upper sides together when so desired.

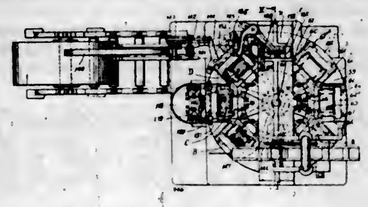
1,345,417. BALLONNET-GAGE. STARR TRUSCOTT, Birmingham, Ohio. Filed May 8, 1919. Serial No. 295,739. 10 Claims. (Cl. 244—3.)



1. The combination with a balloon having a ballonnet therein, an indicator for indicating the inflated condition of the ballonnet, and means movable with the ballonnet and operatively connected with the indicator for operating the indicator according to the movements of the ballonnet.

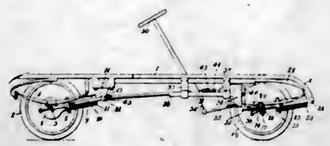
1,345,418. MUFFLER. THOMAS T. TVEDT, Brooklyn, N. Y. Filed Sept. 12, 1917. Serial No. 190,955. 8 Claims. (Cl. 137—160.)

1. In a muffler, a cylindrical expansion chamber open at one end, means for conducting the exhaust gases into the other end of said chamber, stationary means for imparting a whirling motion to said gases as they enter said chamber, a second expansion chamber into which said first chamber discharges from its open end, and means accessible from outside of the muffler for effecting a variation in the relative capacities of said chambers.



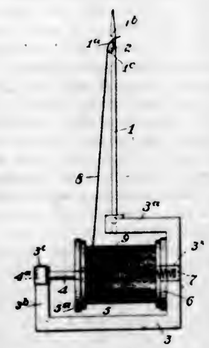
1,345,419. OIL-BURNING DEVICE. CHARLES A. VALENTINE, Buffalo, N. Y. Filed Mar. 19, 1919. Serial No. 283,614. 11 Claims. (Cl. 158—96.)

6. An oil burning device, comprising a porous body adapted to absorb a combustible oil, and a pan-shaped shutter movable toward and from the underside of said body.



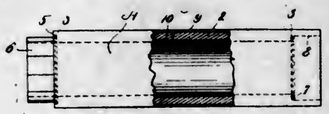
1,345,420. MATCH-BOXING MACHINE. CHARLES W. VAN VLEET, Saugerties, N. Y., assignor of three-eighths to James T. Maxwell, Saugerties, N. Y., and one-eighth to Henry S. Howland, Montclair, N. J. Filed Dec. 7, 1915. Serial No. 65,452. 23 Claims. (Cl. 93—2.)

1. A machine of the class described having in combination, means for feeding box blanks, means for feeding matches to the box blanks, means for feeding a protective strip to the top of the matches fed to each box blank, means for folding the box blanks about the matches and



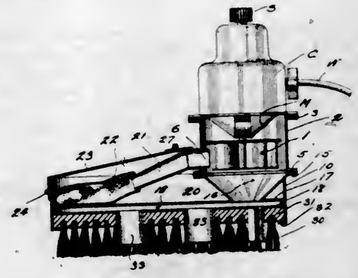
means for applying a removable cover to each box of matches.

1,345,421. CHASSIS. CHARLES WALLACE VAN VLEET and ROBERT EARL HALEY, Saugerties, N. Y., assignors of one-third to James T. Maxwell, Saugerties, N. Y. Filed Nov. 20, 1915, Serial No. 62,450. Renewed Apr. 26, 1920. Serial No. 376,832. 9 Claims. (Cl. 180—79.)



1. A chassis having in combination with a supporting frame wheels and axles, a member pivoted with respect to each of said axles on an axis parallel thereto, a second member pivoted with respect to said first member about an axis at right angles to said first axis, said second member being also pivoted to said frame on an axis parallel to the first axis, whereby said frame is prevented from moving longitudinally and laterally with respect to the axle but permitted to rock laterally about said second axis and steering mechanism having a member carried by the frame and a member carried with the steering axle, said last two members being connected by means permitting one to move vertically with respect to the other without causing movement of the steering axle whereby the lateral rocking of said frame does not affect the steering.

1,345,422. SEWING-NEEDLE. ANGELO VILLANI, Wilmington, Del. Filed Oct. 7, 1919. Serial No. 329,012. 3 Claims. (Cl. 223—37.)

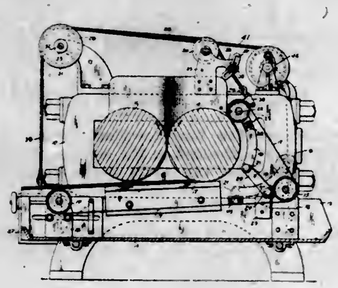


1. In combination, a needle, a handle therefor having a post, an arm having an end pivotally supported by the post, a spool support carried by the arm, and means for holding the arm against swinging.

1,345,423. SECTIONAL WOODEN PIPE-COVERING. CHARLES S. WALDO, Brookline, Mass., assignor to Waldo Brothers, Incorporated, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 30, 1918. Serial No. 256,297. 7 Claims. (Cl. 154—44.)

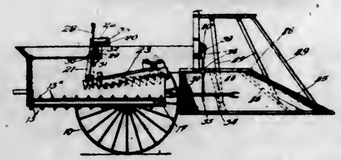
1. Sectional wooden pipe covering formed of staves comprising means embedded in the ends of the staves of a section for fastening the staves of the section together transversely.

1,345,424. VACUUM CLEANING-BRUSH. HENRY W. WASENSKA, Collinsville, Ill. Filed Feb. 28, 1919. Serial No. 279,721. 4 Claims. (Cl. 15—60.)



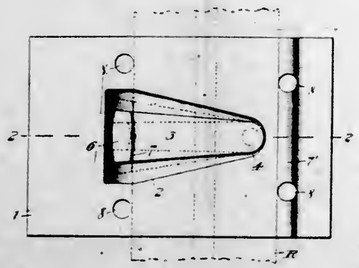
1. A vacuum cleaner comprising a brush, a hollow shell surrounding the brush back, the latter having openings into the shell, a partition above said back, a fan inlet pipe opening into said partition, a suction fan for drawing dust into said inlet pipe, a case for the fan communicating with said fan inlet pipe, a spout carried by the case and communicating with the interior of the shell, and a cover for the shell supported by said spout.

1,345,425. TAP. FRANK OREN WELLS, Greenfield, Mass., assignor to Greenfield Tap and Die Corporation, Greenfield, Mass., a Corporation of Massachusetts. Filed June 30, 1919. Serial No. 307,701. 5 Claims. (Cl. 10—141.)



1. A combination roughing and finishing tap provided with longitudinal flutes parallel to the axis for a portion of its length, said flutes having at their forward end angularly disposed portions, finishing teeth being formed along the longitudinal portions, and roughing cutting teeth formed along the angular edges of said flutes.

1,345,426. ATTACHMENT FOR RUBBER-MIXING MILLS. HARRY ALLEN WELTON, Detroit, Mich., assignor to Morgan & Wright, a Corporation of Michigan. Filed June 6, 1918. Serial No. 238,552. 9 Claims. (Cl. 18—2.)



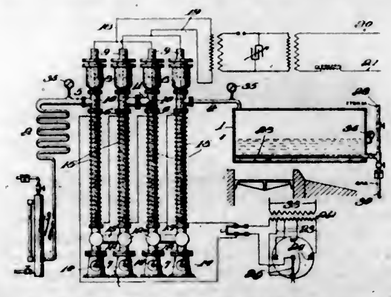
1. An attachment for mixing rolls embodying a support adapted to be secured to a mill underneath the milling rolls thereof, a frame foldable upon itself and pivotally secured at one end to said support, and means secured to the other end of the frame for extending or folding it, a roller mounted in said frame, and an apron trained over said roller.

1,345,427. SPREADER. GEORGE W. WILLIAMS, Morris, Ill. Filed Oct. 4, 1919. Serial No. 328,533. 4 Claims. (Cl. 275—5.)

1. In a spreader, a hopper, means for delivering material from the rear of said hopper, and a conical-shaped hood secured to the rear of the hopper and being inclined downwardly and outwardly and extending laterally from the sides of said hopper to thereby effectively protect the material being delivered from said hopper from the action of the wind.

1,345,428. RAIL-ANCHOR. BENJAMIN WOLHAUPTER, New Rochelle, N. Y. Filed Feb. 28, 1916, Serial No. 81,010. Renewed Oct. 14, 1919. Serial No. 330,668. 17 Claims. (Cl. 238—304.)

16. A rail anchor comprising a chair, a carrier arm pivoted at one end to the chair, and a rail-clutching member loosely connected with the opposite end of the carrier.



1,345,429. METHOD OF MAKING GLAZED KID-LEATHER. MICHAEL A. ZDANOWSKI, Philadelphia, Pa. Filed Apr. 21, 1917. Serial No. 163,582. 9 Claims. (Cl. 149—5.)

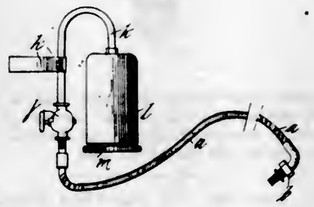
9. In the preparation of a tanning solution containing salt and aluminum sulfate, the step of melting the salt and aluminum sulfate before dissolving the same in water.

1,345,430. METHOD OF SEASONING LEATHER. MICHAEL A. ZDANOWSKI, Philadelphia, Pa. Original application filed Apr. 21, 1917, Serial No. 163,582. Divided and this application filed Apr. 27, 1920. Serial No. 376,955. 2 Claims. (Cl. 149—7.)

1. The sub-process in the making of glazed leather, which consists in seasoning the leather with a seasoning consisting of water, nigrosin, carbolic acid, blood albumen, wood alcohol, gelatin, and formaldehyde.

1,345,431. ELECTRICAL APPARATUS FOR THE ELECTROCHEMICAL TREATMENT OF VAPORS. LOUIS BOND CHERRY, Kansas City, Mo. Filed Oct. 9, 1917. Serial No. 195,608. 12 Claims. (Cl. 204—31.)

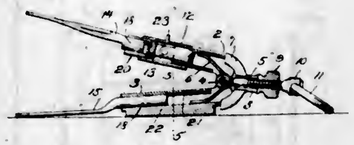
1. In combination, a still for vaporizing liquid hydrocarbons, a condenser, and a conduit for conducting the vaporized products from the still to the condenaer, said conduit embodying an elongated treating chamber remote from the still, means for maintaining the wall of said chamber at approximately a red heat, and means for subjecting the vaporized products while passing through said chamber to a high frequency electric current discharge while said products are under the influence of said hot wall.



2. In apparatus for the purpose substantially as described, a series of treating chambers connected together in series to require the vaporized mixture to pass along an extended path longitudinally through each chamber in succession, means for subjecting the mixture while passing through said chambers to a high frequency electric current discharge, and means for maintaining the walls of the chambers at high temperatures to simultaneously subject the vapor to heat and said discharge.

3. Apparatus for electrically treating vaporized liquid hydrocarbons and other products comprising a series of elongated tubular units forming treating chambers constituting a conduit for said vaporized products, means for subjecting said products while passing through said chambers to a high frequency electric current discharge, and means for highly heating said products while being subjected to said discharge.

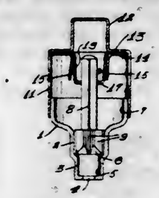
4. In apparatus for the purposes substantially as described, a series of metallic tubular units united by cross connections to form a continuous conduit, electrodes depending in said units, and means connected with the walls of said electrodes to subject the products in said conduit to a high frequency electric discharge.



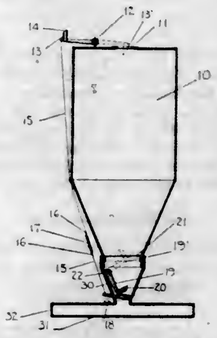
5. In apparatus substantially as set forth, a metallic tubular unit included in a conduit for vaporized liquid hydrocarbons and other products, means for subjecting the vaporized products in said unit to a high frequency electric current discharge, a solenoid exteriorly surrounding and arranged longitudinally of said unit and insulated therefrom and arranged to highly heat the same by induction, said solenoid being composed of a good electrical conductor, means for passing an alternating current through said solenoid, and means for controlling said current to vary the temperature of said unit.

1,345,432. FUEL-ECONOMIZING DEVICE FOR INTERNAL-COMBUSTION ENGINES. WILLIAM GEORGE CLAYTON, Upper Hawthorn, near Melbourne, Victoria, Australia. Filed June 16, 1917. Serial No. 175,231. 1 Claim. (Cl. 123—124.)

A fuel economizing device for internal combustion engines comprising a container, a detachable perforated cap thereon, sponges in said container, a body between said sponges adapted to increase the flash when mixed with the explosive charge at the time of ignition, a flexible pipe having one end in communication with said container and adapted to be connected at its other end to the engine manifold, a valve between said container and said pipe, the intermediate portion of said pipe being adapted to be alongside the exhaust pipe of the engine.



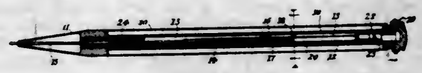
1,345,433. CROWN-ARTICULATOR. LOUIS COOPERMAN, New York, N. Y. Filed Dec. 22, 1919. Serial No. 346,544. 3 Claims. (Cl. 32—1.)



1. A crown articulator provided with two jaws pivoted together by a pivot, a coil spring about said pivot with ends extending into said jaws and adapted to separate them, a stem extending from said jaws, a washer mounted on said stem adapted to rest against said jaws in opposition to the tension of the spring, a nut mounted on said stem for determining the position of the washer and means connected to said jaws for receiving castings.

1,345,434. GREASE-CUP. SIDNEY DAWSON, Chicago, Ill., assignor, by direct and mesne assignments, to Dawson Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 19, 1918. Serial No. 254,736. 8 Claims. (Cl. 184—38.)

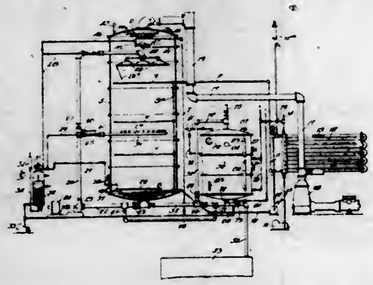
8. A grease cup embracing interfitting outer and inner locking members, a base member, means secured thereto for removably engaging said inner locking member to hold the same locked against rotation, and a grease container mechanism engaging the outer locking member and said base member, said container mechanism adapted to be manually rotated to rotate said outer locking member on said inner locking member as the container mechanism is telescoped over the base member.



1,345,435. AUTOMATIC SELF-CONTAINED FIRE-EXTINGUISHER. CHARLES S. DURKEE, Grasmere, N. Y. Filed July 24, 1919. Serial No. 312,994. 1 Claim. (Cl. 169—26.)

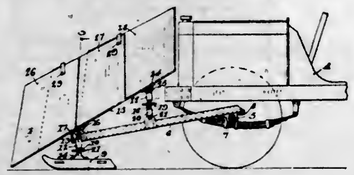
A fire extinguisher having a self contained supply of fire extinguishing material, a vent area adapted to be pierced, a hammer adapted to be released by a rise in temperature and when so released to pierce the said vent area, a diaphragm adapted to be pierced and when so pierced to release the fire extinguishing material, and a hammer adapted to be released by a rise in temperature and when so released to pierce the said diaphragm, both of said hammers being released by a common releasing means operated by a rise in temperature, and normally restrained operating means for the hammers.

1,345,436. MAGAZINE-PENCIL. HARRY P. FAIRCHILD, New York, N. Y. Filed Apr. 5, 1917. Serial No. 159,849. 8 Claims. (Cl. 120—18.)



1. A pencil of the class described, having relatively rotatable outer parts, lead-actuating mechanism, including a helically slotted sleeve or tube, a magazine for extra leads surrounding the sleeve or tube, fastened to the sleeve or tube between the turns of the slot whereby the sleeve or tube is stiffened and strengthened, and connected to one of the said outer parts of the pencil whereby rotation of such part rotates the sleeve.

1,345,437. PROCESS AND APPARATUS FOR EXTRACTING ALCOHOL FROM LIQUIDS. FRANK FEHR, Louisville, Ky. Filed Nov. 22, 1916. Serial No. 132,743. 31 Claims. (Cl. 195—1.)

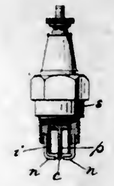


24. The method of extracting alcohol from liquids which comprises placing the liquid in a closed tank or

chamber, heating the liquid to a temperature sufficient to volatilize the alcohol without precipitating the albuminoids or producing other changes in the character of the organic constituents of the liquid, creating an exhaust current from the upper end of said tank to maintain a high vacuum in the tank and to draw off the volatilized alcohol, heating the upper end of said tank to prevent premature condensation of the alcohol vapor, circulating the liquid

by drawing it from the lower portion of the tank and discharging it into the upper portion above the body of the liquid, causing the liquid in circulation to be broken up into a spray in the tank above the body of liquid, and allowing air to be drawn by the vacuum into the body of liquid in the tank and into the circulating current of liquid prior to its encountering said spraying device whereby to increase the subdivision of the spray and produce a very fine mist.

1,345,438. SNOWPLOW. ANTHONY FRICKER, Cleveland, Ohio. Filed Dec. 23, 1918. Serial No. 268,034. 2 Claims. (Cl. 37—59.)

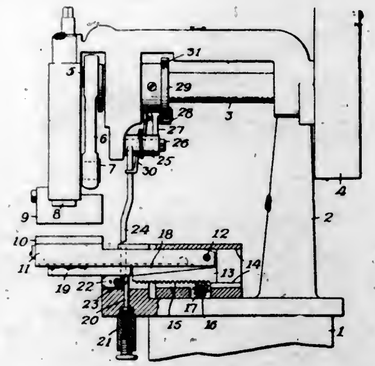


1. A snow plow comprising a base board, a pair of front blades separated from each other and curved outwardly, an intermediate set of blades separated from each other and curved outwardly, the forward portions of this intermediate set being disposed in the path of the snow passing through the apace between the separated front blades, a rear set of blades meeting each other at the front edges, the forward portions of this rear set of blades being disposed in the path of the snow passing through the space between the separated intermediate blades, and jack screw means adjustably supporting the front and rear of the plow, whereby the height and the inclination thereof may be readily adjusted.

1,345,439. DRAG-CAR. ROBERT HAMILTON and ELMER J. REIMEL, Birmingham, Ala. Filed May 29, 1919. Serial No. 300,548. 5 Claims. (Cl. 105—27.)

1. In a mine a longitudinal entry, a lateral working room communicating therewith, a drag car movable along said entry, work cars adapted to be loaded in said mining room, a guide sheave and cable in said room adapted to be connected with said work cars, and means carried by said drag car and co-acting with said guide sheave and cable to move the work cars into and out of said mining room.

1,345,440. SPARK-PLUG. ROBERT R. HILL, Verona, N. J. Filed Mar. 20, 1919. Serial No. 283,749. 3 Claims. (Cl. 123—169.)



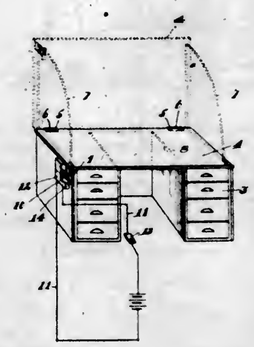
1. A spark plug having electrodes, and a conductor articularly suspended on horizontal portions at its ends with a portion interposed between the electrodes and free to oscillate across the end of the plug.

1,345,441. PROCESS OF DRAWING REFRACTORY METAL. JUNZO HISAMOTO, Nagoya City, Japan, assignor to Toyo-Kagaku-Yakin-Kabushiki-Kaisha (The Oriental Chemical Metallurgic Company, Limited), Tokyo, Japan. Filed Apr. 24, 1919. Serial No. 292,405. 2 Claims. (Cl. 205—21.)

1. The method of drawing refractory metal to a filamentary diameter which consists in surrounding a refractory slug of metal with a refractory oxid, placing these evenly in a metal tube, drawing the tube and contents to a filamentary size and removing the tube and oxid from the inclosed refractory metal.

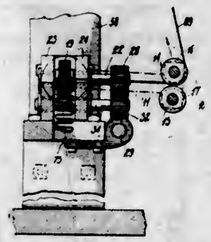
1,345,442. SAFETY DEVICE. CLARENCE W. HOBBS, Worcester, Mass.; Clarence W. Hobbs, Jr., and Samuel T. Hobbs administrators of said Clarence W. Hobbs, deceased. Filed Oct. 2, 1916, Serial No. 123,229. Renewed Mar. 4, 1920. Serial No. 363,287. 8 Claims. (Cl. 74—46.)

1. In a machine of the class described, a yieldable stationary work engaging member, a reciprocating work engaging member coöperating with said yieldable member, means for actuating said reciprocating member, and means operable by said actuating means for rendering said yieldable member rigid at a predetermined point in the movement of said reciprocating member.



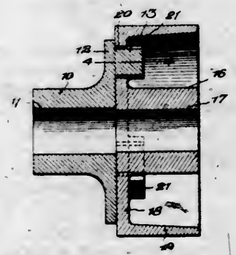
8. In a machine of the class described, a pair of coöperating pressing members, one of said members being yieldably supported, and means responsive to the movement of the other member for procuring the unyielding support of said first member.

1,345,443. SCREWDRIVER. HENRY HOOD, Philadelphia, Pa. Filed July 27, 1918. Serial No. 246,983. 1 Claim. (Cl. 145—50.)



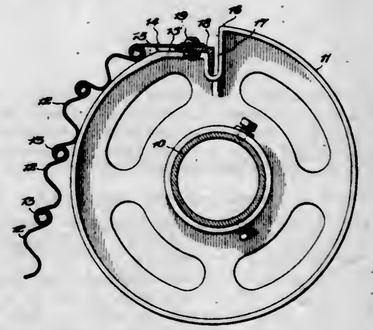
A tool comprising a handle elliptical in cross section, a projection at each end having the shape of an elliptical conical frustum, ferrules each having a bore and an elliptical chamber gradually increasing in size to correspond to the shape of the projections, one of said ferrules being mounted on each end of the handle and inclosing the projections and a blade having a shank passing entirely through the handle and ferrules, said ferrules being fixed to the shank for attaching the handle thereto.

1,345,444. BURGLAR-PROTECTOR. AARON HORVITZ, Chicago, Ill. Original application filed Apr. 12, 1917, Serial No. 161,614. Divided and this application filed June 10, 1918. Serial No. 239,209. 1 Claim. (Cl. 45—6.)



A desk comprising a body having a rearwardly and upwardly opening recess adapted to accommodate the user of the desk; a swingingly mounted top on said desk body adapted to assume either horizontal or vertical positions, said top, when swung to vertical position, exposing said recess to permit of the entrance of the desk user therein; means for releasably holding said top in horizontal position; means for automatically swinging said top to vertical position when the same is released; and leaves carried by the lateral edges of said top and adapted, when said top is moved to vertical position, to assume positions at the sides of said recess to afford lateral protection for the occupant of said recess, substantially as described.

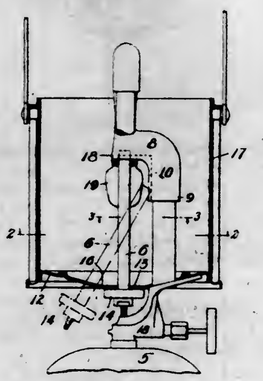
1,345,445. MACHINE FOR CRIMPING WIRE. ALBERT H. JOHNSON, Washington, D. C., assignor to National Electrical Supply Company, Washington, D. C., a Corporation of Virginia. Filed Jan. 31, 1920. Serial No. 352,994. 10 Claims. (Cl. 140—105.)



1. A wire crimping machine, comprising a pair of rollers adapted to receive and hold the wire to be crimped, an oscillating crimping arm arranged near said rollers, said arm being provided with wire receiving means whereby the wire is bent to either side of the rollers and crimped, means for oscillating said arm, and means for intermittently rotating said rollers.

1,345,446. SHAFT-COUPLING. HOWARD A. JOHNSON, Norfolk, Va. Filed Apr. 3, 1919. Serial No. 287,275. 3 Claims. (Cl. 64—101.)

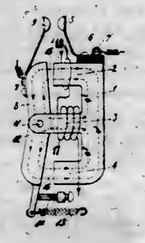
1. As an article of manufacture, a coupling member comprising a hub having a radial flange at one end thereof, said flange formed with a circular series of apertures extending therethrough, and bearing wings at the sides of said apertures, the inner surfaces of said wings being flush with the sides bounding said apertures.



1,345,447. ROLLING DOOR. HOWARD A. JOHNSON, Norfolk, Va. Filed May 24, 1919. Serial No. 299,476. 6 Claims. (Cl. 189—56.)

2. A rolling door construction including in combination a head shaft, spaced wheels secured to said shaft, each

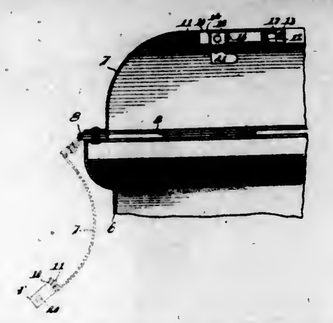
wheel having a transverse slot in its periphery, an angle iron disposed parallel to the shaft with one leg in the slot of the wheels, a flexible door, and pins securing the upper member of the door to the other leg of the angle, the number of pins being greater than the number of wheels.



1,345,448. VAPORIZER-GUIDE. ADOLPH G. KAUFMAN, New York, N. Y. Filed Sept. 12, 1919. Serial No. 323,372. 7 Claims. (Cl. 67—50.)

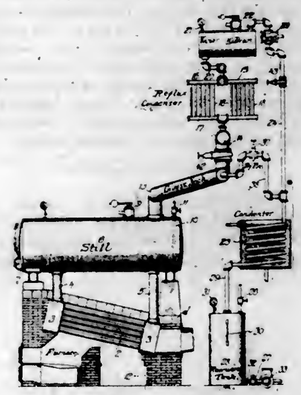
1. A burner head for an incandescent light having a guide for the vaporizer extending vertically below the top of the mantle and laterally from the vertical portion to the vaporizer entrance in the burner head.

1,345,449. [WITHDRAWN.]



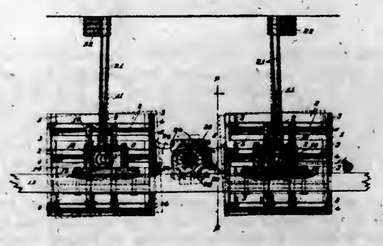
1,345,450. ELECTROMAGNET. LOUIS LARSEN, Brooklyn, N. Y., assignor to Sundh Electric Company, New York, N. Y., a Corporation of New York. Filed Jan. 2, 1918. Serial No. 209,842. 29 Claims. (Cl. 200—94.)

1. An electromagnet comprising a magnetizable member and means for producing therein from the same electric current magnetic forces which are of relative values varying with changes in the exciting current and are counteracting at one pole of said member.



1,345,451. LOCK FOR BURIAL-CASKETS. FRED LUNDBERG, Chicago, Ill. Filed Dec. 28, 1917. Serial No. 209,276. 3 Claims. (Cl. 27—16.)

1. In a burial casket provided with hinged wall portions disposed at right angles to each other, means for locking said wall portions in closed relation with each other, comprising a slotted lug projecting perpendicularly from one edge of one of said wall portions; a socket on the other wall portion adapted to snugly receive said lug when said wall portions are in closed positions; and a rearwardly yieldable stud projecting into one side of said socket for



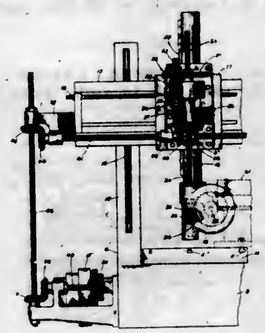
engagement with said slotted lug, substantially as described.

1,345,452. PROCESS OF TREATING HYDROCARBONS. LOREN W. MCOMBER, Milwaukee, Wis., assignor of one-half to Charles B. Belknap, Detroit, Mich. Filed Feb. 24, 1916. Serial No. 80,274. 2 Claims. (Cl. 196—25.)

1. The process of treating petroleum oil to produce a gasolene-like product which comprises subjecting the oil to the action of heat in a still while under under a pressure in excess of approximately 60 pounds per square inch, and without materially releasing this pressure subjecting it to a condensing action while under a still higher pressure.

1,345,453. COAL-SEPARATOR. WILLIAM M. MACFARLANE, Scranton, Pa. Filed Mar. 30, 1917. Serial No. 158,543. 14 Claims. (Cl. 83—56.)

1. In a device of the class described, a screen, trunnions at the ends of said screen intermediate the top and bottom



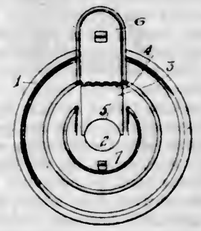
thereof, bearings for said trunnions permitting both transverse and oscillatory movement and means for imparting transverse and oscillatory movement to said screen, substantially as described.

1,345,454. TRANSPORTING AND ELEVATING APPARATUS. CHARLES MASCART, Croissy-sur-Seine, France. Filed Aug. 4, 1917. Serial No. 184,462. 3 Claims. (Cl. 193—4.)

1. In a machine of the class described, the combination with an endless conveyer belt, of a plurality of rollers for supporting the same, rollers for turning the edges of the belt away from the supporting rollers, a covering belt, and yieldably mounted rollers tending to force the covering belt against the conveyer belt.

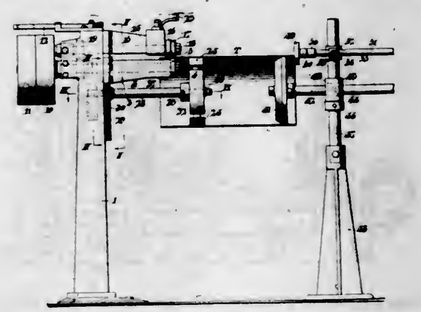
1,345,455. BORING-MACHINE ATTACHMENT. EZRA B. MEAD, Ottumwa, Iowa. Filed Aug. 4, 1915. Serial No. 43,512. 8 Claims. (Cl. 90—4.)

1. The combination with a boring machine having a revoluble table and a horizontally extending rail and adapted to turn, bore and face gear blanks; of an attachment therefor for cutting the teeth of the gear blanks without removing or resetting the blanks comprising a carriage slidably mounted on the rail, a vertically movable ram connected to the carriage, a hob cutter carried by the ram, and a driving connection between the hob cutter and the boring machine for rotating and moving the hob vertically at a rate of speed rotation of the table.



1,345,456. CORN-PULP REMOVER. WALTER OLCOTT, South Manchester, Conn. Filed Mar. 30, 1920. Serial No. 369,922. 1 Claim. (Cl. 146—7.)

A corn pulp remover comprising a head having flanges approximately at right angles to each other, one of the flanges being in front of the other as the head is moved along on the cob, the front flange being furnished with a row of teeth disposed in arcuate order, the fronts of the teeth having acute cutting edges to cut the kernels of corn on such movement, the back flange having a longi-



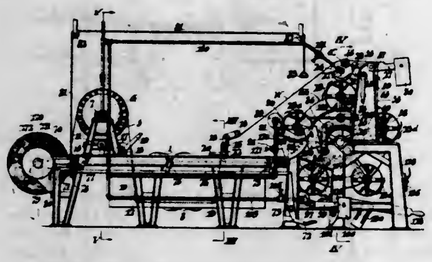
tudinal concavity in its under edge, and acting to squeeze the pulp from the kernels after they have been cut on such movement, said back flange having a rearwardly-extending tang at practically right angles to the line of movement of the head.

1,345,457. COVER FOR COOKING VESSELS. EMIL OLSON, Rochester, N. Y. Filed Aug. 16, 1919. Serial No. 318,035. 5 Claims. (Cl. 53—8.)

1. A combined cover and splash guard comprising a cover member having an elongated opening intersecting the center of said cover and projecting farther from the center on one side than the other, means for closing said opening, and separate means for covering the end of the opening farthest removed from the center to restrict the opening to the center of the cover.

1,345,458. DEVICE FOR CUTTING TUBES. JAMES F. PIERCE, Glynrich, Del., assignor to American Vulcanized Fibre Co., Wilmington, Del., a Corporation of Delaware. Filed Mar. 30, 1917. Serial No. 158,766. 6 Claims. (Cl. 164—69.)

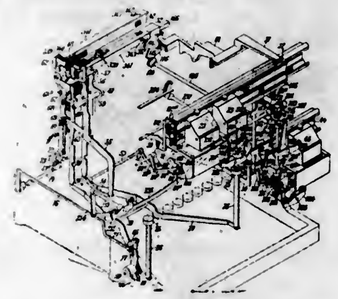
1. A tube cutting machine including in combination, a supporting frame, a rotatable shaft mounted in said supporting frame, a cutting disk mounted on said shaft, a second rotatable shaft pivotally mounted in the supporting frame and capable of being moved toward and from the first named shaft, a cutting disk mounted on the second named shaft and coöperating with the disk on the first named shaft, a supporting bracket for the movable shaft, and a hand wheel for adjusting said bracket vertically to move the shafts toward and from each other.



2. A tube cutting machine including in combination, a supporting frame, a rotatable shaft mounted in said supporting frame, a cutting disk mounted on said shaft, a second rotatable shaft pivotally mounted in the supporting frame and capable of being moved toward and from the first named shaft, a cutting disk mounted on the second named shaft and coöperating with the disk on the first named shaft, a supporting bracket for the movable shaft, a hand wheel for adjusting said bracket vertically to move the shafts toward and from each other, and a yielding feed roll carried by the movable shaft and opposed to and coöperating with the disk on the first named shaft for feeding the tube to the cutting disks.

3. A tube cutting machine including in combination, cooperative cutting disks, means for moving said cutting disks toward and from each other to receive the work therebetween, a rotatable clamping device for supporting the tube to be trimmed, said clamping device including radially movable segments for engaging the inner face of the tube, springs for moving said segments toward the center of the clamping device, expanding dogs for moving said segments outwardly to clamp the tube, said dogs being arranged to hold the clamping device expanded, and manually controlled means for moving the dogs.

4. A tube cutting machine including in combination, a supporting frame, cutting disks mounted on said supporting frame, an expansible clamping device for engaging the inner face of the tube and supporting the same horizontally, said clamping device being rotatably mounted so that the tube may be turned as it is trimmed, means cooperating with the cutting disks for feeding the tube to said cutting disks, and a supporting wheel for guiding and supporting the outer end of the tube.

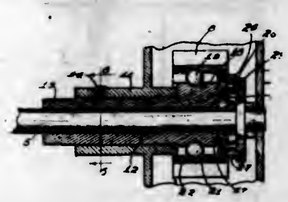


5. A tube cutting machine including in combination, a supporting frame, cutting disks mounted on said supporting frame, an expansible clamping device for engaging the inner face of the tube and supporting the same horizontally, said clamping device being rotatably mounted so that the tube may be turned as it is trimmed, means cooperating with the cutting disks for feeding the tube to said cutting disks, a supporting wheel for guiding and supporting the outer end of the tube, and a gage for engaging the outer end of the tube for determining the length thereof.

1,345,459. APPARATUS FOR FORMING TUBES. JAMES F. PIERCE, Glynrich, Del., assignor to American Vulcanized Fibre Co., Wilmington, Del., a Corporation of Delaware. Filed Mar. 30, 1917. Serial No. 158,770. 11 Claims. (Cl. 93—81.)

3. An apparatus for forming tubes, comprising means for supplying a web of material, a plurality of mandrels on which the web is wound to form tubes, mechanism for rotating a mandrel, means whereby said mandrels may be brought one after another into operative position and operated for winding the web thereon, and means for releasing the mandrels from the winding mechanism when a measured amount of the web has been wound thereon, and means for rolling the formed tubes on one or more mandrels while the web is being wound on another mandrel.

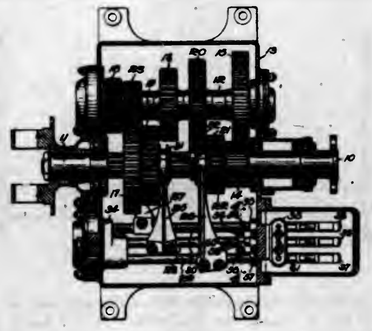
1,345,460. COMBINED TYPEWRITING AND COMPUTING MACHINE. HENRY L. PITMAN, Brooklyn, N. Y., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Aug. 14, 1917. Serial No. 186,098. 67 Claims. (Cl. 235—59.)



1. The combination with a traveling typewriter carriage, of a series of tabulating stops for positioning said carriage, a cross-adding device, a series of stops for positioning said cross-adding device, and key-operated means for setting both sets of stops.

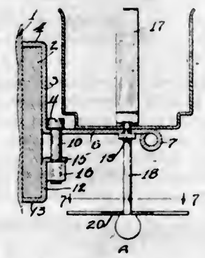
17. In a computing machine, the combination with a traveling typewriter carriage including a totalizer, of a separate computing carriage including a totalizer, a separate master wheel for each totalizer, means for gearing said master wheels together, carry-over devices for each of said totalizers, each including an alining device adapted to take up lost motion in the carry-over devices for each of said totalizers, and connections whereby one of said alining devices is caused to positively operate the other.

36. In a typewriting machine, the combination of normally unset members at letter-space positions apart but adapted to be individually set, and means for setting a plurality of said members to effective positions simultaneously.



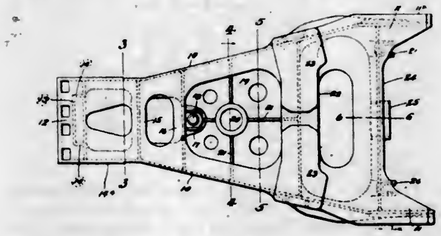
1,345,461. BELT-TIGHTENER. CHARLES L. RAYFIELD, Chicago, Ill. Filed Mar. 19, 1918. Serial No. 223,258. 5 Claims. (Cl. 64—53.)

1. The combination of a rotary shaft, a normally fixed eccentric adjustable circularly thereon, a rotary member mounted on said eccentric, a disk secured to said shaft and rotatable therewith, and means disposed between said rotary member and disk for imparting motion from one of said parts to the other in any position of adjustment of said eccentric.



1,345,462. POWER-TRANSMITTING MECHANISM. DELMAR G. ROOS, Bridgeport, Conn., assignor to The Locomobile Company of America, Bridgeport, Conn., a Corporation of West Virginia. Filed May 5, 1919. Serial No. 294,719. 6 Claims. (Cl. 74—58.)

1. In a power-transmitting mechanism, the combination of a gear set comprising a plurality of gears affording four forward speeds and reverse, means for operating said gear set, including three sliding rods, and swinging means operated by any one of said rods upon lengthwise move-

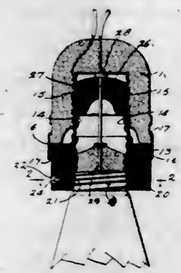


ment thereof to lock the remaining two rods against lengthwise movement.

1,345,463. ADJUSTABLE DETACHABLE ROD AND FIXTURE SUPPORT. DAVID E. SANDBERG, Detroit, Mich. Filed Apr. 24, 1919. Serial No. 292,275. 2 Claims. (Cl. 248—20.)

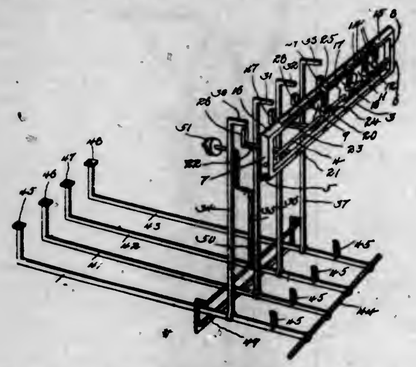
2. A fixture support comprising an angled member adapted to engage a supporting molding, an apertured horizontal projecting arm formed integrally on the angled member, and an eye on the outer end of the horizontal arm, formed by bending the outer end of said arm downwardly and inwardly, said eye adapting the support to engage a rod.

1,345,464. LOCOMOTIVE FRONT-END FRAME. WILLIAM M. SHEEHAN, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Sept. 26, 1918. Serial No. 255,779. 16 Claims. (Cl. 105—172.)



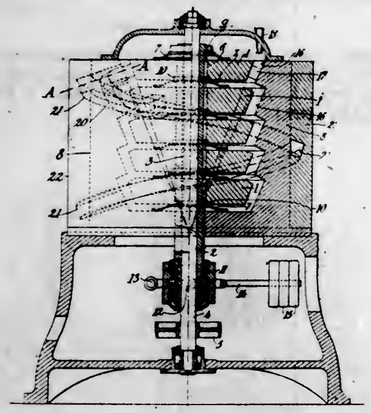
1. As a new article of manufacture, a locomotive front end frame formed in a single piece and comprising a pair of side members which gradually converge toward their forward ends.

1,345,465. HYDRANT. WILLIAM S. SNYDER, Nashville, Tenn. Filed July 3, 1919. Serial No. 308,394. 4 Claims. (Cl. 137—13.)



1. A hydrant comprising a union for connection with the main, said union having at its upper end a transverse partition provided with a central opening, a tubular valve slidable in the opening and having lateral ports, a spring normally pressing the valve upward to bring the port above the partition and to prevent the flow of water into and through the valve, and the lower end of the valve being closed, an extension connected with the upper end of the valve and having a beveled seat at its upper end, a hose connection having its end beveled to engage the seat, and a casing inclosing the valve, the spring, and the extension and having an opening for receiving the connection, said connection and extension having interengaging means for holding the valve open.

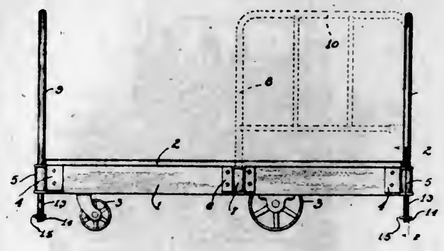
1,345,466. INCANDESCENT-LAMP-PROTECTING DEVICE. HOLROYD FITZWILLIAM WAY, Oregon City, Oreg. Filed June 5, 1919. Serial No. 301,909. 7 Claims. (Cl. 173—356.)



4. The combination with a lamp socket, an incandescent bulb having a threaded base, of a threaded tube, one end of which receives the base of the lamp bulb and is provided with a surrounding collar, means in connection with the collar for securing the same and the said tube to the lamp base, a second threaded tube, one end of which screws within the lamp socket and is provided with an internally supported plug, an axial electrode supported by the said plug, a collar secured around the opposite end of the last mentioned tube at the open end of the lamp socket, and means for securing said last mentioned collar to the lamp socket, all for the purpose described.

1,345,467. TYPEWRITER TABULATOR DEVICE. WILLIAM L. WHITE, Birmingham, Ala., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 27, 1917. Serial No. 145,025. 9 Claims. (Cl. 197—177.)

1. In a typewriting machine, the combination with a traveling carriage having a carriage stop, of a series of column-stops for coöperating with the carriage stop, a frame comprising lugs on which said column-stops are settable, a pivot for said frame, a series of keys, and a series of arms for rocking said frame toward the carriage stop and adapted to be moved by said keys, said arms variously positioned relatively to said lugs to have a variable amount of lost-motion to variably rock said frame to variably arrest the carriage by the stops.

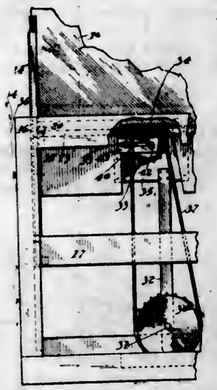


1,345,468. MACHINE FOR GRINDING CONICAL ROLLERS. SVEN GUSTAF WINGQUIST and BENGT WIKTOR FJELLMAN, Gottenborg, Sweden, assignors to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed Oct. 18, 1919. Serial No. 331,736. 11 Claims. (Cl. 51—130.)

1. Machine for grinding the superficies of conical rollers, comprising outer and inner grinding means forming a plurality of annular grinding chambers having each an outer and inner conical grinding face, and means for causing the rollers to circulate from one such chamber to another.

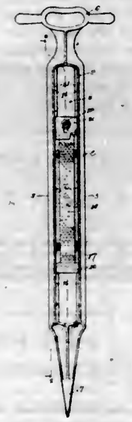
1,345,469. TRUCK. GUILFORD S. WOOD, Chicago, Ill. Filed June 29, 1917. Serial No. 177,668. 4 Claims. (Cl. 280—49.)

1. The combination with a truck having apertured sockets at the corners and sides thereof, of a gate comprising rail members pivoted in the corner sockets, transverse members connecting the rail members, a shaft extension in one rail member at each end of the truck, said shaft extending through the apertured socket and movable



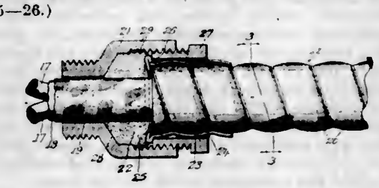
therein whereby the opposite end of the gate may be lifted and swung to engage another socket on the truck frame, and means removably secured to the shaft adapted to prevent the shaft from being lifted out of the socket.

1,345,470. REMOVABLE TRUCK-NOSE. GUILFORD S. WOOD, Chicago, Ill. Filed June 13, 1918. Serial No. 239,709. 10 Claims. (Cl. 280—56.)



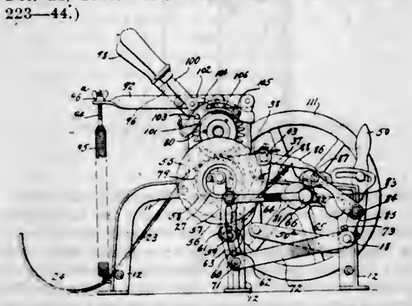
7. The combination with tubular truck frame sills, of a nose, passaged shanks thereon projecting into said sills, resilient means integrally formed on said shanks, wedges associated with said shanks, and means for drawing said wedges into said shanks for forcing said resilient means apart and into locking engagement with said sills to removably hold said nose in position.

1,345,471. WINDOW-FRAME. CARL E. ANDERSON, Maywood, Ill. Filed May 23, 1918. Serial No. 236,090. 15 Claims. (Cl. 268—4.)



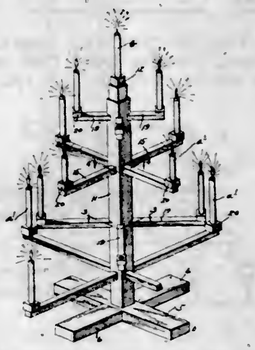
1. A window-frame structure comprising, in combination, a movable window-inclosing frame, a movable frame inclosing said window-frame, and means to move said first frame in said second frame to any one of a desired plurality of positions whereby the relative positions of the two frames with respect to each other will be changed for each of said positions, said frames being maintained in any of the said positions to which they are moved.

1,345,472. FILE OR BRUSH HOLDER. ERNST ANHEUSER, Racine, Wis. Filed Apr. 12, 1919. Serial No. 289,639. 4 Claims. (Cl. 29—80.)



1. A tool holder, comprising an elongated frame, a tool carrying plate movable longitudinally on the frame, and means for securing the plate in adjusted position on the frame.

1,345,473. WATER-TIGHT CONNECTION FOR ELECTRICAL CONDUCTORS. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 18, 1918. Serial No. 258,747. 11 Claims. (Cl. 285—26.)

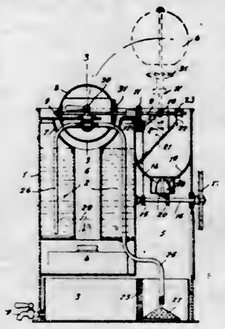


2. A device for connecting a helically-armored cable with a box, comprising a stuffing-box provided with means for securing it to said first box; a packing in said stuffing-box; a connecting member having a helical portion for screwing onto said helical armor; and means for securing said connecting member to said stuffing-box.

1,345,474. PLAITING-MACHINE. HERMAN BISCHOFF, New York, N. Y., assignor to Defiance Button Machine Co., New York, N. Y., a Corporation of New York. Filed Dec. 24, 1917. Serial No. 208,553. 28 Claims. (Cl. 223—44.)

1. In a plaiting machine, the combination with a reciprocatory plaiting blade, and material-feeding means, of means for effecting a variation in the stroke of said plaiting blade, means for effecting a variation in the motion of the material-feeding means, and means controllable at will for simultaneously shifting the plaiting blade feed means and the material feed means.

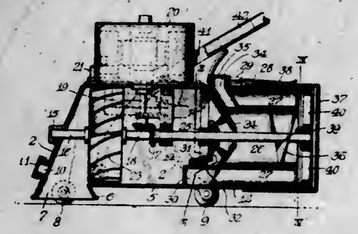
1,345,475. KNOCKDOWN CHRISTMAS TREE. CHARLES J. CARLSTRAND, Minneapolis, Minn. Filed June 9, 1919. Serial No. 302,732. 1 Claim. (Cl. 41—15.)



An artificial knock down Christmas tree comprising a base made up of interlocked members, a trunk that is square in cross section and is provided at its lower ends with a tenon adapted to fit a mortise in one of the base members, said trunk at different vertical points having horizontal groups of mortises in its flat sides, said trunk further having its corner edges provided with mortises arranged in horizontal groups between said first groups, arms or branch members having tenons on their inner ends for interlocking engagement with the mortises above noted in said trunk, block like candle sticks applied to the outer ends of said branches or arms.

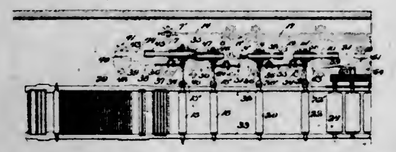
1,345,476. WATERPROOF PAPER AND PROCESS OF PRODUCING THE SAME. ALBERT L. CLAPP, Marblehead, Mass. Filed July 11, 1918. Serial No. 244,477. 11 Claims. (Cl. 92—21.)

1. A process of producing waterproof paper, which comprises mixing a soluble soap with fibrous paper stock and precipitating calcium soap therefrom in and throughout the stock, by the addition of calcium hydroxid to said stock, and then precipitating aluminum resinate in said stock.



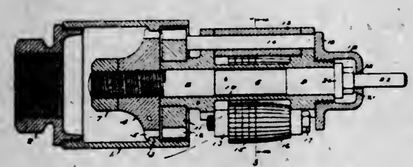
1,345,477. APPARATUS FOR ROASTING AND PREPARING COFFEE IN CUPS. VINCENZO CAPPELLI, Rome, Italy. Filed Jan. 2, 1919. Serial No. 269,352. 1 Claim. (Cl. 53—3.)

In a coffee making machine, an inclosing case, an oscillating roaster, a grinder, a water boiler, a brewer,



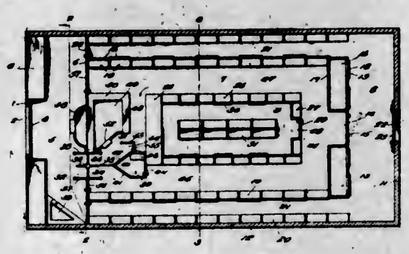
means for driving the roaster and the grinder from the same source of energy, a burner to heat the roaster and the water boiler, a tube to conduct the boiling water from the boiler to the brewer, and a device to bring the roaster into horizontal position above the grinder to discharge its contents into the grinder, this device comprising a spiral spring arranged to draw the roaster upward when the coffee has lost part of its weight during the roasting process, and means to regulate the tension of the spring.

1,345,478. VACUUM CLEANING APPARATUS. ELZA T. S. CLIFFE, Mansfield, Ohio. Filed Mar. 31, 1919. Serial No. 286,526. 7 Claims. (Cl. 183—8.)



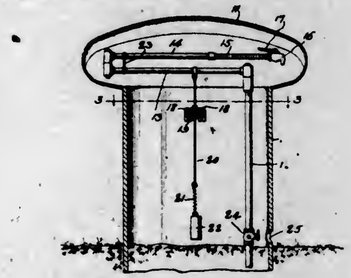
1. A vacuum cleaning apparatus comprising a casing adapted to receive dirt, a container slidable on said casing, a partition in said casing having an axial opening through which dirt passes from said casing to said container, and means adapted for compressing the dirt in said container, and means extending through the opening of said partition for operating said compressing means.

1,345,479. DRIVING MECHANISM FOR PAPER-MAKING MACHINES. BENJAMIN DENVER COPPAGE, Wilmington, Del. Filed Nov. 22, 1916. Serial No. 132,848. 16 Claims. (Cl. 74—21.)



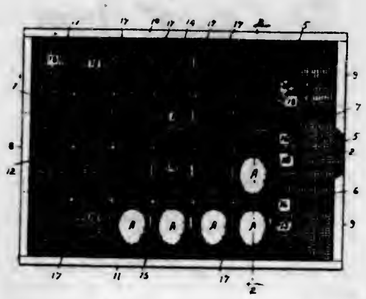
1. The combination in a paper-making machine, of heavy coöperating rotatable paper-engaging rolls, a manually controllable clutch having its driven element directly connected with one of said rolls, a fly-wheel rigidly connected with the driving element of the clutch, a driving shaft adapted to be connected with a prime mover, and a variable speed power connection between the driving shaft and the fly-wheel.

1,345,480. TUBE-CLEANER. PHILIP J. DARLINGTON, Hartford, Conn., assignor to The Roto Company, Hartford, Conn., a Corporation of Connecticut. Filed Apr. 30, 1919. Serial No. 293,591. 5 Claims. (Cl. 83—64.)



1. A tube cleaner having a tubular casing, a nozzle plate with turbine ports fastened in the casing near the front end, an axle with widely separated journal bearings and forward thrust collar screwed into the center of the nozzle plate, a sleeve mounted upon and supported near each end by the bearings on the axle, arms projecting laterally from near each end of the sleeve, pivot pins extending parallel with the axle between the respective arms, yokes mounted upon the pivot pins, studs extending parallel with the pivot pin and connecting the free ends of the yokes, cutters loosely mounted upon said studs, and a rotor mounted upon the rear end of the sleeve.

1,345,481. SELF-SERVING STORE. FREDERICK W. DAVIS, Dayton, Ohio. Filed Apr. 12, 1919. Serial No. 289,635. 16 Claims. (Cl. 211—8.)



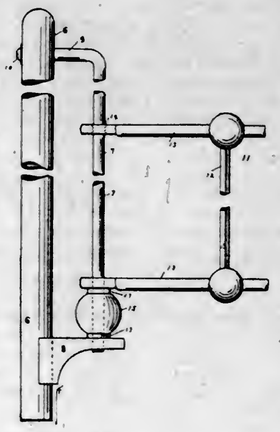
8. A store service arrangement comprising a salesroom, a main stockroom partly surrounding the salesroom, article storage cabinets or the like defining certain of the walls of the salesroom and extending between the salesroom and stockroom and accessible from both rooms, article storage means within the salesroom arranged in hollow formation, the inclosure defined by the last mentioned article storage means constituting an auxiliary stockroom, the last mentioned article storage means being accessible from both the salesroom and the auxiliary stockroom, an aisle extending continuously within the salesroom and having an entrance and an exit and flanked by the first and last mentioned article storage means, duplicate article storage means arranged within the main stockroom and located opposite certain of the first mentioned article storage means, and duplicate article storage means arranged within the auxiliary stockroom and located opposite certain of the last mentioned article storage means.

1,345,482. WATER-STATION. FREDERICK W. DAVIS, Dayton, Ohio. Filed June 26, 1919. Serial No. 306,884. 6 Claims. (Cl. 137—13.)

1. A device of the character described including a casing provided with a canopy having its intermediate portion spaced upwardly from the adjacent portion of the casing thereby forming openings on opposite sides of the casing, a water supply pipe, a discharge pipe in communication with said water supply pipe, means for controlling the flow of water through the discharge pipe, and means for normally holding the discharge pipe beneath said canopy.

1,345,483. EGG-TRAY. CHARLES S. EWRY, Portland, Ind. Filed Aug. 27, 1919. Serial No. 320,095. 2 Claims. (Cl. 119—44.)

1. An egg tray comprising in combination, a main frame, a screen bottom for said frame, a guard extending up from the main frame, an inner frame slidable only forward and backward in the main frame and resting on said screen bottom, partitions dividing the space in the inner frame into a plurality of individual egg compartments, an oval lining secured in each of said compartments and conforming to the shape of an egg and adapted to extend entirely around an egg and of a size only slightly greater than the egg to be located therein, the eggs located in their respective oval linings being supported on said screen bottom, and the limit of movement of the inner frame being such as to give the eggs located therein a half turn when the inner frame is moved to its limit either forward or backward, all substantially as shown and described.

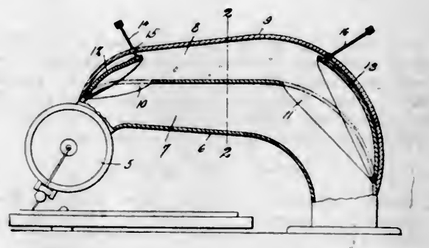


1,345,484. ELECTRICAL COIL. ARTHUR W. FISHER, Wilkinsburg, and CLARENCE S. SNAVELY, Pittsburgh, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Jan. 29, 1919. Serial No. 273,732. 4 Claims. (Cl. 175—21.)

1. The method of constructing a wire coil on a flangeless tube, which consists in attaching two flexible washers to the tube one at each end, winding the wire on the tube, and subsequently wrapping each washer over the adjacent end and cylindrical surface of the coil and attaching it to the cylindrical surface of the coil.

1,345,485. CUSHION FOR SLIDING-SIDE CRIBS. WILLIAM B. FOSTER, Utica, N. Y., assignor to Foster Brothers Manufacturing Company, Utica, N. Y., a Corporation. Filed Apr. 16, 1919. Serial No. 290,519. 2 Claims. (Cl. 5—58.)

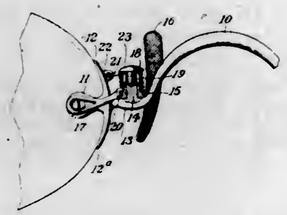
1. A cushioning device adapted to be interposed between approaching members, consisting of a hollow, air-filled, collapsible and resilient member having two oppositely disposed openings and a guide rod extending through said openings and holding said collapsible member in position but allowing contraction and expansion thereof lengthwise of said rod, said hollow member fitting said guide rod so as to allow the gradual escape of air therefrom as the member is compressed and to allow



the gradual inflow of air thereto when the weight is removed and the cushion expands.

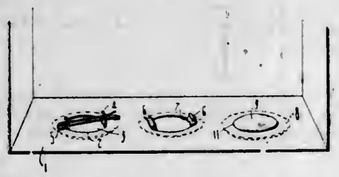
1,345,486. KEY-MOUNT FOR WIND MUSICAL INSTRUMENTS. EDWARD J. GULICK, Elkhart, Ind., assignor to C. G. Conn, Ltd., Elkhart, Ind., a Corporation of Indiana. Filed Aug. 21, 1918. Serial No. 250,769. 3 Claims. (Cl. 84—7.)

1. In a musical instrument of the class described, a key adapted for pivotal movement; a transversely apertured and furcated key bearing member or standard, the furcation whereof is normally contractile; a bearing pin adjustably mounted within the aperture of said bearing standard, the adjustment of said pin being maintained by the contractile force exerted thereon by the prongs of the furcated bearing standard; and a cone and cup bearing connection between said key and said pin.



1,345,487. TONE-ARM FOR TALKING-MACHINES. ERLE H. HAND, Baltimore, Md. Filed Nov. 5, 1919. Serial No. 335,835. 1 Claim. (Cl. 274—23.)

A talking machine tone arm carrying a sound box and having main and auxiliary sound passages, the wall of



the main passage having ports establishing communication between said passage and the auxiliary passage, one of the ports being at the end of the tone arm carrying the sound box, and the other port being located at the outlet end of the tone arm, and closures for the ports adapted to seat therein to close the same, and when thus seated said closures forming continuations of the wall of the main passage in which the ports are located, to maintain an uninterrupted continuity of said wall, and said closures being operable to swing into the auxiliary passage and open the ports and act as sound wave deflectors, the closure for the port adjacent to the sound box end of the tone arm opening away from the direction of the sound waves and deflecting into the auxiliary passage, and the other closure closing transversely of the sound waves and facing said waves when open for deflecting the same from the auxiliary passage back into the main passage.

1,345,488. FINGER-PIECE MOUNTING FOR EYEGLASSES. CHARLES M. HAYNES, Chillicothe, Ohio, assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Oct. 3, 1914. Serial No. 864,837. 4 Claims. (Cl. 88—50.)

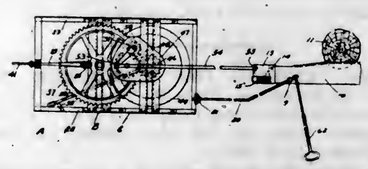
2. Lens connecting means, a headless pivot post thereon, a fingerpiece lever having a tubular sleeve surrounding the pivot post, and a coiled spring surrounding the sleeve having one end anchored on the lever and the other end anchored on the lens holding means.

1,345,489. HOLE-CLOSURE. BRYSON DEXTER HORTON, Detroit, Mich. Filed Apr. 13, 1915. Serial No. 20,983. 5 Claims. (Cl. 247—7.)

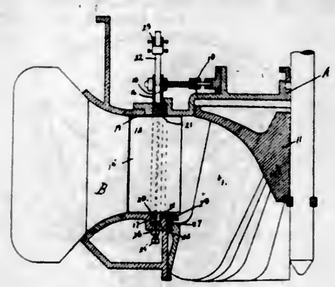
4. A closure for an aperture in the wall of the switch casing comprising a sheet metal disk having an upstruck portion adapted to pass through the aperture from one side thereof, and means in engagement with said portion and adapted to engage the wall from the other side, said means comprising a cotter pin.

1,345,490. PUZZLE. JOHN E. HOY, Midland, Mich., assignor of one-half to Roland P. Place, Midland, Mich. Filed Dec. 29, 1919. Serial No. 347,917. 2 Claims. (Cl. 46—41.)

1. A puzzle consisting of a thin friable sheet of wood having its grain at substantially right angles to its surface so that it may readily be broken into a number of pieces, said sheet having a design on one side to facilitate reassembling the pieces in their original positions in the sheet after the pieces have been intermixed.

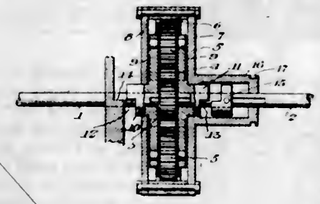


1,345,491. PUMP. GRANVILLE ALLISON HUMASON, Houston, Tex., assignor of one-half to John W. Parker, Houston, Tex. Filed Oct. 5, 1918. Serial No. 256,983. 3 Claims. (Cl. 103—54.)



1. In a pump, the combination of a hollow pump rod, a hollow piston head attached thereto, four piston rods upon said piston head, two of said rods being hollow, a cylinder having four chambers in which the four piston rods reciprocate, valves in the two hollow piston rods, a valve chamber below said piston chamber and an upwardly opening valve in said valve chamber.

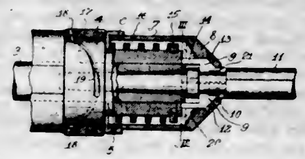
1,345,492. TREE-SAWING MACHINE. ROBIN H. IRVINE, Bay City, Mich. Filed June 30, 1917. Serial No. 177,917. 7 Claims. (Cl. 143—63.)



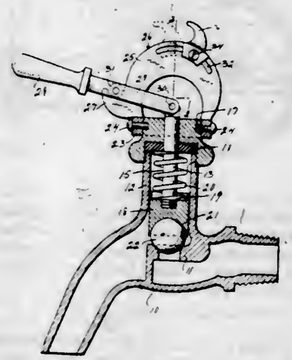
1. The combination of a head block having a slot and provided therein with a socket intersected by the slot, a saw pivoted in the slot and movable through a portion of the socket and a coiled spring mounted in the socket and arranged to bear against the saw and urge the same outwardly.

1,345,493. TURBINE WATER-WHEEL. ERIC ANTON JACOBSON, Lindsay, Ontario, Canada. Filed Apr. 8, 1919. Serial No. 288,536. 5 Claims. (Cl. 253—122.)

1. In a turbine water wheel comprising a casing, a water chamber, a passageway having adjustably positioned guide vanes therein, a runner suitably positioned within said passageway, said runner and said passageway being so constructed that said runner may be removed after removing the top wall without dismantling said passageway, and a removable non-rotatable guide ring between said passageway and said runner.



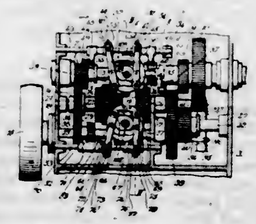
1,345,494. TRANSMISSION-GEARING. ANDREW J. KARL and BENJAMIN FRANKLIN WEBB, Sistersville, W. Va. Filed Feb. 28, 1919. Serial No. 279,688. 1 Claim. (Cl. 74—34.)



In combination with the driving and driven shafts arranged in end to end relation, a pinion carrier formed as a pair of disks secured in spaced relation and having planetary pinions journaled therebetween, said pinion carrier being freely revoluble and slidable upon said shaft at their meeting ends, hub portions formed on said disks and cut away to provide clutch members, a casing surrounding said pinion carrier and slidable therewith with respect to the shafts, an extension on said casing splined upon the driven shaft and formed for engagement by a shifting lever, a center gear confined between said disks and meshing with the planetary gears and splined upon the driving shaft, a ring gear on the inner periphery of said casing meshing with said planetary gears, a clutch member secured upon the driven shaft and engageable by the clutch member on the hub at one side of the pinion carrier when said casing and pinion carrier are shifted in one direction, and a stationary member engageable by the clutch members on the hub at the other side of the pinion carrier when the casing and pinion carrier are shifted in the other direction.

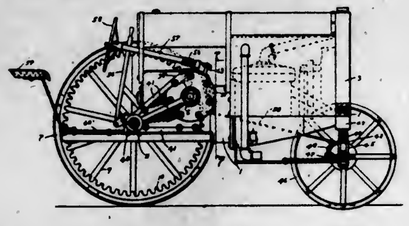
1,345,495. PNEUMATIC TOOL. MICHAEL D. KARLES, Delray, Mich. Filed Oct. 6, 1919. Serial No. 329,180. 2 Claims. (Cl. 121—32.)

1. The combination with a pneumatic tool barrel having a tappet therein and the outer end of said barrel provided with shoulders, of a cap slidable on one of said shoulders, a sleeve connected to said cap and having a conical head, clutch jaws in the head of said sleeve adapted to retain a tool in engagement with said tappet, a spring on said shoulder engaging said cap and adapted to hold said sleeve in a retracted position, and means on another shoulder of said tool barrel adapted for shifting said sleeve to release said clutch jaws.



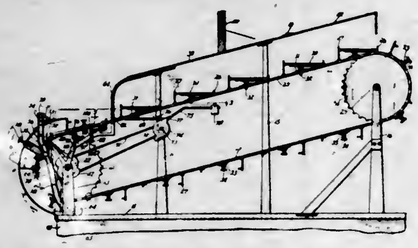
1,345,496. ADJUSTABLE SPIGOT OR FAUCET. JOHN M. KEELER, New Brighton, Pa., assignor of one-half to Charles R. Welsh, New Brighton, Pa. Filed Nov. 5, 1919. Serial No. 335,886. 16 Claims. (Cl. 251—132.)

7. A faucet having a body formed with an upwardly extending chamber and with a seat below said chamber, a bonnet engaging the top of said chamber, a valve stem extending through the bonnet and carrying a valve at its lower end coacting with the seat, a compression spring disposed in the chamber and urging the valve to a closed position, a vertically disposed cam mounted upon the bonnet and arching over the stem, the cam having an edge eccentric to the upper end of the stem, and a handle pivoted to the stem for movement in a vertical plane and having a member thereon engaging the edge face of the cam.



1,345,497. TOOTHED CHANGE-GEAR FOR DRIVING METAL-WORKING MACHINES. RICHARD A. KEMPIN, Rorschach, Switzerland. Filed June 11, 1919. Serial No. 303,396. 6 Claims. (Cl. 74—58.)

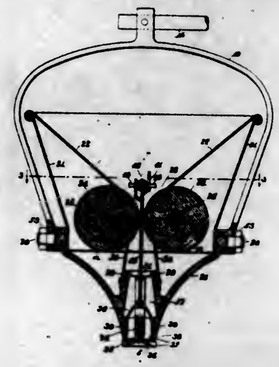
1. A toothed change-gear of the character described, comprising a driving shaft, a counter-member, means



adapted to transmit the rotary movement of the driving shaft to said member, a spindle for fixing the cutting tool, means adapted to directly transmit the rotary movement of said counter-member to the spindle in order to rotate the latter at high speeds, a member loose on the spindle, means adapted to transmit the rotary movement of said counter-member to the member loose on the spindle, and gearing down means adapted to transmit the rotary movement imparted to the member loose on the spindle to the latter in order to rotate it at different speeds which are all lower than those imparted to the spindle when the latter receives its drive directly from the counter-member.

1,345,498. CONVERTIBLE CULTIVATOR-TRACTOR. ELMER B. MCCARTNEY, Minneapolis, Minn., assignor to Toro Motor Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Oct. 31, 1919. Serial No. 334,871. 7 Claims. (Cl. 180—1.)

4. A convertible tractor comprising a frame, a power unit including power generating means, transmission and differential gearing and traction means in combination with interchangeable sets of supporting members adapted to be demountably secured to said frame to provide either a cultivator form or a traction form.

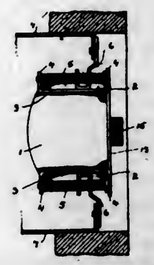


1,345,499. COIN-CONTROLLED VENDING-MACHINE. JOHN L. MEYFARTH, Chicago, Ill. Filed Feb. 15, 1918. Serial No. 217,320. 22 Claims. (Cl. 211—8.)

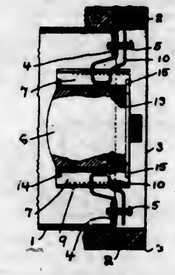
1. In a machine of the class described, in combination, a flexible food conveying means, means for stably placing plates of food thereon, a locking mechanism for said conveying means to prevent movement thereof, and a coin operated means actuated to unlock said mechanism whereby said conveying means will be permitted to travel varying distances to deliver one plate of food.

1,345,500. DOUGH-DROPPER FOR FRYING DOUGHNUTS. LEON MITCHELL, Dorchester, Mass. Filed Jan. 16, 1920. Serial No. 353,359. 15 Claims. (Cl. 107—14.)

1. In a device of the class described, a supported casing having an annular discharge opening in the bottom; an open bottomed dough-receiving hopper within the top thereof open at the bottom; feed rollers within said casing beneath said hopper and parallel with the opening in the bottom of said hopper adapted to eject dough through said discharge opening; means for deflecting the dough outwardly as it passes from said opening; and reciprocating means within said casing beneath said feed rollers whereby portions of said dough may be separated in annular form from the body of the dough ejected through said opening.

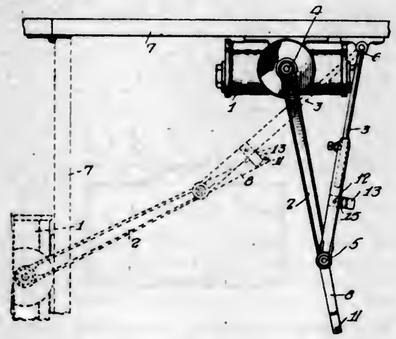


1,345,501. LATTICE-TRUSS. DENNIS W. MORRISON, Indiana Harbor, Ind. Filed Feb. 1, 1917. Serial No. 145,963. 1 Claim. (Cl. 108—23.)



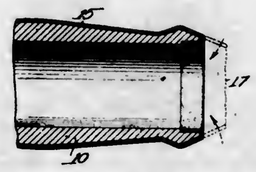
A truss comprising in combination a straight chord, an arched member secured thereto, diagonal braces extending from the center of said member to the end portions of the chord, and lattice members in each half of the truss, the members in each half crossing each other at right angles and the adjacent diagonal brace at an angle of forty-five degrees, whereby one set of members is inclined to the chord at an angle of less than forty-five degrees and the other set is inclined to the chord at an angle of more than forty-five degrees, the lattice members in one half of the truss converging toward the lattice members in the other half, the first set of members converging upwardly and the other set converging downwardly.

1,345,502. SWITCH OR RECEPTACLE BOX. WILLIAM J. NEWTON, Lynbrook, N. Y., assignor, by mesne assignments, to John G. Livingston, Woodmere, Long Island, N. Y. Filed Nov. 23, 1916. Serial No. 132,955. 11 Claims. (Cl. 247—19.)



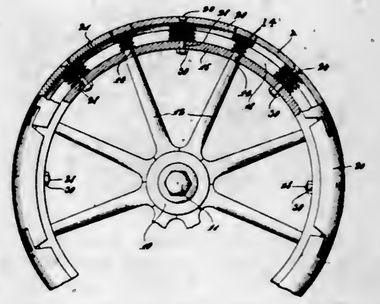
1. In a device of the kind described, a lug having a flat apertured end, and a U shaped apertured end, said flat end extending substantially parallel to the legs of the U.

1,345,503. SWITCH OR RECEPTACLE BOX. WILLIAM J. NEWTON, Lynbrook, N. Y., assignor, by mesne assignments, to John G. Livingston, Woodmere, Long Island, N. Y. Filed Dec. 5, 1916. Serial No. 135,135. 21 Claims. (Cl. 247—19.)



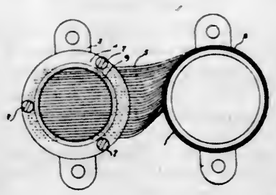
21. In a device of the kind described, a lug, a channel, within which said lug is adapted to slide, a fixed stop at the lower end of the channel and a removable cover projecting over the upper end of the channel.

1,345,504. DOOR-CLOSER. LEWIS C. NORTON, Chicago, Ill. Filed Mar. 18, 1918. Serial No. 223,148. 3 Claims. (Cl. 189—50.)



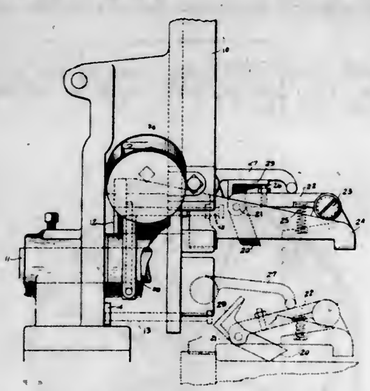
1. The combination with a door closer, including a pair of arms pivotally connected together, one of which is pivotally connected to the door frame and the other of which is pivotally connected to the door, means tending to move said arms from substantial alinement when the door is open toward substantial parallelism to close the door, one of said arms extending beyond the pivotal connection, and a fusible latch connecting said extension with the other arm to hold said arms in substantial alinement to prevent the door from closing.

1,345,505. HANDLE-GRIP. CHARLES A. PERSONS, Worcester, Mass. Filed Oct. 19, 1918. Serial No. 258,804. 1 Claim. (Cl. 208—126.)



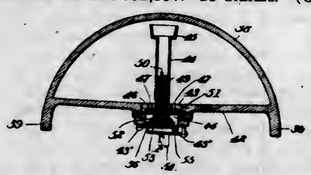
A handle grip comprising a shell having a cylindrical recess therein with one closed and one open end, said recess being annularly enlarged adjacent its open end, and a tubular casing for said shell formed of flexible material and closed at one end only, the opposite open end of said casing being folded inward and backward around the open end of said shell and being positioned in the annular recess in the open end thereof.

1,345,506. VEHICLE-WHEEL. NICK RENNER, Defiance, Ohio. Filed Nov. 16, 1918. Serial No. 262,784. 1 Claim. (Cl. 152—8.)



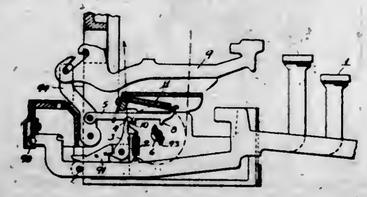
In a vehicle wheel having a plurality of flanged segmental tread elements circumjacent to the rim thereof, the combination of a hub having spokes radiating therefrom provided with shouldered outer ends, with a rigid flanged rim secured at the ends of said spokes, coiled compression springs secured to the shouldered outer ends of said spokes and resting against the inner faces of the tread elements, bolts having conical heads set flush with the periphery of the tread and passing through openings formed in said rim between each pair of spokes, nuts at the inner ends of said bolts for securing them in position, springs surrounding said bolts between said tread and rim, substantially as described and for the purpose set forth.

1,345,507. CHARGE-FORMING DEVICE FOR INTERNAL-COMBUSTION ENGINES. GEORGE A. RICHARDS, Pueblo, Colo. Filed Apr. 11, 1919. Serial No. 289,450. 2 Claims. (Cl. 123—122.)



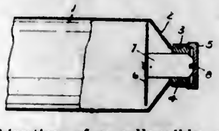
1. A device of the character described, including two annular rings so joined together as to hold rigidly, wires of high conductivity of heat, said wires extending across openings in said annular rings and forming a screen, said rings having extensions on the two outer faces thereof of proper size to fit into and between the intake manifold and intake port of an explosion or combustion engine, and method of removably securing same in this position between intake manifold and intake port of engine.

1,345,508. WEFT-DETECTING MECHANISM. EFFA H. RYON, Waltham, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 15, 1919. Serial No. 317,821. 12 Claims. (Cl. 139—85.)



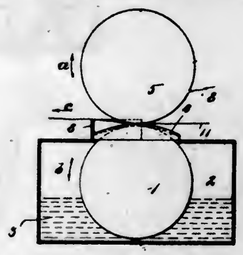
2. In a loom, a weft detector, a transferrer, and a pneumatic device actuated by said transferrer to give said detector a detecting movement.

1,345,509. FIRE-EXTINGUISHING DEVICE FOR FILM-CABINETS. EDWARD W. SALMON, Jr., Baltimore, Md., assignor to Hull, Salmon, Mfg. Co., Inc., Baltimore, Md. Filed June 19, 1916, Serial No. 104,436. Renewed Jan. 16, 1920. Serial No. 352,337. 13 Claims. (Cl. 169—2.)



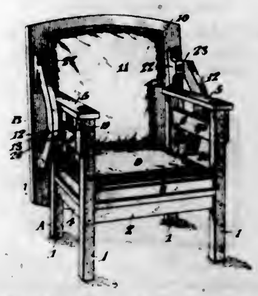
6. A film cabinet comprising spaced walls, formed of fire proof material, a closure for the cabinet, there being an opening formed in the closure, a cap mounted on the closure above said opening, a plug carried by the cap and projecting through said opening, said cap being adapted to contain a fire extinguishing material, and means carried by that portion of the plug which projects through the closure and adapted to be acted upon by heat to establish communication between the cap and the cabinet.

1,345,510. TYPEWRITING-MACHINE. CARL SCHLÜNS, Mehlis, Thuringia, Germany. Filed Nov. 9, 1915, Serial No. 60,584. Renewed Nov. 26, 1919. Serial No. 340,803. 7 Claims. (Cl. 197—17.)



1. In a typewriting machine having a type bar, a key-lever and a prime mover; an intermediary member positively connected with said type bar, operating means connected with said prime mover for moving said intermediary member in one longitudinal direction and other means for moving said member in the opposite longitudinal direction, positioning means actuated by the key-lever for placing the intermediary member in position for engagement with said operating means, said positioning means immediately releasing said member upon the latter moving in longitudinal direction, said positioning means being held yieldingly in operative position.

1,345,511. COLLAPSIBLE CONTAINER. RALPH W. SHULTERS, Battle Creek, Mich. Filed Feb. 11, 1920. Serial No. 357,777. 4 Claims. (Cl. 221—60.)



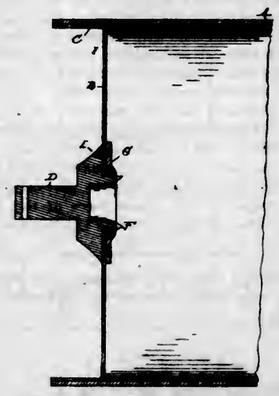
1. The combination of a collapsible container having a conical portion at its discharge end and a threaded neck with a discharge opening in the end thereof, a cap threaded to removably engage said neck, and a disk disposed within said container and adapted to seat on the conical portion thereof, said disk having an arm loosely disposed through said discharge opening to be engaged by said cap and unseated thereby, said arm being provided with a lug at its outer end engaging said neck to limit the inward movement of the disk.

1,345,512. CEMENT-APPLYING MACHINE. ABRAHAM SMOLKER, Chelsea, Mass. Filed Jan. 13, 1920. Serial No. 351,089. 6 Claims. (Cl. 91—51.)

1. In a cementing machine of the character described, in combination, a tank having a slotted top; a cement conveying roll vertically and rotatively mounted therein and extending through the top thereof; and a combined cement guard and work support attached to the top of the tank adjacent to and partly covering the top of the conveying roll.

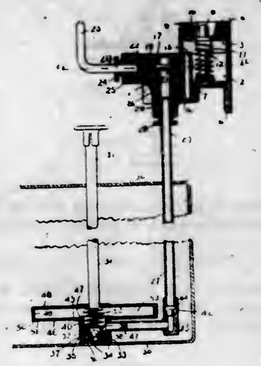
1,345,513. CONVERTIBLE CHAIR. JEROME J. SOUTH, Nashville, Tenn. Filed Mar. 30, 1917. Serial No. 158,662. 18 Claims. (Cl. 155—6.)

1. A convertible chair comprising a stool part with upstanding legs having arm rests at their upper ends,



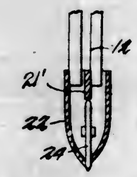
and rails below the arm rests, a back portion also constituting a table top, said back portion having brackets on opposite sides fast to one face thereof, hinge connections between the brackets and the rails located nearer to one end of the rails than to the other and also to one side of the mid portion of the brackets, and stop means at a higher point than the hinge connections.

1,345,514. VENTILATOR. JOHN STEPIN, Derby, Conn. Filed June 19, 1919. Serial No. 305,449. 1 Claim. (Cl. 53—8.)



In a ventilator of the character described, a circular cover plate having a raised marginal border and a flange extended therefrom adapted to engage with the upper portion of a vessel, said cover plate having a plurality of radial openings formed therein, a shutter plate engageable with said cover plate and having a plurality of radial openings coincident with the openings in said cover plate, pivoted links for holding the cover and shutter plates in engagement, pins on said cover plate entering elongated slots in said shutter plates, an actuating knob on said shutter plate for actuating the same, said shutter plate recessed in its lower side, springs secured in the bottoms of the recesses of said shutter plate, said cover plate recessed in its upper face for the reception of the links for holding the shutter plate in its adjusted positions, substantially as described.

1,345,515. LAND-ROLLER. FRANK H. STONER, Monroe, Mich., assignor to Wilder-Strong Implement Company, Monroe, Mich., a Corporation of Michigan. Filed Feb. 28, 1918. Serial No. 219,548. 3 Claims. (Cl. 64—41.)



1. In a land-roller, the combination with a cylindrical shell, of a head therefor formed of relatively light-gage sheet-metal, a trunnion at the center of said head having an enlarged hub and an annular inwardly-extending flange passing through an aperture in said head, and a reinforcing ring on the opposite side of said head engaging said flange, said flange being peened over said reinforcing ring.

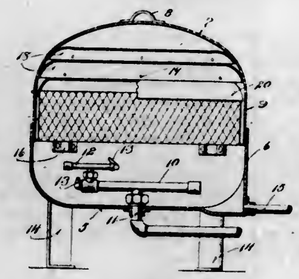
1,345,516. CARBURETER. HERBERT L. THOMPSON, Elgin, Ill., assignor to Elgin Gas Motor Company, Elgin, Ill., a Corporation of Illinois. Filed Apr. 15, 1918. Serial No. 228,520. 2 Claims. (Cl. 123—180.)

1. A device for feeding fuel to an internal combustion engine comprising a carbureter having a mixing chamber and a fuel well having an opening into said mixing chamber above the bottom of the latter; a fuel tank below the carbureter; a feed tube connecting the fuel tank with the fuel well; a priming cup open to the atmosphere outside said carbureter and communicating with said fuel well, the top of the priming cup being below the opening of said well into said mixing chamber; and manually operable means for forcing fuel through the feed tube into the fuel well and the priming cup.

1,345,517. GRAIN-DRILL. ALVIN M. THREEWITS, Centerville, Ind. Filed June 28, 1919, Serial No. 307,275. Renewed May 19, 1920. Serial No. 382,643. 3 Claims. (Cl. 111—79.)

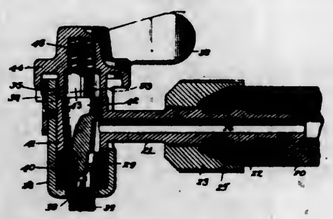
1. A seed drill, a hopper, discharge tubes depending therefrom, a drill boot receiving the ends of the tubes, a partition in said boot and disposed between said discharge tubes, and a disk rotatably mounted in said boot directly below said partition, the disk being projected through the boot for dividing the same into two independent passage ways.

1,345,518. VALVE. JOHN VAN BRUNT, New York, N. Y., assignor to Combustion Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 4, 1919. Serial No. 280,536. 3 Claims. (Cl. 251—4.)



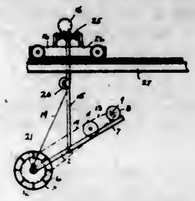
1. An adjustable throttle valve comprising a casing having a cylindrical bore, an inlet port and a discharge port on opposite sides thereof and end caps, a cylindrical plug longitudinally movable in said bore and having a passage extending diametrically through the same and adapted to register with said ports as said plug is revolved, means for

adjusting said plug axially so as to move said passage more or less out of the transverse plane passing through said



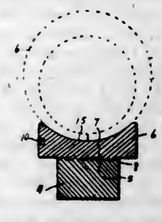
ports and holding it in such adjusted position, and means for rotating said plug when so adjusted and held.

1,345,519. CASING FOR DISH-WASHING MACHINES. JOHN VAUDREUIL, Milwaukee, Wis. Filed July 7, 1919. Serial No. 309,118. 2 Claims. (Cl. 141—9.)



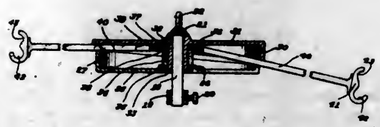
1. A dish-washing machine including a lower casing section, brackets on the inner faces of the upper portions of the walls of the lower casing section, an upper casing section having its walls adapted to fit within the upper portions of the walls of the lower section and seat on said brackets, an article supporting member removably seated on said brackets, and means for discharging fluid jets in the casing against articles carried in said member.

1,345,520. COMPRESSED-AIR-PIPE COUPLING. WILLIAM O. VIVARTTAS, Weehawken, N. J. Filed Feb. 10, 1920. Serial No. 357,737. 10 Claims. (Cl. 284—17.)



1. A coupling as characterized comprising, a head having a delivery air passage therethrough and adapted for service attachment to an air supply pipe; a container cup for said head; a resilient tubular filler permanently disposed in said cup in operative relation with said head; a cap rotatively mounted on said cup for moving said head to compress said filler; and means operatively uniting said cap and cup for moving said cap lengthwise of said cup when said cap is rotated.

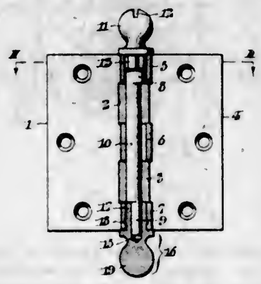
1,345,521. SAND-CUTTING MACHINE. HOWARD L. WADSWORTH, Cleveland, Ohio. Filed Nov. 17, 1919. Serial No. 338,656. 4 Claims. (Cl. 259—144.)



1. A sand cutting machine comprising a pair of traction wheels, a frame pivotally mounted thereon, a sand cutting cylinder mounted on said frame on one side of said wheels, and means connected to drive said cylinder, said means being mounted on said frame on the other side of said wheels from said cylinder, and assisting to balance said cylinder.

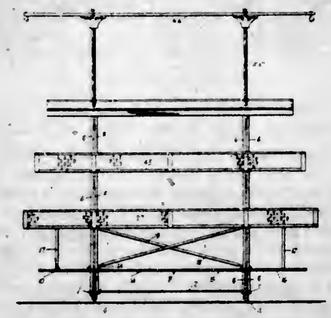
1,345,522. TIRE-RETAINING DEMOUNTABLE RIM. JOSEPH WALKER, Canonsburg, Pa. Filed Oct. 13, 1919. Serial No. 330,385. 1 Claim. (Cl. 301—15.)

In a tire retaining demountable rim, the combination with a felly having its outer cylindrical surface threaded concentric with the center of the wheel from one side face of the felly to the other, of a split rim, the inner cylindrical surface of which being threaded concentric with the wheel from one split end to the other and adapted to engage the threads of the felly, said split ends of the rim acting to permit the rim to expand when fitting the rim to the felly, whereby the spring action of the rim will cause a relative pressure of the rim on the felly, to insure partial contact between the connecting threads of the rim and the felly, the adjacent split ends of the rim having recesses of right angle or rectangular shape, the longer faces of the recesses being concentric with the rim, the shorter faces of the recesses constituting radial shoulders, said rim having channels for the reception of the tire and radial bolts threaded through the felly and engaging the radial shoulders of said recesses to prevent excessive binding between the threaded connections to retain the rim in position on the felly against relative movement, the ends of the bolts engaging the longer faces of the recesses to additionally prevent binding between the threaded surfaces.



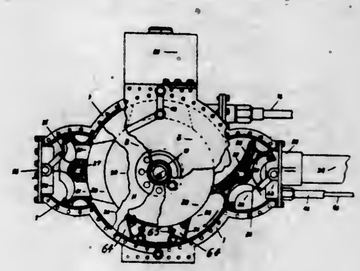
1,345,523. DRIER. STANLEY WASZKIEWICZ, Passaic, N. J. Filed Aug. 15, 1919. Serial No. 317,661. 1 Claim. (Cl. 68—34.)

In a wash hanger, the combination with a support extending diagonally upward from the wall of the building, a cam fixed upon said support, said cam having a diagonal



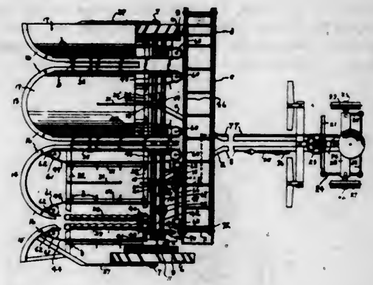
groove in the peripheral face thereof, a hub rotatably mounted interiorly of said cam, a plurality of arms radiating from said hub engageable in the groove of said cam whereby they are alternately raised and lowered as they are rotated, a pair of spooked pulleys pivotally mounted adjacent to a window in said wall, recesses formed at the ends of said spokes and the ends of said arms adapted to receive a cord.

1,345,524. HINGE. JOHN HOWARD WAY, Philadelphia, Pa. Filed May 9, 1919. Serial No. 295,966. 1 Claim. (Cl. 16—107.)



In a hinge, the combination of a pair of leaves formed with interfitting pivot knuckles; a coöperative pintle provided at one end with a head; a socketed member for sustaining the opposite end of the pintle, said member being provided with a peripheral shoulder serviceable as a retainer in coöperation with an internal groove in one of the hinge knuckles, and formed with a tapering approach functional, during assembling, in expanding the knuckle until the shoulder finds its seat within the groove.

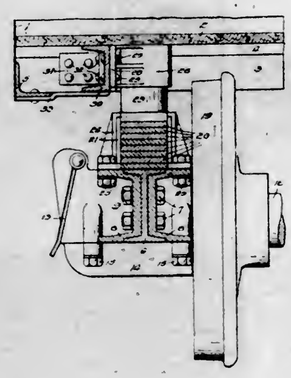
1,345,525. DISPLAY-RACK. BENEDICT E. WILLETT, near Dayton, Ohio. Filed July 15, 1919. Serial No. 310,990. 16 Claims. (Cl. 211—14.)



1. In a display rack, a pair of horizontal base members, a pair of vertically-disposed channel members secured to the middle portion of each base member, a horizontal bracing bar projecting through said channel members at right angles to said horizontal base members, an arch-shaped member secured to each base member, and whose upper portion projects between the channel members secured to the latter, above the horizontal bracing bar, and bowed basket holding bands secured between the arch-shaped members and the horizontal bracing bar.

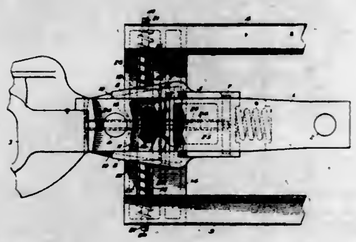
1,345,526. ANNULAR STEAM ROTARY MOTOR. LEONARD ADAMS, Buffalo, N. Y. Filed Oct. 28, 1918. Serial No. 260,031. 14 Claims. (Cl. 121—80.)

1. In combination with an annular steam rotary motor having a suitable casing, two annular steam rotary motor rotors, each having a pair of steam-tight combination valve lift and steam obstructions arranged diametrically opposite each other and suitably fastened, together with a hollow shaft having a solid ring securely fastened onto it and whereon are suitably fastened said rotors in such a manner so that the pair of combination valve lift and steam obstructions on each rotor are positioned diametrically perpendicular to each other, all substantially as shown, described and for the purpose set forth.



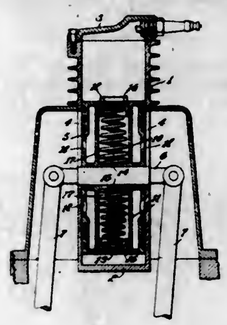
1,345,527. CORN HARVESTER. EUGENE G. BARKER, Glenwood, Iowa. Filed Aug. 30, 1918. Serial No. 252,039. 1 Claim. (Cl. 56—106.)

In a harvester, a main frame, wheels on which the frame is supported, a supplementary frame hingedly mounted on the main frame, U-shaped strips placed side by side on the supplementary frame with the closed curved portions disposed forwardly and downwardly to provide flaring jaws and with the sides of the strips separated to provide parallel channels to receive the stalks, pairs of shafts geared together for rotation in opposite directions journaled at their forward ends in the supplementary frame at opposite sides of the channels and having spiral ribs projecting laterally into the channels to engage the stalks, a bearing block on the supplementary frame adapted to receive the upper rear end of one of the shafts and having a guide space cut-away adjacent the bearing portion thereof, said block also having a transverse open



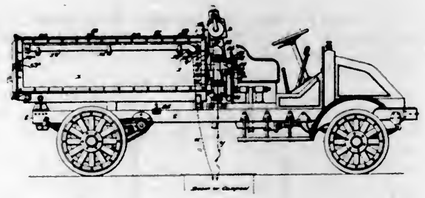
ing beneath the bearing portion, a bearing for the upper rear end of the companion shaft slidable transversely on said guide space, a rod slidable through the opening in the bearing block and having an upturned end to engage the second bearing, and resilient means associated with said rod.

1,345,528. STREET-CAR TRUCK. THEODORE A. BREWSTER, St. Louis, Mo. Filed Sept. 2, 1919. Serial No. 321,011. 2 Claims. (Cl. 105—213.)



1. In combination with the underframe of a car, a truck, a telescopic four point drive connection between the truck frame and the underframe, and a buffer spring carried by each drive connection.

1,345,529. COUPLING-CENTERING MECHANISM. HARRY C. BUHOUP, Chicago, Ill., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 3, 1920. Serial No. 363,002. 5 Claims. (Cl. 213—42.)



1. In mechanism of the character indicated, the combination with a coupler stem that is adapted to be pivotally connected to a car, of a coupler head, means for pivotally connecting said head and stem, means slidably mounted on said stem for centering said head with respect to said stem, and means engaging opposite sides of said stem beneath said slidably mounted means for centering said stem with respect to the car.

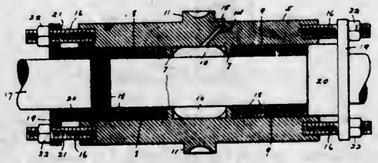
1,345,530. INTERNAL-COMBUSTION ENGINE. LEE ROYAL CARPENTER, Cleveland, Ohio. Filed Oct. 28, 1918. Serial No. 259,968. 6 Claims. (Cl. 123—57.)

1. In an internal combustion engine, a piston having a cylindrical well opening through its working end, a secondary piston in said well, and yielding means coöperating with said secondary piston and opposing its inward movement, said well being formed beneath its piston with a breather aperture communicating with the outer air.

1,345,531. PORTABLE PUMPING APPARATUS. ERNEST ORSON CARTWRIGHT, Springfield, Ohio, assignor to Charles F. Gardner, Springfield, Ohio. Filed Oct. 25, 1918. Serial No. 259,668. 17 Claims. (Cl. 214—65.)

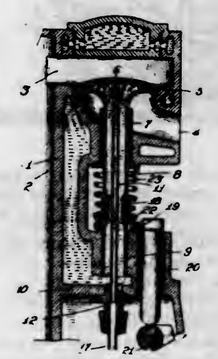
1. In apparatus of the class described, a truck, a tank mounted on said truck, means for raising and lowering an end of said tank to dump the contents, a pump on the vehicle adjacent to the end of the tank which is adapted to be raised and lowered, an ejector carried by said truck and relatively fixed as to position, said ejector having its ejecting-nozzle entrance in communication with the outlet of the pump and having its suction entrance adapted to be put into communication with the sump to be cleaned out, a discharge pipe for delivering the material from the ejector outlet into the tank, said pipe and said ejector having a separable-section joint adapted to effect a water tight connection; when the tank is down and to be automatically disconnected, when the tank is raised, a suction pipe carried by the tank and a separable-section coupling between said suction pipe and the inlet of said pump, which coupling is also adapted to effect a fluid tight joint, when the tank is down and to be automatically disconnected, when the tank is elevated.

1,345,532. DRAG FOR PLANTERS. JOSEPH CASS, Delaware township, Delaware county, Iowa. Filed Sept. 13, 1919. Serial No. 323,522. 4 Claims. (Cl. 55—1.)



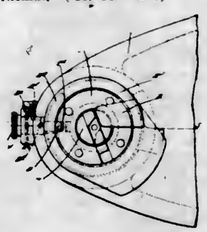
1. A drag for a planter or other vehicle, comprising a V-shaped bar having its vertex bent upwardly, and a draft-connection connected adjustably to the extremities of the members of said bar for vertical adjustment thereof.

1,345,533. PARACHUTE. JOSEPH CHYTRACEK, Clifton Mills, W. Va. Filed Mar. 12, 1920. Serial No. 365,234. 2 Claims. (Cl. 244—21.)



1. A parachute comprising an inflated air bag closed at its upper end and open at its bottom end, a ring for maintaining the bottom of the bag open at all times, inwardly extending radial springs carried by said ring and including upper and lower arms, a sleeve arranged centrally within the open end of the air bag and rigidly fastened to the inner ends of the lower spring arms, a second sleeve telescoping the first and pivotally connected with the inner ends of the upper spring arms, and an attaching harness connected with the second sleeve.

1,345,534. LINE-SHAFT BEARING. JOHN T. CRANE, Maywood, Ill. Filed Feb. 20, 1919. Serial No. 278,202. 5 Claims. (Cl. 64—24.)

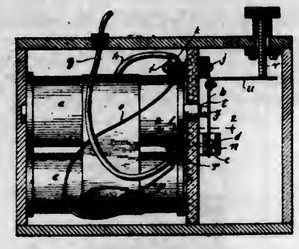


2. A bearing for rotating shafting comprising a casing having a bore therethrough for the passage of a shaft, said bore being of greater diameter than the shaft, said bore being enlarged to provide a chamber, lubricant containing means disposed intermediate the ends of said chamber, compressible packing disposed within said chamber upon opposite sides of said lubricant containing means, and means for compressing said packing to contact and form a bearing for a shaft passing through said bore whereby said packing provides the sole contacting means for the shaft.

1,345,535. VALVE AND MEANS FOR COOLING THE SAME. ARTHUR O. DADY, New York, N. Y., assignor to Pfanstiehl Company, Incorporated, North Chicago, Ill., a Corporation of New York. Filed Jan. 2, 1918. Serial No. 209,896. 2 Claims. (Cl. 123—177.)

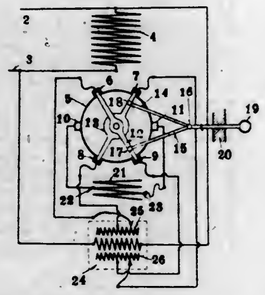
1. An internal combustion engine comprising the combination with a cylinder having a water jacket and a port provided with a valve seat, of a reciprocable valve coacting with said seat comprising a hollow stem having a hollow head at one end and being open at the other end, a bearing for the open end of said stem extending through said water jacket and communicating therewith, means for discharging water into said valve head comprising a tube extending through said water jacket and into said valve stem, and means for supplying water to said tube comprising a radiator, connections between said radiator and said water jacket, and a pump for withdrawing water from said radiator and discharging it through said tube.

1,345,536. ORDNANCE BREECH MECHANISM. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, assignors to Vickers Limited, Westminster, England. Filed July 10, 1918. Serial No. 244,335. 7 Claims. (Cl. 89—27.)



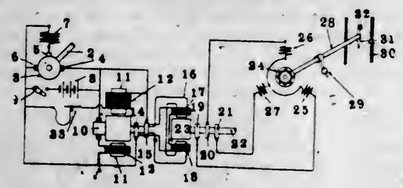
1. In ordnance breech mechanism of the breech screw carrier type, the combination with the axial vent bolt or mushroom stem and its spring, of a member serving as an abutment for one end of said spring and a displaceable catch mounted on the breech screw carrier for engaging with said member to hold it in position.

1,345,537. ELECTROTHERAPEUTIC APPARATUS. JAMES H. EASTMAN, Detroit, Mich. Filed Sept. 22, 1919. Serial No. 325,353. 4 Claims. (Cl. 200—90.)



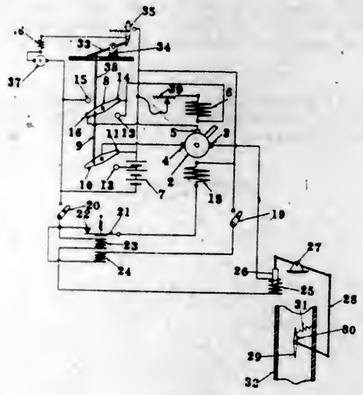
1. In electro-therapeutic apparatus, the combination of a magnet coil, an armature intermittently attracted thereby, an interrupter contact engaged intermittently by the armature, all said devices being in circuit, an arm

secured to the armature between its point of support and the interrupter contact, and means for increasing the



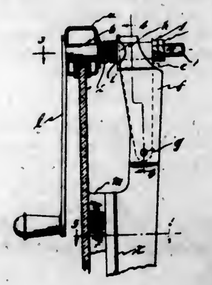
pressure against the arm to varyingly weaken the pressure of the armature against the interrupter contact.

1,345,538. ALTERNATING-CURRENT MOTOR. VALÈRE A. FYNN, St. Louis, Mo., assignor to Wagner Electric Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 15, 1916. Serial No. 137,103. 7 Claims. (Cl. 172—276.)



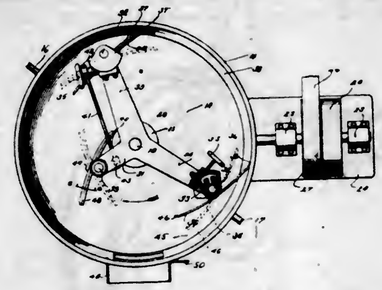
1. In an alternating current motor, the combination of an inducing member, an induced member provided with a commuted winding, means for establishing a working circuit through said winding, means for establishing an exciting circuit through said winding the current in which is independent of the current in the working circuit, means for conductively supplying an E. M. F. to the working circuit, and means for changing the number of conductors of the commuted winding included in the working circuit without changing the axis of said circuit.

1,345,539. SPEED-REGULATING APPARATUS. VALÈRE A. FYNN, St. Louis, Mo., assignor to Wagner Electric Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 25, 1918. Serial No. 230,754. 12 Claims. (Cl. 175—355.)



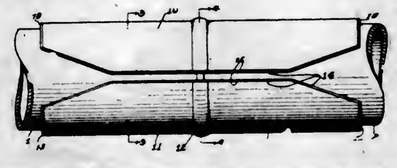
1. In speed regulating apparatus, the combination with a device to be regulated, of electromagnetic speed controlling means therefor, a device operating at a speed independent of that of the device to be regulated, and means for supplying to the electromagnetic speed controlling means an E. M. F. the magnitude of which is dependent on the difference in the speed of said devices.

1,345,540. SPEED-REGULATING APPARATUS. VALÈRE A. FYNN, St. Louis, Mo., assignor to Wagner Electric Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed July 5, 1919. Serial No. 308,869. 8 Claims. (Cl. 290—36.)



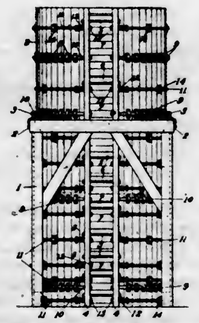
1. The combination of a prime mover, electromagnetic speed controlling means therefor, means for adjusting the controlling means to maintain desired prime mover speeds, a motor for starting the prime mover, a starting switch therefor, and means preventing closing of the starting switch when the speed adjusting means is in a predetermined position.

1,345,541. WINDSHIELD-WIPER. LOUIS W. GATES, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 8, 1920. Serial No. 364,169. 5 Claims. (Cl. 15—59.)



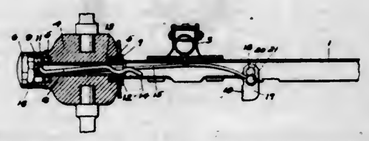
1. In a windshield wiper, the combination of a spindle adapted to be rotatably mounted in a windshield panel, a hand lever on one end of the spindle, a key secured to the other end of the spindle in such relation to turn therewith, means for adjusting the key toward and away from the glass, a wiping element pivoted to the key and adapted to swing at an angle to the plane of the panel, and means for yieldingly pressing the outer end of the wiping element toward the glass, the said adjusting of the key on the spindle causing the wiping element to swing upon its pivot to bring the wiping edge into parallelism with the glass.

1,345,542. DRYING, MIXING, AND KNEADING MACHINE. WILLIS N. HARTSHORN, Racine, Wis. Filed Feb. 10, 1920. Serial No. 357,664. 10 Claims. (Cl. 259—107.)



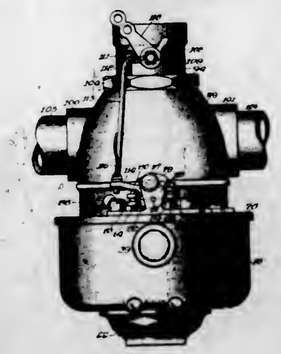
1. A material working machine comprising a container, means for spreading and kneading the material being worked against the rim of the container, and means independent of the first mentioned means for removing the material from the container rim.

1,345,543. PIPE CONNECTION AND METHOD OF MAKING THE SAME. JOHN H. HUTH, Philadelphia, Pa. Filed Jan. 14, 1920. Serial No. 351,324. 2 Claims. (Cl. 285—194.)



1. The combination with two pipe sections having their adjacent ends electrically butt-welded, the adjacent ends of the sections being disposed so as to provide a clearance space, of a saddle having connections with the adjacent edges of the two pipe sections when the ends are butt-welded, of sleeve sections fitting the pipe sections and having grooves overlying and engaging the electrical butt-weld of the two pipe sections, the remote ends and the longitudinal edges of the sleeve sections having electrical butt-weld with the pipe sections, thereby doubly insuring water-tight joints between the pipe sections.

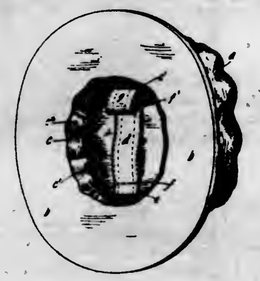
1,345,544. SILO. JOHN LOGAN JONES and EDWARD C. JONES, Kansas City, Mo. Filed June 6, 1918. Serial No. 239,081. 3 Claims. (Cl. 20—1.4.)



1. A silo comprising a rigid door frame, a stave secured to the inner face of each side of said frame, a series of staves fitted edgewise together in cylindrical form, anchorage devices externally of and conforming to the cylindrical arrangement of said series of staves, saddle clips secured to staves of said series and fitting slidingly on said anchorage devices; the said devices extending at their ends through the sides of the door frame, at angles diverging outward with respect to the outer faces of the staves secured to said sides, and means for clamping the series of staves equipped with the saddle clips, against the outer edges of the two staves secured to the sides of the door frame.

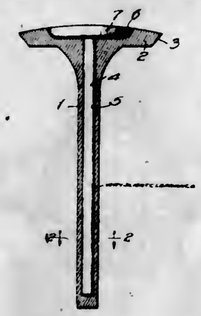
1,345,545. WHEEL-RETAINER. CHARLES A. LINDBERG, Sturgis, Mich., assignor to Sturgis Steel Go-Cart Co., Sturgis, Mich., a Corporation of Michigan. Filed Aug. 22, 1919. Serial No. 319,236. 2 Claims. (Cl. 301—112.)

1. In a wheel retaining means, the combination of a hollow axle having a hole at the outer end thereof, a wheel mounted on said axle, a bar-like retaining dog disposed in said axle and provided with a laterally projecting wheel engaging portion adapted to be projected through said hole, said dog having an offset at its inner end engaging the axle so that the dog is normally supported in an outwardly inclined retracted position, and a rod-like actuating member disposed in said axle to reciprocate at the side of said dog and having a lateral curved offset at its outer end adapted to engage said retaining dog so that when the actuating member is actuated it slidably engages said retaining dog and projects its engaging portion through said hole.



1,345,546. CARBURETER. TORBJÖRN LINGA, Winthrop Harbor, Ill. Filed June 29, 1916. Serial No. 106,575. 2 Claims. (Cl. 261—18.)

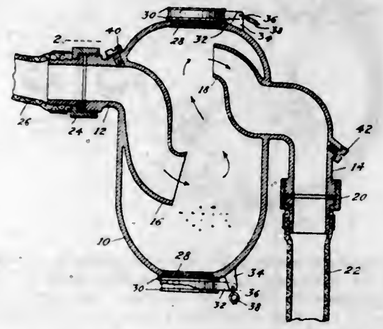
1. A carbureter of the character described, including in combination, compartments for a plurality of fuels of different specific gravities connected by separate passages to a nozzle communicating with the mixing chamber of the carbureter, an adjustable needle-valve for said nozzle, float-controlled valves preserving predetermined liquid fuel levels in said compartments, valves controlling said passages between said compartments and nozzle, uniting means associated with said passage valves controlling the flow ratio of the fuels from said compartments to the mixing chamber through the nozzle, a throttle, and means



connecting said throttle and uniting means whereby the fuel ratio delivered to the nozzle may be determined by the position of the throttle, substantially as described.

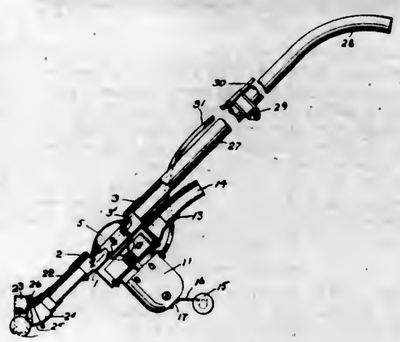
1,345,547. WOMAN'S HAT. MARIE D. MCDONALD, Portland, Oreg. Filed Sept. 19, 1919. Serial No. 325,015. 7 Claims. (Cl. 2—186.)

5. In a hat provided with a lining, a hand-strap stitched at its ends to the lining being arranged parallel with the latter, the hand-strap being of substantial width, the stitches securing the hand-strap to the lining being located at the fastening of the margin of the crown-piece of the lining to the sides of the latter, transverse supplemental stitches, spaced inward from said first mentioned stitches, securing the hand-strap adjacent its ends to the lining, thereby forming a loop of convenient length relative to the width of the hand, for the purpose specified, the hand-strap being stiffened so that the portion between said supplemental stitches will have a tendency to assume and maintain a loop form, and a loop at one end of said hand-strap, such loop being adapted for hanging the hat from a peg.



1,345,548. VALVE. EDWARD MONTAGUE, Chicago, Ill. Filed Feb. 28, 1919. Serial No. 279,844. 5 Claims. (Cl. 123—188.)

1. In a valve for explosive engines having a stem and a head, means for conducting heat from the head to the stem comprising a rod of copper or the like having an enlargement on one end, said stem having a bore extending longitudinally thereof into which said rod is entered, and said head having a cavity for receiving said enlargement on the rod, the rod being slightly smaller in size than the bore and the enlargement on the rod fitting snugly in its cavity so as to be firmly secured therein.

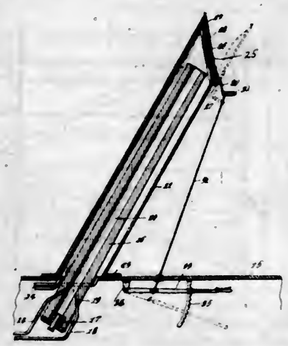


1,345,549. DENTAL APPLIANCE. HARRY P. RAWSON, Minneapolis, Minn. Filed Dec. 26, 1918. Serial No. 268,380. 1 Claim. (Cl. 182—12.)

A dental appliance comprising a vertically extending casing, a pipe adapted to be connected with a fountain spittoon located at a dentist's chair and leading through the upper portion of the side wall of said casing, the discharge portion of said pipe being curved downwardly within said casing adjacent said side wall and being then curved so as to extend substantially horizontally between the top and bottom of said casing to provide a settling

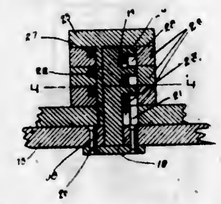
chamber for retaining particles of dental fillings in the lower portion of said casing, and an outlet pipe leading from the top of said casing, said outlet pipe being curved downwardly within said casing and outwardly through the side wall thereof and then being curved downwardly outside of and adjacent said side wall for attachment to a waste pipe.

1,345,550. PNEUMATIC CLEANER. DANIEL B. REPLOGLE, Berkeley, Calif. Filed June 5, 1916. Serial No. 101,695. 10 Claims. (Cl. 15—60.)



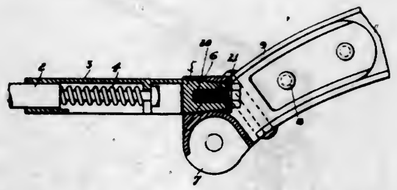
1. In a manually portable vacuum cleaner, the combination with a member having tubular socket conduct arms carrying vacuum producing means, of a plurality of suction pipes operably connected to said arms, and adapted to connect with suction tools at their outer ends.

1,345,551. GUN. HERMAN F. RIESCHICK, Kansas City, Mo. Filed Feb. 1, 1918. Serial No. 214,871. 2 Claims. (Cl. 89—5.)



1. A gun of the class described comprising a barrel, a tube fitting around said barrel and being spaced from the outer walls therof, a gate hingedly secured to the outer end of said tube, said gate provided with a yieldable cushion upon the inner face thereof being adapted to fit snugly upon the outer end of said tube and constituting a seal therefor when said gate is in a closed position, an operating arm carried by said gate, means engaging said operating arm for opening and closing the same, means

for conveying compressed air to said tube and for facilitating the forcing of a circular jet of air longitudinally of



the tube for preventing the entrance of water in the outer end of said tube while the gun is being fired.

1,345,552. COMBINATION-LOCK. WALDO A. RIGAL, Corning, N. Y. Filed Dec. 3, 1917. Serial No. 205,179. 1 Claim. (Cl. 217—56.)

In combination, a box, a lid hinged at one edge to a side of the box, and having a centrally disposed lip at the opposite edge which when the lid is closed provides openings at the sides of the lip, a strip within the box and hinged at one edge thereof and adapted to underlap the said lip and close the openings at the sides thereof, a locking bolt carried by the said strip and adapted to pass through the said lip, a sleeve carried by the lip of the lid and adapted to receive the locking bolt, a tumbler mounted in the sleeve and adapted to co-act with the locking bolt to secure the same.

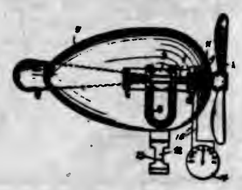
1,345,553. BUMPER FOR AUTOMOBILES. JAMES H. SAGER, Rochester, N. Y., assignor to J. H. Sager Company, Rochester, N. Y., a Corporation. Filed Apr. 23, 1917. Serial No. 163,997. Renewed May 26, 1920. Serial No. 384,506. 6 Claims. (Cl. 293—55.)

1. In combination with a vehicle frame, two brackets each secured to such frame and each having a socket, the axes of the two sockets being parallel, a bumper bar and two bumper supporting arms each having an inner member rigidly and detachably secured in one of the sockets, an outer member guided on the inner member and connected to the bumper bar, and springs interposed between the inner and the outer members of the bumper supporting arms.

1,345,554. BUMPER FOR AUTOMOBILES. JAMES H. SAGER, Rochester, N. Y., assignor to J. H. Sager Company, Rochester, N. Y., a Corporation. Original application filed Apr. 23, 1917, Serial No. 163,997. Divided and this application filed June 29, 1918, Serial No. 242,657. Renewed May 26, 1920. Serial No. 384,507. 9 Claims. (Cl. 293—55.)

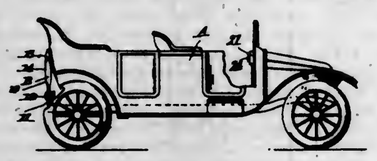
8. In combination with a channeled frame bar having a curved forward end, a bracket secured in said channeled frame bar and projecting therefrom for securing to a vehicle spring, devices for securing said first named bracket in said frame bar, and a bumper supporting bracket secured by said devices and abutting the curved upper face of the end of the frame bar.

1,345,555. WELL-CLEANER. LEMUEL H. SARGENT, Fort Worth, Tex. Filed Oct. 18, 1919. Serial No. 331,574. 2 Claims. (Cl. 166—20.)



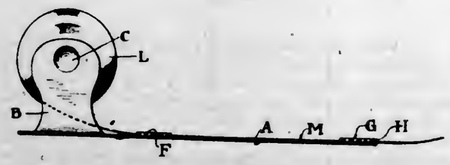
1. A well cleaner including a supply pipe having a nozzle at one end thereof, an upper sealing valve and a lower sealing valve disposed on the supply pipe, the lower sealing valve including an upper expansible member and a lower expansible member, each of said expansible members having a tapering opening formed therein, opposed wedging members disposed within the tapering openings, cylindrical drums having connection with the wedging members, said cylindrical drums having communication with the supply pipe for directing fluid pressure to the drums for causing the wedging members to expand the expansible valve members.

1,345,556. APPARATUS FOR THE DETERMINATION OF VERTICAL VELOCITIES IN OR OF AIR OR WATER. CORNELIS SCHOUTE, De Bilt, near Utrecht; FLORIS ALBERT VAN HEYST, Soesterberg, and NICOLAAS EVERHARD GROENVELD MEYER, Bosch en Duin, near Zeist, Netherlands. Filed Mar. 26, 1918. Serial No. 224,792. 4 Claims. (Cl. 290—44.)



1. An apparatus for the determination of vertical velocities in or of air, water or other medium, comprising,

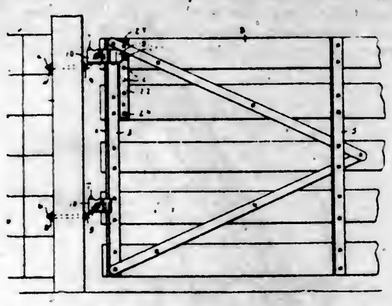
in combination, a reaction element driven by said medium and adjustable to maintain a constant position with respect to the direction of the relative movement of said medium, an electric generator armature rotated by said reaction element and a field magnet in inductive relation



to said armature, the angle between the direction of the lines of flux due to said field magnet and the axis of rotation of said generator armature being variable so as to correspond at any moment to the angle of the relative movement of said medium and the horizontal.

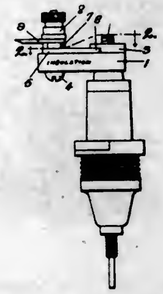
1,345,557. AUTOMOBILE-SIGNAL. EDGAR GEORGE SHANE, Ottawa, Ontario, Canada. Filed Nov. 25, 1918. Serial No. 264,046. 1 Claim. (Cl. 40—132.)

A direction indicator for vehicles comprising a casing formed with a downward extension and a plurality of upwardly extending hollow branches including a vertical branch and side branches diverging outwardly from the vertical branch to a point toward opposite sides of the vehicle, a rear light mounted in the downward extension of the casing, and a number plate mounted in said extension directly above the rear light, so as to be illuminated thereby.



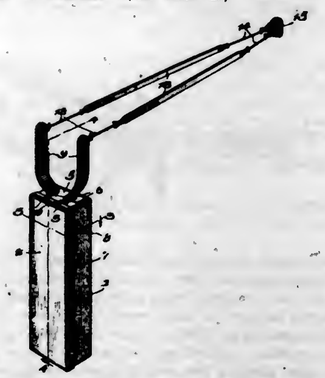
1,345,558. WRITING-PAD. HENRY C. SIMMONS, Atlanta, Ga. Filed Feb. 21, 1920. Serial No. 360,361. 5 Claims. (Cl. 281—6.)

1. A writing pad holder comprising a body having lateral wings, knobs depressed from said wings and guides formed in said body and limited therefrom by parallel slots cut therefrom.



1,345,559. GATE AND HINGE CONSTRUCTION. STEPHEN A. SLAUSON, Cedar Rapids, Iowa. Filed Mar. 12, 1919. Serial No. 282,226. 2 Claims. (Cl. 39—87.)

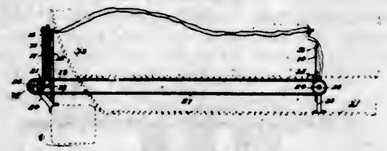
1. In a device of the class described, a suitable fixture; a pivot adapted to be rigidly supported by said fixture; a clamping device hingedly mounted on said pivot, and provided with a perforated extension; a gate provided at one of its ends with members having a vertical sliding relation with said clamping device; means for causing a clamping engagement between said last-named members and said clamping device; a bar secured to said gate and



provided with a series of perforations; and a pin adapted to connect said bar with said extension.

1,345,560. SPARK-PLUG INTENSIFIER. WILLIAM F. SMITH, St. Louis, Mo. Filed Nov. 30, 1917. Serial No. 204,728. 1 Claim. (Cl. 175—183.)

The combination with a spark plug having a binding post, of a block of insulating material, a nut engaging the binding post to clamp the block fixedly in position on the spark plug, a binding post on the block, and an arcuate finger held on the block by said last named binding post and adjustable angularly toward and from the holding nut on the binding post of the spark plug, said finger lying flat on the block with the greater portion thereof in contact with the block and being held by friction against accidental movement.

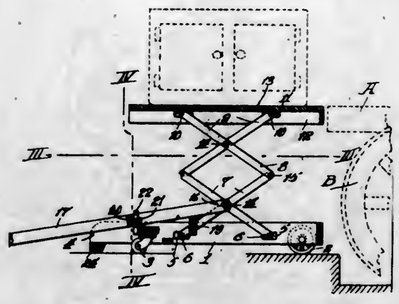


1,345,561. COLLAPSIBLE SLING-SHOT. JAMES SMITHWICK, Manson, N. C. Filed Mar. 20, 1920. Serial No. 367,388. 6 Claims. (Cl. 124—2.)

1. A sling shot device including a combined casing and handle member, and a fork unit pivotally mounted within

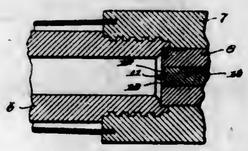
the casing, whereby it may be folded into concealed position within the casing or swung to an external operative position.

1,345,562. AUTOMOBILE DIRECTION-INDICATOR. JOSEPH SOBOCINSKI, Cudahy, Wis. Filed Apr. 26, 1919. Serial No. 292,797. 2 Claims. (Cl. 40—67.)



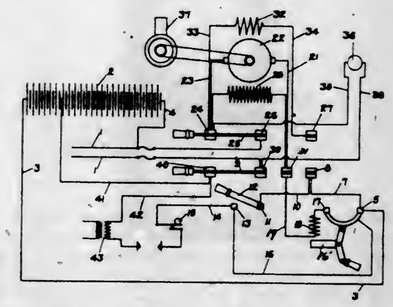
1. An indicator comprising a swinging semaphore arm, a vertically slidable rack intermediately positioned when the arm is in its normal vertical position and operating connections between the said rack and arm whereby the arm is adapted for upward swinging movement in either direction upon the vertical shifting of the rack.

1,345,563. VAPORIZER. MARSHALL KNIGHT THAYER, Edgemont, S. D. Filed Oct. 20, 1919. Serial No. 331,980. 8 Claims. (Cl. 266—5.)



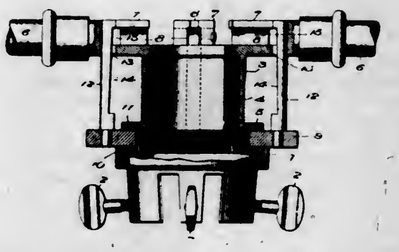
1. The combination with the intake pipe of a combustion motor having a slot in its wall, means forming a liquid fuel chamber adjacent to and on a level below the outer end of said slot whereby products of combustion within the chamber may be drawn in the pipe slot without danger of influx of the fuel oil, and a cover normally closing the fuel chamber and the said slot.

1,345,564. TRUCK. THEODORE G. THOMAS, Houston, Tex. Filed Nov. 17, 1919. Serial No. 338,629. 3 Claims. (Cl. 254—9.)



1. A hoisting device comprising a platform, a lazy-tong mechanism engaged beneath said platform, a lever fulcrumed beneath said platform intermediate of its ends having one end in engagement with the lower portion of said mechanism and a ratchet pawl for engagement with a part of said lever.

1,345,565. OBTURATING FIRING-PIN. JOHN T. THOMPSON, Newport, Ky., assignor of one-half to Thomas F. Ryan, New York, N. Y. Filed Mar. 25, 1920. Serial No. 368,646. 9 Claims. (Cl. 42—69.)

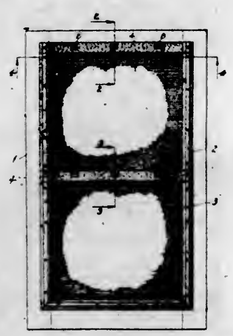


1. In a gun, a firing pin entering the chamber thereof through a firing pin channel, the pin having a portion thereof adapted to be urged into intimate contact with the walls of the channel by powder pressures in the chamber.

1,345,566. ELECTRIC POWER SYSTEM. JOHN GUY THORNBURGH, Indianapolis, Ind., assignor to Swartz Electric Company, Indianapolis, Ind., a Corporation of Indiana. Filed Apr. 3, 1918. Serial No. 226,472. 4 Claims. (Cl. 290—35.)

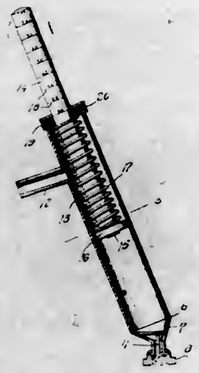
4. In an electric power system, a dynamo electric machine operable as a motor or generator, a battery, a load line, a prime mover, an ignition circuit, an electromagnetic circuit breaker in the ignition circuit and battery circuit and a manually operated switch controlling the ignition circuit, said circuit breaker being operable automatically by a decrease in current demand on the line, to break the ignition circuit when the ignition switch is open.

1,345,567. GEARED, ADJUSTABLE, PIPE-THREADING DEVICE. CHARLES G. WAHNSIEDLER, Evansville, Ind. Filed June 23, 1919. Serial No. 306,054. 6 Claims. (Cl. 10—120.5.)



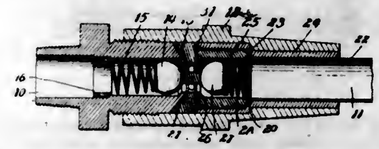
1. In a tool having a head provided with channels which are blind at their outer ends, clean-out openings intersecting the respective channels.

1,345,568. RECEPTACLE. ARTHUR J. WARD, Duluth, Minn. Filed Aug. 11, 1919. Serial No. 316,803. 2 Claims. (Cl. 4—27.)



1. The combination with an oblong receptacle of the character described, of a pedestal fixed to the bottom and extending upwardly therein, centrally and transverse the shorter dimension thereof, substantially as and for the purpose described.

1,345,569. SCREEN. CLIFFORD M. WAY, Des Moines, Iowa. Filed July 1, 1919. Serial No. 307,898. 3 Claims. (Cl. 156—37.)

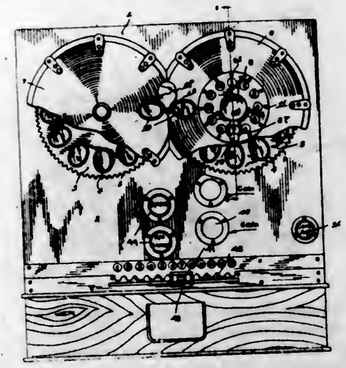


3. As a new article of manufacture a metal strip adapted for attachment to screens for windows, doors, or the like, said strip comprising lateral projections, triangular in cross section, the strip and projections being provided with alined nail receiving openings whereby the strip may be held against the screen frame.

1,345,570. TIRE-PRESSURE GAGE. EARL D. WHITE, Delta, Colo. Filed May 19, 1919. Serial No. 298,251. 1 Claim. (Cl. 152—11.5.)

In a device of the class described, a hollow cylindrical body having a contracted inclined tubular extension, a spring pressed pressure indicator slidably mounted in said body, said indicator comprising a stem and piston, a check valve in said piston, means for connecting said body with a pump at a point above the normal downward limit of movement of said piston and means for connecting the tubular extension to a tire nipple.

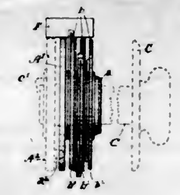
1,345,571. PIPE-COUPLING. CHARLES E. YATES, Detroit, Mich., assignor, by mesne assignments, to The Isko Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 7, 1917. Serial No. 147,161. 9 Claims. (Cl. 284—19.)



1. A pipe coupling comprising two valved members to be connected, means for coupling said members, and means clamped between said members for opening both said valves as said members are coupled.

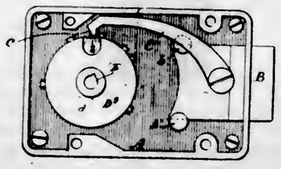
1,345,572. RAILROAD-TIE. FELIKS BARNIAK, Rosemont, W. Va. Filed May 7, 1920. Serial No. 379,535. 3 Claims. (Cl. 238—66.)

2. A tie comprising an I-beam having an upright web, brackets arranged in pairs at opposite sides of the beam with right angular portions coincident with the base flange of the beam and the adjacent portion of the web, securing bolts through the web of the beam and the adjacent portions of the brackets, the latter having double curved upwardly and outwardly projecting portions terminating in supporting arrangement beneath the outer edge portions of the top flange of the beam and rail holding means positioned through the top flanges of the beam and the adjacent end portions of the brackets.



1,345,573. EYE-TESTING MECHANISM. SAMUEL C. BARR, Chillicothe, Ohio, assignor to The Barr Company, a Corporation of Ohio. Original application filed Nov. 27, 1916, Serial No. 133,546. Divided and this application filed Mar. 25, 1918. Serial No. 224,487. 2 Claims. (Cl. 88—22.)

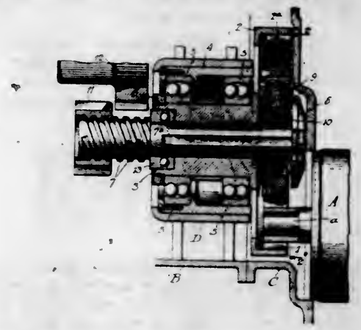
1. In a machine of the character described, a test lens holding means rotatably mounted to present a successive



array of lenses of varying properties, a testing card in proper alinement with the line of vision as said lenses are successively presented, a slidably mounted rack upon which said card is mounted, a pinion in mesh with said rack, a segmental rack operatively connected to said pinion, and means operable from the outside of said machine for oscillating said segmental rack to move said card back and forth.

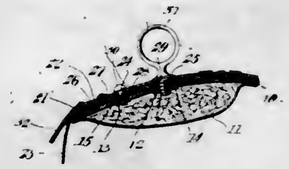
1,345,574. COMBINATION-LOCK. EDGAR M. BENHAM, Norwood, Ohio, assignor, by mesne assignments, to The Mosler Lock Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 23, 1917. Serial No. 182,182. 6 Claims. (Cl. 70—53.)

1. A combination lock embodying a rotatable dial arbor; a drive-wheel removably secured thereon; a second drive-wheel interconnected with the first, loosely mounted on the arbor and provided with an extended hub; a system of toothed disks or tumblers independently carried rotatably upon said stump, and each provided with one or more radial pawls, circumferentially adjustable in relation thereto; and an angle bar extended across said drive-wheels and disks in the rotative path of the projecting extremities of said pawls as an arresting stop; said drive-wheels and disks being peripherally slotted to receive the angle-bar.



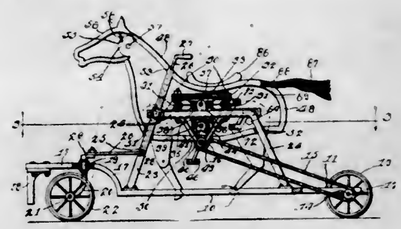
1,345,575. COMBINATION-LOCK. WILLIAM T. BENHAM and EDGAR M. BENHAM, Norwood, Ohio, assignors, by mesne assignments, to The Mosler Lock Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 8, 1917. Serial No. 147,437. 7 Claims. (Cl. 70—53.)

1. In a tumbler lock, in combination with a dial and its arbor, a disk-tumbler notched around its periphery in correspondence with the unit markings of the dial; a radial pawl adapted to seat concentrically with and adjacent to the tumbler and adjustably engage the same and extend outwardly beyond it; and a fence adapted to extend across the tumbler in the rotative path of said pawl-extension and arrest the rotation of said tumbler by contact with said extension.



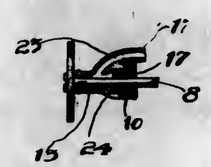
1,345,576. ENGINE-STARTER. VINCENT BENDIX, Chicago, Ill. Filed Dec. 16, 1918. Serial No. 267,068. 11 Claims. (Cl. 74—7.)

1. In an engine starter, a drive or transmission comprising an internal gear, a rotatable shaft operatively connected therewith and in the rotarial axis thereof, a driving member mounted on one end thereof for longitudinal movement thereon to engage an engine member



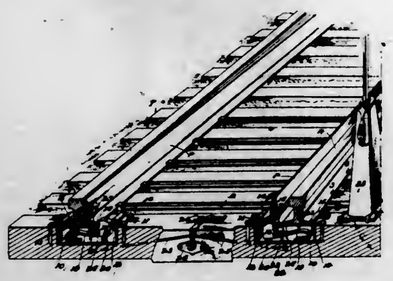
and for rotary movement therewith after such engagement, and a driving pinion meshing with the internal gear.

1,345,577. HARNESS. GEORGE ANDREW BOWNESS, Summerside, Prince Edward Island, Canada. Filed May 6, 1919. Serial No. 295,196. 2 Claims. (Cl. 54—38.)



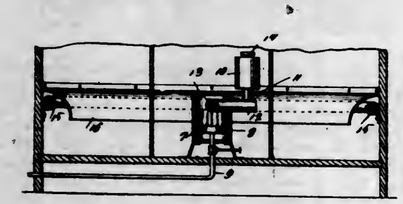
1. A saddle having a passageway in a lateral edge and slit in the outer face, a belly strap having the upper end slidably passing through the said passageway and said slit, readily removable means for securing the belly strap in position, and a ring engaged by the belly strap and saddle, as and for the purpose specified.

1,345,578. EQUESTRIAN TOY VEHICLE. IRA A. BURNETT, Chicago, Ill. Filed Dec. 8, 1919. Serial No. 343,159. 5 Claims. (Cl. 208—165.)



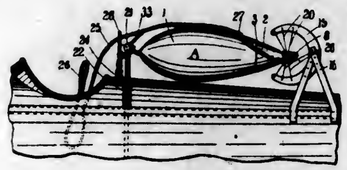
1. In a device of the class described, the combination with a supporting frame including a wheeled base and a support extended upwardly therefrom, of a crank shaft transversely supported by the upper portion of said support below the same, gearing uniting said shaft and the axle of the rear wheels of the main frame for driving said wheels, a body in simulation of the body of a horse mounten on the said support for pivotal movement longitudinally with respect to the support, a pair of legs pivotally mounted on each side of said body, means operatively connecting the diagonally disposed legs in pairs, and means driven by the crank shaft and connected to said operative connections with the legs for imparting pivotal movement to the latter.

1,345,579. MOISTENING ATTACHMENT FOR DENTAL-ENGINE HANDPIECES. IRA A. BUSNETT, Chicago, Ill. Filed May 1, 1920. Serial No. 378,043. 2 Claims. (Cl. 32—10.)



1. In a moistening attachment for dental engine hand pieces, the combination with a tubular member, of a resilient sleeve located in the rear portion of said member and adapted at its rear end to contact with the front end of said hand piece, said sleeve having a longitudinal opening registering with the opening in the hand piece and with the opening of the tubular member in which it is located, and means longitudinally mounted on said tubular member and extended along the same for the discharge of water at its front portion near the front end of said tubular member.

1,345,580. SWITCH-LOCK. JOHN L. BURTON, Hamlet, N. C. Filed July 24, 1919. Serial No. 313,060. 12 Claims. (Cl. 246—448.)



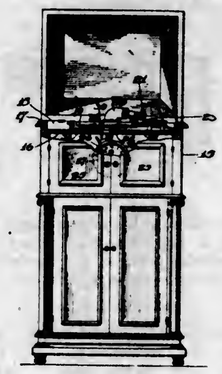
11. In a switch point lock, the combination of a casing, a chair plate closing the casing, a switch point stop normally projecting from the casing through said plate in active position, and means within the casing for retracting said stop.

1,345,581. HEATER FOR POULTRY-HOUSES. LU ELLA BUSBY, Caldwell, Kans. Filed Sept. 23, 1919. Serial No. 325,811. 2 Claims. (Cl. 119—32.)

1. The combination with a compartment having a heater therein; of a water conduit arranged around the inner wall of said compartment, a tank supported above said heater, a T-shaped pipe having the intersection portions thereof positioned over the heater, the stem of said pipe communicating with the tank and its arms arranged transversely of the compartment and communicating with said conduit on opposite sides of the compartment.

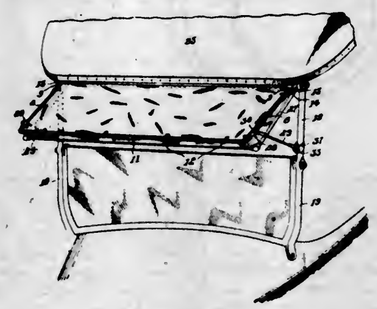
1,345,582. PARACHUTE. EVERARD RICHARD CALTHROP, London, England, assignor to E. R. Calthrop's Aerial Patents Limited, London, England. Filed Mar. 25, 1919. Serial No. 285,133. 8 Claims. (Cl. 244—21.)

1. A parachute launching device comprising a two-part streamline container within which the parachute and its associated parts are nested, a universal joint for supporting one end of the container on the fuselage of an air craft and a rupturable connection for supporting the other end of the container and adapted to maintain the container normally in position.



1,345,583. DRILL-PRESS CHUCK. ALBERT EDWARD CHURCH, New Britain, Conn. Filed Feb. 24, 1919. Serial No. 278,881. 8 Claims. (Cl. 279—74.)

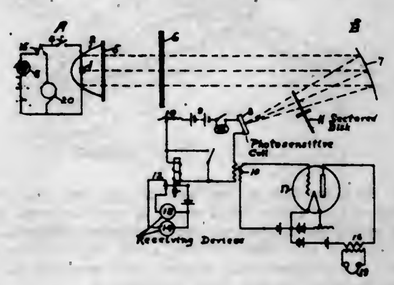
1. In a chuck, a head having a tool receiving socket, a tool driving key movable in said head and projecting normally into said socket, said key being retractable by the forcible insertion of a tool, and key released means for retaining said key in driving position, said retaining means being movable to released position by insertion of the tool and being self-returned to operative position when the tool is completely inserted.



1,345,584. TIME-CONTROLLED STARTING MECHANISM. FRANCESCO CIRELLI, Philadelphia, Pa. Filed Aug. 20, 1918. Serial No. 250,664. 6 Claims. (Cl. 58—14.)

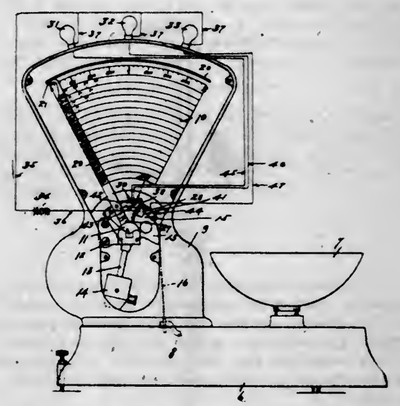
1. The combination of a record, means for moving said record; means movable to effect the movement of said record by said first means; sound transmitting means for engagement with said record; a support for holding said soupd transmitting means out of engagement with said record; and time-controlled means initially operative to actuate said second means to start the record and afterward operative to move said support into a position to

permit said sound transmitting means to engage said record; substantially as described.



1,345,585. AUTOMOBILE-WINDSHIELD SCREEN. GEORGE WM. CISSEL and JOHN P. APPLEMAN, Washington, D. C. Filed July 29, 1919. Serial No. 314,133. 10 Claims. (Cl. 296—95.)

5. A screen for automobile wind shields comprising a rear bar having threaded ends, a pair of L-shaped bars having adjacent ends adjustably connected and provided with apertured free ends through which the threaded ends of the rear bar project, mounting brackets upon said threaded ends of the rear bar, nuts upon said rear bar between which said mounting brackets and L-shaped bars are retained, and means associated with the forward portion of the screen and adapted for adjustable connection with the upright bars of a wind shield to retain the screen in adjusted angular positions, said last named means including a link pivotally and slidably associated with the L-shaped bars.

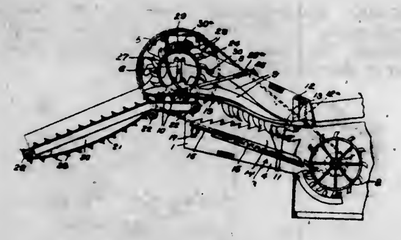


9. The combination with the upright bars of a windshield having bolts upon their upper ends and provided with enlargements at the bases of said bolts, and a top having keepers at its forward end in which said bolts are adapted to be retained, of mounting brackets resting on said enlargements and having apertures through which said bolts are disposed, said keepers substantially resting on said brackets when said bolts are disposed in said keepers and the top is up, a screen extending forwardly and downwardly from the forward end of said top and carried by said mounting brackets, said screen being pivoted to said mounting brackets at a point below the portions of the same which rest upon said enlargements, and means to swing said screen vertically to various inclinations.

1,345,586. RADIOPHONE. WILLIAM W. COBLENTZ, Washington, D. C. Filed Oct. 8, 1919. Serial No. 329,365. 25 Claims. (Cl. 250—2.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

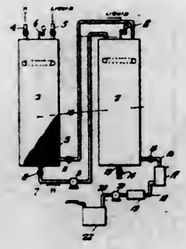
22. A detector of radiant energy of wave length shorter than that of the shortest Hertzian waves comprising molybdenite.

1,345,587. SCALE. JULIUS A. DAHNE, Stillwater, Minn. Filed Mar. 14, 1919. Serial No. 282,616. 3 Claims. (Cl. 265—36.)



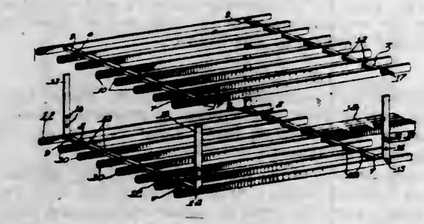
1. The combination with a weighing scale having a dial, of a hand coöperating with the dial and arranged to be set in different weight indicating adjustments in advance of the weighing action of the scale, a plurality of visual weight indicators, and automatic means for including said hand for successively operating said indicators under the weighing action of the scale and in respect to the weight indicated by said hand.

1,345,588. BAND-CUTTER AND FEEDER. BRUNO DION and AMÉDÉE DION, Ste. Therese de Blainville, Quebec, Canada. Filed July 26, 1918. Serial No. 246,866. 13 Claims. (Cl. 130—1.)



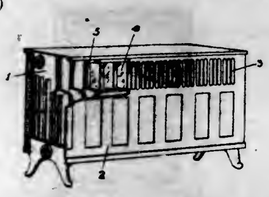
1. In a machine of the character specified, the combination of a rotary shaft; a drum encircling said shaft but free from contact therewith or support thereon, said drum being provided with cutting means; driving connections between said shaft and said drum for rotating the latter from the former; a carrier for delivering bundles beneath said drum to be acted upon by said cutting means; driving connections between said carrier and said shaft; a

centrifugal governor carried by said shaft; and mechanism controlled automatically by said governor for interrupting both driving connections.



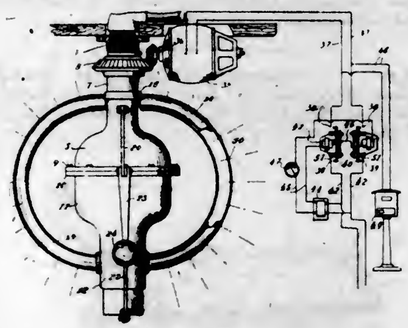
13. In a machine of the character specified, the combination of a rotatable crank shaft; a retarder drum encircling said shaft but not supported thereon, said drum being provided with band cutters; a belt carrier below said drum; and reciprocating feeding bars mounted on said crank shaft on opposite sides of said drum.

1,345,589. PROCESS OF HYDROGENATION. CARLETON ELLIS, Montclair, N. J. Original application filed Mar. 29, 1912, Serial No. 686,988. Divided and this application filed Feb. 20, 1917. Serial No. 149,747. 25 Claims. (Cl. 23—24.)



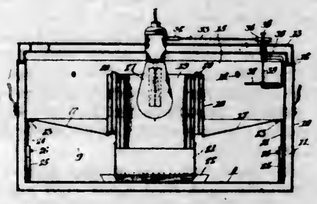
1. A process of hydrogenating aromatic organic material containing unsaturated components, which comprises subjecting a flowing current of such material carrying a colloidal catalyst, to the action of a counter current of a hydrogen-containing gas, said materials being maintained at a temperature at which such material can react upon each other.

1,345,590. GRIDIRON. MATTHEW A. FORD, Rockford, Ill. Filed Feb. 10, 1920. Serial No. 357,583. 9 Claims. (Cl. 53—5.)



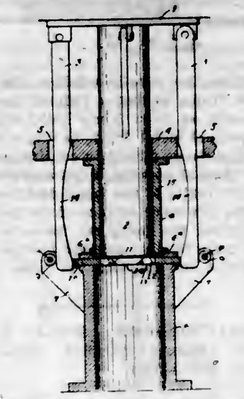
9. The combination of a pair of collapsible grids, and a casing for housing the grids when in collapsed form and constituting a handle for supporting the grids in operative form.

1,345,591. INCASED RADIATOR. WESTON M. FULTON, Knoxville, Tenn., assignor to The Fulton Company, Knoxville, Tenn., a Corporation of Maine. Filed Aug. 31, 1916. Serial No. 117,872. 14 Claims. (Cl. 257—136.)



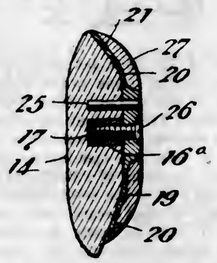
2. The combination of a radiator and a casing therefor provided with a plurality of shutters constituting a damper, said radiator being so constructed as to provide a recess for the reception of said shutters.

1,345,592. AUTOMATIC SPRINKLER. FRANK T. GENTILE, Canton, Ohio, assignor of one-half to Karl M. Kleeman, Canton, Ohio. Filed Sept. 2, 1919. Serial No. 320,984. 1 Claim. (Cl. 169—37.)



A sprinkler including a hollow casing connected to a water supply, a head rotatably mounted upon said casing and inclosing the casing, a rotatable valve within the casing having rock arms at its extremities, a slidable sleeve fitting within the lower extremity of the head, a rod carried by said slidable sleeve and connected to said rock arm and centrifugal means to raise the slidable sleeve and open the valve as the head is rotated.

1,345,593. INCUBATOR. FRANCIS GIDDENS, Ottawa, Ontario, Canada. Filed May 31, 1918. Serial No. 237,517. 4 Claims. (Cl. 119—37.)

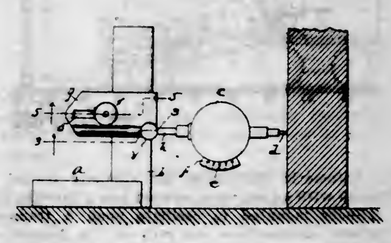


1. In a machine of the class described, an egg tray dished toward the center, a cylindrical reservoir extending upwardly from the tray and rigidly attached thereto, a removable cylinder arranged in the reservoir and spaced from the inner wall thereof, a pan positioned below said cylinder, an air moistening wick depending from the cylinder and extending into the pan, and heating means in the cylinder.

1,345,594. APPARATUS FOR PRODUCING PRESSED-METAL ARTICLES. ARNOLD GEOR, Cleveland, Ohio, assignor to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Dec. 30, 1912, Serial No. 739,194. Divided and this application filed Oct. 27, 1917. Serial No. 198,767. 11 Claims. (Cl. 113—38.)

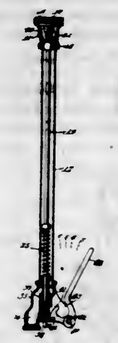
1. In an apparatus of the character described, the combination of a movable die member, a blank support, means for causing relative movement between said die member and said blank support, and means for moving the said die member, the last mentioned means, comprising a profiler having oppositely inclined portions controlling the movement of the die member toward and from the support.

1,345,595. DENTAL BRIDGEWORK. DAVID S. HIGHKIN, Baltimore, Md. Filed May 7, 1920. Serial No. 379,569. 5 Claims. (Cl. 32—12.)



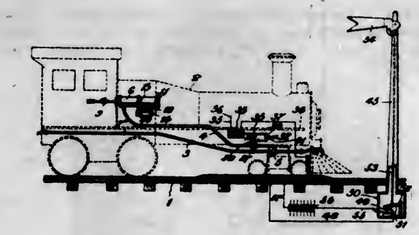
1. In dental bridgework, a facing provided with a threaded socket in its rear side and a second socket alongside the same, a backing having an opening that alines with the threaded socket, and a projection that enters the second socket, and a screw that passes through said opening in the backing and engages in the threaded socket to hold the backing and facing together.

1,345,596. APPARATUS FOR METALLURGICAL AND OTHER PURPOSES. HENRY B. HOVLAND, Zumbrota, Minn. Filed Feb. 2, 1918. Serial No. 215,161. 14 Claims. (Cl. 259—5.)



1. Apparatus of the character described, comprising a vertical self-centering agitator shaft normally revoluble about a fixed axis, means for permitting a pendulatory movement thereof, means for restraining such pendulatory movement, and means for rotating the shaft.

1,345,597. PERPENDICULARITY-INDICATOR. HUGO JANTSCH and WALTER E. GULDAGER, Detroit, Mich. Filed Mar. 1, 1919. Serial No. 279,936. 10 Claims. (Cl. 33—172.)

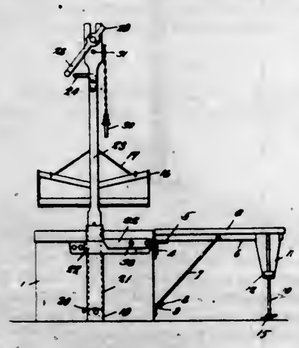


1. An instrument for measuring variations in perpendicularity, having in combination, a try-square, an indicator carrier provided with anti-friction members so as to be freely slidable longitudinally on one of the transverse arms of the try-square, the said indicator carrier being provided with an adjustable slide having anti-friction members and arranged so that the carrier may closely but slidably engage four different surfaces of the arm to secure the same in substantially non-rockable relation to the arm in sliding, and an indicator provided with a stem which responds to variations in the surface being tested and which reciprocates in a path that has a near-right angular relation to the path of travel of the carrier.

1,345,598. SPRAYER. OSCAR W. JOHNSON and ROBERT MILNE, Rockford, Ill., assignors to Ward Pump Company, Rockford, Ill., a Corporation of Illinois. Filed Jan. 29, 1918. Serial No. 214,337. 5 Claims. (Cl. 299—114.)

1. In a spraying device, the combination of a mixing chamber, a conduit for supplying liquid thereto, a valve in the conduit, means for causing the liquid to revolve in the chamber so as to be delivered therefrom in a relatively wide spray, valve controlled means for delivering liquid to the chamber separate from said continuous delivery thereto for varying the character of the discharge from the chamber, and means controlled from a common operating member having a double fulcrum for opening the first mentioned valve with a given leverage advantage whereby liquid will be delivered rotatably to the chamber and for subsequently operating said valve controlled means with less leverage advantage but greater movement to vary the character of the discharge.

1,345,599. AUTOMATIC MECHANISM FOR STOPPING TRAINS. SAMUEL P. JOHNSON, Longacre, W. Va. Filed June 28, 1919. Serial No. 307,347. 3 Claims. (Cl. 246—187.)

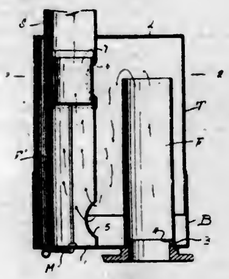


1. In automatic mechanism for stopping trains, the combination with an air brake system and a throttle lever, of a cylinder mounted to oscillate upon a transverse axis disposed intermediate the ends of the cylinder and provided with a piston connected with the throttle lever, a branch pipe leading from the train pipe and having a flexible connection with the cylinder at the throttle lever end thereof a valve included in the branch pipe, and means for opening the valve to reduce the train pipe pressure and apply the brakes and also to actuate the piston and close the throttle.

1,345,600. ARTIFICIAL BAIT. FRED C. KEELING, Rockford, Ill. Filed Oct. 15, 1919. Serial No. 330,686. 6 Claims. (Cl. 43—46.)

1. An artificial bait comprising an elongated body, a forwardly and downwardly inclined wing at the front of said body, a rearwardly and downwardly inclined wing at the rear portion of the body, and a part joining and holding said wings in fixed relative relation.

1,345,601. COLD-PACK COOKING DEVICE. CLELL S. KEPLER, Keosauqua, Iowa. Filed Sept. 5, 1919. Serial No. 321,770. 5 Claims. (Cl. 126—346.)

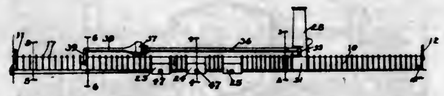


3. In a device of the class described, a receptacle, socket members pivotally mounted on the receptacle, a keeper embracing each of the socket members for limiting the swinging movement of the sockets, a latch on the keeper for locking the socket in one position, a frame carried by the sockets and a windlass mounted on the frame for moving material into the tank.

1,345,602. CURTAIN-WINDOW. GEORGE W. KERR, Racine, Wis. Filed May 2, 1919. Serial No. 294,148. 4 Claims. (Cl. 296—145.)

1. In an automobile curtain window, the combination, with a wooden frame having a visional opening and an outside fabric with an inner fabric lining attached to said frame, of a marginal metal frame having a continuous inwardly projecting flange forming a continuous metal frame lining for the visional opening, a transparent member inclosed within the limits of the flange and having its outer surface engaging the inner surface of the marginal frame, means for securing the marginal frame to the wooden frame, and an inner retainer member secured to the frame within the opening and engaging the inside of said transparent member.

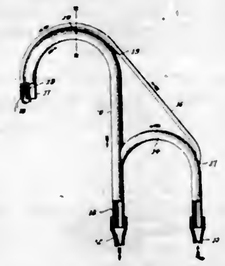
1,345,603. HEATING-DRUM. EDWARD G. KLINGBEIL, Lander, Wyo. Filed Apr. 23, 1919. Serial No. 292,051. 1 Claim. (Cl. 257—172.)



A heating drum of the class described comprising two separable sections having their outer ends closed, the closed end of one of the sections being provided with a pair of radially spaced flues, and at opposite sides of the axial center of the section, one of said flues being in communication with an induction opening in the closed end of said section, said flue being of a length to terminate inwardly of the closed end of the second section when said sections are assembled, the second flue being provided with openings in its wall adjacent the opposite ends of the flue, a thimble disposed through the closed end of the second section and in which an end portion of the second flue telescopically engages when the sections are assembled, said thimble being provided with an opening registering with the opening within said end portion of the second flue, the registering openings of the thimble and second flue being positioned adjacent the inner end of the first named flue, said openings being of a diameter to extend inwardly of said inner end of the first flue, a damper within the second flue for controlling said registering openings, and means extending through said second flue and exteriorly of the drum through the closed end of the first section for operating the damper.

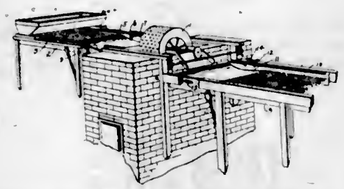
1,345,604. [WITHDRAWN.]

1,345,605. TUNNEL-KILN. FRANCIS JOSEPH LEISEN, Metuchen, N. J., and EDWIN S. DUNN, Huntington, W. Va. Filed Jan. 31, 1919. Serial No. 274,319. 15 Claims. (Cl. 25—142.)



1. A kiln of the character described having a tunnel through which material to be burnt is intermittently moved from end to end, a series of fire zones spaced apart

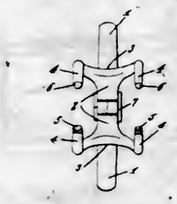
in the length of the kiln and communicating at separate points with the tunnel thereof, and intermediate the ends of the latter, and a stack communicating with the tunnel



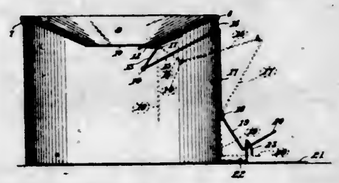
at a point between the series of fire zones and the exit end of the tunnel whereby to draw the heat products from the fire zones in the direction of movement of material through the tunnel from its entrance to its exit.

1,345,606. DENTAL APPLIANCE. JAMES P. LEONARD, Joliet, Ill. Filed Apr. 30, 1920. Serial No. 377,810. 8 Claims. (Cl. 32—23.)

1. A device of the class described comprising a hooked pipe adapted for resting in the mouth of a patient, a curved inlet pipe communicating therewith adapted for forcing fluid outwardly of the opposite end of said hooked pipe and a diluting tube communicating with the branch pipe and terminating adjacent the inlet end of the hooked pipe adapted for supplying water to the saliva being ejected.



1,345,607. MACHINE FOR PREPARING FRUIT FOR DRYING. FRED E. LESTER, near San Jose, Calif. Filed Aug. 11, 1919. Serial No. 316,777. 1 Claim. (Cl. 146—14.)



The combination with a machine for preparing fruit for drying including a dipper and a shaker device including screening means operatively mounted with relation to each other, of a fruit washing means comprising a shallow pan rigidly mounted on said shaker device adjacent said dipper and provided with a bottom curved in the direction of movement of the fruit passing thereover, means for discharging water into said pan and means for permitting the discharge of water from said pan whereby said water is caused to move over said pan with the movement of fruit passing thereover.

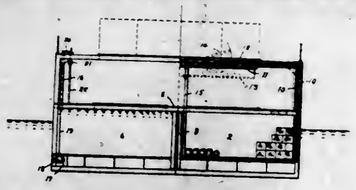
1,345,608. CROWN-SETTER. SAMUEL RILEY LEWIS, El Paso, Tex. Filed May 5, 1920. Serial No. 379,078. 1 Claim. (Cl. 32—10.)

A tool of the class described comprising crossed handles provided with jaws which are bifurcated to form inwardly extended fingers, the fingers of one jaw having concaved terminal recesses of different sizes and the fingers of the other jaw having convexed tips of different sizes corresponding to the recesses and coöperating therewith; and means for pivotally connecting the handles at their point of crossing.

1,345,609. CUSPIDOR. FRANK LIPAR, Trommald, Minn. Filed Mar. 12, 1920. Serial No. 365,281. 2 Claims (Cl. 4—39.)

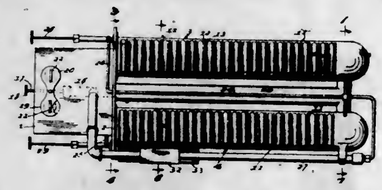
1. A cuspidor including a vessel having a centrally apertured top wall member, a closure plate hinged at one side to the under side of said top wall member so as to swing downwardly to a vertical or inclined open position, means to yieldably maintain the closure in upwardly swung substantially horizontally closed position, an arm fixed to said closure adjacent the pivot thereof and extending downwardly therefrom, a foot lever pivoted to and exteriorly of said receptacle and having the upper end of one arm thereof positioned adjacent the top edge of said receptacle, a link pivoted to the lower end of said first named arm and to the upper end of said arm of the foot lever, a pedal upon the lower end of said foot lever adapted to be pressed downwardly for swinging said closure downwardly to an open position, and means for automatically engaging said foot pedal when the same is depressed beyond a predetermined extent for retaining the latter depressed with said closure in opening position.

1,345,610. VESSEL. ALEXANDER MCDOUGALL, Duluth, Minn. Filed July 29, 1918. Serial No. 247,100. 1 Claim. (Cl. 114—187.)



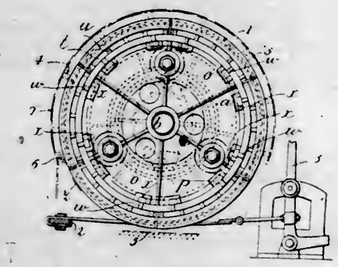
An auxiliary smoke stack for sea-going canal boats comprising a plurality of metal plates united at their longer sides and one of the plates being pivotally attached to the deck of the boat whereby the stack may be collapsed and folded upon the deck.

1,345,611. VESSEL. ALEXANDER MCDOUGALL, Duluth, Minn. Filed July 21, 1919. Serial No. 312,244. 2 Claims. (Cl. 114—72.)



1. The combination with a vessel of the character described having a double bottom or tank in the hold thereof and compartments above the tank suitable for the reception of water for ballast, of a well in each of the com-

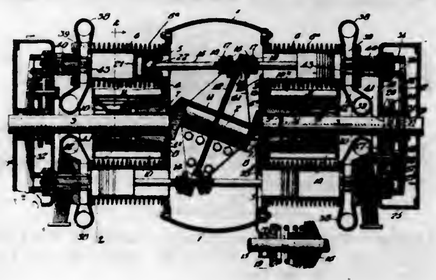
partments, below the tank top and communicating with the former, a sea valve within the well, opening there-



into and communicating with the water outside of the vessel, and means for opening and closing the valve from the deck of the vessel.

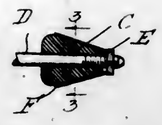
1,345,612. OIL-BURNER. CLYDE J. MCNERNY, Memphis, Tenn., assignor to Henry Loeb and Henry Hurst, Memphis, Tenn. Filed Mar. 16, 1918. Serial No. 222,813. 3 Claims. (Cl. 158—65.)

1. An oil burner comprising a mixing chamber, elongated burners carried thereby, a centrally disposed tube interposed between the burners and communicating with them at one end and with the mixing chamber at the other end, longitudinally disposed partitions in the burners dividing them into upper and lower chambers, the partitions having openings whereby the two chambers may communicate, and means for supplying fuel to the central tube.



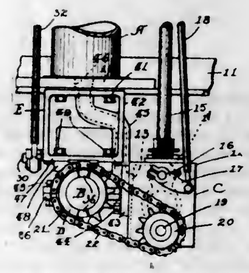
1,345,613. WINCH. GEORGE THOMAS MACFARLANE, Pinner, England. Original application filed May 22, 1917, Serial No. 170,123. Divided and this application filed Mar. 25, 1918. Serial No. 224,555. 4 Claims. (Cl. 188—218.)

1. In a winch, a brake drum formed with T-shaped slots near the periphery thereof, a brake rim built up of renewable sections on said drum, bolts the heads of which engage the T-shaped slots of said brake drum for fixing said rim sections on said drum, and vanes between the periphery of said brake drum and said rim.



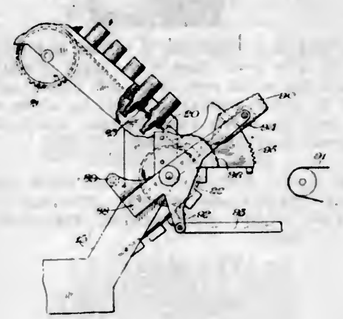
1,345,614. INTERNAL-COMBUSTION ENGINE. CHARLES CAREY MANKER, Des Moines, Iowa, assignor of one-half to J. B. Fayant, Golconda, Nev. Filed July 18, 1918. Serial No. 245,544. 4 Claims. (Cl. 121—119.)

1. In an internal combustion engine, a crank shaft, a wabbler mounted on said crank shaft, a series of cylinders disposed parallel to said crank shaft, each of said cylinders having a piston rod arranged to pass through a portion



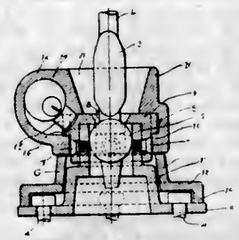
of said wabbler and thrust cones carried by said piston rod on each side of the wabbler for transmitting the movement of the piston to the wabbler.

1,345,615. FAUCET. ROBERT W. MASKE, Chicago, Ill. Filed Oct. 16, 1918. Serial No. 258,331. 3 Claims. (Cl. 251—159.)



2. In a faucet having a valve-seat, a reciprocable valve-stem, a rubber valve through which the latter passes, and a nut on said stem between which and said valve-seat the valve is confined when seated, said valve having a tapered body portion terminating contiguous to said nut, a hollow truncated cone bearing at its smaller end against said nut and projecting over and engaging said tapered body of said valve and adapted to crowd upon the latter when the same is forced to its seat, there being normally a free space in the smaller end of said cone, the latter being unyielding in response to pressure exerted thereon when said valve is forced to its seat.

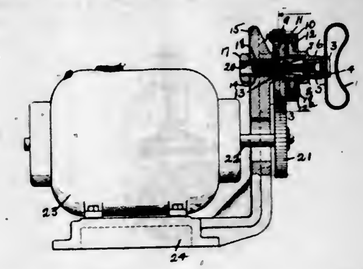
1,345,616. MANIFOLD-BRACKET FOR HYDRAULIC HOISTS. CHARLES E. MASON, Detroit, Mich., assignor to Grant Waldref, St. Paul, Minn. Filed Nov. 3, 1919. Serial No. 335,548. 3 Claims. (Cl. 298—1.)



1. In combination with a hoist cylinder, a drive shaft disposed below said cylinder, a clutch mounted upon said shaft, a pump arranged at one side of the shaft having operating connection with said clutch and a clutch actuator, a manifold bracket having members arranged to support said pump, clutch and clutch actuator in said position and a duct in said bracket leading downwardly from said cylinder into the side of said pump.

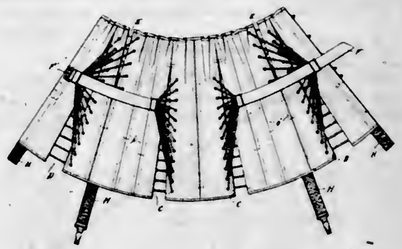
1,345,617. LOADER FOR BOTTLE-WASHERS. GEORGE J. MEYER, Milwaukee, Wis., assignor to Geo. J. Meyer Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Original application filed Nov. 22, 1915, Serial No. 62,706. Divided and this application filed June 9, 1919. Serial No. 302,881. 2 Claims. (Cl. 214—91.)

1. In a bottle washing machine having a traveling bottle conveyer, a swinging frame, a bottle chute pivotally mounted on the swinging frame and forming pockets to receive the bottles in the lower position of the swinging frame, means for inverting the chute during the movement of the swinging frame, a guide for preventing the bottles falling out of the inverted chute until in position for delivery to the conveyer, and means for swinging the frame.



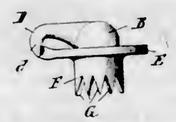
1,345,618. LOCKING DEVICE FOR LEVERS. YUSKE MIYASAKI, McKees Rocks, Pa. Filed Sept. 29, 1919. Serial No. 327,041. 4 Claims. (Cl. 70—128.)

2. In combination with a housing, securing means therefor, and a lever extending through the housing and fulcrumed therein for universal movement, a locking member rotatably engaged with the housing and serving, when in one position, to maintain the lever against universal movement and a guard member independent of the locking member surrounding the housing inwardly of the locking member and overlying the securing means for the housing.



1,345,619. WRENCH MECHANISM. JOSEPH G. MOOMY, Erie, Pa. Feb. 28, 1919. Serial No. 279,760. 3 Claims. (Cl. 81—56.)

1. In a wrench mechanism, the combination of a driving wrench; a yielding drive mechanism having a predetermined driving engagement for said driving wrench; and a holding wrench, the holding wrench being mounted with



relation to the driving wrench to hold a screw on which a nut is being driven by the driving wrench.

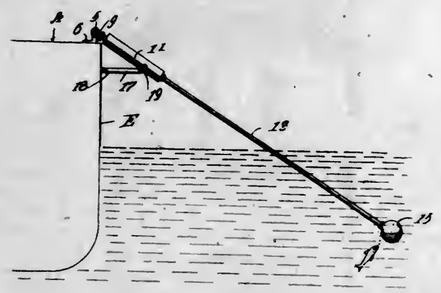
1,345,620. MATERNITY-CORSET. CHARLES MUNTER, New York, N. Y. Filed Dec. 5, 1917. Serial No. 205,623. 9 Claims. (Cl. 2—73.)

9. A maternity corset having a body portion provided in the front thereof with a plurality of openings extending upwardly from the lower edge of the opening and downwardly from the upper edge thereof, and belt operated lacings associated with said openings.

1,345,621. HOOK OR STUD. CHARLES MUNTER, New York, N. Y. Filed Dec. 5, 1917. Serial No. 205,628. 3 Claims. (Cl. 24—146.)

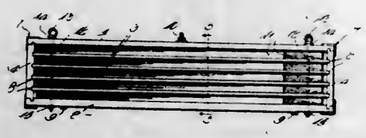
1. A stud or hook embodying an attaching portion provided with a socket, a resilient hook shaped portion integral with the attaching portion and provided with a ball shaped end extending an appreciable distance into the socket, said ball shaped end being of substantially the same diameter as the diameter of the socket, whereby a constructed annular space is left between the ball shaped end and the wall of the socket, through which space a lace is adapted to be passed into engagement with the hook shaped portion, said hook shaped portion yielding slightly to allow of the passage of the lace between the ball shaped end and the wall of the socket.

1,345,622. CASTER. PETER R. NACK, St. Louis, Mo. Filed Mar. 24, 1919. Serial No. 284,815. 4 Claims. (Cl. 16—4.)



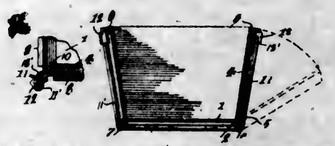
2. A caster provided with a leg, a horizontally disposed foot pivoted to said leg, the bottom of the pivoted

foot being provided with a horizontal track, and a flexible endless shoe whereby said pivoted foot is separated from



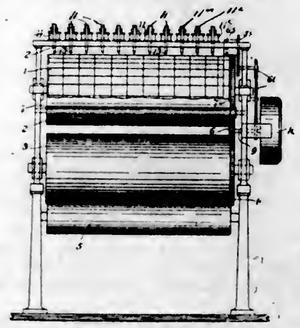
the floor over which the caster travels, said endless shoe surrounding said pivoted foot so as to travel along said horizontal track.

1,345,623. TORPEDO-DEFENSE. EUSEBI NAZZARENO, Telluride, Colo. Filed Apr. 24, 1918, Serial No. 230,514. Renewed Apr. 16, 1920. Serial No. 374,492. 3 Claims. (Cl. 114—240.)



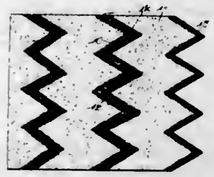
1. A torpedo defense for boats, which comprises a plurality of pivotally mounted hollow arms carrying a bomb at their outer ends, enlargements formed on the inner portion of the arm, means for admitting fluid to the enlargements and arms, and electrical means for exploding the bombs.

1,345,624. CLOTHES-HANGER CABINET. JOHN HENRY NELSON, New Castle, Pa. Filed Aug. 4, 1919. Serial No. 315,254. 1 Claim. (Cl. 68—34.)



In a foldable clothes-hanger, the combination of a box including end walls, a cover-plate, a floor-plate, partition-plates extending from one to the other of the end walls and engaged therewith in a manner to secure them against relative vertical movement, series of supporting bars arranged in alternate relation with said plates and having their upper and lower surfaces slidably fitted against the lower and upper surfaces of said plates, and rods extending through said plates and bars and coacting with said end walls to secure the plates in fixed relation to one another and to pivotally secure said bars to said plates, each of said rods being formed with a loop at its upper end for receiving a suspending element.

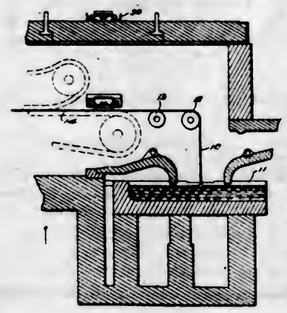
1,345,625. BAKE-PAN. JOHN J. O'DONNELL, Middletown, Conn. Filed June 4, 1919. Serial No. 301,787. 5 Claims. (Cl. 53—6.)



4. A bake pan comprising a bottom and side panels hinged at their lower edges to the edges of said bottom, outturned lips at the ends of the side panels, each being adapted to contact with the adjacent lip of the adjacent panel when the panels stand upright, and means connecting said pairs of lips together.

1,345,626. RECORDING APPARATUS. RODOLPH STUART O'NEIL, London, England. Filed Apr. 11, 1917. Serial No. 161,366. 9 Claims. (Cl. 234—27.5.)

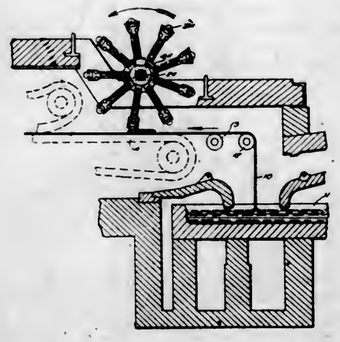
1. A device for recording the position of an engine telegraph or analogous instrument and other data at any given time comprising a continuously moving chart driven at a predetermined speed by means of a clock, a number of magnetically operated recording pencils electrically associated with the telegraph instrument and operating to record by means of lines traced upon particular parts of the chart the orders given, a pair of magnetically operated pencils electrically associated with the engine and controlled by the rotation of the engine and the position of the weigh shaft and operating to record by means of lines traced upon particular parts of the chart the direction of running of the engine, and a further magnetically operated pencil associated with a moving part of the engine for recording by means of marks intermittently made upon the chart the speed of running whereby a continuous and indisputable record of the orders given is obtained.



1,345,627. ROOF-COVERING. FREDERICK C. OVERBURY, Hillsdale, N. J., assignor, by mesne assignments, to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed July 29, 1915. Serial No. 42,627. 7 Claims. (Cl. 108—7.)

1. As a new article of manufacture, a shingle strip formed of waterproofed fibrous material and having

spaced tabs or projections, and adapted to be laid with others in overlapping rows in simulation of shingles, said strip being coated in different fields with grit of contrasting colors, the darker colored grit being laid in strips or bands adjacent the edges of said tabs to give the appearance of thickness thereto and the lighter colored grit covering the remaining fields.

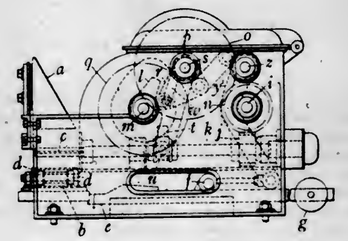


1,345,628. MAKING SHEET-GLASS. MICHAEL J. OWENS, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 6, 1919. Serial No. 269,746. 14 Claims. (Cl. 49—3.)

1. The combination with means for drawing a sheet of glass, of a bending roll over which the glass is drawn, and a flattening device moving transversely over the surface of the glass after it passes beyond the bending roll.

7. The method which consists in continuously drawing a sheet of glass from a pool of molten glass over a support, cooling the sheet before it reaches said support and thereby causing a surface glaze to form thereon which will not be marred by its contact with said support, and sliding a flattening device over the surface beyond said support, thereby flattening the sheet.

1,345,629. MEANS FOR MAKING SHEET-GLASS. MICHAEL J. OWENS, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed June 25, 1919. Serial No. 306,592. 11 Claims. (Cl. 49—3.)



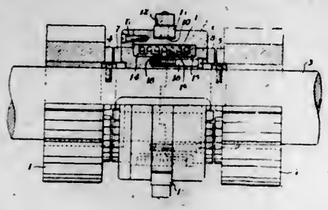
1. The combination with means for drawing a sheet of glass, of a bending roll over which the glass is drawn, and a flattening device moving over the surface of the glass in a direction lengthwise thereof.

1,345,630. PRESSURE-GAGE. JOSIAH W. PLACE, New York, N. Y., assignor to United States Gauge Co., New York, N. Y., a Corporation of New York. Filed Jan. 19, 1920. Serial No. 352,483. 3 Claims. (Cl. 73—109.)

1. In a pressure gage, a nipple threaded on its outside and constructed to form a socket for a Bourdon tube, a Bourdon tube formed separately from said nipple and having a curved flattened portion and a straight tubular portion bent at an angle relatively to the curved portion, said straight portion projecting through said nipple and accessible at both ends thereof for soldering, and means carried by the nipple constituting a mounting for gage mechanism.

1,345,631. DOUGH-MOLDING MACHINE. JOHN EDWARD POINTON, Peterborough, England. Filed Sept. 27, 1919. Serial No. 326,708. 2 Claims. (Cl. 107—9.)

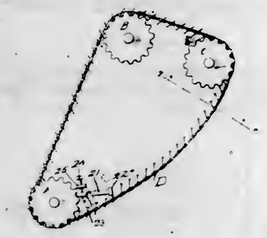
1. Machines for the coiling of lumps or unshaped portions of dough without prior sheeting or stretching of the same, comprising coiling spindles, chutes through which the said dough lumps fall freely into engagement with the said spindles, means for maintaining the said engagement during the coiling operation, and means for withdrawing the spindles from the dough, as set forth.



1,345,632. LIGHT-WEIGHT REFRACTORY BRICK. ROSS C. PURDY and MILTON F. BEECHER, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 1, 1918. Serial No. 260,755. 9 Claims. (Cl. 106—10.)

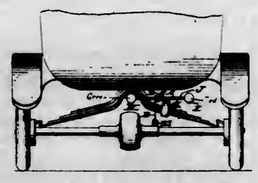
2. A composition of matter for a porous brick comprising a burned refractory lignite clay mass.

1,345,633. CLUTCH MECHANISM. LEWIS M. PYLE, Bryn Mawr, Pa., assignor to Niles-Bement-Pond Co., New York, N. Y., a Corporation of New Jersey. Filed Oct. 15, 1919. Serial No. 330,821. 10 Claims. (Cl. 74—59.)



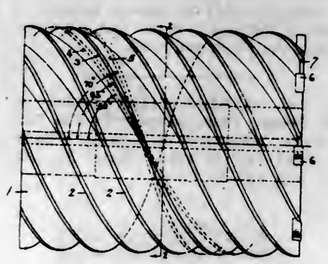
1. The combination in a clutch mechanism of two differently rotating coaxial toothed driving elements, a rotatable axially movable driven element mounted between the

driving elements and having two sets of teeth adapted to respectively mesh with the teeth of the two driving elements, an axially movable operating collar surrounding



the driven element and concentric therewith, and a spring interposed between the driven element and the collar for resiliently connecting the former with the latter.

1,345,634. CONVEYER. JOHN RAYMOND, Jr., Springfield, Vt. Filed June 14, 1919. Serial No. 304,247. 7 Claims. (Cl. 193—8.)

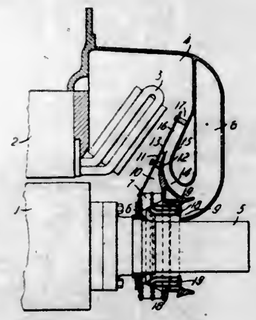


1. In a device of the type described, a conveyer belt comprising slats suitably connected together and provided with openings in the faces thereof, pins mounted in said openings and resiliently held with their operative ends withdrawn within said slats, means for forcing the pins varying distances through said openings into operative position, means for holding the pins in operative position, and means for withdrawing said holding means.

1,345,635. SPEED-CHANGE INDICATOR FOR VEHICLES. HENRY REKERSDRES, Detroit, Mich. Filed June 13, 1919. Serial No. 303,853. 6 Claims. (Cl. 116—57.)

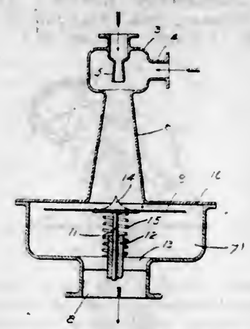
1. In a device of the character described, a movable mass adapted for attachment to a vehicle and to change its position due to the movement of the vehicle and the increasing or diminishing motion of acceleration of the latter, and an independently pivoted indicator operatively connected with said movable mass and consisting of a bar provided at its ends with separate indicating means to indicate to persons remote from the vehicle the direction of and the proportional magnitude of the increasing or decreasing acceleration of the vehicle.

1,345,636. MILLING-CUTTER. JOHN M. RICHARDS, Beaver Falls, Pa. Filed Apr. 23, 1917. Serial No. 163,939. 2 Claims. (Cl. 29—103.)



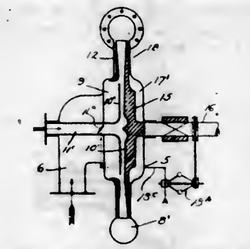
1. A rotary cutter, the angular advance of whose cutting edge is substantially 65°.

1,345,637. KNIFE. EUGENE SÁRKÖZY, New York, N. Y. Filed Oct. 21, 1916, Serial No. 127,004. Renewed Dec. 1, 1919. Serial No. 341,794. 3 Claims. (Cl. 30—9.)



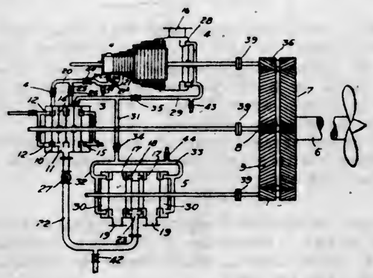
1. A knife comprising handle members having projecting hooks adapted to engage with each other, the hooks of one handle member extending in a direction opposite to that in which the hooks of the other handle member extend and a blade adapted to be held between said handle members, said blade having slots through which said hooks are adapted to project.

1,345,638. VENTILATING APPARATUS. HENRY F. SCHMIDT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 13, 1914. Serial No. 850,804. 8 Claims. (Cl. 230—11.)



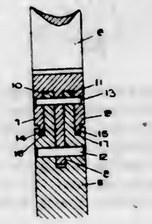
1. A blower comprising a rotatably mounted impeller and a stationary casing for said impeller, the said casing embodying air inlet and discharge chambers, a channel receiving fluid discharged from the impeller and communicating with the discharge chamber and a channel communicating with the first named channel and with the inlet chamber whereby air from said inlet chamber is caused to divide and pass partly through the blower and partly through the last named channel.

1,345,639. FLUID-TRANSLATING DEVICE. HENRY F. SCHMIDT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 14, 1914. Serial No. 861,628. 9 Claims. (Cl. 230—13.)



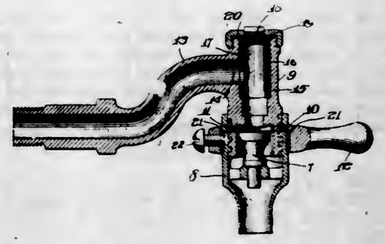
4. In combination with an ejector, a disk movably mounted at the outlet of the ejector diffuser, and coöperating therewith to form an expansion nozzle for the fluid issuing from the ejector.

1,345,640. FLUID-TRANSLATING DEVICE. HENRY F. SCHMIDT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 14, 1914. Serial No. 861,638. 14 Claims. (Cl. 230—14.)



1. In combination in an apparatus of the character described, a chamber having an inlet port for medium to be compressed, means for discharging an annular jet of impelling fluid through said chamber, and means actuated by the jet, for entraining medium located within the chamber.

1,345,641. MARINE TURBINE. HENRY F. SCHMIDT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 27, 1916. Serial No. 122,506. 22 Claims. (Cl. 60—70.)

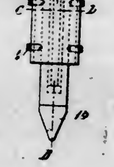


1. A turbine unit comprising a high pressure section adapted to pass all fluid required under full power conditions and two low pressure sections, a separate shaft driven by each section, and means for delivering motive fluid from one stage of the high pressure section to one low pressure section, and from another stage of the high pressure section to the other low pressure section under full power conditions.

1,345,642. BLADE-MOUNTING. HENRY F. SCHMIDT, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Original application filed Mar. 31, 1917, Serial No. 158,977. Divided and this application filed June 22, 1918. Serial No. 241,433. 2 Claims. (Cl. 253—77.)

1. A blade mounting comprising a blade shank provided with at least three tongues adapted to interleave with at least two tongues provided upon a blade carrying element, the free ends of the outer tongues having interlocking engagement with the adjacent portion of the inner tongues for preventing lateral displacement of the outer tongues, and means for preventing separation of the joint in a longitudinal direction.

1,345,643. FAUCET CONTROL. JOSEPH W. SHARP, Jr., Berwyn, Pa., assignor to Haines, Jones & Cadbury Incorporated, a Corporation of Pennsylvania. Filed Mar. 16, 1917. Serial No. 155,157. 1 Claim. (Cl. 277—66.)

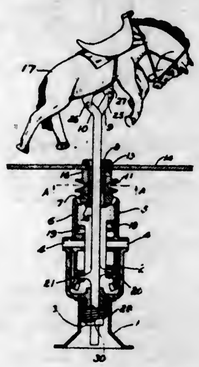


In a faucet, the combination of a tubular neck portion and a vertically extending cylindrical portion or housing integral therewith, said housing portion having an enlarged bore in its upper extension and a valve seat near its lower end, a cylindrical valve member seated in said enlarged bore, open at the bottom and closed at the top and provided with a port adapted to register with the bore of the neck portion, a nozzle member threaded on the lower end of the housing and provided with peripheral projections, a valve member mounted within the nozzle member, and a nozzle-actuating member having a portion surrounding the nozzle member and provided with an inwardly extending peripheral flange for engaging said projections, said actuating member also provided with means for engaging the nozzle member between adjacent projections.

1,345,644. TIRE-TURNING DEVICE. FRANK SOUTHWICK, Kansas City, Kans., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 28, 1919. Serial No. 320,381. 7 Claims. (Cl. 82—40.)

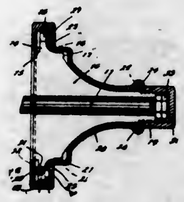
1. The combination with a wheel lathe face plate, of a plurality of brackets secured to the face plate and adapted to engage a tire at the side opposite the face plate and at a fixed predetermined distance therefrom, and a plurality of drivers carried by the face plate and adapted to engage the tire at the side adjacent the face plate and to press the tire laterally against the said brackets.

1,345,645. ELECTRIC SOLDERING-IRON. OTTO STÅLHANE and OLOF OSKAR KRING, Djursholm, Sweden. Filed Apr. 3, 1919. Serial No. 287,327. 3 Claims. (Cl. 219—26.)



1. An electric soldering bolt or iron of the class described, consisting of a soldering bolt provided with a cavity or chamber, resistance heating elements arranged within a tube or tubes of refractory electrically insulating material inserted in the said cavity, said tube or tubes together with a resistance element forming together a technical unit removably arranged within said cavity.

1,345,646. RAILWAY ELECTRIC TRACK-CIRCUIT SYSTEM. REUBEN WILLIAM TARRANT, London, England. Filed Nov. 4, 1919. Serial No. 335,697. 5 Claims. (Cl. 246—34.)



1. In a railway electric track-circuit which includes on the one hand the winding of a traffic-controlling relay interposed in series between the track-rails at one end of a track-section and on the other hand a source of continuous current, an electromagnet winding, and a normally-closed switch controlled thereby, all interposed in series between the track-rails at the opposite end of the track-section, the combination of a core for said electromagnet winding, and an armature therefor, formed by a vibratory reed which is mechanically and magnetically integral with said core and which also constitutes said switch; substantially as and for the purpose set forth.

1,345,647. AMUSEMENT DEVICE. ANDREW MCK. WATERS, Cincinnati, Ohio. Filed July 25, 1919. Serial No. 313,292. 4 Claims. (Cl. 46—27.)

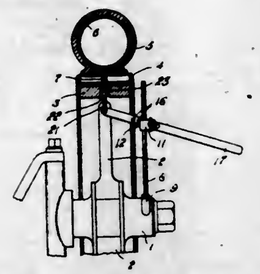
1. An amusement device, including a base, a supporting pedestal swiveled in said base, means to simultaneously raise or lower and tilt said amusement device, and torsion means connecting said base and said supporting pedestal.

1,345,648. WHEEL-HUB. EDGAR P. WEBSTER, Bridgeport, Conn. Filed June 23, 1917. Serial No. 176,496. 6 Claims. (Cl. 21—31.)

6. In a hub for detachable wheels, the combination of a wheel hub member, an outer member adapted to engage said wheel hub member, means adapted to prevent relative turning movement of said members in their engaged relation, and rotatable retaining means adapted to be rotated into locking relation with said members to prevent axial movement of said members relatively to each other, said retaining means being yieldable axially independently of said rotation to permit of said rotation of said retaining means.

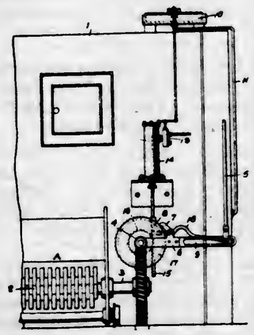
1,345,649. PROCESS FOR THE MANUFACTURE OF OXYALDEHYDES AND OF THEIR ETHERS. ANDRÉ WEISS, Lyon, France, assignor to Societe Chimique des Usines du Rhone, Anciennement Gilliard P. Monnet et Cartier, Paris, France. Filed Jan. 17, 1920. Serial No. 352,088. 3 Claims. (Cl. 23—24.)

1. A process of manufacture of oxyaldehydes consisting in treating a mixture of a phenol and formaldehyde with a nitroso-compound.



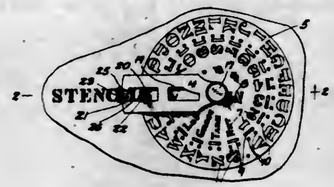
1,345,650. WIRE-FENCE ANCHORING AND SUPPORTING STAKE. BERNDHART L. WESSELS, Woodhaven, N. Y. Filed Sept. 1, 1917. Serial No. 189,282. 1 Claim. (Cl. 189—92.)

An article of manufacture consisting of an upright anchoring drivable fence stay for a wire fence composed of a driving solid head and two straight parallel rigid bars spaced apart the width of a fence wire, integrally united at their upper ends with said head and provided at their lower ends with broad beveled blades disposed parallel with said space, the upper portion of said stay being



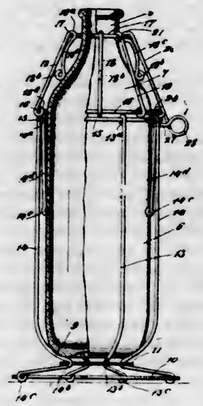
adapted to hold in said slot a series of fence wires and the lower portion thereof being adapted to be driven into the earth and serve as an upright anchor for the stay, said lower portion being provided on the outer faces of its bars with a vertical series of wedge-like teeth in parallel relation with said blades.

1,345,651. VALVE-STEM TOOL. HAROLD J. WILGUS, Canton, Ohio. Filed Aug. 1, 1919. Serial No. 314,775. 5 Claims. (Cl. 29—84.1.)



1. A valve stem tool, including a standard, a curved yoke upon the standard adapted to fit the hub of a wheel, a lever pivotally connected to the standard intermediate its ends and a valve stem engaging member provided upon one end of the lever.

1,345,652. FURNACE CONSTRUCTION. JOSEPH F. TUTEIN, Crafton, Pa. Filed Nov. 29, 1919. Serial No. 341,467. 9 Claims. (Cl. 236—15.)

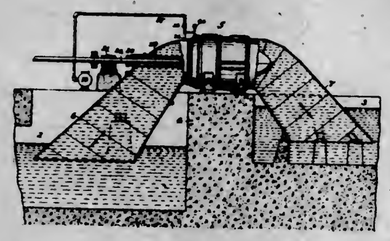


1. In a furnace structure the combination, with a furnace chamber, a mechanical fuel feed, and a speed-changing device applied to said fuel feed, of an automatic control for said speed-changing device including a movable element subject in opposite directions to furnace-chamber pressure and to atmospheric pressure, substantially as described.

1,345,653. STENCIL. LEO WALLENSTEIN, Brooklyn, N. Y. Filed Apr. 5, 1920. Serial No. 371,208. 7 Claims. (Cl. 101—112.)

1. A stencil of the class described comprising a stencil element provided with stencil letters, numerals and characters, a guide and alinement member movably mounted in connection with said stencil element and provided with apertures adapted to register with the separate letters, numerals and characters of the stencil element, and said member being provided outwardly of the periphery of said element with a guide and alinement aperture.

1,345,654. WIRE PROTECTOR FOR NURSING-BOTTLES. EVERETT K. WOLFE, Westchester, N. Y. Filed Apr. 5, 1918. Serial No. 226,805. 3 Claims. (Cl. 215—3.)

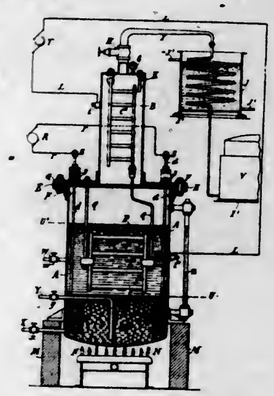


1. In a wire protector for nursing bottles the combination of a pair of wire cage members fitted together in order to inclose a bottle, one of said wire cage members having a ring, and a number of separate pieces of spring wire each bent partially around said ring, each of said separate pieces of spring wire being provided with a portion extending inwardly from said ring and terminating abruptly, said portion being at its end bent into an eye, and so disposed that the edge of said eye presses directly against the adjacent surface of the bottle.

1,345,655. SCREW-PUMP. ALBERT BALDWIN WOOD, New Orleans, La. Filed July 3, 1913. Serial No. 777,174. 16 Claims. (Cl. 103—43.)

1. In a screw pump, an outer tubular casing having an inlet and an outlet at opposite ends, combined with an inner body forming an inclosed chamber and rigidly positioned centrally of the casing and having an axially arranged stuffing-box, a line bearing secured within the chamber of the inner body, a line bearing positioned ex-

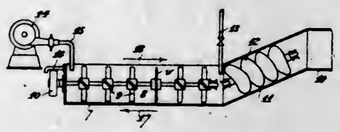
terior to the chamber of the inner body, an impeller shaft extending through the stuffing-box and journaled in the line bearings within and without the inner body, a hub secured to the impeller shaft outside of the inner body and close to the stuffing-box and arranged between the two bearings, and impelling blades secured to the hub.



2. The combination of supply and discharge conduits arranged to respectively contain water at different levels, a screw pump supported at a level above the water in the supply conduit and having an intake passage leading downward from the pump and opening into the conduit below the water level therein and also arranged to discharge into the discharge conduit, an inner closed hollow body centrally arranged in the casing to provide an annular water passage between it and the casing of the pump provided with a stuffing-box at one end, bracing means between the casing and the inner body and extending across the annular water passage for the purpose of rigidly holding the hollow body in central position, an impeller shaft extending through the stuffing-box and into the chamber of the closed hollow body, an impeller carried by the shaft outside of the closed hollow body and beyond the stuffing-box, and a bearing for the shaft arranged within the chamber of the closed hollow body and shielded thereby.

3. In a screw pump, the combination of an outer casing having at one end an intake passage and at the other end a discharge passage, an inner body arranged within the outer casing forming an annular water passage between the said casing and body and provided at one end with a stuffing-box said chamber also having centrally therein a line bearing, a tubular manhole opening from the chamber within the inner body to the outside of the casing, rigid braces between the outer casing and the inner body arranged in the annular water passage for rigidly securing the inner body in position, an impeller shaft journaled in the bearing in the inclosed chamber and extending through the stuffing-box thereof, and an impeller secured to the shaft adjacent to the end of the inner body and having an annular conical passage for water provided with impelling blades for forcing the water through the annular passage between the inner body and the outer casing.

4. In a screw pump, the combination of an outer casing having at one end an intake passage and at the other end a discharge passage, an inner body arranged within the outer casing forming an annular water passage between the said casing and body and provided at one end with a stuffing-box said chamber also having centrally therein a line bearing, a thrust bearing also arranged within the chamber of the inner body and in axial alinement with the line bearing and stuffing-box, a tubular manhole opening from the chamber within the inner body to the outside of the casing, rigid braces between the outer casing and the inner body arranged in the annular water passage for rigidly securing the inner body in position, an impeller shaft journaled in the bearing in the inclosed chamber and extending through the stuffing-box thereof and having its end adapted to coöperate with the thrust bearing, and an impeller secured to the shaft adjacent to the end of the inner body and having an annular conical passage for water provided with impelling blades for forcing the water through the annular passage between the inner body and the outer casing.

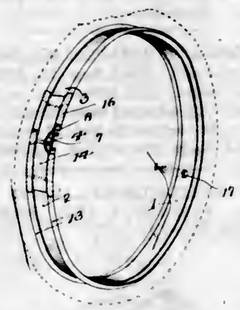


5. In a screw pump, the combination of an outer casing having at one end an intake passage and at the other end a discharge passage, an inner body arranged within the outer casing forming an annular water passage between the said casing and body and provided at one end with a stuffing-box said chamber also having centrally therein a line bearing, a tubular manhole opening from the chamber within the inner body to the outside of the casing, rigid braces between the outer casing and the inner body arranged in the annular water passage for rigidly securing the inner body in position, an impeller shaft journaled in the bearing in the inclosed chamber and extending through the stuffing-box thereof, an impeller secured to the shaft adjacent to the end of the inner body and having an annular conical passage for water provided with impelling blades for forcing the water through the annular passage between the inner body and the outer casing, and an annular diffusion ring tightly fitting between the outer casing and the inner body and centralizing the latter within the outer casing said diffusion ring having blades for causing the rotating water which leaves the impeller to flow in a more or less longitudinal direction through the annular passage of the pump.

1,345,656. APPARATUS FOR PRODUCING LIGHT HYDROCARBONS. JOHN A. YUNCK, South Orange, N. J. Filed Oct. 15, 1918. Serial No. 258,283. 9 Claims. (Cl. 204—31.)

1. In an apparatus for increasing the amount of light hydrocarbon fluids obtainable from a given quantity of native hydrocarbon oil or residuum the combination, with a closed retort for holding the materials, of electrical heating means located in said retort interior comprising a plurality of resistors, one of which is located in the retort space for fluids, and another in the retort space for vapors, and an electric circuit including said resistors.

1,345,657. METHOD OF CRYSTALLIZING MARGARIN. ANDERS CARL AUGUST ZEUTHEN and MARTIN LARSEN, Silkeborg, Denmark. Filed Apr. 3, 1917. Serial No. 159,597. 5 Claims. (Cl. 99—13.)

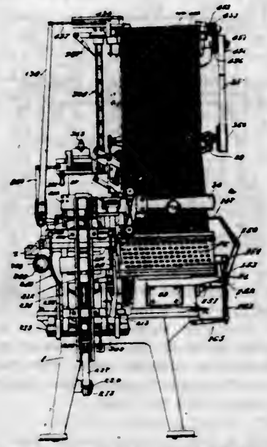


1. A method of crystallizing margarin, which consists in causing the emulsion and a cooling agent to travel through a common course and transversely moving the emulsion and cooling agent relative to each other during such travel.

1,345,658. HAND SCRAPING-TOOL. CARL L. AAGAARD, Rockford, Ill. Filed Mar. 12, 1919. Serial No. 282,238. 11 Claims. (Cl. 279—53.)

1. A scraper comprising a handle equipped with a blade holder having a blade opening and inner walls converging toward said opening, a blade slidable through said opening, an exteriorly threaded member interposed at one end between the blade and one of said converging walls, a nut on said member adjustable to force the same into wedging engagement with said wall and thereby rigidly secure the blade to the holder, the blade being adjustable lengthwise independently of the threaded member, and a second nut on the threaded member providing an end thrust seat for the inner end of the blade and adjustable lengthwise on said member to determine the position of the blade as regards inward movement.

1,345,659. AUTOMOBILE-TIRE RIM. JOHN A. BEDDINGFIELD, Macon, Ga., assignor of one-half to R. Douglas Feagin, Macon, Ga. Filed Sept. 26, 1919. Serial No. 326,584. 3 Claims. (Cl. 152—21.)

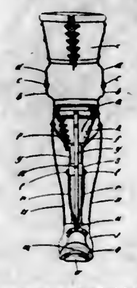


1. A tire supporting rim comprising a section having an open portion or gap therein, and a detachable rim section composed of relatively short sections hinged together at their meeting ends, said detachable rim section being arranged to operate as a toggle, and having free ends extending into and secured within the aforesaid open portion for completing the rim.

1,345,660. BAROTYPE-MACHINE. HERBERT E. BROWN, Sterling, Ill., assignor, by mesne assignments, to Brown Barotype Company, Chicago, Ill., a Corporation of Illinois. Filed May 23, 1913, Serial No. 769,778. Renewed Oct. 18, 1919. Serial No. 331,746. 32 Claims. (Cl. 199—18.)

1. In a device of the class described, a matrix storage magazine comprising a plurality of parallel vertical chutes to receive the matrices, escapement devices at the lower ends of said chutes and the bottom edge of the magazine arranged in right angular offsets or staggers to bring the said escapement devices in a plurality of groups in different horizontal planes.

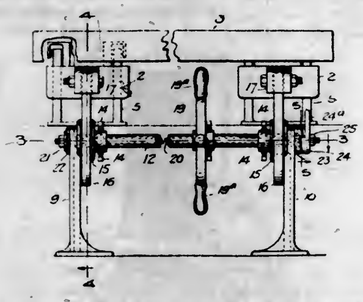
10. In a device of the class described, an escapement device for releasing the matrices from their stored position comprising a pivoted lower pawl provided with an extension near its pivot and an upper pivoted pawl arranged to be engaged by said extension on the lower pawl, so arranged that the weight of the gravitating matrix tends to move the pawls out of its path and that only one pawl is in the path of the gravitating matrix at a time and means comprising a toggle for normally holding the lower pawl in the path of the gravitating matrix and for actuating said pawl.



13. In a device of the class described, means for assembling matrices comprising assembling rails between and onto which the matrices gravitate, a retarding finger in the path of the assembled matrices at the head end, a reciprocating finger to feed the matrices along on said rails at the rear end and means for yieldingly pushing the last named finger against the assembled line of matrices.

21. In a device of the class described, assembling mechanism for the matrices, an elevator to receive the assembled line from the assembling mechanism, means for transferring the assembled line of matrices from the assembling mechanism to the elevator and means comprising a vertically moving latch whereby the said transferring mechanism is automatically locked against operation when the assembled line is over set or too long.

31. In a device of the class described, a pivoted hopper for separating the space-bands from the matrices in the assembled line comprising a pair of spaced plates provided with grooves on their opposing sides and mounted to swing on concentric horizontal pivots and means for normally yieldingly holding said plates up in an inclined position.

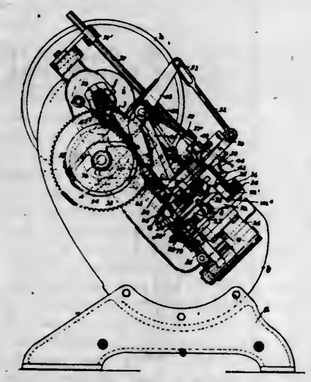


1,345,661. ARTIFICIAL LIMB. FREDERICK JOHN STAVELEY BULFORD, Maidenhead, England. Filed Aug. 29, 1919. Serial No. 320,591. 8 Claims. (Cl. 3—2.)

1. An artificial leg having a rigid annular support adapted to receive the stump of the leg, a tubular peg, a cage-

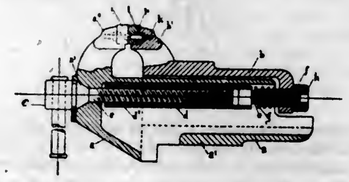
like frame connecting said rigid annular support with said tubular peg, and a bucket depending from said rigid annular support.

1,345,662. TILTING MECHANISM FOR CONCENTRATING-TABLES. WILLIAM A. BUTCHART, Denver, Colo. Filed May 24, 1919. Serial No. 299,474. 6 Claims. (Cl. 83—56.)



1. Adjusting mechanism of the character described, comprising in combination with a tiltably supported element, rack-bars pivotally attached thereto, bendable standards, pinions rotatably supported thereon in operative engagement with racks on the bars, means to rotate the pinions, and locking mechanism acting upon the standards to cause them to frictionally oppose the coöperative movements of the pinions and the racks.

1,345,663. CONCRETE-REINFORCEMENT. PHILIP M. CABELL, New York, N. Y. Filed Apr. 12, 1918. Serial No. 228,114. 2 Claims. (Cl. 72—109.)

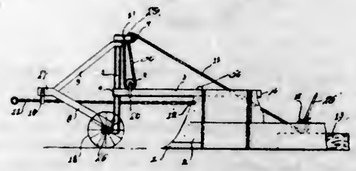


1. The method of forming a reinforcing fabric for cementitious structures consisting in coiling strand material into a spiral, turning the convolutions of the spiral into planes oblique to the axis of the spiral, thus converting the spiral into a flat mat, and then bending the mat along a longitudinal line or lines to form a gutter-shaped unit.

1,345,664. MACHINE FOR MAKING ARTICLES OF SHEET METAL. AMOS CALLESON, Brooklyn, N. Y., assignor to Adriance Machine Works, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 22, 1919. Serial No. 284,449. 13 Claims. (Cl. 271—18.)

2. In combination with a frame, two going means having a yieldable power transmitting connection between them, and one driving the other through said connection and including means to advance the sheets one after another, means to feed the sheets one after another to the advancing means operatively connected with and adapted to be driven by the other going means, means to arrest the motion of said other going means movable into and out of and normally held in position to arrest the motion of the same, and means controlled by the sheet being advanced, to move said arresting means out of said position.

1,345,665. VISE. MAURICE CUENDET, Cordex par Vich, Switzerland. Filed Mar. 20, 1919. Serial No. 283,814. 8 Claims. (Cl. 81—33.)



6. A clamping device comprising a movable jaw having a threaded portion, rotary means for actuating said jaw having a threaded portion, connecting means having threaded portions meshing with said first and second threaded portions respectively, one coöperating pair of said threaded portions having a high pitch and the other pair having a low pitch, and a torsion spring anchored at opposite ends to the respective portions of said low pitch pair for restraining the relative movement of the portions of the low pitch pair upon rotation of said actuating means, the strength of said spring being such as to prevent relative rotation of the portions of the low pitch pair until said jaw meets with resistance and then to permit such rotation, both threaded portions of the low pitch pair being non-rotatable while the two threaded portions of the high pitch pair are rotating relatively to each other.

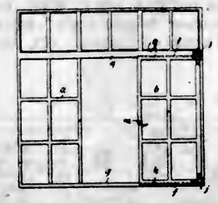
1,345,666. INSULATING MATERIAL. JOSEPH P. DONAVON, Lompoc, Calif. Filed Aug. 28, 1919. Serial No. 320,420. 2 Claims. (Cl. 106—18.)

2. Heat insulating material comprising a block of kieselguhr having voids therein formed by the incineration of pieces of kernel shells embedded in the block.

1,345,667. CARRYING-TRUCK. JULIUS ENGELBRECHT, Boone, Colo. Filed Mar. 5, 1919. Serial No. 280,832. 2 Claims. (Cl. 37—7.)

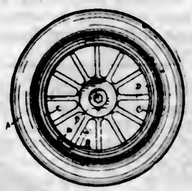
1. In a device of the class described, a truck embodying a post; a plow having an arm slidable vertically upon the post; an idler on the post; an idler on the arm; a winding device on the plow; and a flexible element formed into a depending loop receiving the idler on the arm, the flexible element being trained across the idler on the post, one end of the flexible element being fixed with respect to the post, the other end of the flexible element being assembled with the winding device.

1,345,668. AUXILIARY CAR-STEP. SAMUEL P. FAIRCHILD, Mountain Home, Idaho. Filed Feb. 17, 1920. Serial No. 359,267. 1 Claim. (Cl. 105—447.)



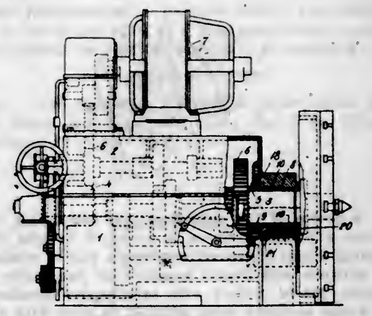
The combination with a step of a railway coach, of depending hangers carried by the step and having eyes,

an auxiliary step having straps doubled and extending across the ends thereof, said straps having eyes at their inner ends registering with the first-named eyes, a pivot bolt disposed through the registered eyes whereby the auxiliary step is pivotally supported, depending apertured



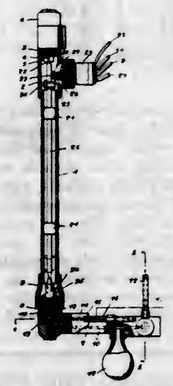
members carried by the coach step, supporting rods movably engaged with the auxiliary step and slidable through the apertured members, a resilient member carried by the coach step, and a member carried by the free edge of the auxiliary step for snapping engagement with said resilient member to hold the auxiliary step in raised position.

1,345,669. METAL WINDOW FRAME AND SASH OF THE SLIDING-SASH TYPE. FRANCIS JOSEPH JAMES GIBBONS, Wolverhampton, England. Filed Feb. 26, 1919. Serial No. 279,394. 5 Claims. (Cl. 189—75.)



1. A metal window frame, having a window aperture and a portion lateral to said aperture, a metal horizontally sliding sash normally covering said aperture and means automatically releasing said sash directly from and automatically causing said sash to become directly pivoted on said frame when said sash is slid open away from said aperture and over said lateral portion of said frame.

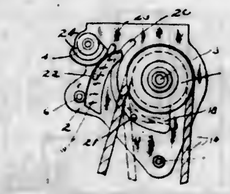
1,345,670. VEHICLE-TIRE RIM. HERMAN H. GREEN, Salt Lake City, Utah. Filed Oct. 6, 1919. Serial No. 328,893. 1 Claim. (Cl. 301—35.)



An automobile tire rim comprising a metal band having an inwardly and outwardly extended flange on one edge; interrupted circumferentially disposed threads thereon; an arc shaped slot cut in the inwardly extended flange with teeth cut in one side of said slot; a coacting metal band of less diameter than the first mentioned metal band and having an outwardly extended flange thereon with a portion formed into a rack flange; an arc shaped slot in said rack flange with teeth cut in one side of said slot; interrupted circumferentially disposed threads in said coacting metal band intermeshing with the circumferentially disposed threads of the first mentioned metal band; and means to engage the teeth in said slots to move said metal bands one within the other to engage the circumferentially disposed threads of one band with the like threads of the other band.

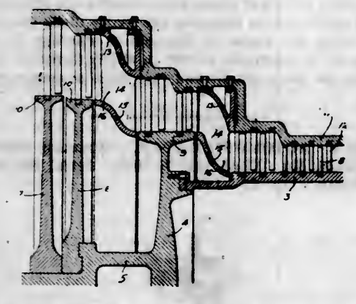
1,345,671. HEADSTOCK-BEARING FOR LATHES. GEORGE E. GREENLEAF, Plainfield, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 9, 1918. Serial No. 261,781. 3 Claims. (Cl. 82—28.)

1. In a lathe headstock, the combination of a box-like frame, a horizontal work spindle, drive gearing for the spindle inclosed within the frame, bearings provided at the respective ends of the frame, the work spindle being mounted in such bearings, passing through the frame and projecting outside thereof at one end, a lathe face plate mounted on such projecting end, the bearing adjacent the face plate including an upper brass and a lower brass provided with a plane wedge-engaging bottom, a wedge block under the lower brass and engaging the bottom thereof, and screw means engaging the wedge block and extending through the frame to the outside whereby the wedge block may be positively moved in either direction to raise or lower the work spindle and face plate to compensate for wear.



1,345,672. AUTOMOBILE-LOCK. WILLIAM HENCKLER, St. Louis, Mo. Filed Aug. 7, 1919. Serial No. 315,951. 3 Claims. (Cl. 70—127.)

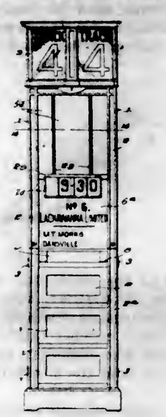
1. A valve and switch actuating mechanism comprising an open ended tubular casing, a valve housing connected with one end of the casing, a head at the opposite end of the casing, an actuating rod rotatably and slidably mounted in the casing, a valve member connected with the rod and threaded into the valve housing for movement into and out of a closed position, a cam element carried upon the rod within the head, a circuit terminal having



contact elements extending into the head for engagement by said cam to move the contacts into engagement with each other when the rod is turned to move the valve to an open position, and a lock controlled turning element carried by the head and having sliding engagement with the rod.

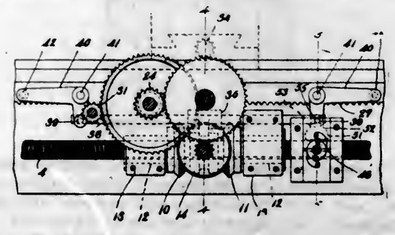
1,345,673. UNIVERSAL LOCK AND RELEASE FOR PULLEYS. GEORGE T. HILLS, Chicago, Ill. Filed July 7, 1919. Serial No. 309,039. 5 Claims. (Cl. 57—34.)

1. A device of the class described comprising in combination a tension member, a pulley, a housing therefor including a pair of spaced members, a pair of wedge members between said spaced members on either side of but normally out of contact with said tension member, both said wedge members being adapted to move with the tension member when the latter is brought successively into contact therewith while moving upwardly.



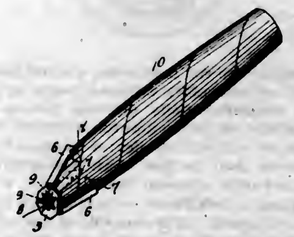
1,345,674. ELASTIC-FLUID TURBINE. FRANCIS HODGKINSON, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 30, 1915. Serial No. 5,249. 1 Claim. (Cl. 253—78.)

A fluid conduit member for turbines having spaced rotor elements, comprising a pair of concentrically disposed stationary annular walls adapted to fit between the rotor elements, and having their outside surfaces conforming in contour to their inside surfaces, and having their inside surface curved to form a passage offering minimum resistance to the flow of fluid from one rotor of small diameter to a rotor of larger diameter, the outer wall of the said member being provided with a radially extending flange whereby the member is secured to the turbine stator and the inner wall being connected to the outer wall by fluid directing vanes whereby the inner wall is supported by the outer wall.



1,345,675. CHANGEABLE INDICATOR. JOB HUTCHINSON, Brooklyn, N. Y. Filed Dec. 4, 1917. Serial No. 205,351. 27 Claims. (Cl. 40—28.)

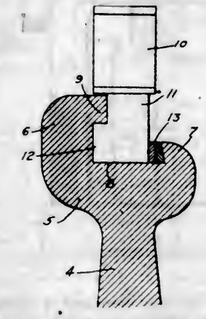
1. In a changeable indicator, a frame, an upper rotatable member mounted on said frame, a lower rotatable member mounted on said frame and below said upper rotatable member, an endless flexible connection passing over said upper and said lower rotatable members and extending between the same, a traveling display device mounted on said flexible connection, a balance weight mounted on said flexible connection on the opposite side of said rotatable



members from said display device, and means to transmit power to one of said rotatable members to move said flexible connection.

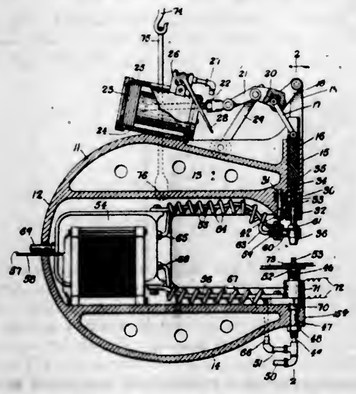
1,345,676. APRON MECHANISM FOR LATHES. ARTHUR H. INGLE and WALLACE E. WARD, Rochester, N. Y.; said Ward assignor to said Ingle. Filed June 8, 1917. Serial No. 173,629. 5 Claims. (Cl. 82—22.)

1. Apparatus of the kind described, comprising a tool carriage equipped with a cross slide and with an apron, a power shaft extending lengthwise of the lathe, and operating mechanism for moving said carriage and said cross slide from said power shaft including a shiftable gear having gear elements coöperative therewith for moving said carriage at a relatively slow rate for feeding or at a higher rate for power traverse, or for moving said cross feed, said shiftable gear being selectively engageable with said gear elements in different shifted positions and being also shiftable to an inoperative position.



1,345,677. SLITTING ATTACHMENT FOR CIGARS. WALTER M. JACKSON, New York, N. Y. Filed June 30, 1919. Serial No. 307,516. 2 Claims. (Cl. 131—20.)

2. A sheet metal puncturing and slitting attachment for cigars consisting of a body portion having projections

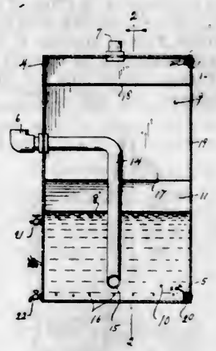


formed therein and extending from one face thereof, said body portion adapted to be applied against the end surface of the cigar and the projections thereon to penetrate into such end surface, said body portion also having arms to engage over and embrace the cigar end, each of said arms formed with a cutting point or projection at the extremity thereof, said cutting points or extremities bent into substantially right angular relation to the planes of the arms and adapted to penetrate the body of the cigar end whereby the withdrawal of the attachment from the cigar end leaves the end surface of the cigar punctured and the exterior surface of the cigar end slitted longitudinally.

1,345,678. MOUNTING FOR TURBINE-BUCKETS. ALEXANDER T. KASLEY, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Filed June 25, 1918. Serial No. 241,882. 8 Claims. (Cl. 253—77.)

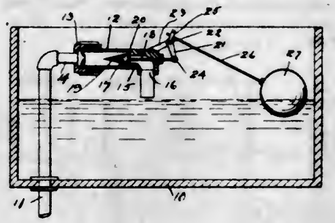
1. A turbine mechanism comprising a rotor having a peripheral bucket retaining flange having an overhanging portion, a radially disposed bucket having a shank with a projection adapted to fit under the overhanging portion whereby radial displacement of the shank is prevented, a flange of less diameter for preventing lateral displacement of the shank and a binding member disposed between the second flange and the shank adapted to hold the shank in engagement with the first flange.

1,345,679. ELECTRIC RIVETING-MACHINE. FRANK P. KORBAY, Amityville, N. Y. Filed Sept. 29, 1917, Serial No. 193,905. Renewed Nov. 14, 1919. Serial No. 338,113. 22 Claims. (Cl. 219—2.)



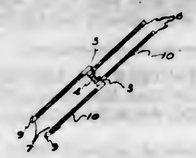
1. In a machine of the class described, a plunger, a plunger die operated by said plunger, an electric transformer, a work piece supporting die in electrical connection with said transformer, an electrode in electrical connection with said transformer and adapted to be moved into position between said plunger and a work piece mounted in said supporting die, and means for operating said plunger to move said electrode into contact with said work piece to heat the same prior to the operation of said plunger die on said work piece to fashion the same.

1,345,680. MANUFACTURE OF LEAVENED BREAD. HENRY A. KOHMAN and ROY IRVIN, Pittsburgh, Pa. Filed Dec. 13, 1919. Serial No. 344,515. 1 Claim. (Cl. 99—10.)



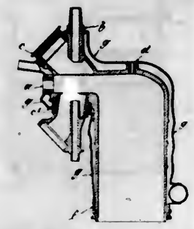
In the manufacture of leavened bread, incorporating lanolin in the dough batch as a shortening agent, fermenting, and baking the loaf; substantially as described.

1,345,681. AIR-WASHER. EDWIN J. KRATOCHVIL, Bancroft, Nebr. Filed Apr. 10, 1920. Serial No. 372,908. 3 Claims. (Cl. 183—24.)



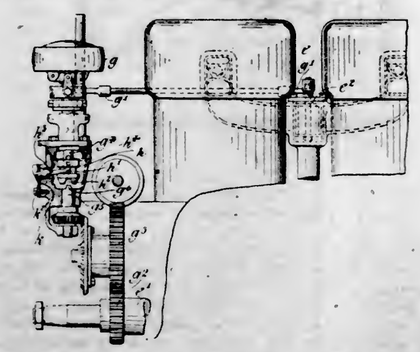
1. An air washer comprising a body portion including a liquid chamber, baffle plates disposed in said body portion and extending into the liquid chamber, an air inlet pipe including branches, said pipe extending into the liquid chamber between the baffle plates, the branches thereof extending through said baffle plates in the opposite direction to each other.

1,345,682. VALVE. WILLIAM LE FRANCOIS, Pawtucket, R. I. Filed July 31, 1919. Serial No. 314,546. 1 Claim. (Cl. 137—104.)



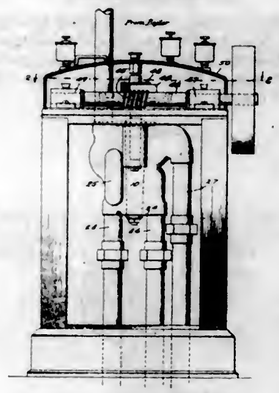
A ball cock comprising a valve casing having a pressure inlet opening a seat and a discharge opening, and endwise movable valve in said casing having a seat portion, a conically-shaped end member on said seat portion extending toward the entering pressure fluid and of a length approximately two and one-half times the diameter of said seat portion to reduce the operating resistance of said valve when moved against the pressure, a stem on said valve, and a lever arm pivotally connected between its ends to said casing and having one end pivotally connected with said stem to positively control both the opening and closing movements of said valve.

1,345,683. SUPPORT FOR SHINGLES. RALPH R. MABIE, New York, N. Y. Filed Apr. 10, 1918. Serial No. 227,830. 9 Claims. (Cl. 108—9.)



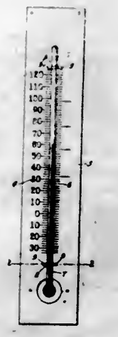
1. In a device of the class described, a member having upstanding projections near the middle of said device, said projections being spaced apart whereby shingles may be spaced at uniform distances apart.

1,345,684. MEANS FOR ATTACHING SHEET-STEEL JACKETS TO CAST-IRON MOTOR-CYLINDERS, FOR WATER-COOLING AND OTHER PURPOSES. AUGUSTE MAIRE, Argenteuil, France, assignor to Societe Lorraine Des Anciens Etablissements De Dietrich & Cie. De Luneville, Paris, France. Filed July 14, 1916. Serial No. 109,231. 3 Claims. (Cl. 123—173.)



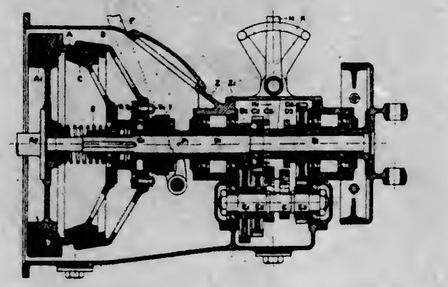
1. A cylinder construction for aviation explosion engines, comprising a cast iron cylinder having projecting internally screw-threaded bosses, steel ferrules screwed into said bosses so as to make a perfectly tight joint therewith, an annular steel member secured around the lower end of the cylinder and making a tight joint therewith and a steel jacket surrounding said cylinder and having portions welded to the steel ferrules and the annular steel member respectively.

1,345,685. CLUTCH CONTROL DEVICE. ALFRED F. MASURY and ROBERT S. BOLGER, New York, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed July 2, 1918. Serial No. 242,993. 1 Claim. (Cl. 74—39.)



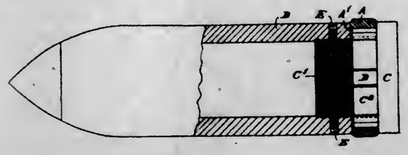
The combination with an internal combustion engine, of a governor to control the speed thereof, gearing and a two-part shaft whereby the governor is driven from the engine shaft, a separable clutch interposed between the two parts of the two-part shaft and including a grooved sleeve member, an operating lever engaging said sleeve member and a manually operable pivoted operating and locking plate having an eccentric cam slot with which said lever is engaged whereby the sleeve is held in or out of driving relation to the two parts of the shaft.

1,345,686. VALVE. LEWIS METTESSER, New Orleans, La. Filed July 29, 1919. Serial No. 314,118. 10 Claims. (Cl. 121—147.)



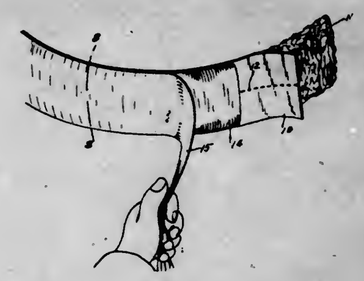
1. In a device of the type described, a casing, an intake and an exhaust port formed in said casing, distribution ports formed in said casing, a four port plug arranged within said casing, said plug ports being arranged in pairs lying in intersecting planes the ports of each pair lying in the same plane, one port of each pair communicating with said inlet port and the other port of each pair communicating with said exhaust port, each of said distribution ports communicating with one port of each of said pairs.

1,345,687. THERMOMETER. HERBERT P. MILKES, Brooklyn, N. Y., assignor to Charles J. Tagliabue Manufacturing Co., Brooklyn, N. Y., a Corporation of New York. Filed May 28, 1919. Serial No. 300,390. 1 Claim. (Cl. 73—52.)



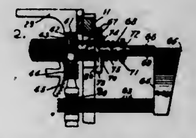
The combination of a thermometer scale-plate of metal having a scale produced on its one face, a thermometer tube on said plate in coöperative relation to said scale, metallic clips hugging said tube and conforming minutely to the form of the outer surface thereof and members comprising integral parts of said clips and extending in surface engagement with said plate and joined thereto by welding whereby said tube is fixed on said scale-plate against lengthwise movement relatively to said scale.

1,345,688. CHANGE-SPEED GEAR. SWINFEN BRAMLEY MOORE, Huddersfield, England. Filed Apr. 26, 1920. Serial No. 276,816. 4 Claims. (Cl. 74—58.)



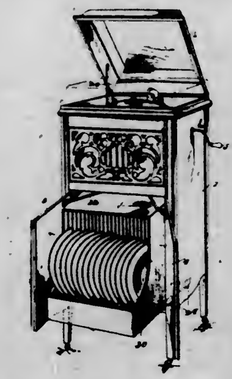
1. A change speed gear comprising an inner driving shaft; two tubular axially arranged shafts mounted on said inner shaft one of which is the second driving shaft and the other of which is the driven shaft; a double acting clutch comprising a compound element the two parts of which are mounted respectively on the two driving shafts, a single element carried by the power shaft, a spring for bringing one of the parts of the compound element into engagement with the single element and for keeping the other part of the compound element out of engagement with said single element, and hand-operated means for reversing said engagements against the action of the spring a countershaft in parallel alinement with the driving and driven shafts; a pinion fixed on the tubular driving shaft and gearing with a pinion fixed on the countershaft; a pinion on the inner driving shaft gearing with a second pinion fixed on the countershaft; a third pinion fixed on said countershaft; and a sliding pinion on the driven shaft adapted either to be put into mesh with the third pinion on the countershaft, to be brought into couple with the pinion on the inner driving shaft by means of a clutch, or to be retained in a neutral position out of engagement with either the third pinion on the countershaft or with the pinion on the inner driving shaft.

1,345,689. SHELL OR PROJECTILE. JOSEPH MORRIS, Elton, near Chester, England. Filed Apr. 18, 1918. Serial No. 229,359. 4 Claims. (Cl. 102—40.)



1. In an explosive projectile, the combination with the projectile body having an interior bore and an opening to the said bore at the rear of the projectile, of a clamping head having a shank which enters the bore of the body and closes the opening, a neck integral with and located between the shank and the head, longitudinal notches in the neck all around its circumference at intervals, and at least one annular rifling band of relatively soft material located directly between the head and the rear of the projectile body and filling the space between the same, the said band having fins formed integrally therewith and adapted to enter the notches in the neck.

1,345,690. TREE-PROTECTOR BAND. ELMER GRANT PERL, Minneapolis, Minn. Filed Aug. 18, 1919. Serial No. 318,070. 4 Claims. (Cl. 43—108.)

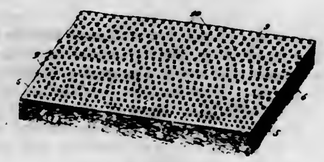


1. A tree-protector band comprising a flexible binding strip of waterproof fabric having cotton batting applied to one side thereof, the other side of the flexible binding strip being adapted to receive an application of sticky substance, the longitudinal edges of the flexible binding strip being extended outward of the longitudinal edges of the cotton batting so as to draw thereover and cover the same when said strip is applied to a tree.

1,345,691. ELECTRIC METER. WILLARD E. PORTER, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Feb. 26, 1917. Serial No. 151,060. 11 Claims. (Cl. 171—323.)

1. In an electric meter of the commutator type, in combination, a metallic vane adapted to be secured to a brush, a metallic brush support, and a metallic spring surrounding said support and serving to mechanically secure said vane to said support and also to provide an electric current path from said support to said vane.

1,345,692. TALKING-MACHINE CABINET. JOSEPH G. PROVIDENTI, Brooklyn, N. Y. Filed Aug. 25, 1919. Serial No. 319,786. 9 Claims. (Cl. 211—16.)



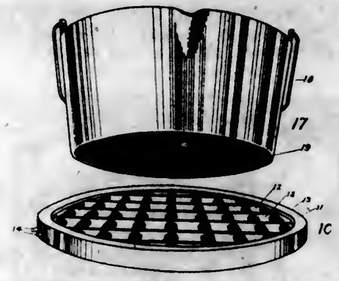
1. In a talking machine cabinet, the combination of a hinged top, a hinged door, a sliding drawer, a movable

member, and connections between said movable member and said top, door and drawer constructed and arranged to move said top, door and drawer upon the movement of said movable member.

6. In a talking machine cabinet, the combination of a hinged top, a hinged door, a sliding drawer, a crank, a plate movable therewith and having a slot therein, connections between said plate and said door and said drawer, and a link having one end connected to the top and its other end coöperating with the slot in said plate.

1,345,693. COMPOSITE HEAT-INSULATING SHEET. DAVID W. PYE, Red Bank, N. J. Filed Dec. 16, 1918. Serial No. 266,853. 2 Claims. (Cl. 154—44.)

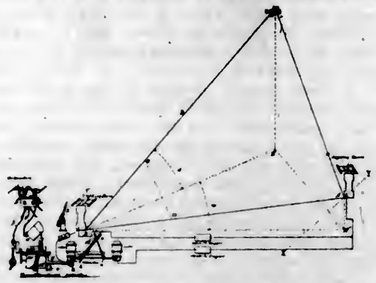
1. A heat insulating article of the class described comprising a body portion of felted material, a sheet of paper overlying said felted body portion and forming a protecting backing, fibers of the felted material extending through minute punctures in said paper sheet and a coating of cementitious material upon the exposed surface of said protecting sheet of paper, embedding the protruding fibers therein.



1,345,694. PROCESS OF PRODUCING A PHENOLIC CONDENSATION PRODUCT. LAWRENCE V. REDMAN, Evanston, and ARCHIE J. WEITH and FRANK P. BROCK, Chicago, Ill., assignors to Redmanol Chemical Products Company, Chicago, Ill., a Corporation of West Virginia. Filed Sept. 16, 1918, Serial No. 254,369. Renewed May 12, 1919. Serial No. 296,537. 4 Claims. (Cl. 106—22.)

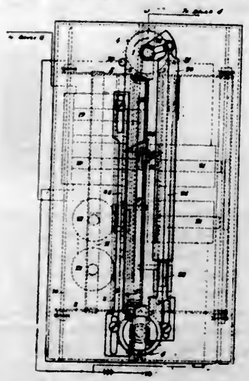
1. The process of producing a phenolic condensation product, without the use of a condensing agent, which comprises: boiling together a solution of formaldehyde and a phenolic body taken largely in excess of the formaldehyde, until the formaldehyde is substantially eliminated from the supernatant aqueous layer which forms and a viscous gummy lower layer is produced; discarding the aqueous layer; concentrating the gummy mass by applying further heat; mixing with the mass a solution of formaldehyde in lesser proportion than in the first step; pouring the mixture into molds and "setting" at a temperature below 100° C.; and removing the material from the molds and hardening by prolonged application of heat at a temperature below 100° C. until the mass becomes infusible and substantially insoluble.

1,345,695. METHOD OF PRESERVING INFUSIBLE PHENOLIC CONDENSATION PRODUCTS FROM DISCOLORATION AFTER PRESERVING. LAWRENCE V. REDMAN, Evanston, and ARCHIE J. WEITH and FRANK P. BROCK, Chicago, Ill., assignors to Redmanol Chemical Products Company, Chicago, Ill., a Corporation of West Virginia. Filed July 24, 1919. Serial No. 312,971. 3 Claims. (Cl. 99—8.)



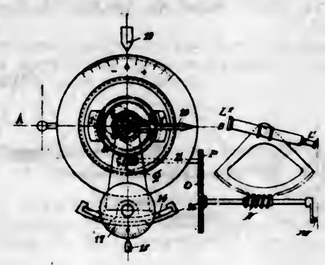
1. The method of preserving an infusible and practically insoluble phenolic condensation product of the transparent order from discoloration which consists in maintaining such product in a medium which is inert with respect thereto when exposed to the action of sunlight.

1,345,696. ELECTRIC HEATING DEVICE. EARL H. RICHARDSON, Ontario, Calif., assignor to Edison Electric Appliance Company, Inc., a Corporation of New York. Filed Dec. 16, 1918. Serial No. 266,989. 4 Claims. (Cl. 219—19.)



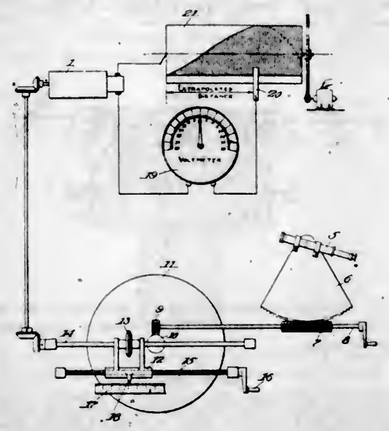
1. The combination with an electric heating unit of the radiant type, of an aluminum cooking utensil having a permanently darkened surface exposed to the radiant heat.

1,345,697. ANTI-AIRCRAFT-CONTROL SYSTEM. JOSEPH LOUIS ROUTIN, Paris, France. Filed July 23, 1917. Serial No. 182,311. 12 Claims. (Cl. 235—61.)



1. Apparatus for regulating the firing of anti-aircraft guns, comprising sighting means, range-finding means controlled by said sighting means, means associated with said range-finding means for tracing the graph of said range in time functions, and graphic means including a time of flight curve for extrapolating by aid of said graph a predicted range of the target.

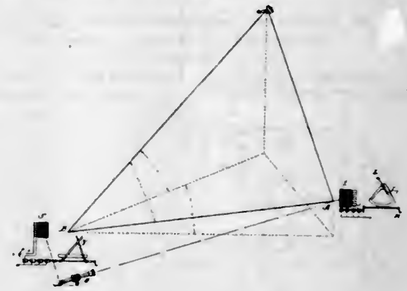
1,345,698. ANTI-AIRCRAFT GUNFIRE CONTROL. JOSEPH LOUIS ROUTIN, Paris, France. Filed July 24, 1917. Serial No. 182,597. 4 Claims. (Cl. 235—61.)



1. In chronotelemetrical apparatus for use in regulating the firing of anti-aircraft guns, the combination of a traveling member adapted to move at a speed proportional to the angular speed of the target, a scale for indicating the product of the time of flight of the projectile by the angular speed of the target, indicating means movable along said scale, means for engaging said indicating means with said traveling member, and timing means controlling the duration of said engagement in accordance with the time of flight of said projectile.

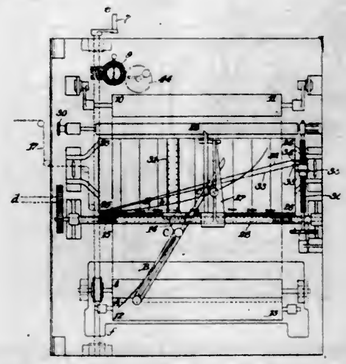
1,345,699. FIRE-CONTROL TACHOMETER. JOSEPH LOUIS ROUTIN, Paris, France. Filed July 25, 1917. Serial No. 182,789. 2 Claims. (Cl. 235—61.)

1. In chronotelemetrical apparatus for regulating the firing of anti-aircraft guns, a magnetic or electromagnetic tachometer wherein the flux is varied so as to indicate the product of a speed by a time, the device being so arranged that it can be gaged by bringing the maximum flux to a constant value by means of independent regulating means.



1,345,700. ANTI-AIRCRAFT GUNFIRE-CONTROL SYSTEM. JOSEPH LOUIS ROUTIN, Paris, France. Filed July 26, 1917. Serial No. 182,981. 2 Claims. (Cl. 235—61.)

1. In apparatus for determining the angular speed of an aerial target by the time of flight of the projectile for regulating the firing of anti-aircraft guns, means for generating an electromotive force proportional to the angular speed of the target, a voltmeter in circuit therewith having the characteristics of a ballistic galvanometer and means associated with the circuit for controlling the application of said pressure to the voltmeter in proportion to the time of flight of the projectile for rendering the voltmeter readings a function of the product of speed of the target and time of flight.

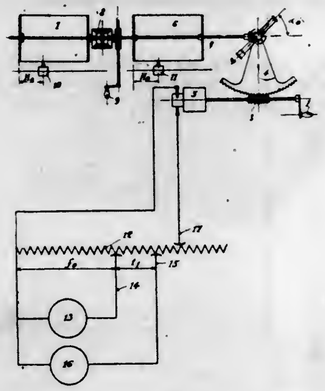


2. In apparatus for determining the angular speed of an aerial target by the time of flight of the projectile for regulating the firing of anti-aircraft guns, means for generating an electromotive force proportional to the angular speed of the target, a voltmeter in circuit therewith having the characteristics of a ballistic galvanometer and means associated with the circuit for controlling the application of said pressure to the voltmeter in proportion to the time of flight of the projectile for rendering the voltmeter reading a function of the product of speed of the target and time of flight, said means comprising a constant speed cylinder having a surface partly conducting and partly non-conducting the ratio of the two depending on the time of flight of the projectile and a brush adjustable lengthwise of the cylinder and contacting therewith for closing the circuit through said conducting portion.

1,345,701. ANTI-AIRCRAFT FIRE CONTROL. JOSEPH LOUIS ROUTIN, Paris, France. Filed Sept. 6, 1917. Serial No. 190,084. 2 Claims. (Cl. 235—61.)

1. A system for regulating the firing of anti-aircraft guns by visual signals and without metallic conductors, comprising a battery station having a bank of lamps, and an auxiliary station provided with sighting means, means thereat for consecutively setting up sight angles comprising a bank of lamps automatically controlled by movements of said sighting device, optical means for associating the images of the two banks of lamps and alidade means at the battery station for reproducing the signals set up at the auxiliary station.

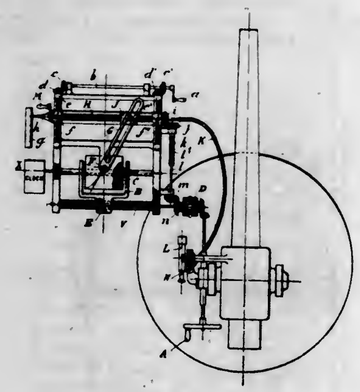
1,345,702. APPARATUS FOR REGULATING THE FIRING OF GUNS. JOSEPH LOUIS ROUTIN, Paris, France. Filed Sept. 7, 1917. Serial No. 190,160. 6 Claims. (Cl. 235—61.)



1. In combination with telechronographic means for predicting the distance of an aerial target and the time

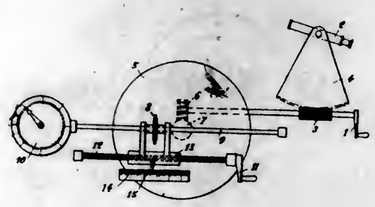
of flight of a projectile, means for proportioning times to distances in accordance with said predicted time and distance of said target and an index element movable with said first-named means for indicating the co-efficient of proportionately

$$\frac{t_0(D_0)^2}{D_1 D_2}$$



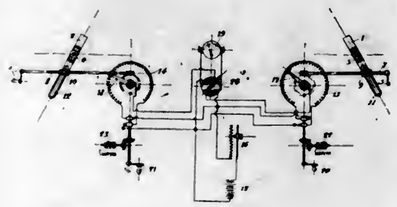
by which the angular speed must be multiplied.

1,345,703. ANTI-AIRCRAFT GUNFIRE-CONTROL APPARATUS. JOSEPH LOUIS ROUTIN, Paris, France. Filed Sept. 8, 1917. Serial No. 190,337. 4 Claims. (Cl. 235—61.)



1. In apparatus of the character described, where the target is moving at a constant altitude during the time of flight of the projectile, the combination of a tachometer giving the angular speed of the target with two scales one giving the time of flight and the other the issuing distance in functions of the angle of sight and of the altitude (H_0).

1,345,704. ANTI-AIRCRAFT TRACKER. JOSEPH LOUIS ROUTIN, Paris, France. Filed Sept. 10, 1917. Serial No. 190,615. 3 Claims. (Cl. 235—61.)

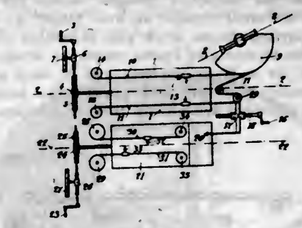


2. In combination a revolubly mounted gun provided with an aiming telescope, a recording surface movable at a uniform rate in one direction, means for displacing said surface transversely to said direction proportionally to the angular movement of the gun, a stylus bearing on said surface for tracing a curve giving angles of sight in time functions and provided with a tangent indicating arm, a threaded manually operated shaft adjustable to and from said stylus proportionally to the time of flight of the projectile and provided with a nut having sliding engagement with said arm and power connections between said shaft and telescope for applying thereto an angular correction as indicated by the tangent position of said arm.

1,345,705. ANTI-AIRCRAFT FIRE-CONTROL APPARATUS. JOSEPH LOUIS ROUTIN, Paris, France. Filed Sept. 11, 1917. Serial No. 190,812. 1 Claim. (Cl. 235—61.)

In apparatus for regulating the firing of anti-aircraft guns, the combination of a sighting telescope, a tachometer and power transmitting means for transmitting the movements of the telescope to said tachometer including adjustable speed-varying means adapted to maintain the speed ratio equal to a predetermined time of flight of the projectile thereby enabling the tachometer to indicate the product of the time of flight by the angular speed of the target for zenithal or azimuthal corrections.

1,345,706. RANGE-FINDING METHOD AND APPARATUS. JOSEPH LOUIS ROUTIN, Paris, France. Filed Feb. 7, 1918. Serial No. 215,932. 3 Claims. (Cl. 235—61.)



1. The method of determining the altitude of an aerial objective from two stations in accordance with the described formula

$$\frac{b}{\tan\beta - \tan\alpha}$$

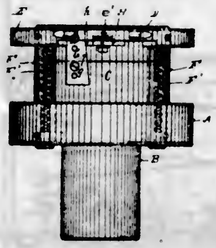
consisting in projecting the angles of sight of said objective from said stations upon a vertical plane common to said stations to obtain angles β and α and controlling the movements of an indicating element in proportion to the difference of the tangents of β and α to indicate said altitude.

1,345,707. APPARATUS FOR REGULATING THE FIRING OF ANTI-AIRCRAFT GUNS. JOSEPH LOUIS ROUTIN, Paris, France. Filed Mar. 6, 1918. Serial No. 220,858. 5 Claims. (Cl. 235—61.)

1. In apparatus for reading off fuse settings for projectiles to be fired at aerial targets, the combination of a support movable in functions of target heights; and provided with sets of curves one of which reads directly durations of flights and the other reads distances for fuse

settings, indices movable over said curves in response to movements of a sighting device, and means for displacing the fuse setting index by a quantity

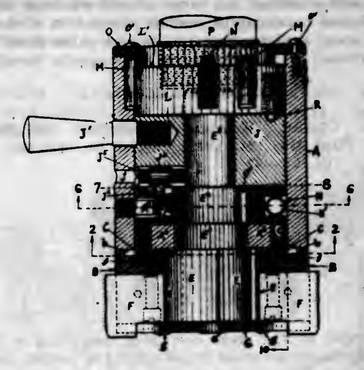
$$a\left(1+\frac{t_1}{f_0}\right)$$



to correct the indicated fuse setting reading.

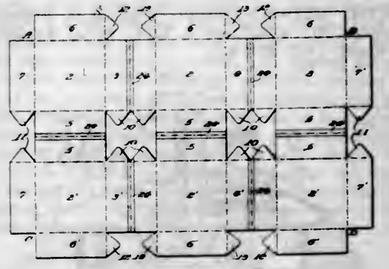
1,345,708. SCREWDRIVER. VICTOR H. SCHNEIDER, Aurora township, Florence county, Wis. Filed July 11, 1919. Serial No. 310,022. 7 Claims. (Cl. 145—50.)

1. A combination tool comprising a handle, a blade carried thereby, a supplementary blade carried by the handle and normally providing the other blade with a single working edge of one size, and means whereby said supplementary blade may be extended beyond the other blade to provide a smaller working edge independent of said other blade.



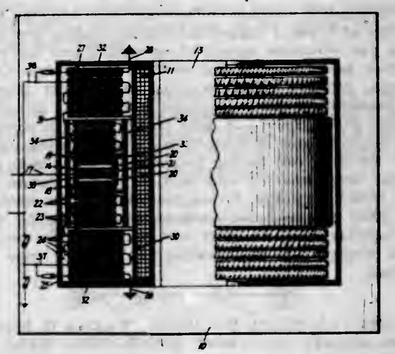
1,345,709. THREADING-DIE MECHANISM. ARTHUR A. SHAFER, Erie, Pa., assignor to Rickert-Shafer Company, Erie, Pa., a Corporation of Pennsylvania. Filed Nov. 14, 1918. Serial No. 262,544. 6 Claims. (Cl. 10—96.)

2. In a device of the character described, a die-holder, dies mounted therein, a rotatable cam sleeve on said die-holder for actuating said dies, an inclined plate secured thereon, a longitudinally movable ring engaging said inclined plate to rotate said cam ring, and spring actuated guide rods secured to said ring and slidably mounted in the die holder to prevent rotation of said ring on said die holder, substantially as set forth.



1,345,710. COLLAPSIBLE TAP. ARTHUR A. SHAFER, Erie, Pa., assignor to Rickert-Shafer Company, Erie, Pa., a Corporation of Pennsylvania. Filed June 27, 1919. Serial No. 307,131. 6 Claims. (Cl. 10—144.)

1. In a collapsible tap a body member having radial slots, chasers slidably mounted in said slots, a central shaft member in said body, cam surfaces carried thereby adapted to force said chasers outwardly at one movement, and the cam ring mounted thereon and rotatable with said



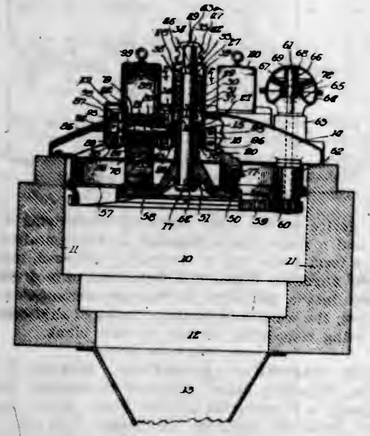
central shaft to force said chasers inwardly at the reverse movement thereof, substantially as described.

1,345,711. DISPLAY-BOX. MORRIS MAX SHAPIRO, Philadelphia, Pa. Filed Oct. 21, 1919. Serial No. 332,187. 8 Claims. (Cl. 229—42.)

1. A device of the class described, comprising a container and a single blank disposed in the container and folded to form a plurality of vertically positioned, integral, relatively angularly disposed walls operative to divide the container into a plurality of separate rectangular compartments, the walls and bottom of each of said compartments being completely formed by said blank.

1,345,712. ELECTRIC APPARATUS. HOWARD O. STEPHENS, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Dec. 18, 1916. Serial No. 137,548. 12 Claims. (Cl. 175—356.)

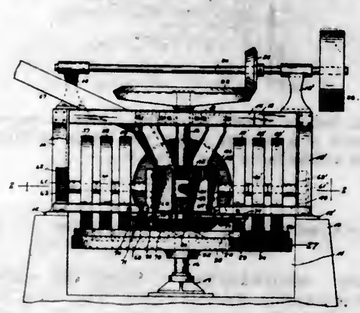
1. A stack of electrical windings having a single rectilinear winding axis and provided with a terminal near the



center thereof, the two ends of the windings being connected together and together providing the opposite terminal of said windings, the turns of said windings being connected and arranged to conduct current in a single direction about said winding axis in two paths from the center terminal of the winding to the opposite terminal thereof.

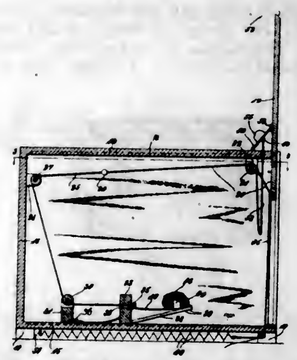
1,345,713. CLASP. WILLIAM H. STEVENS, New York, N. Y. Filed Mar. 21, 1918. Serial No. 223,709. 3 Claims. (Cl. 24—81.)

1. A device of the class described comprising a one piece transversely concaved frame having a central opening therein, the end walls of said frame being weakened to permit bending of the frame along the longitudinal axis thereof, and coacting gripping tongues connected to the frame and disposed upon opposite sides of the longitudinal axis of said frame.



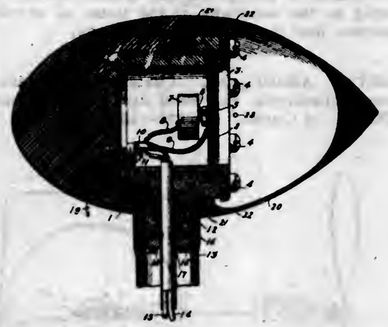
1,345,714. GRINDING-MILL. WILLIAM G. STEVENSON, Chicago, Ill. Filed June 3, 1918. Serial No. 237,847. 1 Claim. (Cl. 83—45.)

In a grinding machine of the class described, the combination of a pit, a supporting frame bridging over said pit, a pan structure supported on said frame for axial rotation, said frame having vertical passageways therethrough, grinding rolls projecting downwardly through said passageways into engagement with the pan structure, vertical guide grooves in said frame for each passageway, journal boxes slidable in said guide grooves, and a shaft for each roll having its ends extending into said journal boxes whereby said rolls may freely rotate and shift bodily vertically during operation of the machine, said guide grooves being open at the top whereby each roll together with its shaft and journal boxes may be lifted through said passageways and removed from the machine.



1,345,715. CRUSHING-MACHINE. WILLIAM G. STEVENSON, Chicago, Ill. Filed Oct. 5, 1918. Serial No. 256,945. 2 Claims. (Cl. 83—45.)

1. In a crushing machine of the class described, the combination of the supporting frame work, a horizontal table having a plurality of concentric troughs, means for rotating said table on its axis, crushing rollers engaging said table in the respective troughs, means for feeding material to the inner trough, an arm hinged at one end to said supporting frame work and extending over said table with the direction of travel thereof, a scoop secured near one of its ends to the free end of said arm and extending under said arm and toward the hinged end thereof in a direction opposite to that of rotation of said

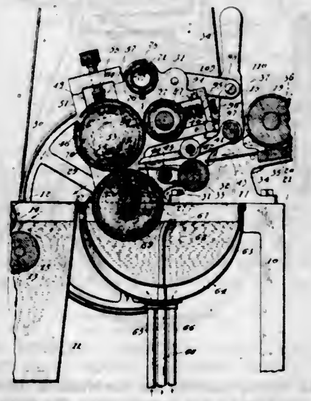


table, the inner end of said scoop resting against the bottom of the inner trough and the other end extending over the trough rim to the next trough whereby material is scooped up from the inner trough and discharged into the adjacent trough, said arm being under tension during such scooping operation and said arm being vertically free to permit the scoop edge to at all times rest against the bottom of said inner trough.

1,345,716. BIRD-TRAP. JOHN SUDUL, Cleveland, Ohio. Filed Jan. 2, 1918. Serial No. 209,947. 2 Claims. (Cl. 43—61.)

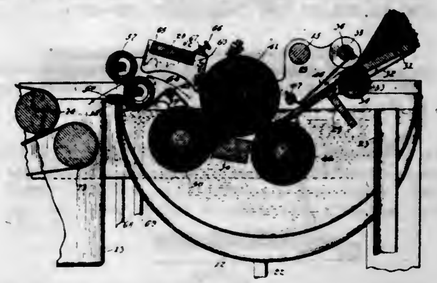
2. In a trap, the combination with a hollow structure, having an entrance and a sliding gate adapted to close the entrance, of a pair of cords attached to said gate, said cords being extended within, close to the upper portion of the structure, a bar connected with said cords, another cord engaging centrally with said bar, and passing through the lower portion of said structure, a block arranged upon the bottom of said structure having an opening through which said cord passes, means for engaging said cord within said opening, means permitting the disengagement of said engaging means, said means being operated by a lure, a spring for accelerating the movement of said gate, and means for locking said gate when in a lowered position thereby preventing it from being raised from the interior.

1,345,717. ACOUSTIC DEVICE. GEORGE B. THOMAS, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 9, 1918. Serial No. 249,066. 5 Claims. (Cl. 181—0.5.)



1. A vibration detector comprising a vibration responsive device and a perforate shield of energy absorbing material for protecting said device from transitory vibrations.

1,345,718. DENTAL MIRROR. CHESTER J. UNDERWOOD, Elgin, Ill. Filed July 3, 1919. Serial No. 308,421. 2 Claims. (Cl. 32—27.)



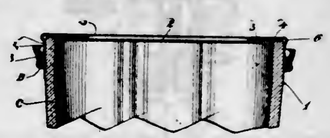
1. A dental mirror comprising a dished holder for the mirror-element, provided with inward projections on its rim, and a mirror-element seating in said holder and having an edge-slot to register with one of said projections for admitting said element into place in the holder, and to be moved out of such registration to confine said element in place by adjusting it in its seat.

1,345,719. MACHINE FOR COATING BLANKS WITH PARAFFIN. FRANK P. VAVRA, Cicero, Ill. Filed Aug. 9, 1918. Serial No. 249,156. 9 Claims. (Cl. 91—51.)

1. In an apparatus of the class described, the combination with a supply tank, of a gaging roll rotating above but dipping into the liquid, a second gaging roll above the first geared thereto and spring pressed into substantial engagement therewith, means for feeding cartons between the rolls, and means for supplying steam to the interior of the upper roll for the purpose described.

1,345,720. PARAFFIN-COATING MACHINE. FRANK P. VAVRA, Cicero, Ill. Filed Oct. 16, 1918. Serial No. 258,399. 10 Claims. (Cl. 91—31.)

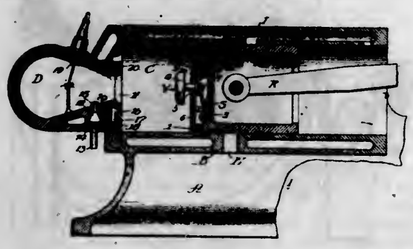
1. In an apparatus of the class described, the combination with a tank, of a gaging roll journaled thereover and dipping into the bath, a feed roll located in the tank beneath the front side of the gaging roll and coöperating therewith, a second gaging roll located in the tank beneath the rear side of the main gaging roll and spring pressed into engagement therewith, and gearing for said rolls to drive them with the same peripheral velocity.



10. In an apparatus of the class described, the combination with a cold water tank, of a pair of feeding rolls journaled at the rear of and above said tank, plural rollers journaled in the tank below the water level, strings running over said rollers to feed blanks through the water, and a feeding roll over which the strings run journaled in advance of and at the level of the lower one of the first mentioned pair of feed rolls.

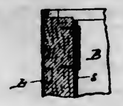
1,345,721. SPARK-PLUG CLEANER, TESTER, AND ADJUSTER. WILLIAM H. WALLACE, Newark, N. J. Filed June 24, 1919. Serial No. 306,474. 2 Claims. (Cl. 7—1.)

2. A device of the character described, consisting of a straight metallic blade, said blade being provided with a longitudinal and a transverse scraping edge, a filing surface arranged upon one side of said blade, and a recessed reduced spacing portion arranged on the opposite side and near one end thereof.



1,345,722. SEALING-CLOSURE FOR CONTAINERS. WILLIAM P. WHITE, Brooklyn, N. Y., assignor to Anchor Cap & Closure Corporation, Brooklyn, N. Y., a Corporation of New York. Filed July 9, 1919. Serial No. 309,572. 18 Claims. (Cl. 215—17.)

9. A package including the combination of a container and a closure cap having a portion forming a cover for the mouth of the container and a portion forming a skirt encompassing the wall of the container, the said skirt

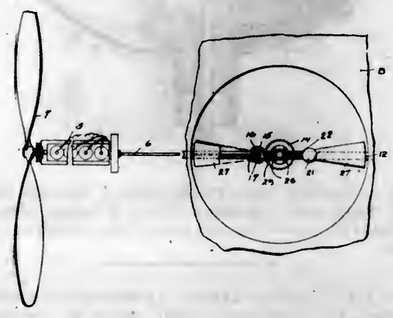


being shaped to provide a resilient sealing portion having frictional engagement with the side of the container and effective to retain the closure thereon, a gasket retaining portion effective to hold a gasket under compression against the side of the container to form a hermetic seal, and a gasket compressed against the side of the vessel and the friction sealing portion.

1,345,723. INTERNAL-COMBUSTION ENGINE. WARD G. WILLIAMS, Brandon, Wis. Filed Mar. 10, 1919. Serial No. 281,756. 10 Claims. (Cl. 123—33.)

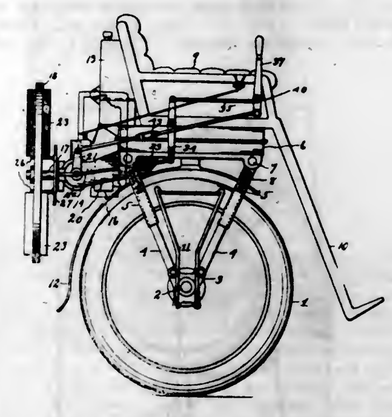
1. An internal combustion engine comprising a compression chamber, a piston movable therein, a combustion chamber, means for supplying fuel thereto, a passageway leading from said compression chamber to said combustion chamber, and a spring controlled valve carried by the piston and adapted to automatically close said passageway immediately prior to the completion of the compression stroke of the piston.

1,345,724. PHONOGRAPHIC-RECORD-ALBUM SIGNATURE. MAX WILLINGER, New York, N. Y. Filed Aug. 11, 1919. Serial No. 316,600. 2 Claims. (Cl. 129—20.)



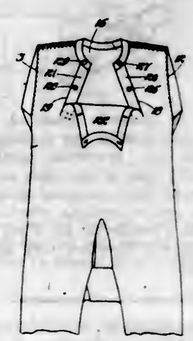
1. A duplex signature for phonographic record albums of the character designated, consisting of independently formed record envelops, eacn having a spinal hinge extension overlapping and adhesively secured to that of the other, for the purpose described.

1,345,725. LIQUID-ELEVATING APPARATUS. FRED V. WILLIS, Oswego, Ill. Filed Jan. 2, 1920. Serial No. 348,726. 12 Claims. (Cl. 103—8.)



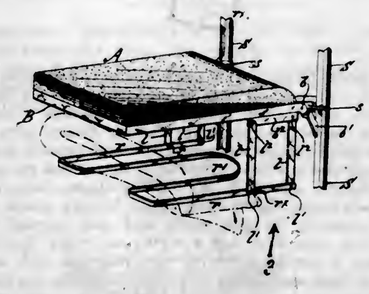
2. In apparatus of the character set forth, the combination of a cylinder into which the fluid to be lifted enters, and means for alternately introducing fluid-pressure into said cylinder to force the fluid therefrom, and venting said cylinder of the contained fluid pressure following the fluid-lifting operation comprising a longitudinally movable valve-device, a piston and cylinder device operating said valve device, and means coöperating with the movable element of said piston and cylinder device for presenting to the movement of the latter an overcomable resistance near the end of its stroke only.

1,345,726. AEROPLANE. CHRISTOPHER ROBERT WILSON, Philadelphia, Pa. Filed Apr. 9, 1919. Serial No. 288,824. 4 Claims. (Cl. 244—15.)



1. In combination with an aeroplane having a stationary wing supporting surface, a source of power, a main driving shaft and a driving propeller thereon, of an attachment for said stationary wing supporting surface mounted in an opening formed in said surface, said attachment comprising a propeller mounted for rotation in the plane of the wing supporting surface, a shaft carrying said propeller, means connecting said shaft to said main driving shaft and means for feathering the blades of said propeller automatically in proportion to the speed of the source of power.

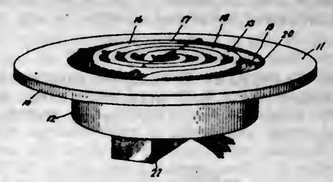
1,345,727. AUTOMONOCYCLE. LOUIE GLENN WILSON, Morning Sun, Iowa. Filed May 3, 1919. Serial No. 294,523. 14 Claims. (Cl. 180—7.)



1. In an automonocycle, in combination with an air propeller for driving the same, means for disturbing the plane of rotation of said propeller to accomplish the guiding of said cycle.

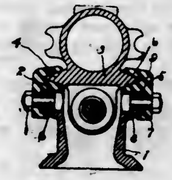
1,345,728. UNDERGARMENT. SOLOMON WRIGHT, Jr., Montclair, N. J., assignor to Wright Underwear Company, Inc., New York, N. Y., a Corporation of New York. Filed July 5, 1919. Serial No. 308,740. 2 Claims. (Cl. 2—144.)

1. An undergarment made from tubular knit fabric, having a neck opening and having two diverging straight line slits which extend from the neck opening downward on the front of the garment, and terminate respectively at dead ends in the body of the garment at points between the median line of the garment and the arm-scyes, the top ends of said slits being at a distance from each other, forming a drop flap, whose upper edge is curved to complement the rest of the neck opening in the body, flies attached to the body along the side edges of the slits and forming under laps for the flap, said flap when closed overlapping the said flies, and means for detachably uniting the said flap with said flies.



1,345,729. HAT AND GARMENT SUPPORT FOR FOLDABLE SEATS. FREDERICK W. ZEIDLER, Jersey City, and CARL HALPERN, Newark, N. J. Filed Jan. 10, 1920. Serial No. 350,593. 3 Claims. (Cl. 155—190.)

2. In combination with a folding seat of the character designated, a skeleton rack, for the support of wearing apparel, suspended on the rear portion of the seat adjacent to its pivotal support by parallel suspender links pivotally connected with both seat and rack, thereby affording unobstructed frontal and side spaces between seat and rack for the accommodation of a garment, said skeleton rack being formed with a medial hat loop, for the purpose described.

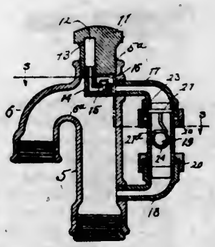


1,345,730. ELECTRIC HEATER. CHARLES C. ABBOTT, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 16, 1919. Serial No. 290,476. 5 Claims. (Cl. 219—37.)

5. An electric heater comprising a casing having a substantially flat upper surface and a heating unit consisting of a resistance conductor and an inclosing metallic tube insulated therefrom formed into a grid and detachably

mounted within said casing so as to present a flat surface which projects above the surface of the casing.

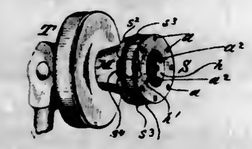
1,345,731. MOUNTING FOR DRILLS. ROBERT L. AMBROSE, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 27, 1918. Serial No. 231,184. 2 Claims. (Cl. 255—51.)



1. In a carriage or mounting for rock drills, a shell having horizontally lying lateral projections, shell caps fitting over said projections, horizontal bolts for drawing said shell caps over said projections and V-shaped recesses and projections between the shell caps and the cylinder casing, whereby slack or play in all directions between the cylinder casing and shell caps is taken up by one adjustment and the alinement of the cylinder casing restored to the original position.

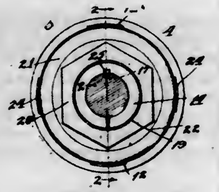
1,345,732. HIGH-SPEED STEEL. JOHN OLIVER ARNOLD, Sheffield, England. Filed Nov. 9, 1918. Serial No. 261,789. 3 Claims. (Cl. 75—1.)

1. A high-speed steel containing as a hardening agent vanadium and molybdenum approximately in the proportion of 1.25 per cent. and 7.50 per cent. respectively.



1,345,733. SIGHT-INDICATOR FOR DISPENSING-PUMPS. CHARLES S. AYRES, Riverton, N. J. Filed July 17, 1919. Serial No. 311,555. 5 Claims. (Cl. 221—102.)

1. In a device of the character stated, the combination with the stand pipe of a measuring pump, of a discharge outlet having a neck, a transparent tube in communication with said stand pipe at points in proximity to said neck, an indicating float in said tube, and means for arresting



the upward movement of said float at a point in proximity to the horizontal plane of said neck whereby said float is visible at a point in proximity to the level of said neck, thereby indicating the primed condition of said pump.

1,345,734. SANITARY APPLIANCE FOR TELEPHONE-TRANSMITTERS, &c. SYLVAN T. BAER, New York, N. Y. Filed Dec. 10, 1919. Serial No. 343,862. 6 Claims. (Cl. 179—185.)

6. A sanitary appliance of the character designated, comprising a cap plate formed with a peripheral flange adapted to embrace the rim of a mouthpiece and with apertures communicating with the interior of the mouthpiece when the device is positioned thereon, and also with a socket having an apertured bottom, and an antiseptic cartridge positioned in said cap plate socket, for the purpose described.

1,345,735. COUPLING. CHARLES A. BAILEY, Chicago, Ill. Filed Dec. 16, 1918. Serial No. 266,891. 4 Claims. (Cl. 64—90.)

1. The combination with a pair of rotary members of a coupling connecting said members so as to rotate together, said coupling comprising a sleeve adjustable axially on one of said members and a ring adjustable circularly around the sleeve, and means for simultaneously clamping the ring on the sleeve and the sleeve on the said member.

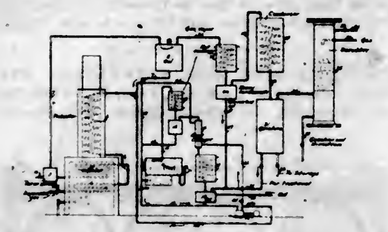
1,345,736. CIGAR-DRILL. ROBERT R. BAILEY, Chicago, Ill. Filed Apr. 14, 1919. Serial No. 289,978. 1 Claim. (Cl. 131—20.)

A cigar drill comprising, in combination, a member, one end of which is in the form of a hollow cylinder and the other end in the form of a substantially conical socket, adapted to receive the closed end of a cigar, which is rigid with the cylinder and has a bore opening into the same, a guide plunger loosely fitting into the cylinder so that it may be rotated or moved back and forth by movements independent of each other, a twist drill rigidly connected with said plunger and adapted to be projected through the bore into the socket, and a stem rigidly connected with the plunger extending through the other end of the cylinder whereby the drill may be forced through the end of a cigar in the socket by a twisting movement and withdrawn from the same by a straight longitudinal movement to make a clean perforation in the end of the cigar.

1,345,737. RAZOR-BLADE HOLDER. ROBERT R. BAILEY, Chicago, Ill. Filed July 23, 1919. Serial No. 312,734. 10 Claims. (Cl. 30—14.)

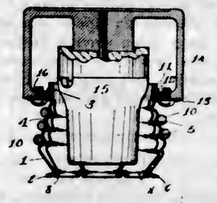
1. In a device of the class described, the combination with a safety razor blade having a central opening, of a holder comprising two reversible portions covering a portion of the sharp edge of the blade and between which the blade is located, said portions being secured to the blade through the central opening, whereby when they are together they form a handle for the blade and when one is turned in the opposite direction they shield the cutting edges of the blade.

1,345,738. [WITHDRAWN.]



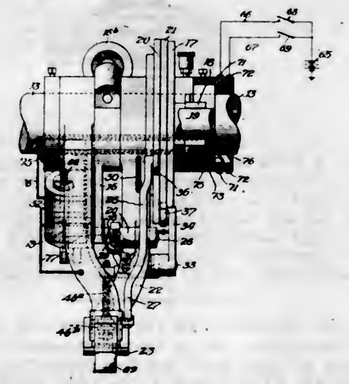
1,345,739. SLEEVE-FORMER. ISAAC BANK, Hammonton, N. J. Filed Aug. 5, 1919. Serial No. 315,392. 4 Claims. (Cl. 223—17.)

1. A sleeve former which comprises in combination the following elements:—a pair of oppositely-disposed forming blocks which when placed together possess a longitudinally curved external shape and are formed with opposite sockets,—means for connecting said forming blocks which embrace a hollow, cylindrical, slotted rod the ends of which enter sockets in the forming blocks,—stop pins which pass through the sockets in the forming blocks, are fixedly connected to said blocks and pass through the slot in the stop rod,—and a spring encircling the stop rod,—and a spring encircling the stop rod and bearing at its ends against the stop pins,—whereby the forming blocks can be compressed together by compressing the spring and be separated by the expansion of the spring.



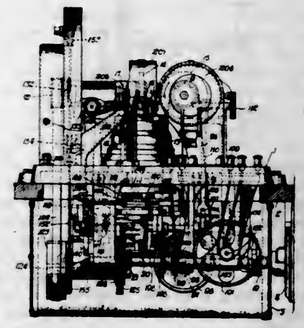
1,345,740. PROCESS OF DISTILLING PETROLEUM. PASCAL MCDONALD BIDDISON, Columbus, and HUGH T. BOYD, Homer, Ohio. Filed Feb. 15, 1918. Serial No. 217,440. 4 Claims. (Cl. 196—25.)

1. That process in the art of distilling liquid residues of petroleum distillation having a boiling point of upward of 400° F. for the obtaining of low-boiling-point hydrocarbons, which consists in circulating the oil from and back to a bulk supply of the liquid; maintaining on the oil a pressure which prevents fractional distillation, not less than the pressure under which the vapors are condensed, by means of injected highly heated gas; continuing the cracking and starting distillation by causing highly heated gas to flow through the cracking zone, cooling the gases and vapors in an auxiliary condenser sufficient to condense oils less volatile than the desired



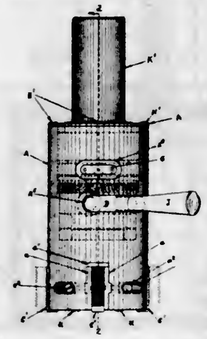
product; further cooling the gas and vapors in the main condenser; absorbing the last traces of gasolene from the gas in an absorber by means of an absorption menstruum, as described.

1,345,741. LAMP-SHADE HOLDER. CARL H. BISSELL, Syracuse, N. Y., assignor to Crouse-Hinds Company, Syracuse, N. Y., a Corporation of New York. Filed July 13, 1918. Serial No. 244,778. 5 Claims. (Cl. 240—115.)



1. A lamp shade holder comprising an expansible and contractile sleeve and a member for contracting the sleeve in the form of a spiral coil encircling the sleeve and rotatable thereon and movable axially thereof during the rotatable movement, substantially as and for the purpose described.

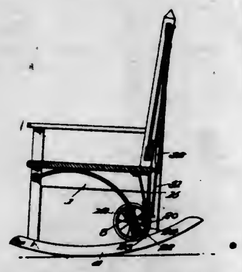
1,345,742. SHEET-GUIDE ADJUSTMENT. JOSEPH R. BLAINE, Oak Park, Ill., assignor to Miehle Printing Press & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 10, 1917. Serial No. 190,474. 7 Claims. (Cl. 271—53.)



5. The combination of means for imparting register to a sheet fed to a printing couple having grippers comprising a gage support, a gage adjustably connected to the support and revoluble at the speed of the cylinder grippers, and stationary means to vary the adjustment of said connection whereby to adjust the position of the gage while the press is in motion, said adjusting means comprising a screw spindle connecting the gage and gage support, a worm wheel on said screw spindle, a worm shaft, a worm on said shaft in engagement with the worm wheel, a ratchet wheel on the worm shaft, a pair of magnets arranged one on each side of the worm shaft with their armature cores substantially in the plane of the ratchet wheel, a pawl carried by each of the armature cores, a spring pressing each of said pawls normally into engagement with opposite sides of the ratchet wheel, means for retracting said pawl out of engagement against the operation of the spring, independent electric circuits one for each of said magnets, a push-button switch in each of said circuits whereby either of the magnets may be energized independently of the other at will in order to rotate the ratchet wheel in either one of two directions.

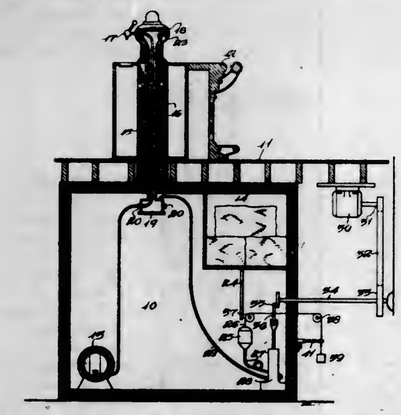
1,345,743. MEANS FOR GRINDING AND SLOTTING CARBON DISKS AND THE LIKE. HARRY BLOUNT, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 7, 1917. Serial No. 153,045. 15 Claims. (Cl. 29—38.)

1. In a device of the class described, a rotatable turret, a plurality of rotatable chucks mounted therein, a plurality of grinding wheels arranged adjacent to the path of rotation of said chucks, and a notching wheel also arranged near said path of rotation, means for rotating said chucks when adjacent to said grinding wheels, but not when adjacent to said notching wheel, and means for moving said notching wheel during a period when the adjacent chuck is stationary.



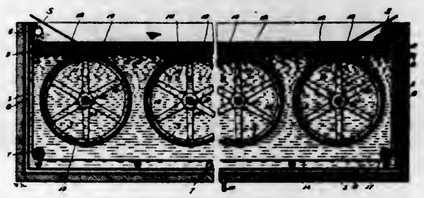
1,345,744. COLLAPSIBLE TAP. RUDOLPH A. BOEHM, Erie, Pa., assignor to Rickert-Shafer Company, Erie, Pa., a Corporation of Pennsylvania. Filed June 9, 1919. Serial No. 302,786. 10 Claims. (Cl. 10—145.)

1. A collapsible tap comprising a body member having radial slots in one end thereof and a cylindrical chamber



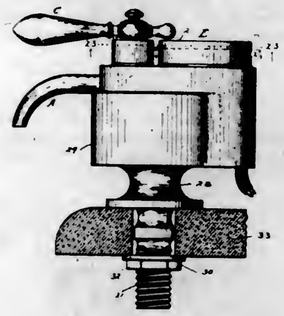
in the opposite end thereof, chasers slidably secured in said slots, longitudinally movable means within said body member engaging the inner ends of said chasers adapted to shift the same, the diameter of said chasers being greater than the diameter of said body member, rotating means mounted on said longitudinally movable means adapted to impart longitudinal movement thereto, a shank, a hub thereon slidably mounted within the cylindrical chamber in said body member, means to prevent rotary movement of said hub within said body member, and means to yieldingly press said hub inwardly in said body member, substantially as set forth.

1,345,745. ATTACHMENT FOR ROCKING-CHAIRS. JOHN B. BOYLE, Crozet, Va. Filed Aug. 16, 1917. Serial No. 186,577. 5 Claims. (Cl. 155—9.)



5. The combination with a rocking chair, of a foot rest connected with the forward portion of the chair for swinging movement and supported for backward and forward travel, the foot rest being movable to position to extend forwardly beyond the chair and to position beneath the seat of the chair, a tongue on the foot rest, a bracket secured to and depending from the seat of the chair and having an opening near its lower end, a latch pivoted intermediate its ends to the lower end of the bracket to be engaged by the tongue on the foot rest, a pin on the latch playing through the opening in the bracket and provided with a head to engage the bracket, a spring secured on the bracket and bearing upon said head, and a pull rod slidably mounted on the back of the chair and having its lower end attached to the upper end of the latch.

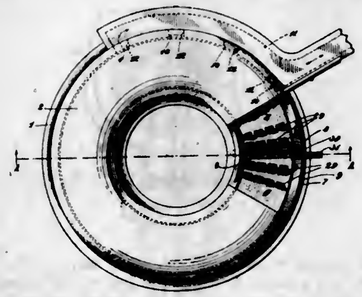
1,345,746. APPARATUS FOR COOLING AND DISPENSING BEVERAGES. EDWARD R. BROWN, Boston, Mass. Filed Mar. 20, 1915. Serial No. 15,826. 6 Claims. (Cl. 62—33.)



3. The combination of a refrigerator, a standpipe having a closed bottom leading from said refrigerator, a dispensing pipe leading from the interior of said refrigerator into and through said standpipe, an ice box in said refrigerator, a pump, and automatic means for causing said pump from time to time to transfer the accumulated water of liquefaction from said ice box to said standpipe.

1,345,747. MACHINE FOR SATURATING PAPER-STOCK. ELISHA J. CADY, Oak Park, Ill. Filed Nov. 5, 1919. Serial No. 335,840. 2 Claims. (Cl. 91—46.)

1. In a saturating machine, a tank for a saturating solution, a plurality of drums having open ends and perforated bodies arranged in spaced tandem relation in the tank, a pair of spaced guides arranged above the top of each drum to provide an upper passage thereto, and a single endless open apron moving on the drums and their spaced guides to provide a continuous supporting run for the stock moving in a series of curved legs across the tandem line of the drums and in tangential legs between adjacent drums.

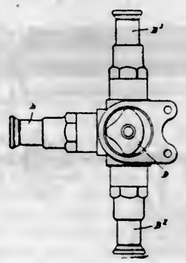


1,345,748. ELECTRIC FAUCET. HOWARD K. CLOVER, Los Angeles, Calif., assignor to Clover Electric Corporation, Los Angeles, Calif., a Corporation of Nevada. Filed Jan. 14, 1919. Serial No. 271,017. 11 Claims. (Cl. 219—39.)

7. In a device of the character disclosed, a dispensing device provided with a valve and valve handle, means for heating fluid to be passed to said dispensing device, a controller for said heating means, a housing for said controller, said housing being rotatably mounted, and operative connections between said device and its handle and said housing whereby said controller is operated.

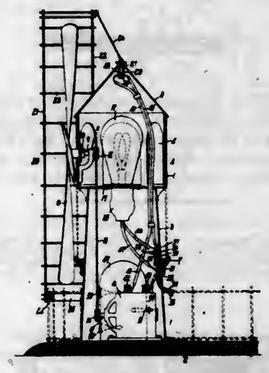
1,345,749. METHOD AND APPARATUS FOR COOLING INGOT-MOLDS. RAY G. COATES, Pasadena, Calif., assignor to Valley Mould and Iron Corporation, Sharpsville, Pa., a Corporation of New York. Filed Oct. 25, 1919. Serial No. 333,420. 47 Claims. (Cl. 263—44.)

27. A cooling device for large castings, such as ingot molds and the like, comprising in combination a chamber adapted to receive hot castings, a suitable floor within said chamber, a conduit for withdrawing air from said chamber, and means to control the withdrawal of the air, said chamber being constructed to provide for the removal of the cooled castings and the addition of hot castings, the



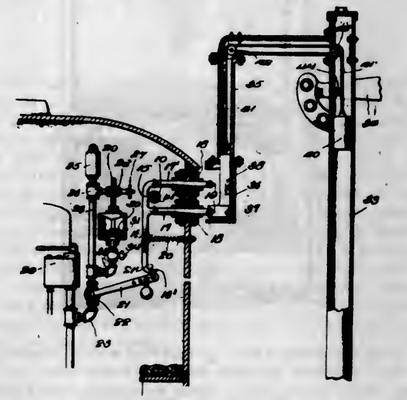
means to control the air being operable to cause the air current to proceed from the cool castings toward the hot castings.

1,345,750. BELT. NORMAN DE BEAUMONT, New York, N. Y. Filed Dec. 11, 1919. Serial No. 344,209. 2 Claims. (Cl. 241—8.)



2. In combination, a leather strap end having a pair of metal studs and a connecting plate rigidly secured thereto, said plate holding said studs in parallelism and said studs extending outwardly from said strap at spaced points along the length thereof and presenting rounded head portions, and a second leather strap end of a thickness slightly less than the height of said studs and having apertures formed directly therein and spaced apart along the length thereof and slightly smaller than said stud ends whereby the apertures may be forced over the stud heads by a slight stretching of the leather at the apertures when the strap ends are superposed.

1,345,751. MULTIPLE-WAY STOP-VALVE. JOHN DEWRANCE, London, England. Filed Sept. 23, 1918. Serial No. 255,362. 2 Claims. (Cl. 277—18.)

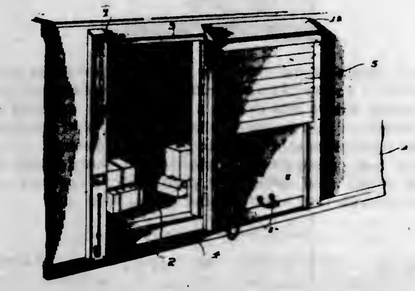


1. A multiple-way stop valve comprising a central chamber, a plurality of branches extending therefrom in angular relation, valves for controlling said branches, said valves having an operative part extending into the chamber and a cam mounted within the chamber, having a plurality of projecting points disposed to simultaneously engage in different positions the operative parts of different groups of valves.

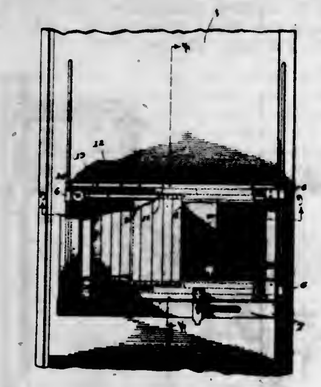
1,345,752. ELECTRIC LAMP AND FAN. HUNT DIEDRICH, New York, N. Y. Filed June 16, 1919. Serial No. 304,501. 5 Claims. (Cl. 240—2.)

1. A device of the character described having, in combination, a hollow casing provided with openings, an electric motor within said casing, a fan rotatably mounted on the outside of said casing in alinement with said openings, means connecting said motor to said fan, whereby a rotary motion may be imparted thereto, and an electric lamp located within said casing and positioned to cast rays of light through said openings and across said fan.

1,345,753. AUTOMATIC OR SAFETY TRAIN-STOP MECHANISM. FRANK A. DIODATO, North Collins, N. Y., assignor to Dio-Kads Corporation, Buffalo, N. Y., a Corporation of New York. Filed Aug. 25, 1919. Serial No. 319,533. 7 Claims. (Cl. 246—186.)



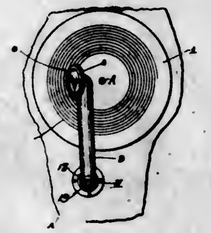
5. In train stop mechanism, a visual signal arranged along the railroad way and movable to and from train passage and train stop positions, a contact block, suspending means for said contact block operatively connected with said visual signal whereby said suspending means are automatically raised and lowered by and with said signal, to support said contact block at various elevations, said contact block when suspended at its various elevations being either in inoperative or operative position relative to means on a passing locomotive adapted to be actuated by said block to stop the locomotive, said visual signal, contact block, and their connections, being so arranged that the contact block will be suspended at inoperative position when the signal is at train passage position, and will be suspended in operative position when the signal is at train stop position.



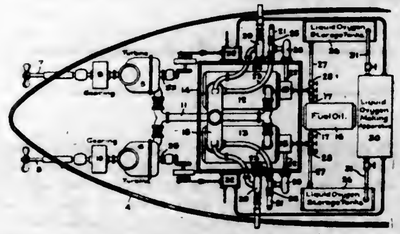
1,345,754. CONDENSER AND METHOD OF MAKING THE SAME. WILLIAM DUBILIER, New York, N. Y. Filed Oct. 30, 1918. Serial No. 260,366. 18 Claims. (Cl. 250—41.)

1. The method of making condensers which comprises assembling alternate layers of conducting elements and mica sheets and subjecting the same to such high pressure as to effect intimate contact and practically absolute and complete surface union of such elements and mica sheets.

1,345,755. CAR-DOOR. ROBERT ANDREW EDGAR, Carlyle, Kans., assignor of one-fourth to Henry T. Rentfroe and one-eighth to John A. Sellers, Carlyle, Kans. Filed Dec. 7, 1918. Serial No. 265,723. 1 Claim. (Cl. 20—26.)

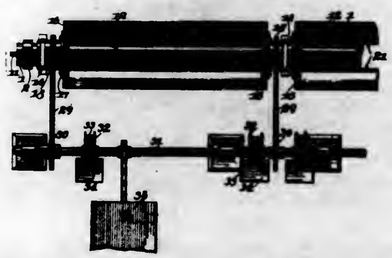


In combination with a car having a door opening, and a door mounted to slide over and away from over the door opening, said door having an auxiliary door opening at its lower end and extending approximately the full width of the main door and substantially flush with the floor of the car when the door is closed, an auxiliary door for closing the opening, said main door having a passage above the auxiliary door opening in which the auxiliary door is mounted to slide, and having vertical passages at each side of the door opening and of the first named passage, and counterweights in the last named passages and connected to the auxiliary door to operate the same.



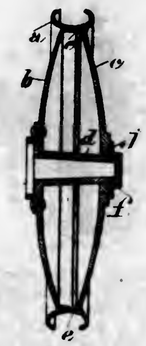
1,345,756. TALKING-MACHINE. VICTOR H. EMERSON, New York, N. Y., assignor to Emerson Phonograph Company, Inc., a Corporation of New York. Filed Feb. 18, 1916. Serial No. 79,218. 8 Claims. (Cl. 274—28.)

1. In a talking machine provided with a record having record grooves therein, a sound box having a stylus, a tone arm, means for supporting said sound box on said tone arm and permitting a shifting of the sound box with respect to the tone arm for a position in which the side



of the stylus tracks upon one edge wall of the record groove to a position in which the side of the stylus tracks upon the other edge wall of the record groove, substantially as described.

1,345,757. PROPULSION OF SUBMARINE VESSELS. WILLIAM L. R. EMMET, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 15, 1918. Serial No. 244,838. 4 Claims. (Cl. 60—105.)



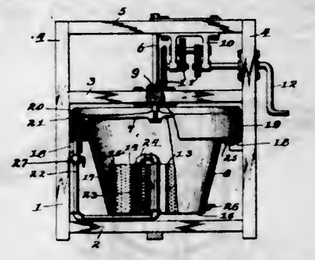
1. In combination, an elastic fluid engine, a boiler for supplying elastic fluid thereto, means for circulating furnace gases through the boiler, liquid oxygen storage tanks, means for supplying oxygen from said tanks and fuel to said furnace gases to form a combustible mixture, means for discharging the excess of furnace gas over-board, and apparatus for supplying liquid oxygen to said tanks.

1,345,758. SOLAR STEAM-GENERATOR. ARTHUR V. FOLSOM, Jacksonville, Fla. Filed Feb. 14, 1919. Serial No. 277,088. 7 Claims. (Cl. 126—271.)

1. A solar heater, comprising a reflector having heads and hubs, each provided with a bore in alinement, means for rotatably supporting the reflector at the hubs, a tubular boiler disposed longitudinally of the reflector and extending through the aforesaid bores in circumferentially spaced relation, means for fixedly supporting the tubular boiler, means having driving engagement with said hubs for turning the reflector, and means for regulating the rate of movement of said driving means.

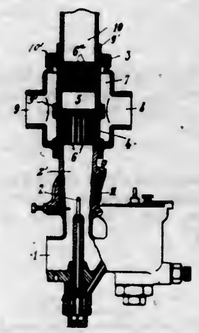
1,345,759. DISK WHEEL FOR MOTOR-CARS. JOSEPH MARIE ETIENNE FRANC, St. Vallier, France. Filed Feb. 15, 1918. Serial No. 217,417. 1 Claim. (Cl. 21—69.)

A disk wheel comprising a hub, a dished circular disk having an inwardly turned concave flange fixed centrally on one end of said hub, a circular rim portion having a concave base fixed around said flange and having its one edge curved inwardly and its other edge thickened to form an annular grooved seating, a removable dished circular disk provided with a central orifice adapted to fit on said hub and having its periphery inwardly curved and being inwardly bent adjacent said inwardly curved periphery so as to form a circular inward projection adapted to coincide with and lie in said grooved seating, and a central nut for fixing said removable disk upon said hub.



1,345,760. INVALID'S BED. EDWIN P. FAYE, Milburn, W. Va. Filed Feb. 5, 1919. Serial No. 275,139. 3 Claims. (Cl. 5—12.)

2. An invalid's bed comprising a lower rigid frame, an upper frame including head, foot and body sections, means hingedly connecting the meeting ends of the sections together, depending threaded bars carried by each section, means carried by the lower frame for receiving and adjusting each threaded bar, the head and foot sections of the upper frame being formed of slidably connected portions to allow for contraction or extension of these sections as the threaded bars are adjusted, as and for the purpose specified.

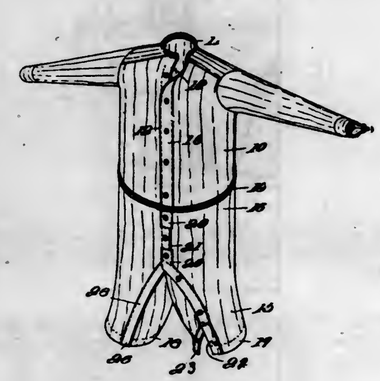


1,345,761. CENTRIFUGAL CLOTHES-WASHING MACHINE. JAMES J. FULTON, Guerneville, Calif. Filed Jan. 8, 1920. Serial No. 350,078. 7 Claims. (Cl. 68—18.)

3. A washing machine comprising a frame, a revolubly mounted imperforate tub, a cylindrical wall in the center of said tub, a plurality of perforated walls around said first wall and spaced therefrom and from each other,

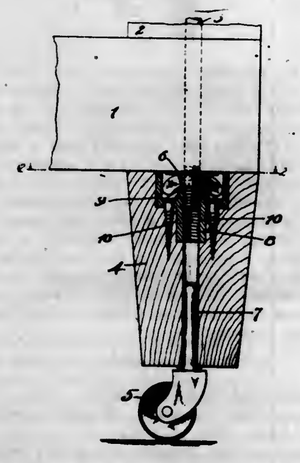
a tank surrounding said tub, and means for carrying the water from said tank through the bottom of and into said tub.

1,345,762. FUEL-HEATER. ALBERT GÉNAULT, Courbevoie, France. Filed Sept. 19, 1918. Serial No. 254,852. 3 Claims. (Cl. 251—241.)



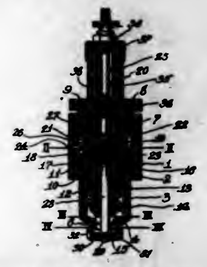
3. The combination with a carbureter having an outlet branch, of a heater casing detachably connected to the outlet branch and provided with an inlet and an outlet, a pair of superposed and partially nested blocks located in the heater casing and each provided with a series of integral walls dividing the blocks into a series of longitudinal passages, one of the blocks being recessed at the adjacent ends of the blocks to provide an expansion chamber, the outer surfaces of the blocks being spaced away from the wall of the heater casing to provide a heating chamber having the outer surface of the blocks at its inner wall, a second outlet branch bearing against the upper block, and means detachably connecting the second branch and heater casing and holding said blocks in fixed position within the heater casing.

1,345,763. COMBINATION-GARMENT. ANNA GOLD, Fredericksburg, Tex. Filed Jan. 25, 1919. Serial No. 273,090. 1 Claim. (Cl. 2—144.)



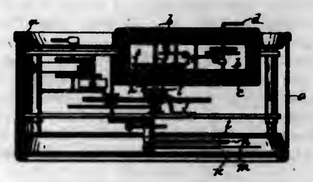
A combination garment comprising a shirt portion and a drawers portion united into a single integral garment by a waist seam, said shirt portion having a closure band and a fastener band extending from the neck to said waist seam, said drawers portion having a closure band and a fastener band positioned to form continuations of the first mentioned bands from said waist seam to the crotch, whereby a fly is provided at the crotch, the closure band and fastener band of the drawers portion extending longitudinally along one leg of the drawers from the crotch to the extremity of the leg, the other leg of the drawers being split from the crotch to the extremity of the leg and provided with means for normally closing said split

portion, and fastening devices carried by the fastener bands and positioned to be engaged by the closure bands, said waist seam being positioned to extend diagonally up-



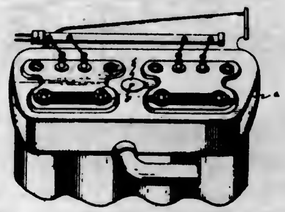
ward from the front to the rear to lengthen the seat portion of the drawers, whereby the fastening devices for both legs may position themselves on the inside of the legs of the wearer.

1,345,764. REFRIGERATOR CONSTRUCTION AND REMOVABLE LEG. HERBERT J. GWYER, Yonkers, N. Y. Filed Jan. 16, 1920. Serial No. 351,914. 4 Claims. (Cl. 45—48.)



1. In a cabinet, a bolt carried by the cabinet and projecting from the lower part thereof, a nut screwed onto said bolt and leaving a portion of the threaded end exposed for engagement by the leg, a detachable leg comprising a body, a threaded sleeve rigidly secured in the upper end of said leg and threaded to screw on to said bolt, and a recess or chamber in the upper end of said leg to afford clearance space for the nut on said bolt, said sleeve cooperating with said nut to hold said bolt.

1,345,765. SPARK-PLUG. GEORGE HADRICH, Highland Park, Mich., assignor of one-third to Theodore C. Betzoldt and one-third to Maxwell W. Benjamin, Detroit, Mich. Filed June 30, 1919. Serial No. 307,760. 4 Claims. (Cl. 123—169.)

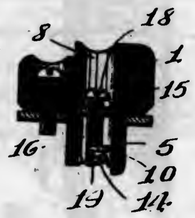


1. A spark plug having a fixed electrode, a reciprocable electrode, and means for holding said reciprocable electrode stationary, said fixed and reciprocable electrodes having teeth adapted to mesh when the reciprocable electrode is reciprocated relative to said fixed electrode.

1,345,766. CLOCK. LAURENS HAMMOND, Detroit, Mich. Filed July 14, 1919. Serial No. 310,741. 8 Claims. (Cl. 58—53.)

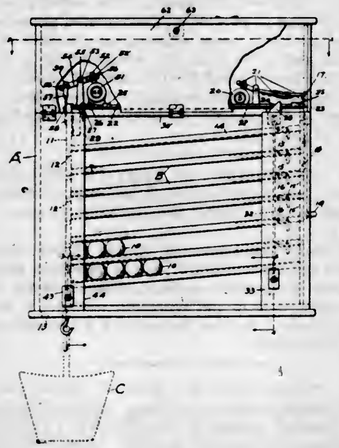
1. In a clock, a sound proof container disposed interior thereof containing the escapement mechanism separating the same from the remaining clock mechanism.

1,345,767. METHOD AND APPARATUS FOR INDICATING HEAT. LAURENS HAMMOND, Detroit, Mich. Filed Feb. 7, 1920. Serial No. 356,999. 4 Claims. (Cl. 116—106.)



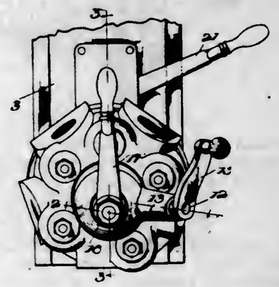
1. The process of detecting whether or not an engine has been heated to a certain temperature by affixing thereto a configured stamp formed of such material that when the engine has been heated to such temperature the stamp will fuse sufficiently to obliterate the configuration thereon so as to indicate such fact.

1,345,768. ELECTRICAL APPLIANCE. HAROLD P. HASTINGS and JOHN J. DOSSERT, Syracuse, N. Y., assignors to Crouse-Hinds Company, Syracuse, N. Y., a Corporation of New York. Filed June 24, 1918. Serial No. 241,560. 3 Claims. (Cl. 173—259.)



2. An electrical appliance comprising a base, a conductor mounted on the base, a binding device in the form

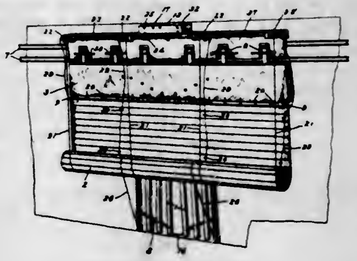
of a U-shaped clip extending transversely relatively to the conductor and having the branches of the U-shaped formation arranged above and below the terminal and the intermediate part thereof extending crosswise of the conductor, and a screw threading through one of the branches



of the U-shaped clip and abutting against the opposing side of the conductor, the intermediate part of the U-shaped clip being formed with a slot thereby providing bars at opposite ends of the U-shaped clip and the conductor being formed with notches for receiving the bars, substantially as and for the purpose described.

1,345,769. BALL-RACK. THOMAS R. HAYES and LAWRANCE E. KITSON, Portland, Oreg. Filed Feb. 20, 1919. Serial No. 278,274. 2 Claims. (Cl. 235—91.)

1. In a ball rack provided with a casing, the combination therein of a plurality of racks adapted at one end to receive balls of desired diameter, a vertically movable slide adjacent to the receiving ends of said racks, the slide being provided with dogs upon its inner face and recesses therein opposite the closable racks, a slidable rod positioned to engage the slide in its recesses and having a spring to retain it in such engagement, and a lug upon the rod, a vertically movable rod having a cam plate on its upper end arranged to engage the lug on the slidable rod and move the rod out of engagement with the slide and to release it into engagement therewith, means to lock, unlock and raise or lower said vertical rod, and a register provided with mechanism extending therefrom toward the said slide and arranged in a manner whereby the dogs upon the slide, when moving upwardly, will engage said mechanism and by its means cause the register to tally and may pass said mechanism, when moving downwardly, without causing the register to tally.

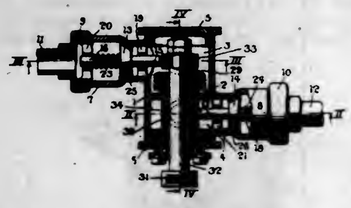


1,345,770. OPERATING DEVICE FOR THE TURRETS OF MACHINE-TOOLS. ERNEST C. HEAD, Rochester, N. Y., assignor to Colburn Machine Tool Company, Franklin, Pa., a Corporation of Pennsylvania. Filed Nov. 10, 1917. Serial No. 201,241. Renewed Feb. 24, 1919. Serial No. 278,935. 6 Claims. (Cl. 29—49.)

1. In combination, a turret, a pivot on which said turret is rotatably mounted, a gear rigidly connected with said turret, a housing non-rotatably mounted upon said pivot, a gear member carried by said housing and rotatable on an axis intersecting the axis of said pivot at an acute angle, said gear member being in mesh with said gear, and means to rotate said gear member.

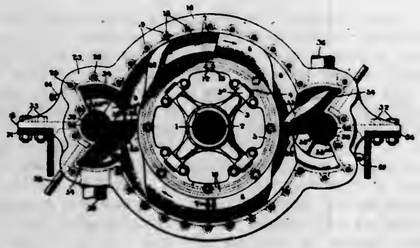
5. In combination, a turret, a pivot for said turret provided with a screw-threaded extension, a gear rigidly connected with said turret, a housing splined to said pivot, a clamping nut carried by said screw-threaded extension for moving said housing into clamping relation with said turret, means for rotating said nut, a gear member in mesh with said gear and mounted in said housing on an axis intersecting the axis of said pivot at an acute angle, and means to rotate said gear member.

1,345,771. BREACH-MAT. JOHN R. HEWETT, Schenectady, N. Y. Filed May 27, 1918. Serial No. 236,913. 26 Claims. (Cl. 114—229.)



1. A breach mat comprising a plurality of beams normally held in a horizontal position, a sheet member normally rolled up, means for releasing said beams so that they may move into a vertical position, and means for releasing said sheet member so that it may unroll over said beams.

1,345,772. THROTTLE-VALVE. PHILIP D. HIBNER, Seattle, Wash. Filed Jan. 28, 1919. Serial No. 273,627. 2 Claims. (Cl. 277—3.)

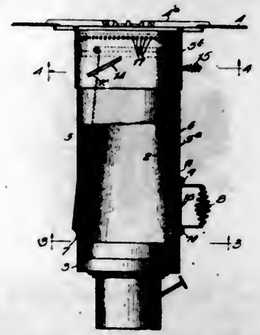


1. A throttle valve casing having separate pairs of fluid inlet and outlet ports, valves normally closing said inlet ports, valve stems, a throttle lever having a shaft rotatably mounted in the casing, cams on said shaft opposite

their respective valve stems for engaging the valve stems and shaped to simultaneously open the said valves as the

shaft is rocked to a certain position, one of said cams being also shaped to open one of said valves only, when the shaft is rocked to another position.

1,345,773. ROTARY ENGINE. PHILIP D. HIBNER, Seattle, Wash. Filed Mar. 11, 1919. Serial No. 281,953. 23 Claims. (Cl. 123—15.)

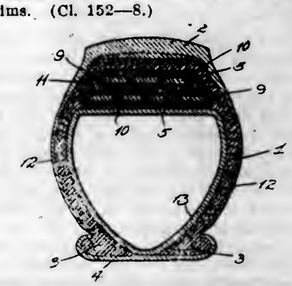


1. In a rotary engine, a casing having an annular chamber, a piston head traveling therein and coaxial rotating and oscillating valves for controlling the admission of motive fluid to said chamber, the rotating valve being driven from the engine shaft and the oscillating valve being controlled in its movements by the piston head.

1,345,774. CURB-PUMP. SHERWOOD HINDS, Fort Wayne, Ind. Filed Sept. 26, 1917. Serial No. 193,259. 8 Claims. (Cl. 221—102.)

1. A curb pump comprising pumping mechanism, an operating member, a discharge hose, a casing entirely inclosing the entire pumping mechanism with the exception of the operating member and the said hose, and common locking means for the member and the hose.

1,345,775. OIL-STOVE. RUDOLPH HOFFMAN, Kankakee, Ill., assignor to Sears, Roebuck and Company, Chicago, Ill., a Corporation of New York. Filed May 3, 1917. Serial No. 166,084. 2 Claims. (Cl. 126—45.)



1. In an oil stove, the combination with a fixed top having a grate, and a burner stationarily supported below the grate, of a unitary heat-conducting device carried solely by the burner and comprising a chimney, a drum surrounding the chimney so as to provide an annular air space between the chimney and drum, the lower ends of said chimney and drum being rigidly secured together and there being air inlet openings communicating with the lower part of said space, said chimney and drum being mounted to tilt upwardly about a pivot point near their lower edges so as to provide a space to give access to the burner, and a tubular upper section freely movable relative to the upper end of the drum and adapted to be supported thereby either in a lowered position such as to permit of a tilting of the device upon its support unrestrained by the grate or in operative position immediately adjacent the underside of the grate.

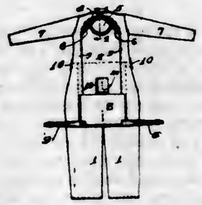
1,345,776. PRODUCTION OF TEXTILE FIBROUS MATERIAL. MAARTEN HOFSTÉ, Amsterdam, Netherlands. Filed Jan. 2, 1920. Serial No. 349,050. 8 Claims. (Cl. 92—10.)

1. The process of preparing textile fibrous materials from stalks and other parts of plants especially of plants with a hard woody rind or bast, such as ramie, which comprises producing in the vegetable material a gas liberated by chemical reaction for causing a mechanical laying bare of the fibers.

1,345,777. VEHICLE-TIRE. HALL H. HOLDAWAY, Los Angeles, Calif., assignor, by mesne assignments, to The Adams-Campbell Company, Incorporated, a Corporation of California. Filed Dec. 14, 1915. Serial No. 66,731. 5 Claims. (Cl. 152—8.)

1. A vehicle tire casing provided in the tread thereof with two groups of ring members, one group being of less width and outside of the other group, said rings being made of flat spring material, each of said rings being covered, and means binding said rings together side by

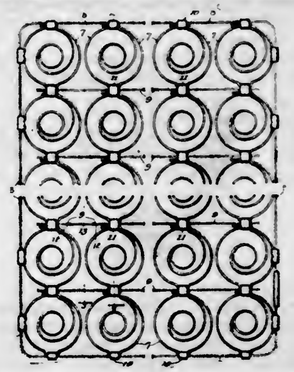
side in each group, and means binding the two groups together within said tread, substantially as described.



3. A vehicle tire comprising a casing having layers of fabric constituting the body portion thereof, a series of rings of spring material embedded in the tread portion of the casing, tire fabric incasing each of said rings, a tire fabric incasing the series of rings, and an inflation member arranged within the rings for keeping them in position and for assisting in the distending of the tire casing.

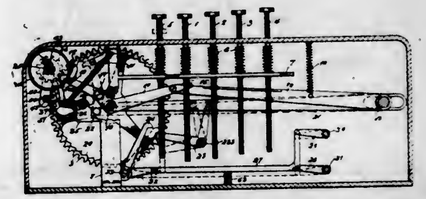
1,345,778. STOVEPIPE-LOCK. GEORGE WASHINGTON HORMEL, Wichita, Kans., assignor to George McConnell Glenn, Wichita, Kans. Filed July 7, 1919. Serial No. 308,990. 3 Claims. (Cl. 285—185.)

1. A stove pipe lock, comprising a stationary member and a movable member, and coacting means carried by the members for frictionally locking the movable member against movement when the members are in alined position.



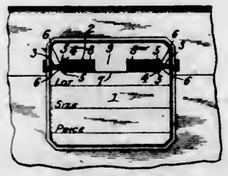
1,345,779. OVERALLS. ARTHUR HOSMER, Chicago, Ill. Filed Oct. 26, 1918. Serial No. 259,811. 3 Claims. (Cl. 2—144.)

1. A garment of the class described, comprising leg portions, a front body portion integral with said leg portions and having a neck opening at the top thereof, said front body portion being extended into a neck band adapted to fit over the shoulders and around the back of the neck of the wearer, side flaps extending from said front body portion around the sides of the body and partially covering the back, said side flaps being separated to provide an opening therebetween to admit the body of the wearer into the garment, and a flap secured along the lower edge of the rear opening and adapted when raised to overlap the side flaps and to close the lower half of the back opening up to approximately the waist-line.



1,345,780. SPRING STRUCTURE. OZELLO R. HUNT, Chicago, Ill., assignor to Cushion Spring Engineering Corporation, Chicago, Ill., a Corporation of Illinois. Filed May 23, 1919. Serial No. 299,200. 12 Claims. (Cl. 5—29.)

1. The combination of a hollow member the walls of which are capable of being crushed into deflected condition, an element gripping said member, with the portions of the latter gripped by said element, in deflected condition forming an interlock between said member and ele-

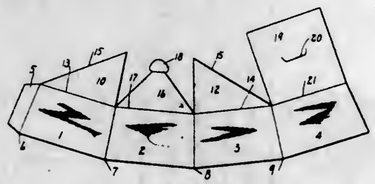


ment, preventing slippage of said element on said member, and reinforcing means located in said member, for the purpose set forth.

1,345,781. ADDING-MACHINE. JUSTIN T. HURLEY, New York, N. Y. Filed May 18, 1918. Serial No. 235,317. 16 Claims. (Cl. 235—82.)

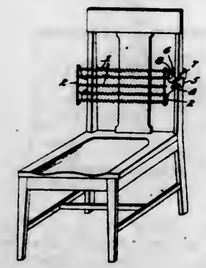
1. In a machine of the class described, the combination of digit wheels, a single driving element provided with two pivotal operating points arranged in operative relation with respect to the wheel and providing a shiftable fulcrum to vary the degree of radial movement of said driving element, a series of depressible elements which may be operated individually and whose movements when depressed in pairs operate said driving element on both pivotal fulcrum points to increase the degree of radial movement of said driving element to produce digit indication equivalent to the combined numerical value of the pair of keys operated.

1,345,782. CLOTHING-TICKET. JOHN ALWYN KELLER, Bay Shore, N. Y. Filed Dec. 18, 1918. Serial No. 267,303. 6 Claims. (Cl. 40—2.)



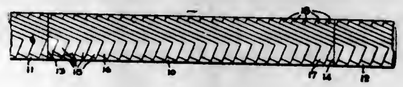
6. A clothing ticket having at its opposite side edges lateral slits forming an open channel extending from the edge and terminating in a body perforation extending above and below the terminal end of the slit, and having an open-ended flap intermediate of said body perforations and in line therewith.

1,345,783. THUMB-SUCKING PREVENTER. ERNEST BYRON KELLY, Chicago, Ill. Filed Aug. 27, 1917. Serial No. 188,377. 11 Claims. (Cl. 128—133.)



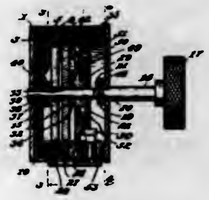
1. In a device of the class described the combination of a bracelet, means for engaging a member of the hand and a member extending between the bracelet and said means, said bracelet means and member being connected together to produce a rigid construction for the purpose specified.

1,345,784. BOX. WILLIAM C. KITT, Cincinnati, Ohio. Filed May 7, 1919. Serial No. 295,383. 1 Claim. (Cl. 229—16.)



A box composed of sides forming a body therefor, provided with a bottom flap, shaped to form the bottom of the box and carrying a slit therein, two side flaps, each of said side flaps having a straight outside line and an inclined line running from the outer edge of said straight line down to the point where the flap meets the body of the box, and a triangular shaped locking flap carrying a button at its outer extremity, said side flaps capable of being folded over onto the bottom flap and at their free ends overlapping each other, and said locking flap and its button capable of being folded over onto the overlapped side flaps, its locking button engaging the slit in the bottom flap and passing therethrough to lock the parts together.

1,345,785. ADJUSTABLE BACKREST. WILLIAM J. KOCH, La Crosse, Wis. Filed Mar. 9, 1920. Serial No. 364,589. 5 Claims. (Cl. 155—158.)

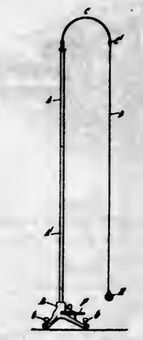


1. A back rest attachment for chairs, seats and the like comprising a pair of attaching devices having forwardly extending independently adjustable arms, and a longitudinally expansible and contractible back rest carried by outer ends of said arms.

1,345,786. ART OF MAKING CORES FOR ELECTRICAL APPARATUS. MASAKICHI KUBO, Tokyo, Japan, assignor to General Electric Company, a Corporation of New York. Filed Oct. 14, 1915. Serial No. 55,790. 1 Claim. (Cl. 29—148.)

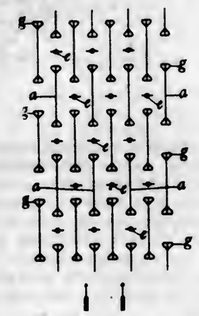
The method of manufacturing core laminations for electrical apparatus whose dimenisonal component longitudinally of the stock is a non-multiple of the stock's longitudinal dimension; which consists in welding strips of stock together edge to edge, and in successively striking laminations from said stock in continuous advance transverse to the welded edge.

1,345,787. LOCK. CHARLES EDWARD LEIFER, Little Rock, Ark. Filed Jan. 13, 1920. Serial No. 351,133. 3 Claims. (Cl. 70—53.)



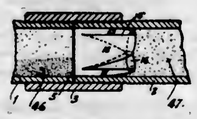
1. In a device for the purpose set forth, the combination of a casing, a tumbler shaft rotatably and slidably mounted in the casing and provided with spaced annular grooves and a notch establishing communication between the grooves, a stop mounted on the casing and selectively engaging said grooves to hold the shaft in either its forward or rear position, and permit its rotation, a plurality of tumblers mounted concentric with the shaft, means whereby rotation of the shaft will set the tumblers, means whereby some of the tumblers will follow the sliding movement of the shaft, the remaining tumblers becoming inactive, and a movable member controlled by the tumblers.

1,345,788. LEVER OPERATING MECHANISM FOR OIL-CANS. GUSTAVE LIDSEEN, Chicago, Ill. Filed Mar. 19, 1917. Serial No. 155,716. 4 Claims. (Cl. 74—39.)



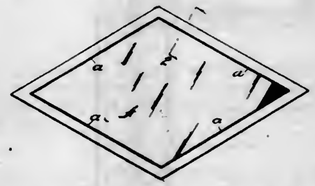
1. In a device of the class described a plate, a socket formed thereon having a slot therein, a lever projecting through said slot, means on said lever adjustably seated in said socket to afford a fulcrum for the lever, and retaining means on said plate for adjustably holding said means in place.

1,345,789. APPARATUS FOR PLAYING A GAME OF SKILL WITH A CAPTIVE BALL. CHARLES MONTAGUE LINLEY, London, England. Filed Mar. 24, 1920. Serial No. 368,398. 13 Claims. (Cl. 46—59.)



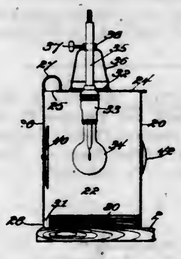
1. In combination with a revoluble shaft, of a ball suspended therefrom to afford means for imparting rotation to the shaft, an indicator device for indicating the number of rotations made by the shaft, and means for actuating said indicator device upon the rotation of said shaft.

1,345,790. ELECTRICAL DEPOSITION OF PARTICLES FROM GASES. LIONEL LODGE, Birmingham, England, assignor to The Lodge Fume Company, Limited, Birmingham, England. Filed May 10, 1920. Serial No. 380,340. 5 Claims. (Cl. 183—7.)



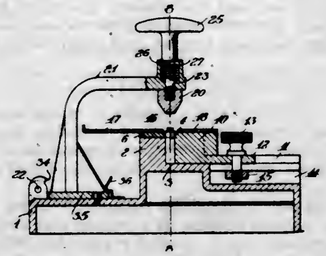
1. In chambers for use in the electrical deposition of particles from gases, the combination comprising plates forming channels for the gases, discharge electrodes situated transversely and longitudinally between the plates, and deflectors for deflecting the gases toward the sides of the channels when passing longitudinally by the discharge electrodes, substantially as described.

1,345,791. GASEOUS MIXER DEVICE. FRANK M. LIVINGSTONE, Springfield, Mass., assignor to Fuel Economy Company, Springfield, Mass., an Associated Trust of Massachusetts. Filed Apr. 27, 1918. Serial No. 231,152. 4 Claims. (Cl. 48—180.)



1. An article for the purpose described, having a plurality of curved fingers that are spaced from each other at their outer side edges, the inwardly extending curved edges 15^3 of the delivery ends 15^4 of the curved portions of the fingers intersecting with the curved ends 15^4 of the delivery end portions of the fingers and meeting in the axis 19 of the article and their outer side edges $15'$ being located in a curve the locus of which is a cylinder and of a diameter which is equal to the base portion of the article, each of said fingers being bent at their outer delivery ends 15^4 into a form that is substantially a semi-circle.

1,345,792. IMITATION-BEVELED-GLASS PANEL. JOHN A. MCAVOY, Chicago, Ill., assignor to McAvoy Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 15, 1919. Serial No. 330,918. 2 Claims. (Cl. 49—92.)



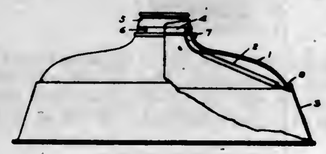
1. A glass panel having for simulating a bevel, a groove parallel to the margin and endless within the face of the panel, said groove being only of sufficient depth to cause refraction of light at the lines which it occupies.

1,345,793. MOTION-PICTURE MACHINE. ISIDORE MARKS, Boston, Mass., assignor to Keystone Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 17, 1919. Serial No. 331,297. 3 Claims. (Cl. 240—41.)

1. A light box for motion picture machines having front and side walls, a cover shorter than the side walls forming an opening at its rear end, an open ended hood covering said opening and a back having an opening at its lower end.

1,345,794. CHECK-PRINTER. ANTHONY MASSI, Rochester, N. Y. Filed Aug. 14, 1919. Serial No. 317,507. 7 Claims. (Cl. 101—381.)

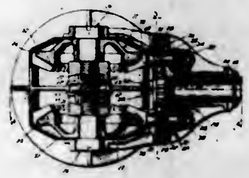
7. In a check printing machine, the combination with a bed recessed to receive the types, of a form plate secured to the bed and having fingers projecting laterally into the recess to provide individual spaced pockets for



the types, a movable clamping member forming the opposite wall of the recess and a two part check supporting bed overlying the printing bed, part of which check supporting bed is carried by the clamping member.

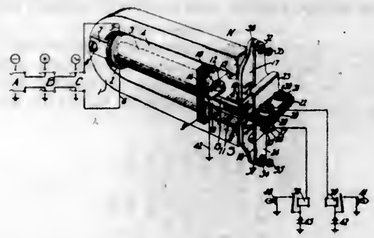
1,345,795. THERMOMETER. HERBERT P. MILKER, Brooklyn, N. Y., assignor to Charles J. Tagliabue Manufacturing Co., of Brooklyn, N. Y., a Corporation of New York. Filed July 25, 1919. Serial No. 313,155. 8 Claims. (Cl. 73—52.)

1. A thermometer comprising a light pervious body, a tube extending lengthwise thereof, edge members upon said body and clamping means connected with said edge members and whereby said tube is maintained against unintentional movement relatively to said body.



1,345,796. REFLECTOR. WILLIAM F. MINOR and PHIL C. KELLER, Cleveland, and THOMAS W. ROLPH, Sebring, Ohio, assignors to General Electric Company, a Corporation of New York. Filed Mar. 15, 1919. Serial No. 282,868. 5 Claims. (Cl. 240—103.)

1. A reflector for use with artificial light sources comprising a lower metal light reflecting element, a metal heel spaced from said element, means connecting said reflecting element and said heel whereby the former is supported through the latter, and a glass transmitting element covering the space between said metal element and said heel.



1,345,797. LIFTING-JACK. JOSEPH J. MIZER and VICTOR JAKOB, Racine, Wis., assignors to Walker Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Sept. 5, 1919. Serial No. 321,871. 12 Claims. (Cl. 254—103.)

1. A lifting jack comprising a standard, a lifting member slidably mounted therein, an actuating gear seated in said standard and having threaded engagement with said lifting member, gears rotatably mounted on opposite sides of said standard and meshing with said actuating gear, an operating handle pivotally connected to said standard and having means adapted to alternately and operatively engage the gears mounted on the sides of said standard to cause said actuating gear to rotate in one direction, reversing mechanism associated with and operated from the

end of said handle whereby said means acting through said side gears may be positioned so as to rotate said actuating gear in the opposite direction.

1,345,798. ELECTRICAL RELAY. LOUIS A. MORTIMER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 4, 1919. Serial No. 342,528. 2 Claims. (Cl. 200—93.)

1. A relay comprising a U shaped permanent magnet, an iron core supported thereby and extending midway between the legs thereof, a magnetizing coil mounted on said core, a pair of armatures mounted on said core, one of said armatures extending over one pole of the permanent magnet, the other of said armatures extending over the other pole of the permanent magnet, and a contact member for each of said armatures, said contact members being supported by the said core and insulated therefrom and from each other.

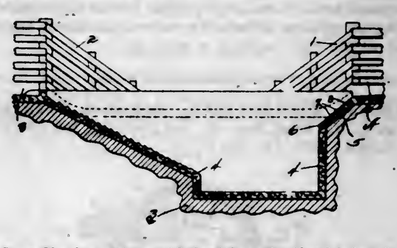
1,345,799. WATER GLASS AND COLUMN REFLECTOR AND PROTECTOR. JOHN A. MOYER, Harriman, Pa. Filed Dec. 2, 1919. Serial No. 341,853. 5 Claims. (Cl. 73—54.)

1. In a device of the character stated, a shield comprising a back having an elongated slot therein for admitting light to the back of a gage glass, a light chamber arranged in proximity to said shield, a transparent front for said shield, and laterally extending top and bottom apertured ears for securing said shield in position with respect to a gage glass.

2. In a device of the character stated, a shield comprising a back having an elongated slot therein, a light chamber for an illuminating device, said shield having transparent front and side openings and laterally extending top and bottom apertured ears for securing said shield in position.

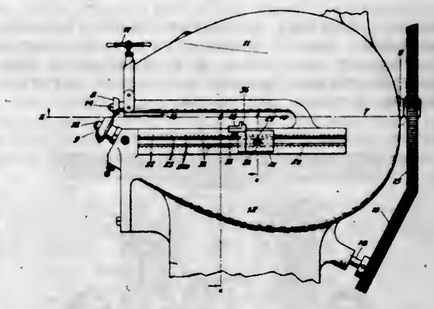
3. In a device of the character stated, a shield comprising a back having an elongated slot therein, a light chamber for an illuminating device, said shield having transparent front and side openings and laterally extending top and bottom apertured ears for securing said shield in position in combination with the supporting arms of a gage, and guard rods passing through and common to said ears and arms.

4. In a device of the character stated, a shield comprising a concave back having an elongated slot therein, a light chamber for an illuminating device extending in proximity to said shield and having internal curved reflecting walls for deflecting rays of light through said slot upon the back of a gage glass, upper and lower laterally extending apertured ears for securing said shield in position, a front door having tempered glass therein for preventing the gage glass in case of breakage from being scattered exteriorly of the shield, and a transparent side window.



5. In a device of the character stated, a shield comprising a concave back having an elongated slot therein, a light chamber for an illuminating device extending in proximity to said shield and having internal curved reflecting walls for deflecting rays of light through said slot upon the back of a gage glass, upper and lower laterally extending apertured ears for securing said shield in position, a front door having tempered glass therein for preventing the gage glass in case of breakage from being scattered exteriorly of the shield, and a transparent side window in combination with a gage glass, apertured arms projecting therefrom and guard rods passing through and common to said ears and arms.

1,345,800. FOUNDATION-GIRDLE. LENORA E. MULLIN, Oak Park, Ill. Filed Sept. 27, 1919. Serial No. 326,801. 5 Claims. (Cl. 241—8.)



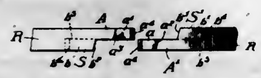
4. A girdle formed of material cut on the bias and adapted to encircle the body of the wearer, said material having the center thereof cut on oppositely facing curved lines extending from the center to each end of the girdle, the oppositely facing edges of said curved lines being formed on different curves, and vertical stays disposed in said girdle at predetermined distances apart.

1,345,801. DIPPING-VAT. THOMAS L. MULLINS, Aubrey, Tex. Filed Oct. 18, 1919. Serial No. 331,656. 4 Claims. (Cl. 119—158.)

1. In a dipping vat provided with an inclined inlet chute, bearing bars mounted on each side of said incline, antifriction rollers, and journals for said rollers journaled in said bearing bars.

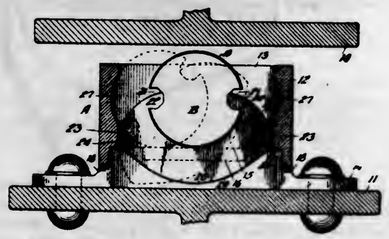
1,345,802. GAGE FOR SHEET-METAL SHEARS, &c. FREDERICK E. MUNSCHAUER, Buffalo, N. Y., assignor to Niagara Machine & Tool Works, Buffalo, N. Y., a Corporation of New York. Filed Apr. 28, 1919. Serial No. 293,369. 3 Claims. (Cl. 164—60.)

1. A shearing machine having a main frame provided with upper and lower arms forming a gap and said lower arm being provided on one of its longitudinal sides with a horizontal T-shaped groove, and a longitudinal guideway on the outer side of said lower arm and on opposite sides of said groove, a carriage slidable horizontally and lengthwise in engagement with that side of the lower arm having the groove and guideway and provided with a longitudinal guide rib engaging with said guideway, a T-bolt passing through said carriage and having its head arranged in the large part of said T-groove and bearing with its nut against the outer side of said carriage, and a gage bar extending transversely over said lower arm and secured at one end to said carriage.



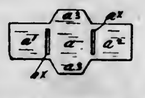
1,345,803. DEFLECTING SPIGOT-TAP. WILLIAM EDGAR MUNTZ, London, England. Filed May 10, 1917. Serial No. 167,747. 7 Claims. (Cl. 299—138.)

1. A tap adapted to effect the functions described comprising, a casing having a wide, elongated discharge orifice



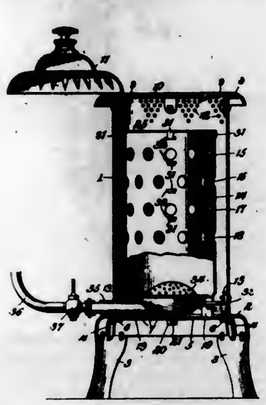
in the outer end, a rotatable spigot plug located in said orifice, an elongated slot in the said plug, the said slot having a cross sectional area as great as the minimum cross sectional area of the supply pipe, means for rotating the said plug so as to deflect the outflowing fluid in any direction within the limits of a wide arc.

1,345,804. PACKING-RING. EDWARD R. NORMAN, Chicago, Ill. Filed Nov. 28, 1917. Serial No. 204,311. 4 Claims. (Cl. 74—109.)



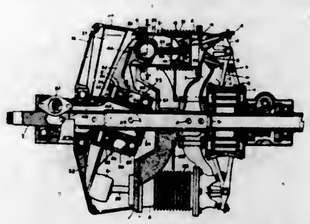
1. A packing-ring having a step-joint formed by two meeting ends, the abutting portions of the joint being diagonal at obtuse angles to the circumferential line of division of the joint and provided with radially disposed coacting tongues and shoulders on opposite sides of its median line and having longitudinally extended coöperating bearing surfaces forming longitudinally extended seals.

1,345,805. GRAVITY SELF-CENTERING ROLLER-BEARING. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Mar. 1, 1919. Serial No. 279,939. Renewed May 26, 1920. Serial No. 384,509. 5 Claims. (Cl. 64—64.)



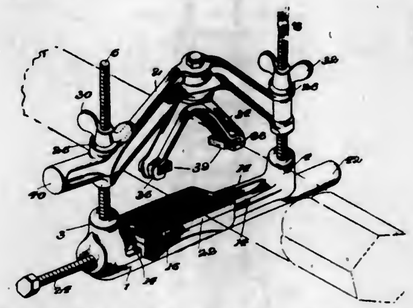
1. In an anti-friction bearing of the character described, the combination with a hollow retaining member adapted to be secured to a bolster of a car and having a pair of parallelly arranged, spaced, flat, longitudinally extending bearing seats, of an anti-friction cylindrical roller having its ends adapted to roll along said seats, and an eccentrically disposed, separately formed, weight rigidly attached to said roller adapted to automatically return the latter to normal position after each actuation upon removal of the actuating pressure.

1,345,806. STRAP-SEAL. SIDNEY J. OANSTON, New York, N. Y. Filed Sept. 10, 1919. Serial No. 322,809. 2 Claims. (Cl. 292—315.)



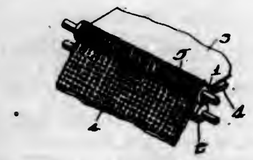
2. A strap seal of the character designated, comprising the overlapping strap ends, and an embracing coupling consisting of a single blank of sheet metal formed with a central outer portion or face plate, strap slots, and overlapping end extensions in close contact with each other, the lateral edges of said central outer portion or face plate being bent around and under the said overlapping end extensions of the blank, and the straps and superposed plates of the coupling being punctured to clench the parts together, for the purpose described.

1,345,807. GAS HEATER AND COOKER. JOHN S. E. PANASEVITCH, Northampton, Mass. Filed Sept. 3, 1919. Serial No. 321,430. 2 Claims. (Cl. 126—85.)



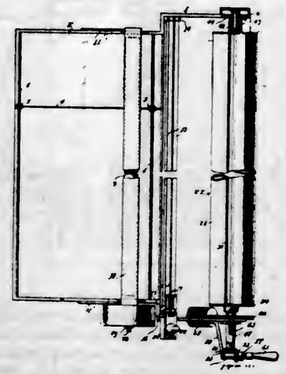
1. A gas stove comprising a heat radiating casing, a drum within the casing spaced from the side walls thereof, said drum having superposed series of circumferentially arranged passages through its upright wall, and division plates or partitions in superposed order within the drum, with each plate carried by the drum immediately below a corresponding circumferentially arranged series of passages, the lowermost plate or partition having a central passage through it with surrounding perforations, the higher plates having passages through them smaller than the central passage through the lowermost plate and in staggered relation, and the top of the drum being provided with numerous small passages or perforations therethrough, the plate nearest the heating element being of heavier gage than the plate above the same and so on up to the top plate.

1,345,808. ROTARY-GAS-ENGINE CONSTRUCTION. GEORGE A. REYNOLDS, Indianapolis, Ind. Filed Nov. 11, 1918. Serial No. 261,962. 14 Claims. (Cl. 123—43.)



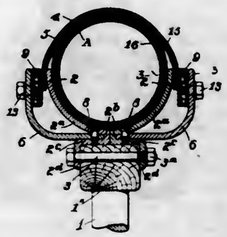
1. A rotary gas engine including a plurality of revoluble cylinders, pistons in said cylinders, and a spider near the ends of the cylinders and rotatable on an axis at an angle to the axis of revolution of the cylinders and connected with and actuated by the pistons and parts of the spider adapted to engage the walls of the cylinder and cause their revolution along with the spider.

1,345,809. DEVICE FOR REFINISHING AXLES, CRANK-SHAFTS, &c. GEORGE H. TABER, Binghamton, N. Y., assignor to Emco Manufacturing Company, Inc., Binghamton, N. Y., a Corporation of New York. Filed Dec. 26, 1919. Serial No. 347,632. 10 Claims. (Cl. 29—76.)



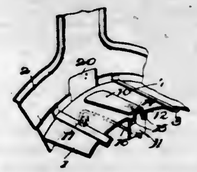
1. In a device of the character described, two frame members adjustable toward each other, one of said members having a clamping member and the other a sliding carriage provided with a cutting tool, substantially as described.

1,345,810. LINOLEUM. JOHN J. TOMEC, Trenton, N. J. Filed Sept. 16, 1918. Serial No. 254,164. 3 Claims. (Cl. 154—49.)



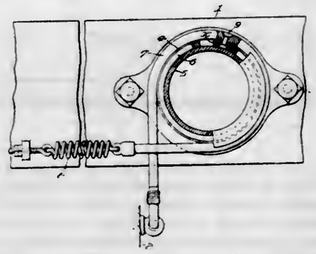
1. A new article of manufacture including a sheet of linoleum composition and a sheet of relatively thin fibrous material, the opposing, contacting surfaces of each of which are provided with projections and depressions, the projections of one fitting into the depressions of the other, substantially as described.

1,345,811. CLOTH-MEASURING MACHINE. JOHN T. TULLIS, Hope, Ark., assignor of one-half to J. N. Riley, J. P. Brundidge, Eldridge Greening, Albert Betts, and Harry Alphy, Hope, Ark. Filed Aug. 6, 1917. Serial No. 184,684. 14 Claims. (Cl. 33—131.)



1. A cloth measuring machine embodying a receptacle, a cloth winding means coöperating with the receptacle, a bar over which the cloth is movable, means for supporting the bar independently of the winding means, means for measuring the cloth as it traverses the bar, a cloth gripper on one end of said bar, and a cutter movable along the bar over said gripper to a point beyond the gripper.

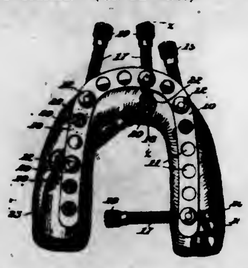
1,345,812. RESILIENT-TIRE CONSTRUCTION. ERNEST VELTUNG, New York, N. Y., assignor, by direct and mesne assignments, to Veltung Steel Tire Company, a Corporation of Delaware. Filed Aug. 19, 1919. Serial No. 318,444. 8 Claims. (Cl. 152—17.)



5. In a resilient tire an annular rim adapted to be secured to a wheel felly and having a peripheral channel, an endless inflatable tube in said channel, said rim having oppositely faced annular grooves, annular rings having laterally extending walls secured in said grooves, and having outwardly extending walls spaced from the channel walls of the rim, sectional rings detachably connected to said annular rings, said sectional rings having radial grooves in their inner faces open at their inner ends, and resilient tread members overlying said inflatable tube and having studs on their ends slidingly engaging said grooves.

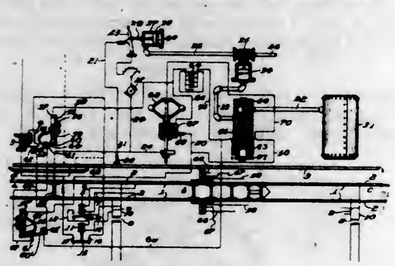
1,345,813. MOTION-PICTURE-FILM REEL. MOSES F. WALKER, Cadiz, Ohio. Filed Mar. 14, 1918. Serial No. 222,436. 9 Claims. (Cl. 242—57.)

1. The combination with a film reel, of means carried thereby and controlled through the unwinding of the film to give audible signal when all but a predetermined length of the film has been unwound.



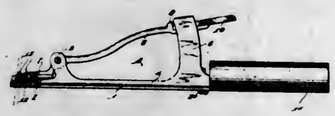
1,345,814. MOTION-CONTROLLING MECHANISM. JOHN W. WATSON, Wayne, Pa. Filed Mar. 21, 1918. Serial No. 223,764. 30 Claims. (Cl. 267—10.)

1. The combination of relatively movable members, means to cause frictional resistance to their relative move-



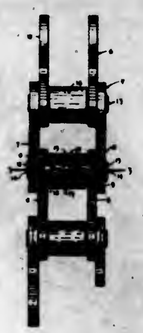
ment in one direction, spring means tending to move said members away from frictional engagement when said members are moved in the opposite direction, said means also operating to relatively move said members in said last-mentioned direction.

1,345,815. PARALLELING DEVICE. LOUIS J. WEINSTEIN, New York, N. Y. Filed Jan. 6, 1920. Serial No. 349,683. 4 Claims. (Cl. 32—10.)



1. In a dental paralleling device, an arcuate base plate, arms rotatably and slidably supported thereon and paralleling elements adjustable in said arms at an angle thereto.

1,345,816. AUTOMATIC TRAIN CONTROLLING AND STOPPING MECHANISM. FRANK C. WILLIAMS, Philadelphia, Pa., assignor to The Safety Block Signal Company, a Corporation of Delaware. Filed April 19, 1917. Serial No. 163,100. 16 Claims. (Cl. 246—40.)

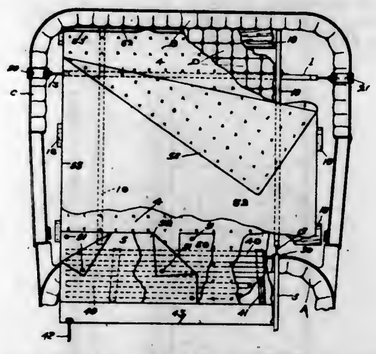


8. In a train stopping device, the combination of a track having a first and second insulated block, a main propulsion supplying current line and an independent train stopping contact section located in each block, means to normally energize said train stopping section and means to automatically deënergize said section of the second block when a train is in the first block.

1,345,817. WELDER'S TOOL. ROY O. WILLIAMS, Columbus, Ohio. Filed Aug. 4, 1919, Serial No. 315,058. Renewed May 15, 1920. Serial No. 381,745. 7 Claims. (Cl. 219—8.)

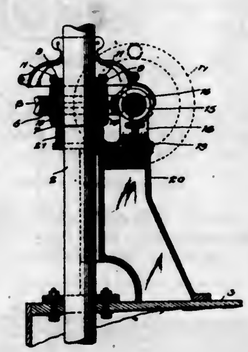
1. In an electrode-holder, a main structure, a stationary jaw member forming a part of said structure, a movable jaw member pivotally carried by said structure, and said jaw members being provided with coöperative openings extending perpendicularly therethrough, said openings being arranged substantially in registration when said jaw members are separated and out of registration when said members are in closed relation.

1,345,818. LINK CHAIN. FREDERICK C. WITT, Roanoke, Va. Filed July 8, 1918. Serial No. 243,737. 4 Claims. (Cl. 74—32.)



3. A chain comprising inner and outer side bars having their ends in overlapping relation, the outer side bars being provided with recesses in their inner faces and openings communicating with said recesses, rivets extending through the overlapping ends of said side bars and fixed in the openings in said outer side bars, shoulders on the rivets spacing these bars, and a thimble surrounding each rivet and fixed in the inner side bars and having its ends projecting into the recesses of the adjacent outer side bars and spaced from the walls and bottoms of said recesses.

1,345,819. COMPOSITION FOR CLEANSING ARTIFICIAL DENTURES AND THE LIKE. ALLAN SCOTT WOLFE, Washington, D. C. Filed Oct. 1, 1919. Serial No. 327,811. 4 Claims. (Cl. 167—9.)



1. A pasty mass for cleansing artificial dentures and the like consisting of an inert filler impregnated with a mucous solvent in quantity sufficient to remove the mucous from the denture, the mixture being suspended in a viscous vehicle, the cleansing mass being readily removable from the denture by washing in water without leaving residue.

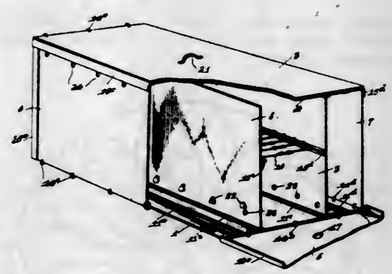
1,345,820. AUTOMOBILE-BED. GEORGE W. YOUNG, Seattle, Wash. Filed May 19, 1919. Serial No. 298,245. 6 Claims. (Cl. 5—72.)

1. An automobile bed supporting mechanism comprising a bar adapted to extend across the automobile body above the rear seat, suspension bars having each an arm embracing the upper edge of the automobile side, means for removably securing the ends of said cross bar to said suspension bars, two beams extending lengthwise the car and supported at their rear end by respectively opposite ends of said cross bar, adjustable extensions at the forward ends of said beams, means connected with said extensions for supporting the forward ends of said beams from the back of the front seat, and flooring-members carried by said beams.

1,345,821. DAVIT. SOLOMON E. AARON, Boston, Mass. Filed Mar. 22, 1919. Serial No. 284,474. 13 Claims. (Cl. 9—22.)

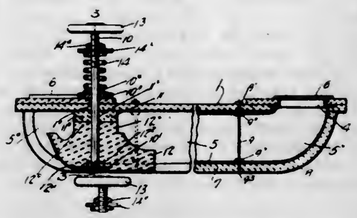
1. The combination with a stepped davit, of a standard arranged beside the davit and wholly independent thereof, a slide mounted on the standard and connected to the davit to float therewith in oscillations of the davit bodily with respect to the standard, a gear mounted on the davit, and driving mechanism mounted on said slide and engaging said gear.

1,345,822. VAPORIZER FOR LIQUID FUELS. HENRY ADICKS, Duttons Landing, Calif. Filed Feb. 13, 1920. Serial No. 358,524. 2 Claims. (Cl. 123—180.)



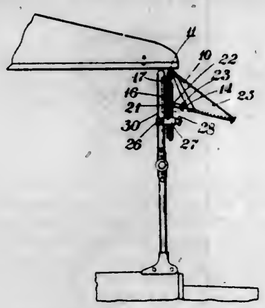
1. A vaporizer for liquid fuels comprising a vertical tube adapted to receive liquid fuel into its upper end and having its lower end open and positioned adjacent the air intake of a carbureter, and pockets formed in the tube whereby the downward passage of the fuel will be retarded, the tube being thoroughly heated before being placed in position.

1,345,823. COLLAR-SUPPORTER. CHARLES W. AHRENS, New York, N. Y. Filed July 16, 1919. Serial No. 311,158. 4 Claims. (Cl. 2—91.)



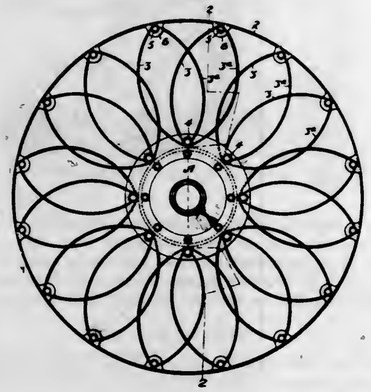
3. In a device of the character described, the combination of a base member adapted to be mounted adjacent a collar button and having oppositely-disposed upstanding posts and a collar-supporting member comprising laterally extending resilient collar-supporting arms and downwardly extending resilient braces connected to the outer ends of said arms and each having a sliding connection at its lower end with one of said posts, collar-engaging members carried by said lower ends of said braces, and adjustable means of connection between said members whereby the height of said collar-supporting arms above said base member may be varied.

1,345,824. COOKING DEVICE. ISABEL LEES BAYLESS, Washington, D. C. Filed Jan. 27, 1920. Serial No. 354,347. 8 Claims. (Cl. 126—27.5.)



1. A cooking device having in combination, a bottom piece, a plurality of walls hinged to said bottom piece, two top pieces hinged to back wall piece, and means for holding same together set up, all adapted to be set up or folded together, as and for the purpose described.

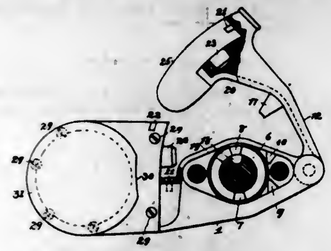
1,345,825. SLEIGH. MATHEW BEAU, Port Colborne, Ontario, Canada. Filed Dec. 16, 1918. Serial No. 267,088. 2 Claims. (Cl. 280—12.)



1. In a sleigh, the combination with the sleigh body, of tubular runner bodies extending longitudinally of the sleigh body and having up-turned ends, removable closures for the up-turned ends of the tubular runner bodies, and sleigh runner members extending longitudinally of the runner bodies and following at their ends the curve of the up-turned ends of such bodies.

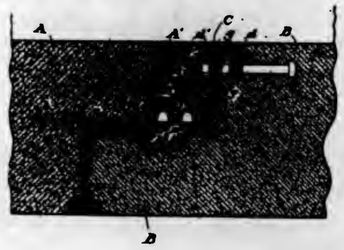
1,345,826. PROTECTOR FOR WINDSHIELDS. JOSEPH BEDARD, Columbus, Ohio. Filed May 20, 1919. Serial No. 298,390. 4 Claims. (Cl. 296—95.)

3. A wind shield protector including, in combination, a pair of slotted standards, a forwardly projecting frame including upper and lower side bars secured in hinged relation to each other at their forward ends, means for removably attaching the rear ends of said bars to the slotted standards, an opaque flexible cover for the upper portion of said frame, and means for adjustably attaching the slotted standards to the ends of the wind shield frame.



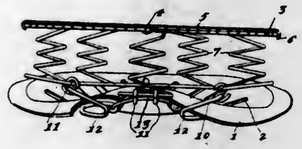
1,345,827. RESILIENT WHEEL. DAVID D. BOHANNON, Berkeley, Calif. Filed Oct. 17, 1918. Serial No. 258,547. 4 Claims. (Cl. 152—29.)

4. A wheel including a metal rim having equally spaced inwardly projecting lugs, pins carried by the lugs, a wheel hub centrally positioned with relation to the rim, a plurality of pins secured in the hub, said pins being half in number to those carried by the rim, and oppositely curved spring spokes arranged in pairs one on each end of each hub pin, the pairs extending outwardly in opposite directions and having their outer ends connected with separate adjacent rim pins and all the spokes being fixed at their ends so as to provide a continuous tensional strain upon the intermediate portions of the individual spokes.



1,345,828. AUTOMOBILE-STEERING-GEAR LOCK. FLETCHER O. BOSWELL, Philadelphia, Pa. Filed Feb. 17, 1919. Serial No. 277,629. 3 Claims. (Cl. 70—90.)

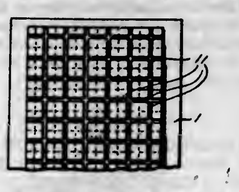
1. In a device of the character described, the combination of a lock casing having formed therewith the main clamping member, a secondary clamping member hinged to the main clamping member, the two clamping members adapted to embrace the casing of an automobile steering post, a locking member also hinged to the main clamping member and adapted to close over the secondary clamping



member, lugs projecting from the members for engagement with the steering post casing; and means for locking the locking member in its closed position.

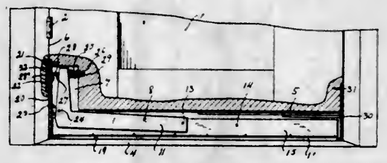
1,345,829. JOINT FOR CONCRETE PIPE. ALBERT J. BOYLE, Baltimore, Md. Filed July 23, 1919. Serial No. 312,719. 2 Claims. (Cl. 72—51.)

1. An expansion joint for concrete pipe comprising a metallic cylinder having one end secured in the end of one concrete section and the opposite one secured to the adjacent concrete section, said pipe having an expansible corrugation intermediate of its length, and means for protecting the folds of the corrugations from the filling, substantially as described.



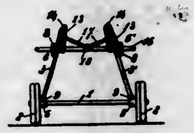
1,345,830. SEAT FOR AGRICULTURAL IMPLEMENTS. JAMES CHRISTOPHER BRIAN, Maxbass, N. D. Filed Sept. 4, 1919. Serial No. 321,563. 1 Claim. (Cl. 155—179.)

An auxiliary seat for agricultural implements, comprising an annular frame, a sheet of perforate material closing the frame, and a series of coil springs connected with the frame at the underside of the sheet inside the frame, and an attaching frame connected with the lower ends of the springs and having means for engaging the seat at the front thereof to connect the auxiliary seat to the seat.



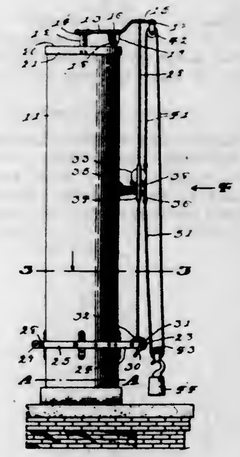
1,345,831. DISPLAY-RACK. JAMES D. BROWN, Glasgow, Scotland. Filed July 12, 1918. Serial No. 244,632. 4 Claims. (Cl. 40—140.)

1. A display rack comprising a board, a frame for said board, means detachably securing display cards to said board either transversely or longitudinally thereof, pairs of brackets arranged on said board, and a strut adapted



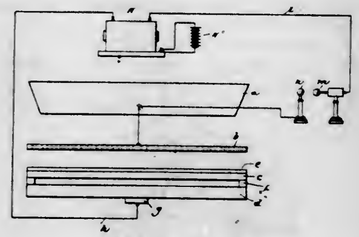
to be detachably secured to either pair of brackets for supporting the device either on its side or end.

1,345,832. WEATHER-STRIP. THOMAS M. CAMPBELL, Dallas, Tex. Filed May 28, 1919. Serial No. 300,256. 2 Claims. (Cl. 20—68.)



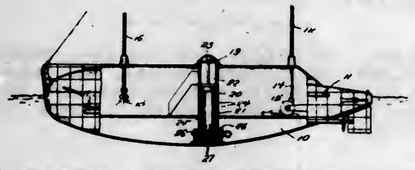
1. The combination with a door having a right angle chambered out portion at its lower edge portion adjacent the hinged edge portion, of a cover plate for the vertical part of the right angle chambered out portion, a support pivoted on the cover plate and substantially conforming to the right angle chambered out portion, a weather strip swingingly pivoted to the end of the horizontal arm of said support, said weather strip comprising a sheet metal holder, and a pliable sill engaging member carried by said sheet metal holder, means carried by one of the arms of the support and engaging between the bottom wall of the vertical chambered out portion of the hinged edge of the door and the support for urging the support, whereby it may tilt on its pivot for holding the weather strip raised when the door is open, said yieldingly urging means comprising a spring, and a pin with which the spring is in surrounding relation, said pin being pivoted to the vertical part of the support and protruding through the cover plate, to engage the jamb of the frame, to actuate the support for lowering the weather strip.

1,345,833. LANDING-CARRIAGE FOR FLYING-MACHINES. GIANNI CAPRONI, Milan, Italy. Filed Apr. 22, 1919. Serial No. 292,002. 2 Claims. (Cl. 244—2.)



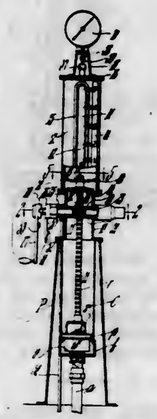
2. In a flying machine having a fuselage frame, a landing carriage comprising a wheel axle, rotatable rings at the ends of said wheel axle, two rear stay rods connected at their lower ends to said rings and inclined to one another as well as in respect of a vertical plane passing through said axle, ball and socket connections between the upper ends of said rods and the fuselage frame, two fore stay rods joined at their ends by ball and socket connections to said rings, said rods being inclined to one another as well as in respect to a vertical plane passing through the axle, the end sections of the rods being provided with longitudinal slots, stirrups on the heads of said sections; a transverse bar depending from the fuselage frame, elastic bands wound on said bar and passing over said stirrups, other rods arranged respectively between a point of said transverse bar and the end sections of said fore stayrods and ball and socket connections interposed in said last mentioned rods.

1,345,834. APPARATUS FOR PAINTING SMOKE-STACKS. LEE CHANDLER, Oklahoma, Okla., assignor of one-half to John D. Allen, Oklahoma, Okla. Filed Nov. 3, 1919. Serial No. 335,489. 5 Claims. (Cl. 91—39.)



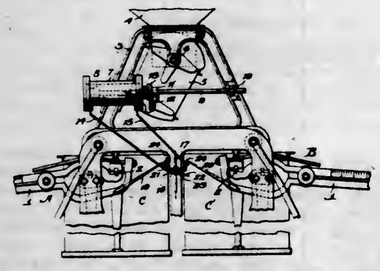
1. In apparatus of the class described, an overhead support, a guiding cable suspended from the support, a paint container arranged to slide along the cable, means for sliding said container, a paint brush attached to the container, and means operable by the sliding means for releasing paint from the container onto the brush.

1,345,835. APPARATUS FOR SEPARATING OR CONCENTRATING FINE METALS FROM PULVERIZED MATERIAL. GIULIO CLÉMENT, Milan, Italy, assignor to Clement Gold Magneto Company, a Corporation. Filed Dec. 16, 1916. Serial No. 137,474. 1 Claim. (Cl. 83—49.)



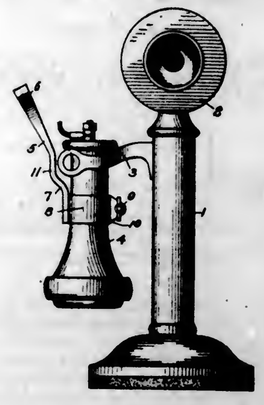
The herein described apparatus comprising a hopper, an electric condenser consisting of a metallic sieve, a non-conductive surface, superposed wooden boards carrying said surface and insulated from one another, a metallic block secured to one of said boards, means for creating an electric current of high tension, an electric conductor connected to said block, another conductor connected to said metallic sieve and a spark gap for regulating the tension of the current.

1,345,836. SUBMARINE. WILLIAM H. COLLIER, Yatesville, Ga. Filed Nov. 1, 1918. Serial No. 260,717. 7 Claims. (Cl. 114—16.)



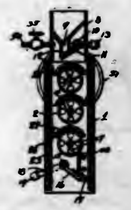
1. In a submarine vessel, a collapsible tower extending from the hull of the vessel and communicating with the interior thereof, means for extending the tower and means for collapsing the same to house the tower within the hull.

1,345,837. LIQUID-DISPENSING APPARATUS. JOHN B. DAVIS, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a Corporation of Massachusetts. Filed Aug. 4, 1919. Serial No. 315,210. 12 Claims. (Cl. 221—100.)



1. The combination with a reciprocating piston pump, of a measuring cylinder alined therewith and having transparent portions, whereby its interior is visible, a member forming a continuation of the pump cylinder to connect the latter to the measuring cylinder, and pump actuating mechanism mounted in said member and including a pinion within the member to reciprocate the piston rod of the pump.

1,345,838. AUTOMATIC WEIGHING APPARATUS. WALTER A. DEVEY, American Fork, Utah. Filed Aug. 16, 1918. Serial No. 250,212. 6 Claims. (Cl. 249—56.)



1. The combination with a plurality of independent weighing scales and a source of supply from which materials to be weighed are adapted to be fed to receptacles respectively on said scales, of a movable member for terminating the flow of material to either of said receptacles, fluid actuated means for moving said member, a valve controlling said fluid actuated means, and means operable by the scales to actuate said valve when material of a predeterimned weight has been delivered to one of the receptacles.

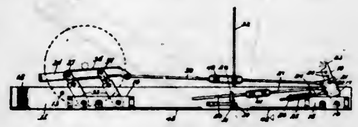
1,345,839. TELEPHONE-RECEIVER HOLDER. ALFRED J. DIEBOLD, Pittsburgh, Pa. Filed Apr. 2, 1919. Serial No. 286,924. 1 Claim. (Cl. 179—157.)

The combination with a standard telephone receiver comprising an elongate body having the receiving diaphragm at one end and conductor terminals at its outer end, of a substantially rigid supporting member attached to said body member and projecting therefrom beyond said outer end of the receiver in the same general line of extent of the receiver but slightly laterally therefrom, the outer end of said member being provided with a shoulder rest whereby the telephone receiver may be held between an ear and shoulder of a user solely by urging said ear and shoulder toward each other against said rest and the diaphragm end of the receiver.

1,345,840. WHEAT-STEAMER. KENNEDY DOUGAN, Minneapolis, Minn. Filed July 13, 1916. Serial No. 109,012. 7 Claims. (Cl. 83—27.)

1. The combination in a wheat steamer, of a steaming chamber, having hollow ends, and removable sides, having inwardly extending horizontal shelves rigidly secured thereto, a plurality of rollers rotatable in said steaming chamber disposed one above the other and spaced apart, each roll adapted to be rotated in a direction opposite to that of the one immediately above it, each of said rolls being rigidly secured to a shaft having its ends rotatable in bearings in said hollow ends, said horizontal shelves closing the spaces between one side of each of said rolls and said sides, and means for rotating said shafts.

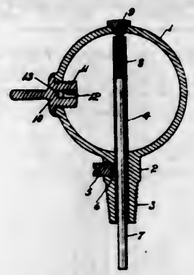
1,345,841. CARBURETER-LOCK. WILLIAM C. EVANS, Sedalia, Mo., and SAMUEL M. BANCROFT, Wichita, Kans., assignors, by mesne assignments, to The Carburetor Lock Corporation, a Corporation of New York. Filed June 10, 1918. Serial No. 239,278. 3 Claims. (Cl. 251—6.)



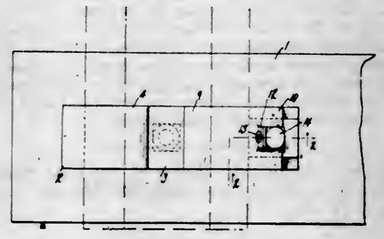
1. In a fuel locking mechanism for carbureters, the combination with a carbureter having a standard fuel-line connection, of a casing inclosing a fuel valve and a lock capable of retaining the valve in closed position, a fuel-line connection on the casing, and a connection integral with the casing and adapted for quick and permanent joinder to said carbureter connection, without modification of the latter.

2. In a fuel locking mechanism for carbureters, the combination with a carbureter having an integral fuel-line connection, of a casing inclosing a fuel valve and a lock capable of retaining the valve in closed position, a fuel-line connection on the casing, and a connection integral with the casing and adapted for quick and permanent joinder to said carbureter connection without modification of the latter.

3. In fuel locking mechanism for carbureters, the combination with a carbureter having an integral fuel-line connection, of a unitary casing inclosing a fuel valve and a lock capable of retaining the valve in closed position, a fuel-line connection on the casing, and a connection integral with the casing and adapted for quick and permanent joinder to said carbureter connection without modification of the latter.



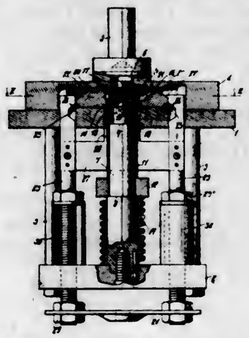
1,345,842. AUTOMATIC AUTOMOBILE-JACK. LOUIS M. FISHER, Clarksdale, Mo. Filed Mar. 11, 1919. Serial No. 282,020. 7 Claims. (Cl. 254—89.)



1. In a vehicle jack, means engageable by the forward end of the vehicle for raising the said end, supporting members actuated by the said means for raising the opposite end of the vehicle, means for locking the said means and members in vehicle supporting position, rollers on said members, and contact plates mounted on said rollers and adapted to engage and support the said vehicle.

1,345,843. OILER FOR LOOSE PULLEYS. JOHN JAMES FORTIER and JOHN K. SHERWOOD, Grand Rapids, Mich.; said Sherwood assignor to said Fortier. Filed May 2, 1919. Serial No. 294,304. 6 Claims. (Cl. 184—70.)

4. In combination, a relatively fixed shaft, a pulley having a hub loosely mounted on the shaft, a hollow lubricant container, a screw threaded stem projecting from a side of the container and threaded into the hub at a side thereof, whereby the container rotates with the hub around the shaft, means to introduce a quantity of liquid lubricant into the container, a tube passing through the stem into the container and terminating a short distance from the outer side of the container, a rod loosely mounted in the tube, its inner end bearing against the shaft and its upper end terminating a distance short of the upper end of the tube, a spring housed in the tube between the outer end of the rod and the outer side of the container, and a nut threaded through the outer side of the container against which the outer end of the spring bears, said spring serving to hold the rod with light pressure against the shaft, substantially as described.

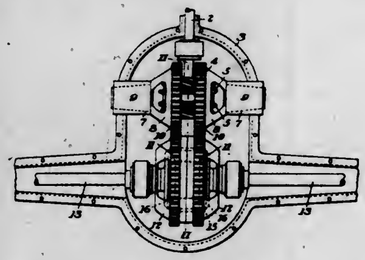


1,345,844. RAIL-CLAMP. VAL F. FRANCK, Louisville, Ky., assignor of one-half to John W. Deming, Louisville, Ky. Filed Nov. 22, 1919. Serial No. 339,843. 3 Claims. (Cl. 238—304.)

3. In a device of the class described the combination of a plate provided with an integral clamp, the free end of said clamp provided with a dove-tailed portion, a removable clamp provided with a dove-tailed groove adapted to engage said dove-tailed portion, said dove-tailed portion provided with a tapered pocket provided with a tapered inside slope adjacent the end of said clamp, an aperture provided within said removable clamp and adapted to register with said pocket, an integral collar provided upon the top of said removable clamp, the bore of which registers with said aperture, a tapered pin adapted to pass through said aperture and into said pocket.

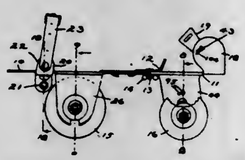
1,345,845. MANTLE-RING-FORMING MACHINE. HARRY JACKSON GREEN, Sebring, Ohio. Filed Mar. 6, 1920. Serial No. 363,814. 10 Claims. (Cl. 25—27.)

1. In a molding apparatus of the character specified, a mandrel, a collar mounted on the mandrel and having



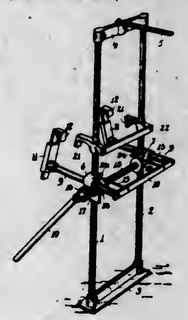
a limited movement thereon, a sleeve encircling the mandrel and collar, and a die co-acting with the mandrel and collar and adapted to move the latter in one direction.

1,345,846. PROCESS OF EXTRACTING METALS FROM THEIR ORES. WILLIAM E. GREENAWALT, Denver, Colo. Filed Dec. 13, 1915, Serial No. 66,621. Renewed Sept. 15, 1919. Serial No. 323,997. 4 Claims. (Cl. 204—15.)



1. A process of extracting copper from its ores which consists in treating the ore with an acid solution to dissolve the copper, separating the rich copper solution from the gangue, washing the residue and thus obtaining a lean copper solution, electrolyzing the solution rich in copper to deposit the metal and regenerate acid, precipitating the lean copper solution with hydrogen sulfid and thus obtaining copper sulfid precipitate from the lean copper solutions, and then applying the copper sulfid precipitate to the electrolyte to reduce the variable valent salts in the electrolyte to their lowest valency.

1,345,847. GEARING. ALBERT W. GRIFFITH, Pittsburgh, Pa. Filed Dec. 6, 1919. Serial No. 342,916. 7 Claims. (Cl. 74—99.)



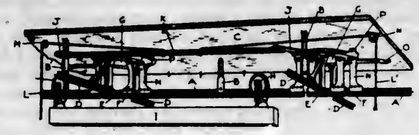
6. Gearing, comprising a driving shaft, a ball member secured thereto and having worm teeth thereon, and two gear members having internal worm teeth which mesh with the worm teeth of the ball member at opposite sides of the axis, the axis of rotation of said ball member intersecting the axes of rotation of the gear members, substantially as described.

1,345,848. ROLLER-SKATE. EMERY EASTMAN HARDY, Brooklyn, N. Y. Filed Aug. 27, 1918. Serial No. 251,609. 14 Claims. (Cl. 46—51.)

1. A roller skate comprising a frame that is composed of a front frame member and a rear frame member having overlapping parts, the said parts comprising a lower part that extends rearwardly from the front frame member and has a longitudinal slot and an upper part that extends forwardly from the rear frame member, overlays the said lower part, and has a T-shaped lug that is projected through the said slot for serving as one means of connection of the frame members, and the said frame members being provided with means for receiving a bolt and nut for serving as a second means of connection of the frame members.

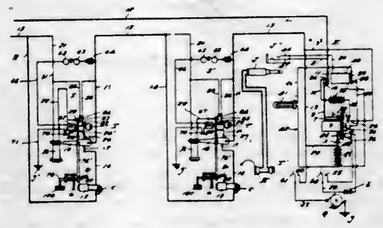
1,345,849. TIRE-SPREADER. THOMAS L. HARKINS, Boston, Mass. Filed Sept. 30, 1919. Serial No. 327,819. 6 Claims. (Cl. 152—27.)

1. A tire spreader comprising a pair of spaced posts suitably supported, claws slidable on said posts, rods horizontally and slidably supported by said posts, claws carried by said rods, and means for forcibly moving said rods to separate the last-named claws from those first mentioned.



1,345,850. WRENCH. JOHN T. HASLETT, Winchester, Kans. Filed May 15, 1918. Serial No. 234,687. 5 Claims. (Cl. 81—91.)

1. A wrench of the class described comprising a handle, a jaw comprising a shank having a gripping element at its free end and its rear end bifurcated and straddling said handle and pivotally connected thereto at a point spaced from the terminal of the handle, a coöperating jaw bifurcated and straddling the handle in front of said first-mentioned jaw and having a finger extending between the bifurcations of the first-mentioned jaw.

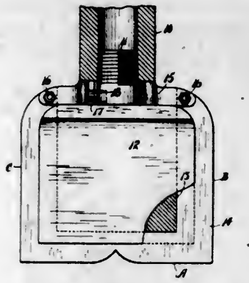


1,345,851. TRACK FOR OVERHEAD CARRIERS. PAUL M. HASSLER and ALBERT H. NELLER, Fairfield, Iowa, assignors to The Louden Machinery Company, Fairfield, Iowa, a Corporation of Iowa. Filed Apr. 3, 1920. Serial No. 370,955. 7 Claims. (Cl. 104—99.)

1. In tracks for overhead carriers, the combination of a main track, a plurality of cross-tracks spaced apart parallel to each other and intersecting the main track in horizontal alinement, a plurality of trolleys spaced apart to correspond with the cross-tracks and connected together in this relation by an extended horizontally disposed bar forming the basis of an overhead carrier adapted to run endwise upon the main track or sidewise upon the cross-tracks, a switch section at each intersection of the tracks adapted to receive and transfer the trolleys from the

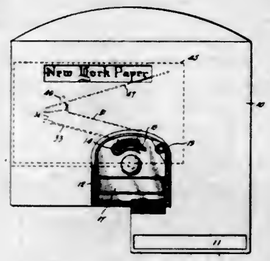
main track to the cross-tracks and vice versa, and means to simultaneously operate the switch-sections and to thereby effect the transfer of the trolleys in unison.

1,345,852. TELEPHONIC CALL SYSTEM. RUBEN C. M. HASTINGS, Columbus, Ohio, assignor to The International Telephone Company, Columbus, Ohio, a Corporation of Ohio. Filed Dec. 9, 1915. Serial No. 65,944. 18 Claims. (Cl. 179—31.)



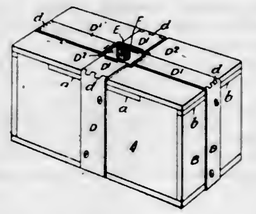
18. In a telephone system, electrically connected receiving and sub-stations, each sub-station including a receiver hook, a receiver, a transmitter, and means for shunting the receiver and transmitter when the receiver is left off the hook; and means for operating the shunting means from the receiving station.

1,345,853. TERMINAL POST FOR BATTERY-CARBONS. EDWIN W. HENGER, Waterbury, Conn., assignor to The Chase Companies, Inc., of Waterbury, Conn., a Corporation. Filed Mar. 13, 1920. Serial No. 365,496. 1 Claim. (Cl. 204—29.)



A terminal-post for battery carbons or electrodes, the said post comprising a binding-screw, an anchoring-stem, and an annular bearing-flange between the same, the anchoring-stem being spirally fluted with flutes of relatively coarse pitch as compared with the threads of the binding-screw, whereby the stem holds the post against rotation in the electrode, and prevents its being withdrawn therefrom by pulls in the direction of its length.

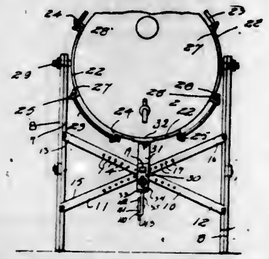
1,345,854. DRILL-BIT. WALTER J. HOLLAND, Fairoaks, Calif., assignor of one-fourth to Percy M. Pike and Alvin R. Johnson, San Francisco, Calif. Filed May 13, 1919. Serial No. 296,809. 3 Claims. (Cl. 255—61.)



1. A drilling device comprising a flat body member having a shank on one side adapted to enter and be secured to a drill stem, a cutting member positioned around the remaining three edges of the body, a collar inclosing the shank and having lugs in which the separated ends of the bit are detachably held in relation thereto.

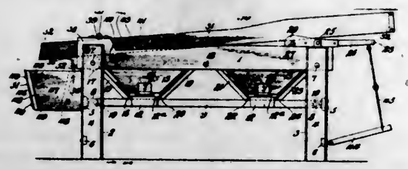
1,345,855. NEWSPAPER-VENDING MACHINE. OMAR J. HOTALING, East Orange, N. J. Filed Sept. 18, 1919. Serial No. 324,415. 9 Claims. (Cl. 211—8.)

1. In a newspaper vending machine, the combination of an arm mounted to swing in an arc around a certain axis, a newspaper ejecting arm mounted upon the aforesaid arm and movable therewith, and an actuator carried by the first mentioned arm and coöperating with the latter mentioned arm to cause it to swing around an axis different from that of the first mentioned arm coincidentally with the swinging of both arms.



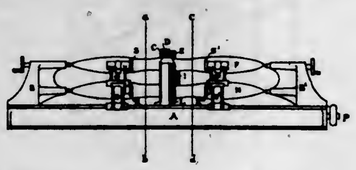
1,345,856. PACKING-CASE. LIONEL WORSLEY HUGHES, Port Said, Egypt. Filed Feb. 6, 1920. Serial No. 356,710. 4 Claims. (Cl. 217—56.)

1. A packing-case comprising a body and a lid, a metallic strengthening band secured to the said body, fastening



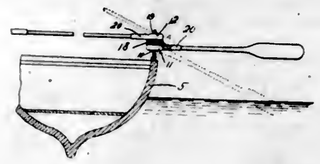
strips hinged to the upper ends of said band, apertured plates on the ends of said strips all the apertures in said plates being arranged to register on the lid of the case, a threaded rod on the lid, and a cap screwed on to the threaded rod.

1,345,857. CONTAINER-HOLDER. JOSEPH HULA, Irving, Kans. Filed Jan. 17, 1920. Serial No. 352,059. 1 Claim. (Cl. 248—58.)



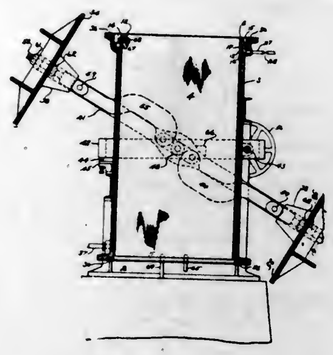
The combination with a plurality of supporting frames adapted to pivotally support a container, of a shank detachably secured to one of said frames, a rest plate on one end of the shank adapted to support the container in a horizontal position, a rod having one of its ends adjustably mounted in the other end portion of the shank, the other end portion of said rod being extended in off-set relation to the rod, a latch member pivoted to the rod adjacent its off-set portion, said latch being operated by gravity to engage and hold the container in a vertical position, said latch engaging the off-set end portion of the rod to retain the container in its vertical position.

1,345,858. POTATO-GRADER. CHARLES JENKINS, Delevan, N. Y. Filed Feb. 21, 1919. Serial No. 278,386. 21 Claims. (Cl. 130—32.)



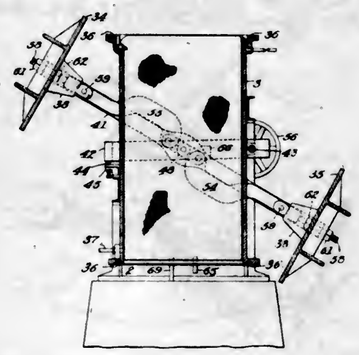
1. A potato grader comprising a support, an inclined reciprocatory grading chute on the support, means for varying the inclination thereof, and elastic means between the chute and support yieldable in the direction of reciprocation of the chute and comprising spring retained slidable pins on the chute and fixed abutments on the support in the path of the pins, said pins engaging with said abutments whatever the adjustment of inclination of the chute.

1,345,859. MANUFACTURE OF PROPELLERS. JOHN JAMES KERR, Lincoln, England. Filed July 8, 1916. Serial No. 108,227. 2 Claims. (Cl. 142—7.)



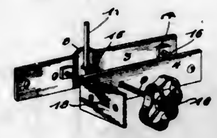
1. In a machine for the purpose set forth, the combination of means for supporting a propeller and a model at their ends in close parallel relation, means for rotatably supporting and holding the propeller and model centrally of the ends thereof against relative lateral movement, said means including a relatively narrow support located centrally of the ends of the propeller and model, annular bearings on said central support extending through the same, rings rotatably mounted in said bearings, and in which the propeller and model are held, driving means for the propeller and model connected therewith near said central support, and trimming means operatively associated with the model and controlled thereby for shaping the propeller to accord with the shape of the model, said trimming means being supported for adjustment longitudinally of and at right angles to the propeller and model.

1,345,860. BOW-FACING OAR. FERDINAND KOHL, Plymouth, Wis. Filed Nov. 19, 1919. Serial No. 339,085. 2 Claims. (Cl. 9—25.)



1. A bow facing oar including a standard, a handle member mounted thereon, a blade member mounted on the standard, each member being equipped with a gear upon adjacent faces, a spider secured to the standard between said members and a beveled gear mounted on each spider leg to mesh with the gear on the two members for causing the two members to turn in the same direction.

1,345,861. FILTERING APPARATUS. MICHAEL H. KURYLA, Park City, Utah, assignor to The Merrill Company, San Francisco, Calif., a Corporation of California. Filed June 29, 1916. Serial No. 106,563. 8 Claims. (Cl. 210—13.)



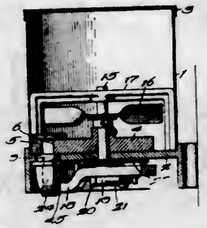
1. In a filtering apparatus comprising a chamber open at its top and at its bottom and filtering elements in said chamber, the combination of closures for the top and bottom of the chamber, means for seating the closures on the chamber, and means for equalizing the pressure of the closures on the chamber.

1,345,862. REMOVABLE CLOSURE. MICHAEL H. KURYLA, Park City, Utah, assignor to The Merrill Company, San Francisco, Calif., a Corporation of California. Original application filed July 29, 1916, Serial No. 106,563. Divided and this application filed Jan. 16, 1917. Serial No. 142,628. 12 Claims. (Cl. 220—1.)

1. A chamber having opposite openings, closures for said openings, an actuator for said closures situated between them, means for drawing said closures toward said actuator, and a movable support for said actuator.

1,345,863. AUTOMOBILE-SIGNAL. WILLIAM A. LEE, Muskogee, Okla. Filed Oct. 2, 1919. Serial No. 327,914. 2 Claims. (Cl. 116—52.)

1. An automobile signal comprising a pair of spaced arms having means at one end for engagement with a stationary support, one of said arms being provided between its ends with a transversely extending seat at its inner side, said arms being also provided with alined openings, one of said openings extending through said seat, a shaft extending rotatably and slidably through said openings, a signal arm carried by said shaft and positioned between said arms and adapted to normally bear in said seat, spring means for shifting said shaft to normally position said signal arm in said seat, and means connecting the free ends of said arms, said means also serving to limit the downward movement of the signal arm, substantially as set forth.

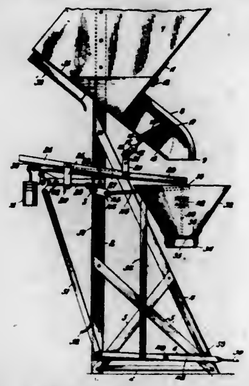


1,345,864. CARRIER FOR AMMUNITION. ALBERT ALEXANDER LETHERN, London, England, assignor, by mesne assignments, to Frank R. Batcheider. Filed May 14, 1918. Serial No. 234,456. 11 Claims. (Cl. 224—15.)

1. A carrier for projectiles, having a discharge outlet in its lower portion, a bottom by which projectiles occupying the carrier are guided to move toward said outlet under the influence of gravity, a retainer pocket for the said outlet constructed and arranged to hold the leading projectile in position to be grasped and removed by hand, and also

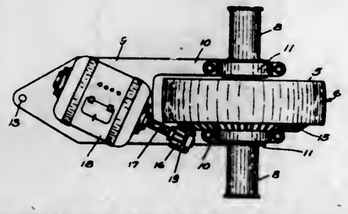
in position to hold back the succeeding projectiles, and means for fastening said pocket in closed condition.

1,345,865. DISPENSING-MACHINE. ROBERT H. LITTLE, Chicago, Ill., assignor to U. S. Sanitary Specialties Corporation, Chicago, Ill., a Corporation of Illinois. Filed Apr. 23, 1919. Serial No. 292,131. 6 Claims. (Cl. 221—106.)



1. A dispensing machine including a container for material that is to be dispensed; a rotatable wheel mounted with one face closely adjacent a wall of the container; a pocket wall portion closely approaching said container wall portion and the peripheral circle of the wheel and formed with a part closely overlying the other face of the wheel; said wheel being formed with a peripheral notch having a comparatively long bottom extending inwardly from the peripheral circle of the wheel and also having a short side at the inner end of the notch bottom; a movable abutment engageable with said long notch bottom and an end of said pocket wall portion to form with said pocket wall portion, said container wall, and the wheel, a space in which a measured quantity of material to be dispensed is trapped, said container wall portion having a discharge opening communicating with said space and located near said abutment through which opening the material is forced when the wheel is turned toward said opening; and a spring for pressing said abutment against said long notch bottom.

1,345,866. BAGGING-MACHINE. LORENS C. LORENSON, Hudson, N. Y., assignor to Clayton H. Petry, Hudson, N. Y. Filed May 24, 1918. Serial No. 236,337. 15 Claims. (Cl. 249—16.)

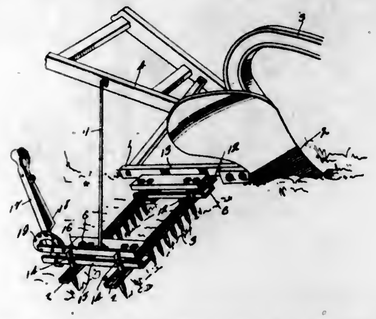


1. In a bagging machine, the combination with a spout and a weighing hopper thereunder having means for the

application of a bag thereto, a gate for the spout in the line of travel of material therethrough and movable to open the spout, connections between the hopper and gate for closing the latter against the weight of material in the spout by the superior weight of the material delivered

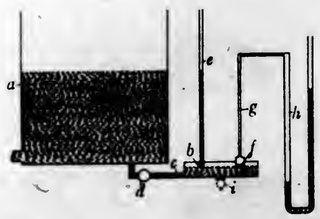
by the spout to the hopper, means for holding the gate closed while the bag is being applied to the hopper, and manually operable means located within ready reach of an operator for opening the gate to actuate the hopper and permit the latter to rise.

1,345,867. DRIVING APPARATUS FOR MONORAIL-TRUCKS. ROYAL A. MCCLURE and WILLIAM W. BOULTON, Seattle, Wash., assignors to Universal Elevated Railway Company, Seattle, Wash. Filed Nov. 9, 1917. Serial No. 201,174. 4 Claims. (Cl. 105—118.)



1. The combination with a truck wheel of the class described, of a motor disposed with its center of gravity in the plane of said wheel and its driving shaft at an angle to the plane of said wheel, and means connecting said wheel and said drive shaft for rotating said wheel.

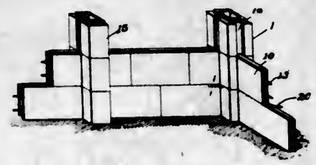
1,345,868. DRAPERY-CLIP. BERNHARD H. MEYER, New Haven, Conn. Filed Mar. 29, 1920. Serial No. 369,665. 1 Claim. (Cl. 156—21.)



A drapery clip comprising two members hinged together by a pintle, a spring on said pintle the ends of which bear against the inner faces of the members whereby the lower ends are normally forced together, blocks mounted on the lower inner faces of the members, said blocks provided with inwardly projecting pins, and an arm connected with the upper end of each member, said arms reversely bowed and adapted to engage with a curtain-pole.

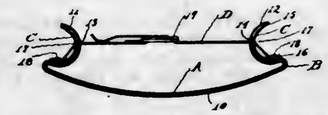
1,345,869. PLOW ATTACHMENT. JAMES ARCHIE MILLER, Beeville, Tex. Filed Mar. 6, 1920. Serial No. 363,637. 4 Claims. (Cl. 55—103.)

1. An attachment of the character specified, comprising relatively inner and outer longitudinally disposed supporting bars, and a plurality of transversely arranged toothed bars having their end portions mounted in the supporting bars and adapted to have independent or concurrent vertical movement at both ends.



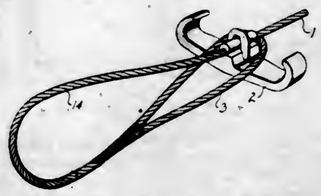
1,345,870. FLUID-PRESSURE-MEASURING INSTRUMENT. ROBERT JOHN NASH and GEORGE HENRY ALEXANDER, Birmingham, England, assignors to The A-N Company Limited, Birmingham, England. Filed Dec. 17, 1918. Serial No. 267,216. 1 Claim. (Cl. 73—54.)

In fluid pressure measuring instruments, the combination comprising a closed displacement chamber in communication with a body of fluid and containing a quantity of entrapped air, the height of the air space above the fluid datum level in the chamber being small relatively to the diameter of the chamber, a fluid gage communicating at one end with the air space in the displacement chamber, and a pipe in communication with the fluid in said chamber, said pipe serving to determine the datum level and also as a passage for air to or from the chamber for restoring such level when required, substantially as described.



1,345,871. BUILDING CONSTRUCTION. EDWARD NOTTEBOHM, Manila, Philippine Islands. Filed Jan. 22, 1919. Serial No. 272,580. 1 Claim. (Cl. 72—16.)

A wall of the character described, including a series of hollow, vertical sectional posts having alternate tongues and grooves formed to interlock the meeting ends of the sections, and vertical grooves in said posts in the line of the wall, a series of superimposed concrete slabs with interlocking tongues and grooves upon their horizontal meeting edges, and tongues upon their vertical ends to

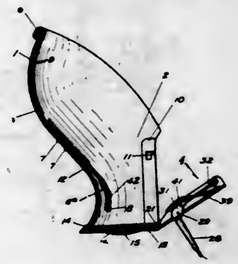


engage the vertical grooves of the posts, and the contiguous slabs, and bonding members by which said slabs and posts are united.

1,345,872. WRIST OR HAND BLOTTER. PAUL ORZEL, New York, N. Y. Filed Mar. 18, 1920. Serial No. 366,854. 8 Claims. (Cl. 120—25.)

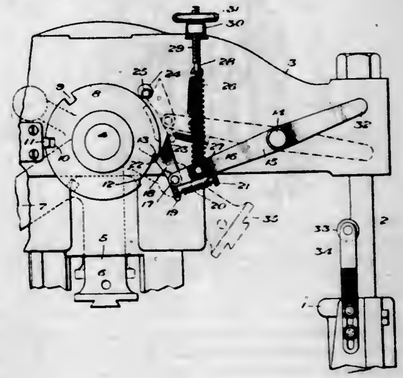
1. In a blotter, in combination, a base member provided with reversely curved ends having concave interiors; a blotting member stretched over the under exterior of the base member; retaining clips engageable with the interiors of the curved ends of the base member with the blotting member therebetween; and a clasping member strained between the retaining clips; said retaining clips when in engagement with the curved ends of the base member with the blotting member between the exterior of the clips and the interior of said curved ends providing means for retaining the blotting member operatively in place.

1,345,873. TOWING-CABLE. CONRAD B. OSMUNDSEN, Chicago, Ill. Filed July 21, 1919. Serial No. 312,392. 3 Claims. (Cl. 213—67.)



1. A towing device, comprising a cable having an eye formed at one end thereof and a toggle rigidly secured to the running part of said cable, said eye being passed over said toggle to engage the same and form a loop in said cable at one end thereof, said toggle having oppositely extending arms and means on the ends of said arms to retain said eye in position on said toggle.

1,345,874. WATCH-REPAIR TAG. HENRY PAULSON, Chicago, Ill. Filed Jan. 29, 1920. Serial No. 354,795. 1 Claim. (Cl. 40—20.)

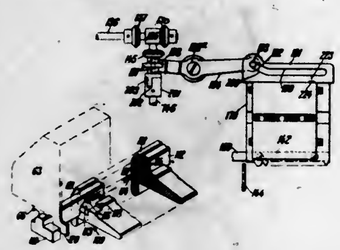


A watch repair tag comprising a body portion of any suitable material, provided with an elliptically slotted hole, placed in the center of the tag, and running parallel to the long side of the tag, adapted to be pulled over the watch hook, and be held in a rigid horizontal position.

1,345,875. SHOE-PROTECTOR. ORLAND WELLSLEY PETERS, Los Angeles, Calif. Filed July 25, 1919. Serial No. 313,325. 2 Claims. (Cl. 36—72.)

1. A shoe protector comprising a casing adapted to fit the sides and back of the heel of a shoe having an outwardly flaring bottom edge, a bottom plate having its edges clamped upwardly and inwardly and adapted to be slipped upon the outwardly flaring bottom edge of the heel casing from the rear, a clamping means hingedly mounted at the front edge of the bottom plate adapted to swing upwardly against the heel under the instep, and means for securing the clamping means to the front edges of the sides of the heel casing.

1,345,876. HEEL-NAILING MACHINE. GEORGE M. PETTENGILL, Haverhill, Mass., assignor to Hamel Shoe Machinery Company, a Corporation of Massachusetts. Filed July 30, 1918. Serial No. 247,352. 9 Claims. (Cl. 1—35.)

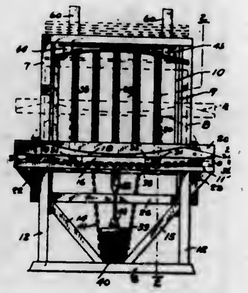


1. In a machine of the class described, a rotatable turret, means for locking said turret in either of a plurality of operative positions, means tending to turn the turret into one of said operative positions when removed therefrom, and automatically acting means for moving said turret to another of its operative positions against the tendency of said first means.

1,345,877. COMBINED TYPEWRITING AND COMPUTING MACHINE. HENRY L. PITMAN, East Orange, N. J., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Jan. 23, 1918. Serial No. 213,279. 68 Claims. (Cl. 235—59.)

2. The combination of a totalizer comprising computing elements, a locking bar for said computing elements, and

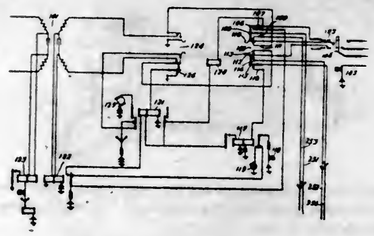
means to increase the range of utility of said locking bar.



14. The combination of a carriage, a column-computing unit, a cross-computing unit, each unit comprising two elements, namely, a totalizer and a master wheel normally clear thereof, normally-ineffective driving mechanism for the master wheel of said cross-computing unit, and means controlled by said carriage for intermittently rendering said driving mechanism effective by bringing the

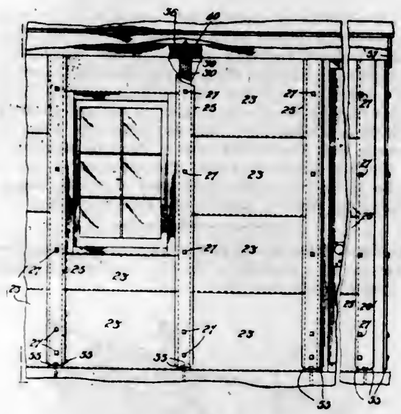
master wheel and totalizer into coöperative relation.

26. In a computing machine, the combination of a master wheel, driving mechanism for said master wheel, and means to cause a change in said driving mechanism to enable the master wheel to be reversely rotated, said means comprising a slidable shaft, a single key engaging directly with said shaft, a detent coöperating with said key, and an indicator for said key.



1,345,878. CRATE-PRESS. JOHN H. PLATT, Los Angeles, Calif. Filed May 25, 1918. Serial No. 236,658. 9 Claims. (Cl. 100—57.)

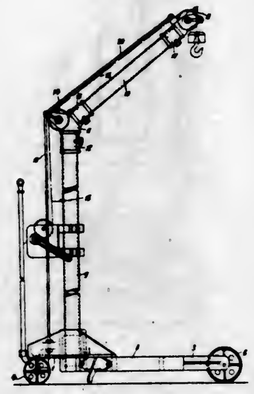
1. In a crate press the combination with a frame of a vertically adjustable box support, a curved cover holder, and means to move said holder to press a cover held thereon in contact with an uncovered crate on said support.



1,345,879. MACHINE-SWITCHING TELEPHONE-EXCHANGE SYSTEM. LIPA POLINKOWSKY, London, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 9, 1918. Serial No. 221,552. 14 Claims. (Cl. 179—27.)

1. In a telephone exchange system, telephone lines, an operator's position, a connecting circuit at said position, means for extending said lines to said connecting circuit, automatic switches for further extending said lines, a registering and controlling equipment under the control of said operator for controlling said switches, a trunk line leading to said switches, an assignment key individual to said connecting circuit for associating said equipment therewith, and a plug and jack switch for connecting said connecting circuit to said trunk, the insertion of said

plug in the jack serving jointly with the operation of said assignment key to associate the registering equipment with said connecting circuit.



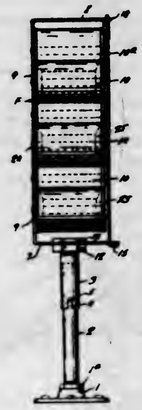
1,345,880. CONCRETE BUILDING CONSTRUCTION. HENRY M. PRIEST, ROBERT H. FORD, ALEXANDER L. GREENABAUM, and CHARLES P. RICHARDSON, Chicago, Ill. Filed June 17, 1918. Serial No. 240,363. 3 Claims. (Cl. 72—1.)

1. A concrete building construction, composed of precast reinforced concrete units, comprising concrete outside corner posts or uprights, interior corner posts and intermediate posts, the sides of all of said posts disposed toward the exterior having their longitudinal edges extended beyond the adjacent sides of the post, superposed reinforced concrete slabs or panels of uniform dimensions having their longitudinal edges formed to provide lapping joints while the ends of the panels are arranged in abutting relation with the adjacent posts so as to have the extended edges of the posts overlap the ends of the panels, the panels being arranged in parallel superposed relation to provide an inner and an outer wall with an air space therebetween, and spacing members secured to and disposed throughout the length of the posts whereby the rows of superposed panels will be maintained in spaced relation.

1,345,881. PORTABLE JIB-CRANE. WALTER H. PURNELL and JOSEPH A. BUTTERWORTH, Loughborough, England, assignors to Herbert Morris, Limited. Filed July 23, 1919. Serial No. 312,659. 2 Claims. (Cl. 212—142.)

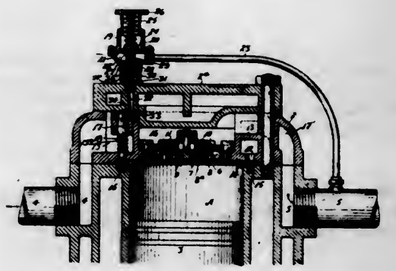
1. In a portable jib crane in combination a carriage constituted by three triangularly arranged wheeled units, steel flats constituting arms connecting one of said units with the two remaining units said arms containing between them an uninterrupted open space, an upright tubular post mounted on the said first mentioned unit, a bracket in sleeve engagement with said post, a guide pulley supported by said bracket, a jib carried by said bracket

at an inclination to said post, a bracket having an extension in sleeve engagement with the outer end of said jib, and a guide pulley supported by said last mentioned bracket, as and for the purpose set forth.



1,345,882. SHEARS. CHARLES L. REPASS, West Pittston, Pa., assignor of one-half to Henry R. Smith, Scranton, Pa. Filed Sept. 12, 1919. Serial No. 323,250. 1 Claim. (Cl. 30—13.)

Shears including opposed pivoted members, a pair of spaced parallel cutting blades forming a part of one of the pivoted members, a thumb hold having a relatively wide supporting member formed integral therewith, the free end of the supporting member terminating in a plane equal to the plane of the ends of the cutting blades, a relatively flat cutting blade of a width equal to the width of the supporting member, secured to the supporting member, said relatively flat blade having an offset outer extremity extending beyond the plane of the ends of the parallel cutting blades to provide a support, said relatively flat blade adapted to operate between the parallel blades.

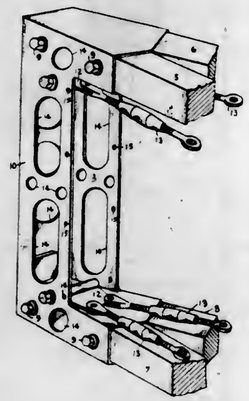


1,345,883. SPOOL-RACK. NATHAN OTTO RICHMAN, Cleveland, Ohio. Filed Aug. 20, 1919. Serial No. 318,683. 7 Claims. (Cl. 242—134.)

1. In a spool rack, a spindle supporting frame, and a base, tubular members secured to the frame and base respectively, said tubular members engaging each other in rotatable relation and retained in adjusted positions

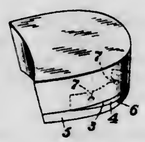
by a projection on one member engaging a recess in the other.

1,345,884. UNLOADER FOR COMPRESSORS OR THE LIKE. EDWARD A. RIX, Oakland, Calif. Filed Feb. 12, 1919. Serial No. 276,544. 10 Claims. (Cl. 230—24.)



1. In a fluid compressor the combination with an inlet valve of annular ring shaped form, and an exhaust valve, of a discharge pipe communicating with the exhaust valve and a plurality of plungers engageable with the inlet valve actuated by the pressure in the discharge pipe for opening the inlet valve and holding it open the moment a predetermined pressure is obtained in the discharge pipe.

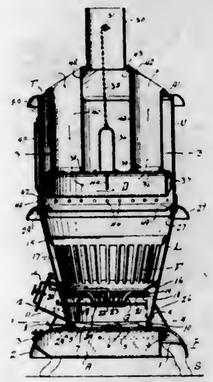
9. In a fluid compressor, the combination with a cylinder, of a piston reciprocally mounted in said cylinder, a cylinder head on the cylinder, an inlet valve of annular ring shaped form mounted in said head, an exhaust valve also mounted in the head, a discharge pipe communicating with the exhaust valve, an annular fluid receiving passage formed in the cylinder head, a plurality of cylinder chambers also formed in the cylinder head and in communication with said annular fluid passage, a piston in each cylinder, a plunger extension on each piston engageable with the inlet valve, a spring surrounding each plunger extension adapted to normally hold the pistons and plungers in elevated position out of contact with the inlet valve, and a pressure actuated valve connected with the discharge pipe and with the annular fluid receiving passage in the cylinder head adapted to automatically admit fluid under pressure from the discharge pipe to depress the pistons and open and hold the inlet valve open the moment a predetermined pressure is obtained in the discharge pipe, said pressure actuated valve also adapted



to automatically exhaust the fluid admitted to the annular fluid passage and the piston cylinders to permit the springs to raise the plungers and pistons out of engagement with the inlet valve and to permit the inlet valve to assume its normal function the moment the pressure in the discharge pipe drops below the predetermined pressure.

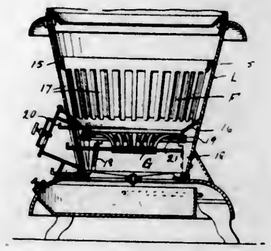
1,345,885. AEROPLANE. HUGH A. ROBINSON, Keyport, N. J., assignor to Aeromarine Plane & Motor Co., Inc., a Corporation of New York. Filed Aug. 23, 1918. Serial No. 251,071. 3 Claims. (Cl. 244—31.)

1. In a device of the class described, a three sided metallic structure having upper and lower sockets within which may be secured the longerons of an aeroplane and rudder locks at the back thereof within which may be supported a rudder.



1,345,886. REPAIR PART OR SECTION FOR HEELS. LEO ROSENFELD, New York, N. Y. Filed Aug. 19, 1919. Serial No. 318,437. 1 Claim. (Cl. 36—34.)

As an article of manufacture, a heel repair part adapted for insertion between a worn rubber tread lift and a heel in order to level the worn part, consisting of an elastic rubber wedge, having notches formed in its thinner edge, spaced apart approximately the distance between the nails in the heel with which the part is to be used and arranged to straddle such nails when inserted into the heel.

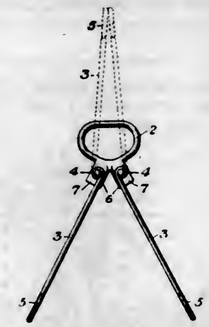


1,345,887. STOVE OR FURNACE. EVERETT W. RYER, Colorado Springs, Colo. Filed Mar. 12, 1919. Serial No. 282,072. 14 Claims. (Cl. 126—70.)

1. A device of the character described comprising a casing having a flue at its top and a fire-pot at the lower portion thereof, a hollow drum suspended within the casing above the fire-pot, a plurality of upstanding pipes carried by and in communication with the drum and loosely extending through the top, said pipes affording the only communication with the interior of the drum, one of said

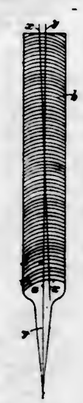
pipes conveying cold air into the drum, and another pipe discharging hot air from the drum, and means for elevating the drum.

1,345,888. FIREPOT. EVERETT W. RYER, Colorado Springs, Colo. Original application filed Mar. 12, 1919, Serial No. 282,072. Divided and this application filed July 28, 1919. Serial No. 313,708. 2 Claims. (Cl. 126—150.)



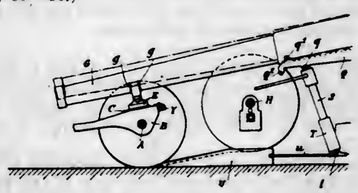
1. A device of the character described comprising a casing, a fire-pot arranged within the lower portion of the casing and supported for oscillating movement about a vertical axis, said fire-pot including circumferentially spaced slats, said slats being substantially V-shaped in cross section with their apices outwardly directed, the apices of the slats contacting with the wall of the casing.

1,345,889. TOOL FOR HANDLING AND MANIPULATING VEHICLE TIRES AND WHEELS. LOUIS R. SCHMERTZ, Jeannette, Pa. Filed Mar. 28, 1919. Serial No. 285,893. 3 Claims. (Cl. 294—26.)



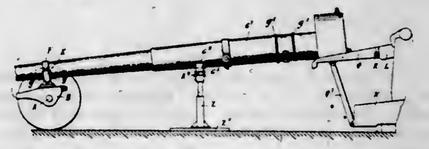
3. A portable hand tool of the character described for lifting circular objects, comprising a handle portion having a gripping opening therethrough, lugs on said handle portion, a pair of legs pivotally secured to said lugs, the axes of said pivots extending at substantially right angles to said gripping opening so that the legs may be swung to inoperative position to overlie said handle portion,

hooked ends on, said legs projecting in the same direction and adapted to extend under the object to be lifted from



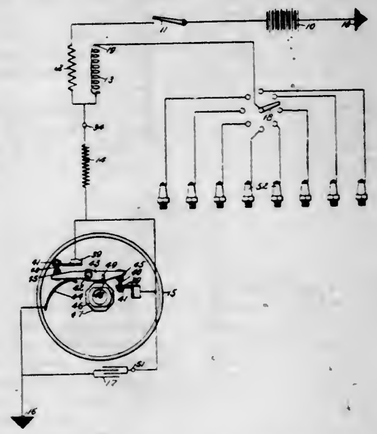
the same side thereof, and stops on said lugs adapted to hold said legs in diverging relation when in operative position, substantially as described.

1,345,890. FILE. CHARLES OTTO SCHNEIDER, Wimbledon, London, England, assignor to The Patent File and Tool Company Limited, London, England. Filed Oct. 14, 1918. Serial No. 258,000. 1 Claim. (Cl. 29—78.)



A file having teeth of arcuate form extending across the surface of the file, the generating centers of the arcs of said teeth lying on a line inclined to the axis of said file.

1,345,891. TRANSPORT APPARATUS FOR DEMOUNTING AND REMOUNTING GUN-BARRELS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Mar. 31, 1919. Serial No. 286,486. 13 Claims. (Cl. 89—40.)



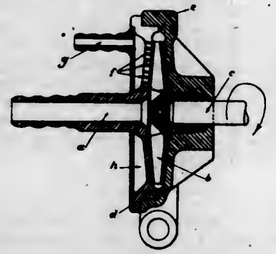
1. In transport apparatus for demounting and remounting gun-barrels, a fore-wheeled axle, a saddle journaled on said axle having a pivot-bolt projecting from the same perpendicular to said axle, a collar adapted to receive the chase of the gun-barrel journaled on said pivot-bolt to permit horizontal angular movement of the gun-barrel relative to the longitudinal axis of said saddle, a rear-wheeled axle movable independently of the fore-wheeled axle to be positioned relative to the gun-barrel, and a cradle on said rear-wheeled axle adapted to receive the breech of the gun-barrel.

1,345,892. TRANSPORT APPARATUS FOR DEMOUNTING AND REMOUNTING GUN-BARRELS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Mar. 31, 1919. Serial No. 286,487. 2 Claims. (Cl. 89—40.)

1. In transport apparatus for demounting and remounting gun-barrels, the combination of independently movable fore-wheeled and rear-wheeled axles placed to receive successively and respectively the chase and breech of the gun-barrel as the latter is slid from its carriage, a pivoted collar forming a seat on the fore-wheeled axle for the chase and permitting angular horizontal movement of the gun-barrel relative to the fore-wheeled axle, a lifting-jack placed beneath the gun-barrel and coacting with the fore-wheeled carriage to support the gun-barrel during the placement of the rear-wheeled axle preliminary to receiving the breech of the gun-barrel subsequently lowered thereon by the lifting-jack, and a cradle pivoted on the lifting-jack to form a seat for the gun-barrel and to permit horizontal angular movement of the gun-barrel relative to the lifting-jack.

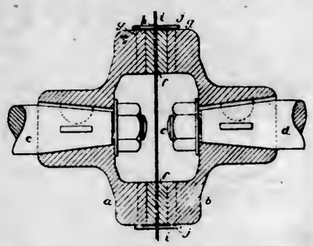
1,345,893. HYDROCARBON-MOTOR. HERMAN SCHWARZE, Detroit, Mich., assignor to Cadillac Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 22, 1916. Serial No. 138,304. 17 Claims. (Cl. 123—148.)

1. A timer comprising a single movable member having a plurality of contacts other contacts corresponding in num-



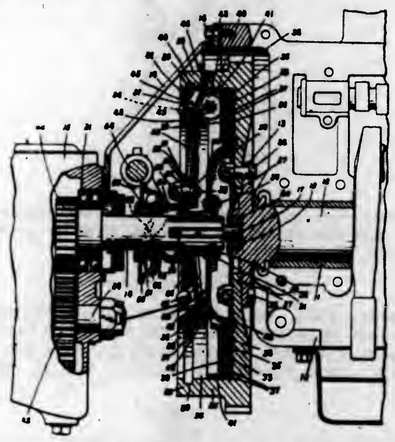
ber with said first mentioned contacts and with which said first mentioned contacts contact, and means for operating said member to thereby simultaneously separate the contacts which it has from said other contacts.

1,345,894. TYPEWRITING-MACHINE. GEORGE A. SEIB, Ilion, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Aug. 1, 1919. Serial No. 314,679. 14 Claims. (Cl. 197—108.)



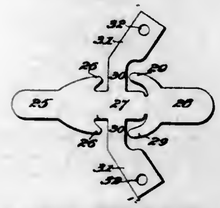
1. In line lock mechanism for typewriting machines, the combination of a carriage actuated slide for controlling the locking means, a spring connected directly to said slide for returning it to normal position, and a carriage rail on which said slide is mounted for sliding movement, said rail having a cavity in which said spring is contained.

1,345,895. CENTRIFUGAL PUMP. LAURENT SEGUIN, Paris, France, assignor to Societe Des Moteurs Gnome Et Rhone, Paris, France. Filed Mar. 29, 1920. Serial No. 369,743. 3 Claims. (Cl. 183—3.)



1. A centrifugal pump for liquids liable to contain gaseous bubbles in suspension or liquids reaching temperatures near their point of ebullition, comprising a casing, a rotor rotatably mounted in said casing, and a drain chamber, the casing of the pump being provided with small apertures located at different distances from the axis of the pump and opening into said drain chamber.

1,345,896. FLEXIBLE COUPLING. FREDERICK RICHARD SIMMS, London, England, assignor of one-half to Simms Motor Units Limited, London, England. Filed Mar. 4, 1920. Serial No. 363,216. 7 Claims. (Cl. 64—96.)

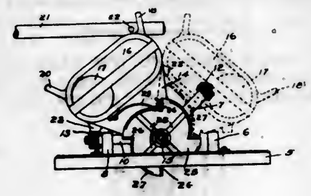


1. A shaft coupling comprising two members secured respectively to the shafts to be connected and each provided with a series of parallel teeth, the teeth of one member being oppositely disposed to the teeth of the other member; an intermediate member interposed between said members and provided on its opposite sides with series of parallel teeth which engage the teeth of the first members, and means for locking the intermediate member in position.

1,345,897. CLUTCH MECHANISM. CHARLES R. SHORT, Detroit, Mich. Filed June 11, 1917. Serial No. 174,169. 18 Claims. (Cl. 192—7.)

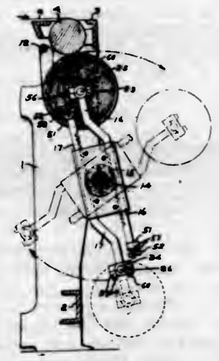
1. In a device of the class described, the combination with a driving member, a driven disk and a clamping plate, of means comprising a plurality of radially arranged springs, and a plurality of wedging devices operated one by each of said springs for operatively connecting said member, disk and plate together.

1,345,898. SHUTTLE. PHILIP SPENCER, Millbury, Mass., assignor to J. H. Williams Company, Millbury, Mass., a Corporation of New York. Filed Aug. 5, 1919. Serial No. 315,376. 4 Claims. (Cl. 139—27.)



3. A shuttle having, in combination, a body portion and a bobbin holder comprising a bobbin spring and a shield member, the shield member having a top plate, a bottom plate, an inclined portion extended from the top to the bottom plate, and two spacing arms extended rearwardly from the inclined portion formed integrally therewith and adapted to coöperate with the bobbin spring to serve as a spacer, and having provision for securing the shield member to the body portion of the shuttle.

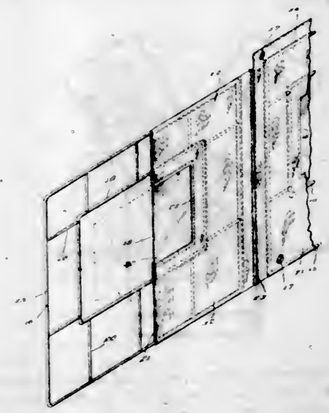
1,345,899. ELECTRICAL SWITCH. HENRY R. STEVENS and ROBERT L. ROCKWELL, Seattle, Wash., assignors to Universal Elevated Railway Company, Seattle, Wash. Filed June 12, 1918. Serial No. 239,675. 6 Claims. (Cl. 200—47.)



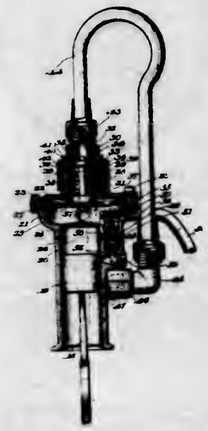
1. A switch of the class described comprising a base, a plurality of switch blades each consisting of two straight rigidly connected sections formed at an angle to each other and pivotally mounted on said base, bars of insulating material connecting the outer ends of said switch blades,

U-shaped terminals mounted on said base for the reception of the ends of said switch blades, a pivotally mounted frame adapted to swing from one side to the other of a vertical plane passing through its pivot point to engage

with and throw said switch, a race formed in the top of said frame, a heavy roller in said race and adapted to roll from one end to the other of said race as said frame is oscillated from side to side, and means for moving said frame.



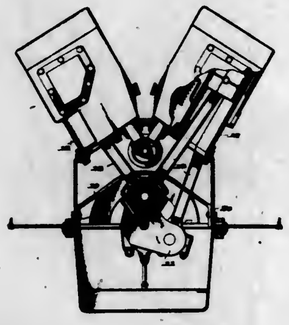
1,345,900. LOOM. MELVIN L. STONE, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 11, 1919. Serial No. 329,968. 17 Claims. (Cl. 139—60.)



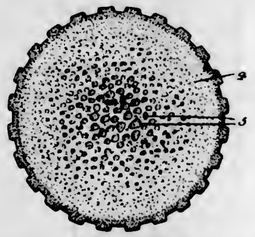
1. In a loom, the combination of a rotary driving member, two sets of rack supports, each set of which is adapted to support a cloth roll, a casing in which the rack supports are mounted, means acting upon the casing and tending to turn it to carry one set of rack supports into and the other set of rack supports from operative relation with the driving member, and a catch for restraining the operation of said means until the cloth roll that is in operative relation to the rotary driving member has a predetermined amount of cloth wound thereon.

1,345,901. AUTOMOBILE PANEL-CURTAIN. DELBERT G. TOWNSEND, Indianapolis, Ind., assignor to Hartman-Townsend Co., Indianapolis, Ind., a Corporation of Indiana. Filed Mar. 13, 1919. Serial No. 282,302. 6 Claims. (Cl. 296—138.)

5. An automobile side curtain, comprising an outer frame approximating in shape the outer edge of the curtain, an inner frame spaced from the outer frame and approximating in shape a window opening with which said curtain is provided, cross-connectors between said inner and outer frames to hold them in relatively fixed positions, a fabric covering overlying said frames and cross-connectors on both sides thereof and cut away to form the window opening, and a sheet of transparent material fixed in said inner frame.

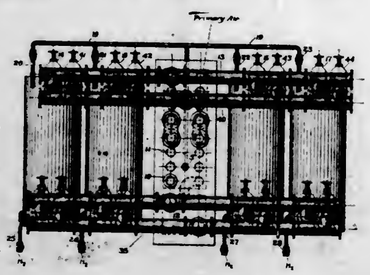


1,345,902. PUMP FOR MOTOR-VEHICLES. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich, a Corporation of Michigan. Filed Sept. 7, 1917. Serial No. 190,243. 7 Claims. (Cl. 230—24.)



1. In combination, a cylinder, a piston slidably mounted therein, a partition above the piston dividing the cylinder into a piston chamber and a discharge chamber, an inlet opening and a discharge opening formed through the side of the cylinder, the discharge opening being nearer the discharge end of the cylinder than the inlet opening, a discharge conduit connecting the discharge opening and the discharge chamber, an inlet valve controlling the admission of fluid to said inlet, and pressure responsive means associated with said discharge chamber for governing said valve.

1,345,903. HYDROCARBON-MOTOR. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 10, 1919. Serial No. 296,275. 6 Claims. (Cl. 184—13.)



2. In combination with a series of engine cylinders, a crank shaft, connecting rods carried by said shaft, and a series of laterally extended baffle plates mounted on the side walls of the crank case above and adjacent to the crank cheeks and spaced from one another and overlapping the bearings of the connecting rods.

1,345,904. SPONGE-RUBBER ARTICLE AND METHOD OF MAKING THE SAME. JAMES BENJAMIN WISHART, Trenton, N. J. Filed Aug. 5, 1919. Serial No. 315,468. 5 Claims. (Cl. 18—53.)

1. A sponge rubber article having cells therein, the cells being largest at the central portion of the article and decreasing in size toward the surface of the article.

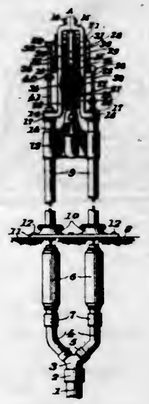
1,345,905. PROCESS OF AND APPARATUS FOR PRODUCING HYDROGEN. LYLE STOCKTON ABBOTT, River Edge, N. J., assignor to The Improved Equipment Company, New York, N. Y., a Corporation of Colorado. Filed Nov. 6, 1915. Serial No. 60,011. 10 Claims. (Cl. 48—118.2.)

10. A continuous run plant for the manufacture of hydrogen which is made by a process involving distinct heating, steaming and reducing steps; a plurality of apparatuses, each apparatus capable of performing the whole process, and the number of such apparatus constituting the plant being so correlated to the time of operation of each such step that by simultaneous operation of the different steps in the different apparatus hydrogen may be continuously produced from the plant as a whole.

1,345,906. HOT-WATER AND ICE BANDAGE. WILLIAM F. AUGUSTINE, Chicago, Ill. Filed Sept. 23, 1918. Serial No. 255,253. 1 Claim. (Cl. 128—258.)

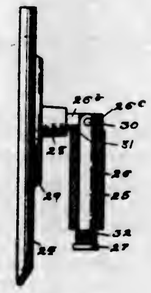
The combination with a flexible bag, of an apertured belt rigidly secured thereto for mounting the bag, a neck formed on said bag projecting through said belt, an adjustable funnel member on said neck to facilitate filling of the bag, and means for closing said neck when the bag is filled.

1,345,907. MACHINE FOR MAKING ROUND BELTING. ALPHEUS E. BARKER, Philadelphia, Pa., assignor to Alexander Brothers, Philadelphia, Pa., a Corporation of New Jersey. Filed Jan. 16, 1918. Serial No. 212,030. 15 Claims. (Cl. 28—21.)



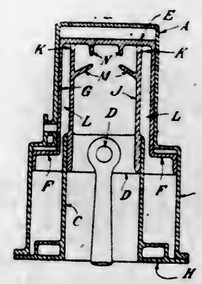
1. A machine for making round belting including a forming mechanism adapted, during operation, to properly shape a belting from a supply of material passed therethrough, means for effecting a relative movement between said forming mechanism and the shaped belting, means to draw said material through said forming mechanism and means for varying the relative rates of speed at which said last two mentioned means operate.

1,345,908. CASTER-SOCKET. CHARLES S. BARNARD, Bridgeport, Conn., assignor to The Bassick Co., of Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 14, 1919. Serial No. 317,401. 4 Claims. (Cl. 16—73.)



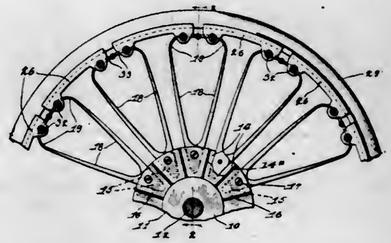
3. In a socket for top bearing casters, a sheet metal body having a rounded top forming a ball chamber, and a ball in the chamber, the socket having cut-out side portions below the chamber and having integral ears which are bent inwardly from the cut-out portions and engage beneath the ball.

1,345,909. OPERATING MECHANISM FOR PUMPS. LAWRENCE BRENNAN, Red Deer, Alberta, Canada. Filed Nov. 7, 1918. Serial No. 261,465. 4 Claims. (Cl. 74—54.)



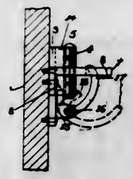
1. The combination of two reciprocatory driven members, and means for driving said members concurrently in opposite directions embodying a pair of main driving gears, a shaft on which both of said gears are journaled for free turning movement, crank shaft sections in axial alinement with each other and parallel to said main gear shaft, pinions fast on said crank shaft sections meshing with said main driving gears, crank operated connections between said crank shaft sections and said reciprocatory driven members, bevel gear faces on the inner sides of said main driving gears, a spider on the main gear shaft between the latter, and pinions journaled on said spider and meshing with said bevel gear faces.

1,345,910. WALL-BRACKET. WALLACE A. COZART, Oklahoma, Okla. Filed June 24, 1919. Serial No. 306,427. 2 Claims. (Cl. 248—1.)



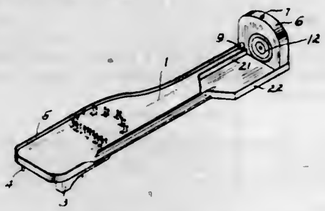
1. In a device of the character described, a table having a depending spindle, a supporting arm through which the spindle revoluibly passes, the spindle being movable vertically in the arm and being pivotally jointed near its upper end, and yieldable means acting to draw the lower portion of the spindle downward in the arm.

1,345,911. INTERNAL-COMBUSTION ENGINE. WILLIAM RUSSELL CUMMINS, Glasgow, Scotland. Filed Nov. 20, 1918. Serial No. 263,299. 22 Claims. (Cl. 123—171.)



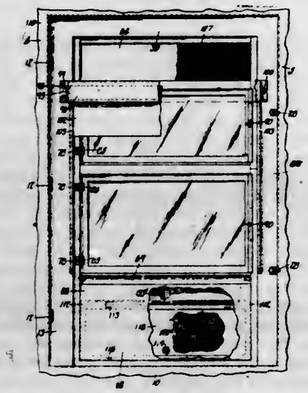
1. A two stroke cycle internal combustion engine of the type defined, somprising an auxiliary cylinder, a power piston, a cylindrical cross-head guide, an annular piston in said auxiliary cylinder, a tubular sleeve connecting said annular piston and power piston and having in combination a circulation chamber contained between the walls of the auxiliary cylinder and the cylindrical guide for the crosshead closed at its outer end, a hollow trunk connecting the cross head with the power piston, ports extending through the walls of the trunk in the region about the outer face of the power piston, deflectors within the hollow interior of the trunk, and a passage extending between the walls of the tubular sleeve and the trunk, for the purposes set forth.

1,345,912. RESILIENT WHEEL. MATTHIAS EDLING and WILLIAM FALK, Iron River, Mich. Filed Feb. 17, 1920. Serial No. 359,236. 1 Claim. (Cl. 152—29.)



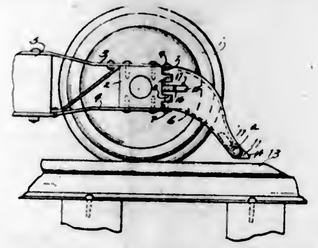
In a wheel of the class described, the combination with a hub, of a series of spokes mounted at their inner ends on said hub and extended in substantially radial lines therefrom with their faces located in planes at right angles to the faces of the wheel, each spoke comprising a pair of outwardly tapered single spring members having their outer portions curved toward each other and provided with transverse openings, a sectional felly mounted on the outer ends of said members, each section of said felly having transverse openings near each of its ends, hinges uniting the ends of the felly sections, each of said hinges comprising a pair of plates hinged together at their meeting edges and having in their opposite edges transverse and spaced apart openings to receive therebetween the apertured portions of the spring members of the spokes, bolts extended through the openings of the felly sections, the openings of the hinges and the openings of said spring members, one of the members of each spoke being thus connected at its outer end to one of the felly sections and the other member thereof similarly connected at its outer end to the felly section adjacent the first named section, and a tire mounted on the felly sections.

1,345,913. LATCH. ERNEST S. EKSTROM, Rosholt, S. D. Filed Aug. 21, 1918. Serial No. 250,801. 1 Claim. (Cl. 292—336.)



In a latch, an angle piece having one end secured to a support and its free end perforated, ears formed upon the non-perforated end of said angle piece, a bolt fulcrumed to said ears and having a long and a short end, the long end of said bolt being adapted for engagement with the perforated end of said angle piece, and a swinging hasp adapted for releasable engagement with the free end of said angle piece, said hasp engaging with the long end of said bolt while moving in one direction and engaging with the short end of said bolt while moving in the opposite direction.

1,345,914. GAME DEVICE. WILLIAM H. EMMERT, Chicago, Ill. Filed July 15, 1919. Serial No. 310,878. 6 Claims. (Cl. 46—62.)

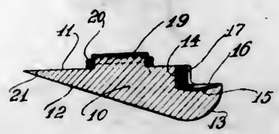


1. A game device comprising a board, a series of ball engaging devices thereon, and a magazine for holding a series of balls, said magazine comprising two offset passages, a connecting passage having a ridge therein adapted normally to prevent the balls in the first passage passing into the second passage, and means for moving a ball through said connecting passage when desired.

1,345,915. WINDOW. GEORGE A. FAIR, Detroit, Mich. Filed Apr. 10, 1916. Serial No. 90,173. 1 Claim. (Cl. 20—48.)

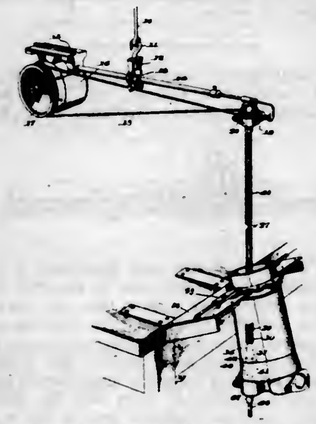
A window construction comprising a frame, a vertically slidable sash supported thereby, an outer glazed casement mounted on said sash and swingable inwardly in respect thereto about a vertical axis, and an inner glazed casement mounted on the outer glazed casement and swingable inwardly in respect thereto about a vertical axis, whereby an air space is formed between the glazings when the casements are closed and whereby the glazing may be presented in desirable position for cleaning.

1,345,916. WHEEL-GUARD. PETER FEIDEN, Jr., St. Joseph, Mo. Filed Aug. 21, 1918. Serial No. 250,800. 2 Claims. (Cl. 293—58.)



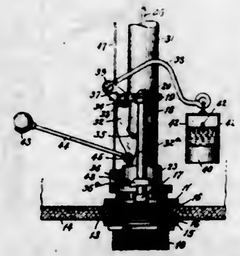
1. In a wheel guard for railway trucks, a guard frame hinged to the journal box, said guard frame extending forward, inward and downward and in advance of the wheels, means carried by said guard frame for frictional engagement with said journal box to prevent lateral movement of said guard frame, and a shoe pivotally secured to the forward end of said guard frame.

1,345,917. TROUSERS-SUPPORT. FRANK E. FITZGERALD, Watertown, N. Y. Filed July 24, 1919. Serial No. 313,051. 1 Claim. (Cl. 241—9.)



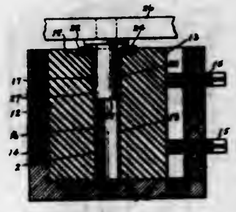
In a support, the combination with a pair of trousers having a band and having right and left hip seams, of rings detachably mounted on said band forwardly of said hip seams, a flexible strap having a buckle at one end disposed near the right hip seam, the opposite end loosely engaging the ring at the left side and folded upon itself and secured to the trousers rearwardly of the left hip seam, a second strap loosely engaging the ring at the right side and folded upon itself and secured to the trousers rearwardly of the adjacent seam, the free end of the second strap being perforated and inserted through the buckle adapted to draw the four quarters of the trousers toward the corresponding hip seams.

1,345,918. MANICURING DEVICE. WILLIAM FOGGIE, Brooklyn, N. Y. Filed Mar. 24, 1920. Serial No. 368,378. 6 Claims. (Cl. 132—36.)



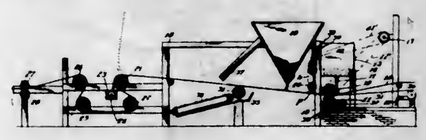
1. An article of manufacture comprising a generally wedge-shaped body having a substantially straight upper face and a curved lower face, one of its ends terminating in a sharp point, the other, broadened end being semi-spherically curved, a depression provided at its broadened upper portion adapted to receive the tip of a finger, a semi-circular step forming an upright wall of said depression, a nail file attached to said wall, a leather pad covering the depressed finger receiving portion, and a nail polishing pad provided at the upper face of the body in such a way as to leave free its pointed end.

1,345,919. GRINDING-MACHINE. CHARLES GABELMAN, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 8, 1919. Serial No. 270,241. 14 Claims. (Cl. 51—4.)



1. In valve seat grinding means, an operating member, a support for the operating member and a pilot member for centering said operating member with respect to the valve seat having means slidably fitting said operating member and the valve stem guide.

1,345,920. FLUSH-VALVE. EDWARD GLENNON, Brooklyn, N. Y. Filed Jan. 29, 1919. Serial No. 273,731. 1 Claim. (Cl. 4—5.)

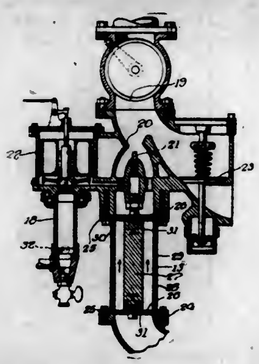


The combination of a tank for containing a supply of water and having an outlet, upright guide rods contiguous to said outlet, a cross-bar extending between said rods at their upper ends, a valve controlling said outlet, means for raising said valve to an open position, lugs on said valve coöperating with said guide rods to guide said valve in its movements, a projection on one of said lugs, a locking member pivotally connected with said cross-bar and arranged to engage said projection to lock said valve in its open position and a hollow receptacle containing water and directly connected with said locking member, said receptacle normally dominating said locking member whereby the latter is moved to an inoperative position to release said projection and said receptacle being submerged in said supply of water and being rendered inactive thereby against said locking member whereby the latter swings back to an operative position in the path of said projection.

1,345,921. DIE FOR MAKING VALVE-CASINGS FOR WIND-MUSICAL-INSTRUMENT VALVES. EDWARD J. GULICK, Elkhart, Ind., assignor to C. G. Conn, Ltd., Elkhart, Ind., a Corporation of Indiana. Filed Oct. 28, 1918. Serial No. 260,010. 4 Claims. (Cl. 76—90.)

1. A device for shaping a one piece wind instrument valve casing comprising a die member having a bore within which the valve casing is adapted to be confined during the shaping operation, said die being provided also with an enlarged bore section into which the metal of the valve casing may be pressed; a screw thread forming die encompassing a portion of the valve casing; and an arbor member adapted to forcibly engage the inner wall of the valve casing for expanding and forcing the metal thereof into the enlarged bore section of the die and into the interstices of the threads of said screw thread forming die.

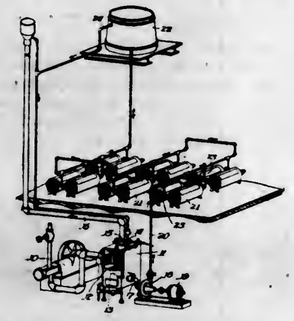
1,345,922. METHOD FOR PRODUCING ROOFING MATERIAL. SOLOMON H. GOLDBERG, Chicago, Ill., assignor to The West Coast Roofing and Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 26, 1912, Serial No. 738,612. Renewed Dec. 2, 1919. Serial No. 342,014. 6 Claims. (Cl. 154—2.)



1. The method of coating a flexible roofing surface with a granular coating material arranged in designs, which consists in applying bituminous adhesive substance to said surface, covering a portion of said surface with a relatively light pattern strip, and applying the granular coating material over said surface not covered by the pattern.

3. The method of design surfacing a length of roofing material, which consists in causing the roofing length to travel substantially horizontally, applying adhesive substance to the top surface of the roofing length while the latter is traveling, feeding a pattern length to said adhesive surface, applying surfacing material to the roofing length as it is covered by the pattern length, then deflecting the roofing length so that the loose surfacing material on the pattern covered areas may fall therefrom, to leave only the adhesive surfaces covered with surfacing material and then exerting pressure to intimately associate the surfacing material with the roofing length.

1,345,923. HEATER FOR COOLING SYSTEMS. RIDSDALE ELLIS, Oak Park, Ill., assignor to Paul Carpenter, Glenview, Ill. Filed Jan. 25, 1917, Serial No. 144,424. Renewed Oct. 31, 1919. Serial No. 334,883. 3 Claims. (Cl. 123—174.)



1. In a water-cooled internal combustion engine the combination of a water cooling system, a carbureter, means

for heating the water after the engine has stopped running and means for heating the air admitted to the carbureter

to aid the vaporization and reduce the condensation of liquid fuel on starting the engine.

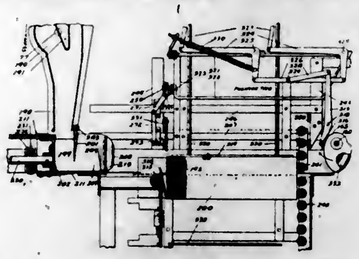
1,345,924. METHOD OF AND APPARATUS FOR SUPPLYING HEATED LIQUIDS. WILLIAM R. HAGER, Chicago, Ill., assignor to Troy Laundry Machinery Co., Ltd., Chicago, Ill., a Corporation of Illinois. Filed Feb. 21, 1917. Serial No. 150,288. 6 Claims. (Cl. 137—78.)

1. Apparatus for heating and circulating heated water, comprising in combination, a heater adapted to contain a body of heated water, an elevated storage tank adapted to contain another body of water, a main connecting the two bodies, a branch from said main for withdrawing water from either of said bodies, a tank overflow pipe communicating with said heater, and means for causing circulation of said water, substantially as described.

2. Apparatus of the character described, comprising in combination, a container for heating and storing a body of water, an elevated container for storing a second body of water, a conduit connecting said containers, branches from said conduit for withdrawing water from either or both said containers, a pump for constantly moving water toward said elevated container, and a tank overflow pipe for returning water to said heater, substantially as described.

3. In combination, a plurality of means adapted to simultaneously require a supply of heated water, a conduit connected to said means, a hot water container at each end of said conduit, both of which containers are adapted to supply water to said means, a return pipe between said containers, and means for effecting constant enforced circulation of the water, substantially as described.

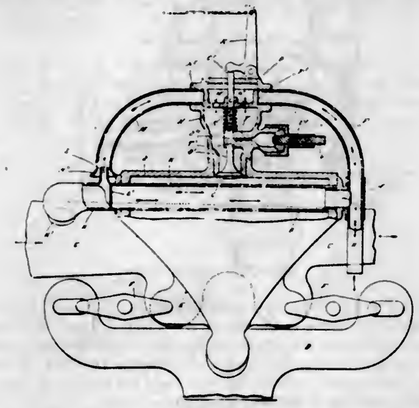
4. The method of heating and maintaining a supply of heated water for washing machines and the like, which consists in maintaining two separate bodies of heated water, one of said bodies being elevated above the washing machines, causing the water to flow from either of said bodies to said washing machines, diverting the water in its passage to such machines as desired, permitting the excess of water in said elevated tank to return to the other body, maintaining a fixed water level in said elevated tank, and heating the water.



5. Apparatus for heating and circulating heated water for use in washing machines and the like, in combination, a heater adapted to contain a body of heated water, an elevated storage tank adapted to contain another body of water, a single main connecting the two bodies, a plurality of washing machines, branches from said main to said machines, connections in said main to permit withdrawal of water from either body for use in the machines, a tank overflow pipe communicating with said heater, and means for circulating the water.

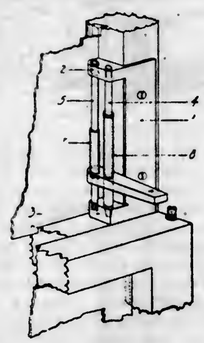
1,345,925. CONCRETE-ROAD-BUILDING MACHINE. WILLIAM DEANE HAM, Chicago, Ill. Filed Sept. 28, 1916. Serial No. 122,611. 6 Claims. (Cl. 94—41.)

1. In a machine of the class described, a concrete mixer, a frame on which the same is mounted, a power plant, means transmitting a drive from the power plant to said mixer and permitting said drive to be disconnected, a windlass on the frame, a cable attached thereon, adapted to be attached to a fixed point to move said frame when the windlass is driven by the power plant, means admitting a predetermined quantity of water into the mixer with each charge of material admitted thereto, and a housing for the power plant pivoted on said frame and affording a loading platform for discharge of material into the mixer.



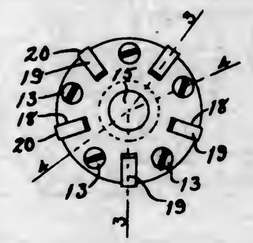
1,345,926. CARTON-PACKING MECHANISM. ARTHUR W. HARRIS, Sleepy Eye, Minn. Filed Jan. 17, 1919. Serial No. 271,636. 44 Claims. (Cl. 226—14.)

1. The combination, with a driving shaft, of mechanism for flattening and packing a flexible article, a driving mechanism connecting said mechanism with said shaft, mechanism for placing an empty carton in position to receive the articles and for discharging the filled carton, a driving mechanism connecting said carton placing mechanism with said shaft, and means for controlling the time and sequence of operation of said mechanisms for regulating the number of articles packed.



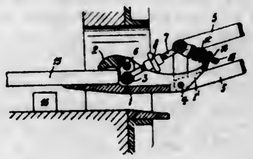
1,345,927. INTERNAL-COMBUSTION ENGINE. WALTER HENRY HAYES, London, England. Filed Jan. 27, 1919. Serial No. 273,271. 10 Claims. (Cl. 123—119.)

1. A vaporizer for internal combustion engines working with paraffin or like liquid fuel, comprising the combination of means for mixing exhaust gases from the engine with the air and fuel, a vaporizing chamber, a pipe passing transversely through said vaporizing chamber and conveying exhaust gases from the engine whereby said vaporizing chamber is heated, a valve for controlling the admission of said mixture of exhaust gases, air and fuel to



said vaporizing chamber, an induction pipe of the engine, and means for connecting said vaporizing chamber with said induction pipe so as to conduct the vaporized mixture thereto.

1,345,928. WINDOW-SASH LOCK. OLIVER HOLDSWORTH, Oakland, Calif. Filed Jan. 16, 1920. Serial No. 351,904. 1 Claim. (Cl. 292—63.)

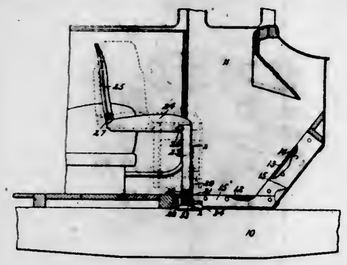


A window sash lock of the character described, in combination with a pair of vertical sliding sashes comprising a plate, adapted to be attached to the stile of the upper sash, said plate having upper and lower brackets adapted to and carrying back and front guide rods, front and back tubes slidably mounted on said guide rods, said upper bracket having an aperture and said lower bracket having a pocket for the reception of the said front and back tubes, the said tubes operating in conjunction with a projecting and retaractable slide bar which is attached to the lower end of said back tube and provided with an opening for engagement with said front tube; said front tube being pointed at its lower end and provided with a rim at its upper end, is slidably moutned through an opening in said slide bar, the lower pointed end being adapted to drop into said pocket in the lower of said brackets, holding the said slide bar in a locked and operating position overlapping the top rail of the lower sash, whereby upon the movement of either of the sashes, said slide bar carrying the said front tube by its top rim is forced upward under and is stopped by said upper bracket, thereby limiting the relative movement of the sashes.

1,345,929. ADJUSTABLE REAMER. WILLIAM B. JOHNSON, Elkhart, Ind., assignor to Foster-Johnson Reamer Company, a Corporation of Indiana. Filed Sept. 19, 1917. Serial No. 192,076. 3 Claims. (Cl. 77—76.)

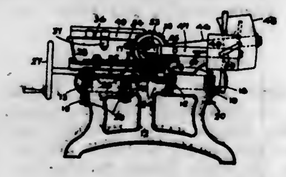
1. In a device of the character described, a holder provided with a driver spindle chamber and a plurality of longitudinal blade slots, said slots being in communication with said spindle chamber; blades arranged in said slots and adapted for radial movement, each of said blades being provided with a plurality of seats; a driver spindle movably arranged in said spindle chamber and provided with a plurality of cam members, said cam members being adapted to engage said blade seats when the spindle is longitudinally actuated; a spring pressed collar slidably mounted upon said holder and adapted to inwardly actuate said blades; and means for imparting a longituinal movement to said spindle, whereby said blades are outwardly and radially actuated.

1,345,930. GRIP FOR HANDLING SLABS, BARS, BILLETS, OR OTHER MATERIAL. ARTHUR WAKEFIELD JONES, Stepps, JAMES BRYDEN, Cartcosh, and ARCHIBALD JOHN HOLME MOWBRAY, Stirling, Scotland. Filed Sept. 18, 1919. Serial No. 324,619. 2 Claims. (Cl. 294—106.)



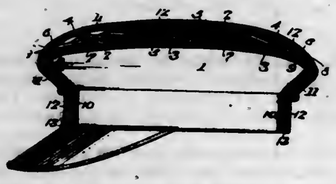
1. A grip for handling slabs and other articles comprising, in combination, a jib, a lower jaw and an upper jaw, the lower jaw pivoted to said jib, and the upper jaw constituted by a bell-crank lever pivoted to said lower jaw, a link connecting said lever to said jib at a point remote from the pivot of said lower jaw, and means normally maintaining said jaws in open position, and adapted to be overcome by pressure of the load acting downwardly on said lower jaw.

1,345,931. MOTOR-VEHICLE. FREDERICK KIEHLER, Detroit, Mich., assignor to Cadillac Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 16, 1916. Serial No. 137,294. 10 Claims. (Cl. 296—65.)



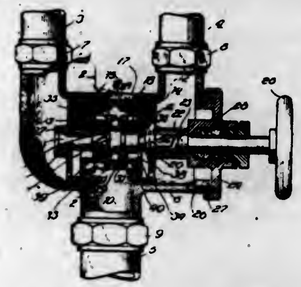
1. In a device of the class described and in combination with a vehicle body, two bosses spaced apart from one another and supported from said body; a transversely extending base member pivotally supported in said bosses and capable of oscillating movement therein; means for limiting the extent of movement of said transverse base in one direction; a vertically extending trunnion carried by said base; a frame having a bottom member supported by and rotatable about said trunnion; a chair seat car-

ried by said frame; cooperating cam members upon said base and the bottom member of said frame and whereby



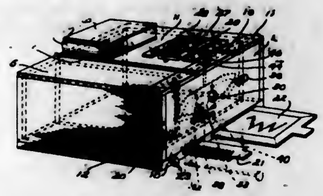
said base and frame are maintained in definite relation relative to one another; and a spring acting to hold said members in engagement with one another.

1,345,932. MOLD FOR PLASTIC AND SIMILAR SUBSTANCES. ROBERT HUTCHISON KIRK, Newcastle-upon-Tyne, England. Filed Jan. 24, 1920. Serial No. 353,680. 3 Claims. (Cl. 25—41.)



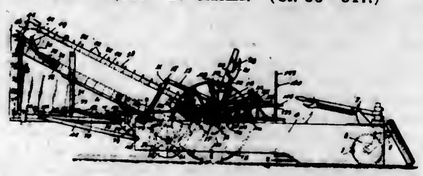
3. A molding machine comprising end frames, crossbars between said end frames, adjustable supports carried thereby, a central shaft between said end frames, a mold thereon having sloping sides and ends, detachable tapered side linings, detachable tapered end linings which lock said side linings in position, a pallet, pivoted catches which lock both said end linings and said pallet in postion, worm gearing for rotating said shaft to invert and return said mold, and weighted arms at each end of said shaft for balancing the mold, one of said arms being adapted to be swung to either side of said shaft to compensate for the difference in the weight of the mold when filled and when empty.

1,345,933. HEAD-GUARD ATTACHMENT FOR CAPS. GEORGE B. KNIGHT, Camden, N. J. Filed Aug. 22, 1919. Serial No. 319,064. 7 Claims. (Cl. 2—106.)



5. A head guard for a cap consisting of a pad of mesh or open-like structure of relatively rigid material, a rim therefor, a mat of pliable material on which said pad is imposed, a sack adapted to contain said mat and pad and to conform to the crown of a cap to which it is secured, and a cover for said guard attachable to the cap.

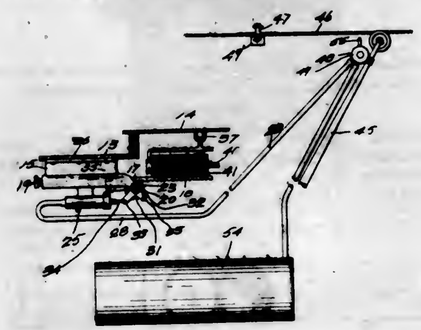
1,345,934. MIXING-FAUCET. WALTER F. KNOX, Port Huron, Mich. Filed Apr. 19, 1917, Serial No. 163,118. Renewed Apr. 5, 1920. Serial No. 371,481. 10 Claims. (Cl. 251—106.)



1. In a device of the class described, a casing, a pair of inlets for fluids to be mixed, an outlet, a rotary element intermediate the respective inlets and the outlet and driven by the flow of fluid adapted to accelerate the flow of the more slowly moving fluid and to retard the flow of the more rapidly moving fluid.

1,345,935. CIGAR AND CIGARETTE BOX. JOHN KOSTKA, Cleveland, Ohio. Filed Sept. 5, 1919. Serial No. 321,736. 1 Claim. (Cl. 206—38.)

In a container of the character described having a plurality of compartments adapted for the reception of various articles of personal usage, a pair of levers pivotally connected at one end, oppositely disposed knives on said levers in one of said compartments, a stop pin, a pivoted actuating lever adapted to rest with its inner, lower end on said stop pin, a spring for drawing the opposite end of said lever into normal operating position, a cam-shaped terminal on one of said levers, a spring for connecting said cam terminal and said actuating lever, a plunger contacting with its inner end with the upper edge of one of said pivoted levers, and an operating knob on said plunger to operate said knives.



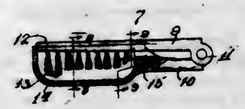
1,345,936. HARVESTER FOR BEANS AND THE LIKE. JOHN LECK, Santa Ana, Calif. Filed Jan. 23, 1919. Serial No. 272,617. 28 Claims. (Cl. 56—347.)

26. A harvester for beans and the like comprising a table formed of relatively movable sections, means to pick up the vines from the field and discharge them upon the table, a rotating member, a member having a hook, means operatively connecting the last named member with the sections to move said sections, means to move the member

having the hook into different positions to cause the hook to move into and out of the path of travel of the crank, and means to limit the downward movement of the member having the hook when said hook is engaged by the rotating member so as to disengage the hook from said rotating member.

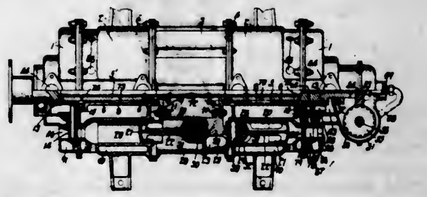
1,345,937. STOP-INDICATOR. RICHARD LEE and CHARLES A. HIATT, St. Louis, Mo., assignors of one-half to Claud D. Hall, St. Louis, Mo. Filed Jan. 2, 1920. Serial No. 348,734. 3 Claims. (Cl. 40—45.)

1. A stop indicator comprising a removable support adapted to be attached to a coach, a plurality of indicating signs pivotally carried by said support, a compressed air tank, a rack and pinion mechanism for supporting the indicating signs in a horizontal position and releasing the same one at a time, a ratchet mechanism for actuating the rack and pinion mechanism intermittently, a valve mechanism connected to the air tank and the ratchet mechanism, and means for operating the rack and pinion mechanism at predetermined intervals.



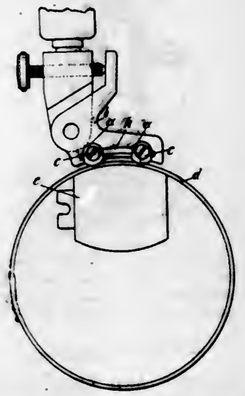
1,345,938. THERMALLY-CONTROLLED FLOAT. SAMUEL LIPPERT, Cleveland, Ohio. Filed June 29, 1916. Serial No. 106,574. 3 Claims. (Cl. 236—53.)

1. A device for the purpose set forth, comprising a float valve, an expansion tube extending therethrough and secured at the upper end to said float, the lower end of said tube being slidable in the wall of said float, and an air valve in said tube controlling the passage of air through said tube, and connected to the lower end of said tube, whereby when said tube expands and contracts said valve is alternately closed and opened.



1,345,939. FOLDING TOOTHBRUSH. CONVEASE W. LLOYD, Chicago, Ill., assignor to The Sani-Fold Company of California, a Corporation of California. Filed Aug. 3, 1916. Serial No. 112,977. 1 Claim. (Cl. 15—39.)

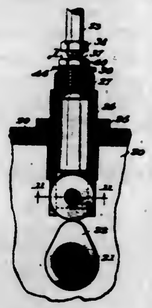
In a folding tooth brush, handle sections hingedly connected to one another, a brush on one of said sections, a container on the other section adapted to receive the brush folded thereinto with the bristles of the brush concealed and spaced from the walls of the container at all points, said container handle section having a groove therein adapted when the sections are folded to receive the



brush section intermediate its length to insure centering of said brush when folded into said container, said brush and container being so constructed as to afford a continuous opening around the brush at the upper end of the container when the brush is folded thereinto.

1,345,940. INTERNAL-COMBUSTION ENGINE. WILLIAM E. LOONEY, Detroit, Mich. Filed Aug. 10, 1917. Serial No. 185,432. 13 Claims. (Cl. 123—58.)

1. An internal combustion engine comprising a rotatable engine shaft, a wave-like cam rigid and co-axial therewith, a plurality of cylinders arranged parallel with the engine shaft, said cylinders forming combustion chambers, pistons for the cylinders, rollers carried by the piston and engaging the cam, a head common to the cylinders, a valve secured to the shaft and interposed between the head and the cylinders, and an annular shim fixed to the cylinders and interposed between the latter and the valve.



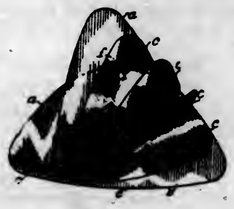
1,345,941. LEATHER-PARING MACHINE. JOHANNES LOOSE, Stuttgart-Cannstatt, Germany, assignor to The Firm of Fortuna-Werke, Spezialmaschinenfabrik, G. M. B. H., Stuttgart-Cannstatt, Germany. Filed Mar. 27, 1916, Serial No. 87,074. Renewed Mar. 17, 1920. Serial No. 366,689. 3 Claims. (Cl. 69—9.5.)

1. In a machine for paring leather and like material, in combination, a presser foot, and associated with said foot at least two pressure pieces adjustable in such manner as to vary the distance between said pressure pieces.

3. In a machine for paring leather and like material, in combination, a presser foot and a plurality of detachable pressure pieces associated with said foot, said pressure pieces being adjustable substantially in the direction of extension of the pressure edge of the presser foot.

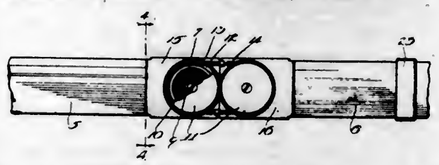
1,345,942. METHOD OF MAKING VALVE TAPPET AND ROLLER HOLDERS FOR HYDROCARBON-MOTORS. GEORGE L. MCCAIN, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 17, 1917. Serial No. 169,250. 8 Claims. (Cl. 29—148.)

4. A method of making valve tappet- and roller-holders consisting of drilling two similar cylindrical pieces to provide each with a relatively thin tubular wall throughout part only of its length, drilling a hole through the remaining part of one of said pieces to provide a vent, and welding the thin wall parts of said pieces together end to end.



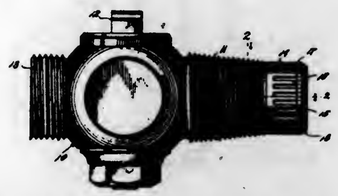
1,345,943. HYDROCARBON-MOTOR. GEORGE L. MCCAIN, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Original application filed May 17, 1917, Serial No. 169,250. Divided and this application filed Sept. 29, 1917. Serial No. 193,986. 4 Claims. (Cl. 123—90.)

1. A valve tappet- and roller-holder comprising a tappet-holder part having a tapped head and a tubular portion and a roller-holder part having a slotted head and a tubular portion, said tubular portions being welded end to end.



1,345,944. TOE-PUFF AND LIKE STIFFENER FOR BOOTS AND SHOES. DAVID BAIRD MACDONALD, Leicester, England. Filed Mar. 2, 1920. Serial No. 362,859. 5 Claims. (Cl. 154—46.)

1. A stiffener for use in the herein described manner, comprising a face layer, a back layer, a plurality of intermediate layers of reticulated material coated or impregnated with a stiffening agent and a middle layer of porous,



absorbent or like material adapted to serve as a carrier for the stiffening agent, substantially as described.

1,345,945. ELASTIC EXTENSION DEVICE. LOUIS MACHEROUX, Chicago, Ill., assignor of one-half to Karl Matheus, Chicago, Ill. Filed May 12, 1919. Serial No. 296,441. 3 Claims. (Cl. 267—69.)

1. As a new article of manufacture, a spring device comprising two end portions movable toward and from each other, a plate secured to each end portion, a reel pivotally mounted with respect to each plate; said pivotal mountings being non-coincident, a cap over each reel, there being an opening in each cap, a cord secured to and winding upon each reel and passing through the opening of the corresponding cap, a connection from the end of each cord to the cap of the opposite reel, and a spring within each reel for rotating the same to wind its cord thereon, substantially as described.

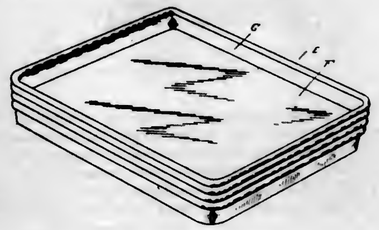
1,345,946. EEL-GUARD FOR COCKS. PHILIP MUELLER, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Aug. 27, 1919. Serial No. 320,290. 10 Claims. (Cl. 210—166.)

1. A guard for cocks comprising a cup-shaped body, the end of which is slotted to form a series of bars, and means to hold said bars against displacement.

1,345,947. ART OF MAKING COFFEE AND APPARATUS THEREFOR. FREDERICK H. MULLER, Chicago, Ill. Filed July 29, 1916. Serial No. 112,041. 2 Claims. (Cl. 53—3.)

1. A means for making coffee comprising a liquid receptacle, a perforated bucket within the receptacle, and a series of superposed successively removable, perforated coffee containers supported by said bucket above the bottom thereof, each container being provided with a cover.

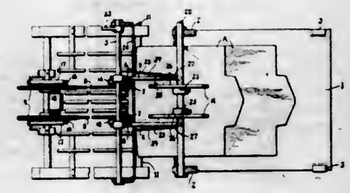
2. A means for making coffee comprising a liquid receptacle, a perforated bucket within the receptacle, a removable screen adjacent the bottom of said bucket, and a series of superposed, successively removable perforated



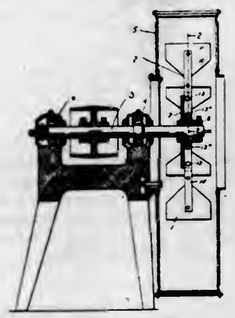
coffee containers supported in said bucket, each container having a top and means for spacing it from the adjacent container.

1,345,948. BOTTLE-CAP REMOVER. LOUIS MYERS, Detroit, Mich. Filed Feb. 17, 1919. Serial No. 277,440. 2 Claims. (Cl. 65—46.)

1. A bottle closure remover, comprising a member for extending across the mouth of the bottle, having finger grips at its opposite ends adapted to engage the bottle and one or more prongs for engaging the closure cap, a pronged member beneath said first-mentioned member in a plane parallel thereto, a handle above the same, and a shank on said handle passing through a central aperture in said first-mentioned member into fixed engagement with said pronged member.



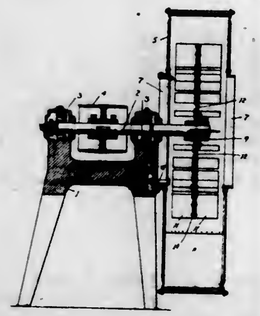
1,345,949. TRAY. LOUIS MYERS, Detroit, Mich. Filed Oct. 15, 1919. Serial No. 330,768. 7 Claims. (Cl. 65—53.)



6. The combination with a tray having a bottom and a marginal flange, of a second tray nested within said first-mentioned tray and having a similar bottom and marginal flange, and a spacer upon one of said trays and between said bottoms for maintaining the edges of said marginal flanges vertically spaced and for permitting the weight of the superposed tray resting on the bottom of the lower tray.

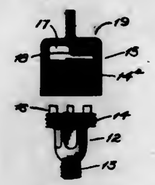
1,345,950. TRANSFERRING DEVICE. CHARLES F. PFLANZE, St. Louis, Mo. Filed Oct. 29, 1917. Serial No. 199,006. 12 Claims. (Cl. 271—28.)

10. In a sheet feeding device, a rotary feed member adapted to engage the sheets, a lifter comprising a movable suction tube whereby the sheets are successively placed in engagement with said rotary feed member, a marginal portion of each sheet being elevated by said lifter, a second rotary feed member comprising a pressure roll coöperable with the first mentioned rotary feed member, a lever on which said pressure roll is rotatably mounted, a shiftable support to which said lever is fulcrumed, means for shifting said support to shift said pressure roll from an inoperative position beyond the path of said marginal portion to an operative position wherein it engages the sheet to be fed, and yielding means coöperable with said lever to force said pressure roll into engagement with the sheet.



1,345,951. SELF-ALINING FAN-WHEEL. MORTON FRANK PHELPS, Little Rock, Ark., assignor to Phelps Manufacturing Company, Limited, Little Rock, Ark., a Copartnership consisting of Frank Phelps and Morton F. Phelps. Filed Jan. 20, 1920. Serial No. 352,821. 5 Claims. (Cl. 230—11.)

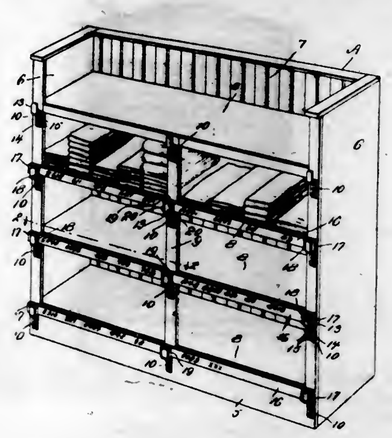
1. The combination, in a fan wheel, with a suitable hub, of a series of spokes projecting from said hub, and flexible laterally of the plane of the wheel, a ring sup-



ported by the said spokes, and fan blades secured to said ring, in pairs, and projecting therefrom in opposite directions, for the purpose set forth.

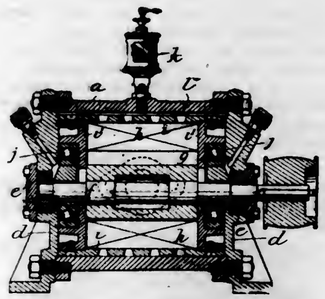
1,345,952. SELF-ALINING FAN-WHEEL. MORTON FRANK PHELPS, Little Rock, Ark., assignor to Phelps Manufacturing Company, Limited, Little Rock, Ark., a Copartnership consisting of Frank Phelps and Morton F. Phelps. Filed Jan. 20, 1920. Serial No. 352,822. 3 Claims. (Cl. 230—11.)

1. The combination, in a fan wheel, with a suitable hub, of a series of spokes pivotally supported upon said hub, and capable of swinging in either direction transversely to the plane of the wheel, a fan blade secured to each of said spokes, and means for locking each spoke in any desired position within its limit of movement.



1,345,953. GREASE-CUP. GEORGE B. PICKOP, New Haven, Conn., assignor to The Malleable Iron Fittings Company, Branford, Conn., a Corporation of Connecticut. Filed Mar. 27, 1919. Serial No. 285,417. 3 Claims. (Cl. 184—48.)

1. In a grease cup, a body portion, a cup having threaded engagement therewith, and projections upon said body portion and cap positioned to project into the mass of grease confined within said grease cup, to thereby increase the resistance offered by the grease to a force tending to turn said cap in an unscrewing direction.



1,345,954. RACK. GEORGE F. RAMM, Del Monte, Calif. Filed Oct. 29, 1917. Serial No. 198,915. 1 Claim. (Cl. 40—63.)

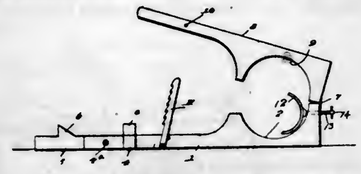
The combination with a rack comprising a vertical row of shelves, of hooks secured along the front of the rack and spaced from the edge of the shelves, indicia bearing strips removably secured in said hooks and disposed along the front edge of the shelves to divide the latter into separate individually indicated spaces and flanged plates carried

by the strips and engageable with the hooks to hold the strips against longitudinal movement.

1,345,955. ROTARY ENGINE, COMPRESSOR, AND EXHAUSTER. WILLIAM REAVELL and HANS HAERLE, Ipswich, England. Filed Dec. 8, 1919. Serial No. 343,399. 5 Claims. (Cl. 230—30.)

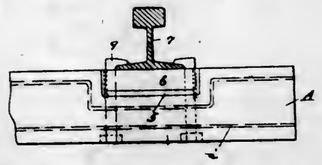
1. In a rotary engine, compressor or exhauster of the character described, the combination of a stationary casing, a perforated ring or rings within said casing mounted on bearings for maintaining the same concentric with said casing and arranged to rotate freely therein, and radially movable blades arranged to bear throughout their length against the inner surface of said ring or rings.

1,345,956. HARNESS-BUCKLE. WILLIAM C. REED, Stockville, Nebr. Filed Apr. 16, 1918. Serial No. 228,922. 2 Claims. (Cl. 24—178.)



1. In a buckle, a hollow shell having a curved interior and oppositely disposed openings, a plate within said shell and extending at one end through one of said openings, said plate having a laterally directed tongue intermediate its ends, means for swingingly connecting said plate at the other end to said shell near the other opening

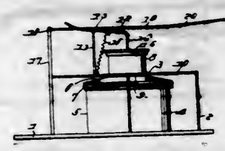
thereof, means for attaching a strap to the extended end of said plate, and another strap having spaced perforations



adapted to pass through one opening of the shell and deflected by the curvature thereof through the other opening and engaging by one of its apertures with the tongue.

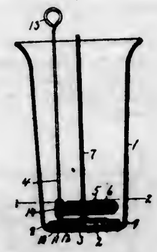
1,345,957. TIRE-CLAMP. CLAIR L. REISH, Pittsburgh, Pa. Filed May 31, 1919. Serial No. 301,018. 2 Claims. (Cl. 242—6.)

1. A tire clamp comprising a base constructed to engage a predetermined portion of the periphery of a tire casing, supports adjustably associated with the base for supporting spaced portions of the tire casing, a handle member hinged to the base for contracting the diameter of the casing and a catch connected to the base and adapted to engage said handle member for holding the same in operative position.



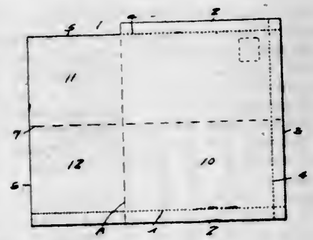
1,345,958. RAIL-FASTENER. CHARLES WESLEY RICHARDSON, Piketon, Ohio. Filed Aug. 13, 1919. Serial No. 317,211. 6 Claims. (Cl. 238—285.)

5. The combination with a casting forming a housing adapted to be seated in a railway tie, and having vertical ways in opposite sides, of a block carried in the housing, rail fasteners passing through the housing and block to engage a rail when upon the block, and means engaged in the ways and fasteners to prevent rotation of the latter and any play thereof.



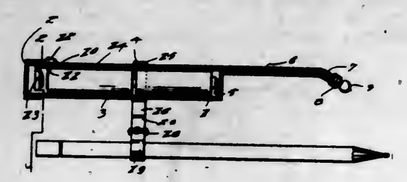
1,345,959. INKSTAND. THOMAS L. ROBERTSON, Danville, Va. Filed Nov. 14, 1918. Serial No. 262,584. 1 Claim. (Cl. 120—67.)

A device of the character described including a base, a container thereon formed with a neck, a retaining frame for the container including upright posts projecting from the base and a spider the ring portion of which is disposed about the neck of the container while the arms are joined with the posts, a secondary post on one of the arms of the spider, a lever swingably connected to the secondary post, a cover suspended from the lever for seating against the neck, one of the posts of the frame being higher than the others, another lever formed with a ring like portion swingingly connected to the high post, a cross bar across the ring like portion of the second lever and seated and supported on the free portion of the first lever so that when



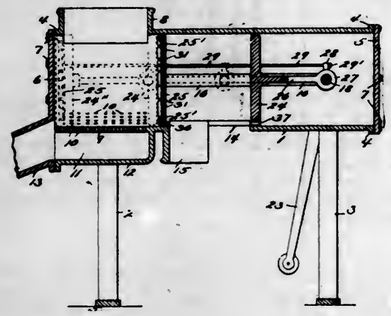
the second lever is depressed the first lever will also be depressed for the raising of the cover, and a coil spring connected to the frame and to the first lever and tensioned so as to normally hold the cover seated and for automatically returning the parts to their normal positions subsequent to the release thereof.

1,345,960. SANCTUARY OIL-LAMP. WILLIAM ROSENBERGER, Syracuse, N. Y., assignor to The Will & Baumer Company, Syracuse, N. Y., a Corporation of New York. Filed Dec. 16, 1918. Serial No. 266,898. 4 Claims. (Cl. 67—36.)



4. A wick-holder for sanctuary oil lamps comprising a base adapted to rest upon the bottom of an oil container and provided with an upstanding lifting rod at one side of its center and means on the lifting rod for holding a wick above the base.

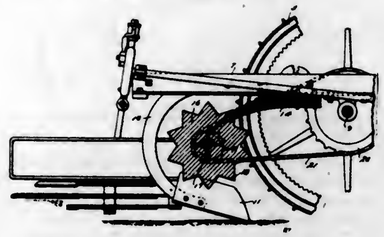
1,345,961. COMBINED LETTER-SHEET AND ENVELOP. FRANK I. SANDA, Steelton, Pa. Filed May 29, 1919. Serial No. 300,509. 1 Claim. (Cl. 229—92.7.)



A combined letter sheet and envelop adapted for folding on intersecting lines, said sheet having a foldable portion with an unperforated edge and an unperforated edge contiguous to said portion, and perforated edge strips extending around the sheet from one corner thereof to the line of folding the said portion, whereby the longer sealing side strip is doubled over upon itself and sealed and also sealed to the shorter side sealing strip.

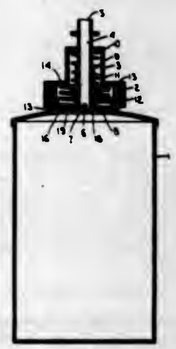
1,345,962. PEN OR PENCIL ATTACHMENT. AURA J. SANDERS, Cedar Springs, Mich. Filed Feb. 28, 1917. Serial No. 151,542. 1 Claim. (Cl. 240—8.4.)

A pen or pencil attachment comprising a cylindrical casing having one end closed and a slot adjacent its other end, means securing the casing to a pen or pencil, a tubular arm formed on the closed end of the casing and in communication with the interior thereof, an electric lamp secured in the end of said arm, a battery in said casing and having one pole thereof electrically connected to the casing, a removable cap closing the open end of the casing, an insulated contact arm slidable in said slot, a handle secured to said contact arm and extending through the slot, a conductor connected to said contact arm and extending through the casing and tubular arm and connected to the lamp, and a right angled extension formed on said contact arm and adapted to be moved with the arm by the handle to engage the other pole of the battery.



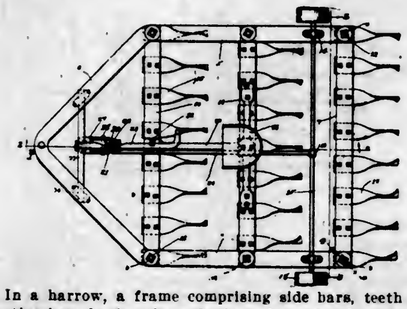
1,345,963. JUICE-EXTRACTOR. NICOLÁS GUNTURÍZ Y SANTOS, Sagua La Grande, Cuba, assignor of one-half to Antonio M. Caraballo, Sagua La Grande, Santa Clara, Cuba. Filed Feb. 24, 1919. Serial No. 278,651. 5 Claims. (Cl. 100—42.)

1. A juice extracting device comprising a casing provided with an inlet for the material to be expressed, and having an outlet for the juice and a further outlet for the bagasse, a plurality of plates within said casing and movable collectively and relatively one to the other, and means for giving a reciprocating motion to said plates to express between them when moved in one direction the material fed into the casing and to discharge the juice, and when moved in the opposite direction to discharge the bagasse.



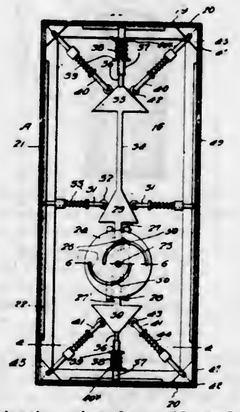
5. A juice extracting device comprising a horizontal cylindrical casing closed at one end and provided near this end with an inlet for the material to be expressed, a perforated bottom beneath said inlet, an outlet for the bagasse, an auxiliary casing beneath said perforated bottom for receiving the juice percolated therethrough, a cover on the closed end of the casing provided with a discharging conduit for the juice, which comprises the auxiliary casing and the lower part of the main casing, two vertical plates, one of which is a pressing plate and the other a percolating plate normally spaced apart from each other and from the closed end of the casing, said percolating plate being arranged between the pressing plate and the closed end of the casing, a horizontal shaft transversely mounted in said casing, a supporting arm loosely mounted on said shaft, lugs projecting from said arm, said pressing plate being slidably mounted on grooves along the casing and rigidly connected to said supporting arm, longitudinal rods extending through said pressing plate, said percolating plate being rigidly connected to said longitudinal rods and through the lugs projecting from supporting arm and provided with a projecting flange on the side facing the closed end of the casing, means within the pressing plate for securing said plate to said longitudinal rods during the movement of said rods toward the cover of the closed end of the casing, and means for allowing said pressing plate to slide upon said longitudinal rods so that the pressing plate approaches the percolating plate and reciprocally in a reverse manner, and a pair of gear wheels fixed on the projecting ends of the horizontal cross-shaft, and horizontal racks provided at the sides of the casing on which said gear wheels are adapted to move forward and backward.

1,345,964. AGRICULTURAL IMPLEMENT. JAMES WADDLE SCOTT, Falcon, Colo. Filed Jan. 16, 1920. Serial No. 351,749. 8 Claims. (Cl. 55—109.)



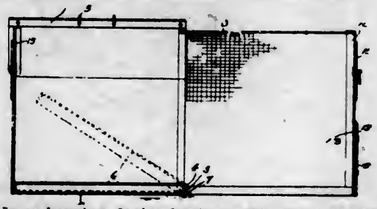
1. A clod breaking device for use in combination with an implement having a plow, an earth-crushing roll attached to the implement above the plow, cutting ridges on the roll, and resilient means for attaching the roll to the farm implements.

1,345,965. CONTAINER FOR VOLATILE LIQUIDS. FREDERICK W. SHUTE, Amesbury, Mass. Filed Sept. 19, 1919. Serial No. 324,925. 4 Claims. (Cl. 221—16.)



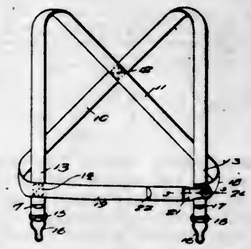
1. In a container, the combination with a container body, of a discharge spout having a discharge port, and a spring-pressed valve member normally closing said port but movable outwardly to open said port by pressure which develops in the container body, said spout being movable inwardly relative to the valve member to open the port.

1,345,966. HARROW. FLOYD E. SIVILS, Lawrence, Miss. Filed Aug. 29, 1919. Serial No. 320,640. 1 Claim. (Cl. 55—75.)



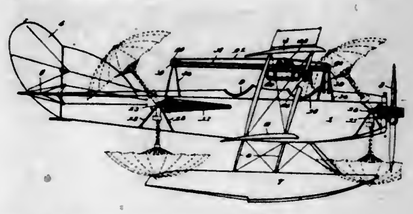
In a harrow, a frame comprising side bars, teeth supporting bars having the ends thereof connected to the side bars, the teeth supporting bars being curved transversely of their lengths, a plurality of teeth supported on the teeth supporting bars, each of said teeth having a lower cutting edge and having a curved portion, the teeth of one bar being disposed in a plane between the teeth of the adjacent bar, and means for moving the teeth into and out of operation.

1,345,967. DOOR. JESS SMELSER, Topeka, Kans. Filed Sept. 29, 1917. Serial No. 193,989. 2 Claims. (Cl. 20—69.)



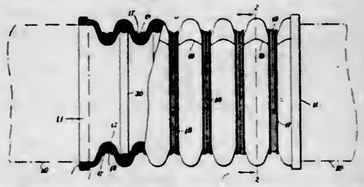
1. The combination of a door, side and end packing strips carried by the door, angle plates pivotally connected to the door and arranged with their apices between the contiguous side and end packing strips on the door, and means for moving said angle plates outwardly and inwardly.

1,345,968. POULTRY-HOUSING DEVICE. DANIEL E. SPEICHER, Urbana, Ind., assignor to The Cyclone Manufacturing Company, Urbana, Ind. Filed Nov. 18, 1918. Serial No. 263,021. 9 Claims. (Cl. 119—19.)



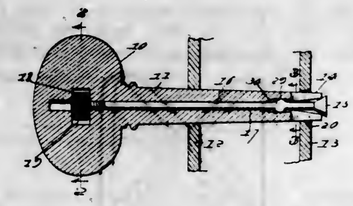
1. In a housing device having guide ways at the bottom thereof and an open front, and a bracing element extending around the open front and held fast thereto and having portions contiguous to said ways conforming to the shape thereof.

1,345,969. SUSPENDERS. BESSIE STACY, Port Clinton, Ohio. Filed Apr. 11, 1919. Serial No. 289,303. 1 Claim. (Cl. 241—12.)



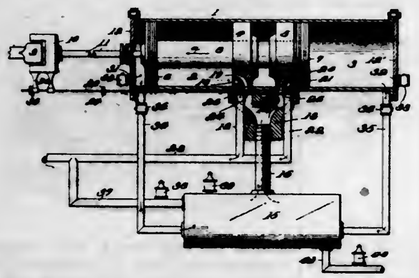
A pair of suspenders comprising web members of unequal length and having button engaging means at their free ends and crossing at equal distances from the button engaging ends and attached where they cross, one terminal of the shorter web being attached to the longer web near its button engaging meahs and the longer web attached intermediate the ends to the shorter web near its button engaging means with the longer web end crossing the chest of the wearer, and means for releasably engaging the free end of the longer web relatively near the button engaging terminal of the longer web.

1,345,970. AIRPLANE. CHESTER FRANK STANLEY, Ashland, Ky. Filed June 2, 1919. Serial No. 301,226. 7 Claims. (Cl. 244—21.)



1. In a flying machine, the combination with the fuselage, and wings extending therefrom, of outriggers projecting from the fuselage at opposite sides thereof and in front and in rear of said wings, and front and rear sets of normally collapsed parachutes attached to said outriggers.

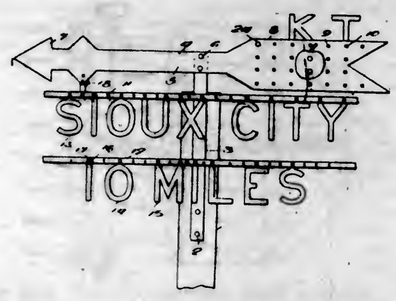
1,345,971. FLEXIBLE CONNECTION. RICHARD STAR, Brooklyn, N. Y. Filed Oct. 26, 1918. Serial No. 259,841. 5 Claims. (Cl. 285—90.)



1. The combination with a flexible connection formed with a plurality of corrugated tubular lineal sections, of a plurality of continuous circular binding members for holding said sections in tubular arrangement, said binding members embodying a plurality of separable ring sections adapted to infold said tubular sections, and a suitable wrapping for said binding members.

1,345,972. TUNING-PEG FOR MUSICAL INSTRUMENTS. HOWARD P. STROUGH, Fresno, Calif. Filed June 4, 1919. Serial No. 301,600. 1 Claim. (Cl. 84—78.)

The combination with a musical instrument having a peg box of which the rear wall is provided with an outwardly flared peg seat, of a peg having its shank provided at its ends with a plurality of longitudinal slits and fitted in said flared seat, a conical spreader engaged in the slit terminal and provided with a stem extending through the shank of the peg, said stem being formed with oppositely disposed fins, the shank having guide grooves in which the fins engage, the head of the peg having a recess, and a knurled nut set in the recess of the head and threadingly engaging the extremity of the shank, whereby longitudinal movement without angular movement is imparted to the shank to draw the spreader into the slit terminal of the shank for firm frictional contact of the latter with the flared seat of the peg box.

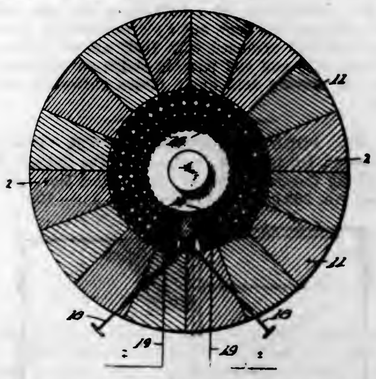


1,345,973. AIR-COMPRESSOR. BURCHARD D. THOMPSON, Cyclone, Pa. Filed Mar. 11, 1919. Serial No. 281,905. 1 Claim. (Cl. 230—32.)

An air compressor comprising a cylinder casing having an intermediate cylinder head forming two cylinders, a piston in the said cylinder, an operating piston rod passing through one of the outer heads of the cylinder and connected with the adjacent piston, a relatively large piston rod connecting the two pistons and reciprocating through the inner cylinder head, the outer ends of each cylinder having air inlets, a tank communicating with the outer ends of the cylinders, the inner cylinder head having two sets of inlet and outlet ports, and means for controlling the said ports by opening the inlet port when its respective piston is moving away from the port and closing the outer port, and opening its respective outlet port and closing its respective inlet port when the piston is moving toward the said ports.

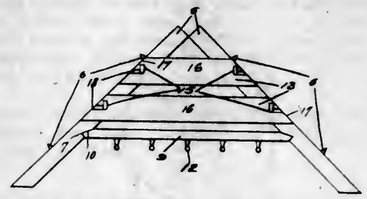
1,345,974. ROAD-GUIDE. ELDORUS B. WATTS, Alcester, S. D. Filed Dec. 16, 1918. Serial No. 266,871. 1 Claim. (Cl. 40—145.)

A device of the character described comprising a standard, a bracket secured to the upper end of said standard, an arrow shaped member secured medially to the upper end of the bracket, the tail portion of said arrow being provided with a plurality of vertically and horizontally arranged rows of openings, letters disposed on the tail portion and rising vertically above the same, a symbol mounted on the tail portion of the arrow, a plurality of



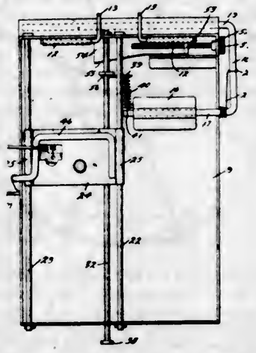
supporting bars secured to the bracket in spaced parallel relation below the arrow, and a plurality of letters carried by the supporting bars and depending therefrom.

1,345,975. SIFTER-TOP FOR CONTAINERS. JOSIAH T. WILCOX, Westfield, N. J., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Mar. 15, 1920. Serial No. 365,956. 4 Claims. (Cl. 221—64.)



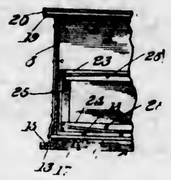
1. A sifter top for containers, including an apertured neck, an apertured cap rotatable to bring the apertures in the cap and neck into and out of register, said cap including a downwardly projecting marginal skirt, a collar mounted on the neck, and means carried by the collar and slidably engaging the skirt for maintaining said cap in engagement with the upper part of the neck.

1,345,976. ELECTRICAL FURNACE. RAYMOND SAMUEL WILE, New York, N. Y. Filed Feb. 26, 1920. Serial No. 361,379. 6 Claims. (Cl. 204—64.)



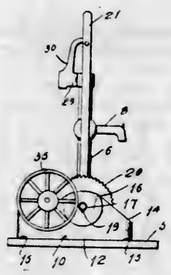
1. A furnace of the class described having a resister provided with current paths in parallel decreasing in length from the outside inwardly.

1,345,977. CORNER RACK AND SHELF. NELSON B. WINTER, Frostburg, Md. Filed Sept. 18, 1919. Serial No. 324,398. 1 Claim. (Cl. 248—18.)



In a knock down shelf, a pair of divergent bars having recesses in their opposed faces disposed in alinement, each of the recesses having inclined side walls and an inclined rear wall, said recesses being provided with notches at the ends thereof, a cross bar having inclined end walls conforming to the inclined surfaces of the first mentioned recesses, a shoulder formed at the base of each end, shelves supported on the divergent bars, and means for securing the divergent bars to right angularly extending walls.

1,345,978. COPY-HOLDER. ALBERT N. WOODRUFF, New York, N. Y. Filed Nov. 20, 1919. Serial No. 339,325. 3 Claims. (Cl. 120—34.)

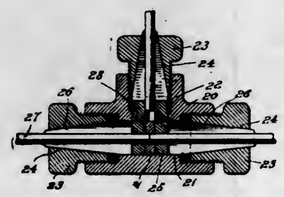


1. A copy-holder comprising a base, a writing bed carried by the base, a plurality of rods rigidly carried by the writing bed on the rear face thereof, a reciprocating rod mounted on the rear face of the writing bed, said reciprocating rod being movable longitudinally of the writing bed, a carriage slidably mounted on the first-mentioned rods and overlying the reciprocating rod, a lever pivotally carried by the carriage, a trigger member pivotally carried by said lever and provided with an opening for the reception of the reciprocating rod, and means actuating the trigger to cause its positive engagement with the reciprocating rod when the latter is moved in one direction and to permit of free movement of the reciprocating rod in the other direction.

1,345,979. MILK-CRATE. DAVID G. ADAIR, Ionia, Mich. Filed May 10, 1916. Serial No. 96,660. 1 Claim. (Cl. 220—21.)

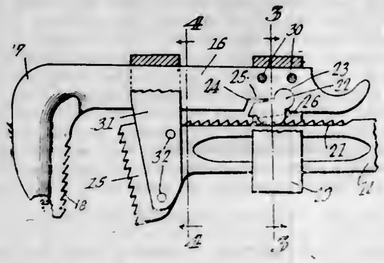
In a milk crate, the combination with a metallic body portion having a meshed bottom, of a skeleton frame therefor, said frame being removably mounted within the body and supported upon the meshed bottom thereof, said frame constituting upper and lower auxiliary frame sections, a series of cross rods carried by each section, and metallic corner braces connecting the sections and cross rods in paced relation, one to the other, and spacing the upper and lower sections of the frame from each of the walls of the body portion to permit of a free circulation of the air passing through the crate between the walls of the body and the auxiliary frame and sections of the frame and cross rods.

1,345,980. PUMP-JACK. HENRY F. ALEXIS and MAGNUS OLSON, Fishlake, Minn. Filed Sept. 19, 1917. Serial No. 192,135. 1 Claim. (Cl. 74—14.)



A pump jack including a base, side, front and rear walls resting on said base and said rear wall being of a greater height than the front wall, said side walls having their ends bent and overlying and secured to the front and rear walls and being inclined from their ends to a point intermediate their ends to conform to the height of the front and rear walls, outwardly extending bearings formed on the side walls at a point intermediate their ends, stub shafts journaled in said bearings and projecting beyond the inner faces of said side walls, gears secured to the inner ends of said shafts and lying in close proximity to the inner faces of said side walls, means connecting said gears to the sucker rod of a pump, lateral ears formed on the lower edges of the side walls and secured to the base, outwardly extending and horizontally disposed bearings formed on the upper edge of the side walls adjacent one of their ends, a power shaft journaled in the last named bearings, and means connecting the power shaft to the gears.

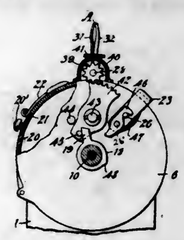
1,345,981. GUN-CAMERA. ERNEST C. BASS, New York, N. Y. Filed Apr. 29, 1918. Serial No. 231,491. 10 Claims. (Cl. 88—17.)



1. In a gun camera, a camera proper having a shutter and a film feeding mechanism, a controlling and actuating device for the said shutter and film feeding mechanism, spring pressed means connected with the said controlling and actuating device, and a trigger controlled releasing device for the said means to release the latter on pressing the trigger, to allow the means to move by the action of its spring to actuate the said controlling and actuating device for manipulating the shutter to make an exposure.

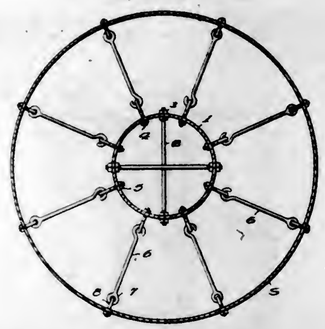
1,345,982. T, Y, AND L CONNECTOR. ROBERT A. BECKER, Poughkeepsie, N. Y., assignor to Charles Tremain, Poughkeepsie, N. Y. Filed Nov. 27, 1916. Serial No. 133,632. 1 Claim. (Cl. 287—116.)

A connector, comprising a casing having a bore, an outwardly tapering gripping member within said bore, a contracting member having a tapered bore and adapted to be screwed in said casing and contract the tapered end portion of said gripping member extending into said last-named bore, and a second bore within said casing opening into said first bore, the axis of said casing bores being angularly disposed with respect to each other, an outwardly tapering gripping member within said last-named bore, and a second contracting member having a tapered bore and adapted to be screwed upon said casing and contract the end portion of said second gripping member extending into the bore of said second member, by forcing one gripping member directly against a laterally directed face portion of the other gripping member.



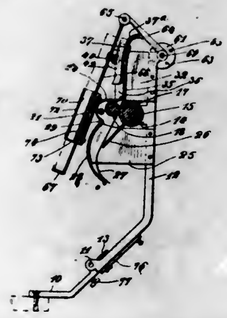
1,345,983. RATCHET PIPE-WRENCH. WILLIAM E. BELL, Tulsa, Okla., assignor to The Bell Wrench Company, Tulsa, Okla. Filed Nov. 28, 1919. Serial No. 340,982. 6 Claims. (Cl. 81—139.)

1. A wrench comprising a fixed jaw and shank, the latter having its upper edge provided with ratchet teeth and shoulders at either side of the teeth, a movable jaw having a shank, means for movably connecting the shanks, the shank of the movable jaw being recessed at its bottom edge and a spring actuated pawl pivoted in the recess to engage the ratchet-teeth and formed with means to engage the smooth walls of the shoulders whereby to raise the pawl from engagement with the teeth and permit free sliding movement of the movable jaw relative to the fixed jaw with the engaging means of the pawl moving along said walls.



1,345,984. TOOTHPICK-DISPENSING DEVICE. CHARLES HARRISON BENNETT, Mount Morris, N. Y. Filed Sept. 29, 1919. Serial No. 327,207. 8 Claims. (Cl. 211—8.)

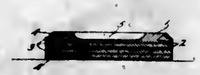
4. A device of the character stated, comprising a rotary receptacle, a gate normally closing an opening in the receptacle, a gripper on the outside of the receptacle, a segment controlling the operation of the gripper, a pivoted



dog operatively connected to the gate, a fixed part, and a lug on the same, said fixed part and lug controlling the operation of the gripper and the gate.

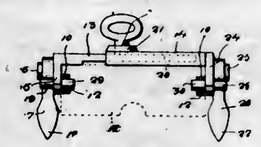
1,345,985. SILO-BRACE. WILLIAM ANDERSON BERKSHIRE, Ocheyedan, Iowa. Filed Nov. 3, 1917. Serial No. 200,100. 1 Claim. (Cl. 20—1.4.)

The combination with a silo having a cylindrical body, of a removable brace comprising a tube of considerably less diameter than the dameter of the silo body and adapted to be centrally located in the latter, eye-bolts adjustably secured at intervals in the silo body and tube and elongated hooks loosely connected permanently to the eye-bolts in the silo body and detachably engageable with the eye-bolts in the tube, and crossed rods in the tube and connected thereto at diametrically opposite points of the same.



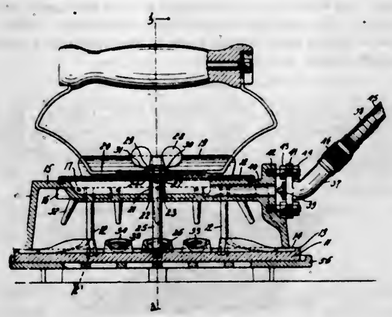
1,345,986. COPY-HOLDER FOR TYPEWRITERS. MILTON EUGENE BLUME, New York, N. Y. Filed Nov. 24, 1917. Serial No. 203,808. 7 Claims. (Cl. 120—32.)

1. A copy holder comprising a supporting frame, a feed roller and a compression roller mounted in said frame,



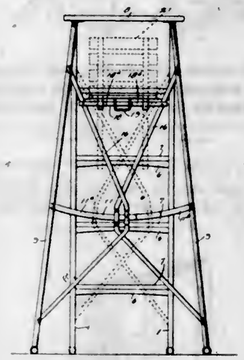
a fixed guiding member extending upwardly from a point adjacent, the meeting line of said feed and compression rollers, and an adjustable guiding and screening member disposed in front of said fixed guiding member and having its bottom edge a short distance above the said compression roller, a rack secured to said screening and guiding member, a pinion engaging said rack, and means whereby said pinion may be rotated.

1,345,987. CUSHION-SUPPORT. FREDERICK WILLIAM BOCKING, Rifle, Colo. Filed Feb. 27, 1920. Serial No. 361,871. 2 Claims. (Cl. 84—15.1)



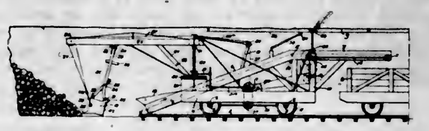
2. As a new article of manufacture, a cushion pad comprising a series of superimposed layers of rubber, certain of said layers being of relatively soft rubber with a relatively high degree of resiliency and others of said layers being of relatively hard rubber with a relatively low degree of resiliency, the alternate layers being of the same material and the adjacent layers being of different material, the top and bottom layers being of relatively soft rubber, the uppermost layer of relatively hard supporting rubber having a central opening which is filled by the top layer of soft rubber and said top layer of soft rubber having a circular depression in its face, the uppermost layer of hard rubber forming a support for the walls of said depression, and all of said layers vulcanized together.

1,345,988. SKEE-BRAKE. ARVID BRAGER and OSCAR LEE, Kinosee, Alberta, Canada. Filed July 14, 1919. Serial No. 310,532. 3 Claims. (Cl. 46—67.)



1. A brake mechanism for skees comprising a pair of telescopically engaged members extending transversely of the skee, a brake arm pivoted upon each of said members and adapted to extend beyond the lower surface of the skee, said arms being freely movable in one direction, and means for limiting movement of said arms in the other direction.

1,345,989. SADIRON. MICHAEL BROWN, New York, N. Y. Filed May 12, 1919. Serial No. 296,431. 6 Claims. (Cl. 158—23.1.)

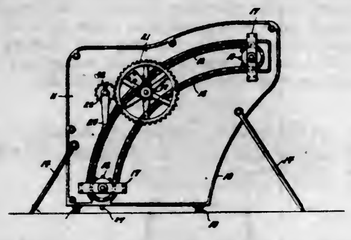


1. A sad iron, comprising a base, a chambered body thereon having a longitudinal recess in its top, a member covering said recess provided with upwardly and outwardly extending wings projecting over said top, a screw-threaded bushing uniting said member and said body, tubular burners within said body communicating with said recess, a gas supply connection leading to said recess, a handle placed upon said member, a screw-threaded bolt fixed to said base extending through said bushing and handle, and a nut on said handle in engagement with said bolt for uniting said base, body and handle.

1,345,990. STEPLADDER. ORLANDO W. BROWN, Jr., Sanford, Me. Filed Dec. 18, 1919. Serial No. 345,836. 5 Claims. (Cl. 228—31.)

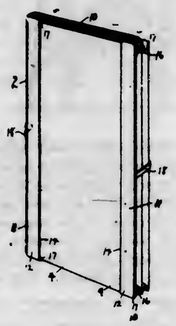
1. A stepladder, comprising front legs, steps on the front legs, rearwardly projecting bars secured to the upper ends of the front legs, rear legs pivotally connected to the bars, means connecting the rear legs and permitting lateral movement of the lower ends of the legs, said rear legs of tubular longitudinally slotted formation, links pivotally connected to the front legs, and enlargements on the ends of the links movable in the tubular rear legs.

1,345,991. POWER MINE-SHOVEL. PATRICK B. BROWN, Shenandoah, Pa. Filed June 3, 1918. Serial No. 237,915. 4 Claims. (Cl. 214—90.)



1. The combination in a power mine shovel, of a frame; a centrally located box at the forward end of the frame open at its under side; an inclined belt conveyer mounted on the frame and extending through the opening in the box to a point beyond the rear end of the frame; a vertical shaft; a horizontal boom, the said shaft being supported by the box; means for supporting the upper end of the shaft and boom; means for moving the boom laterally; a head; a screw for traversing the head to and from the pivot of the boom; a shovel pivoted to the head and connected to the boom so that it can be moved rearward from its digging position with its load in order to discharge its load onto the conveyer.

1,345,992. LIFTING APPARATUS. JOSEPH DUROFSKY, Philadelphia, Pa. Filed Oct. 11, 1919. Serial No. 329,911. 2 Claims. (Cl. 254—4.)

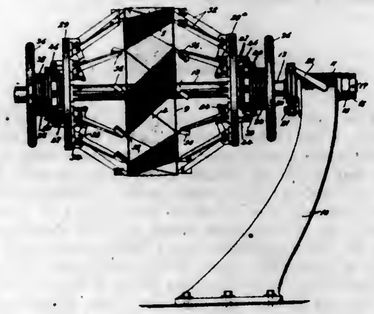


1. A device of the character described, comprising a frame formed of spaced vertical sides having cut out portions, sprocket wheels mounted in said cut out portions, continuous chains in said cut out portions and carried on

said sprocket wheels, an interposed cradle having its ends connected to said chains, mechanism for actuating said chains carrying the cradle therewith, runners carried on

the sides of the frame adjacent the said chains and rollers on the cradle and operating over said runners when the cradle is actuated by the operation of said chains.

1,345,993. CARD-HOLDER FOR ENVELOPS AND WALLETS. ALVAH BUSHNELL, Jr., Philadelphia, Pa. Filed Jan. 6, 1919. Serial No. 269,776. 9 Claims. (Cl. 150—39.)



1. In a device of the character stated the combination with a wallet including an outer wall, of a pair of spaced parallel runners secured to the outer face of said wall and having their ends folded over and secured to the inner face of said wall, the inner edges of said runners being free to permit the insertion of a card.

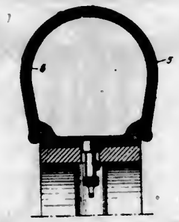
1,345,994. PNEUMATIC-TIRE CASING AND PROCESS FOR MAKING SAME. FRED B. CARLISLE, Andover, Mass., assignor to Joseph M. Gilbert, New York, N. Y. Filed Aug. 2, 1919. Serial No. 314,931. 18 Claims. (Cl. 154—14.)

1. The process of making pneumatic tire casings which consists in supporting a pair of spaced annular members from the inside at individual points, spaced apart to define winding spaces, and winding a band of composite material comprising a rubber sheet carrying adhesively upon its surface a group of parallel adjacent cords between and around said annular members at said winding spaces to form a cylindrical unit, said band of material corresponding in width to an integral division of the width of said winding spaces, the latter thus constituting multiples of the width of the band.

1,345,995. APPARATUS FOR MAKING PNEUMATIC-TIRE CASINGS. FRED B. CARLISLE, Andover, Mass., assignor to Joseph M. Gilbert, New York, N. Y. Filed Dec. 6, 1916, Serial No. 135,353. Renewed Dec. 10, 1919. Serial No. 343,815. 27 Claims. (Cl. 154—11.)

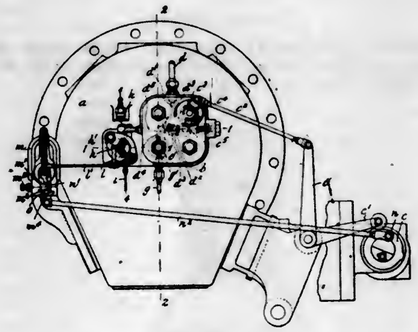
1. Apparatus of the kind described comprising two alined sets of supports for two annular members, each set consisting of a series of annularly disposed fingers spaced apart from each other to permit a band of cords to be passed over the annular members and between two of the adjacent fingers.

1,345,996. APPARATUS FOR USE IN THE MANUFACTURE OF PNEUMATIC-TIRE CASINGS. FRED B. CARLISLE, Andover, Mass., assignor to Joseph M. Gilbert, New York, N. Y. Filed Aug. 2, 1919. Serial No. 314,932. 7 Claims. (Cl. 33—80.)



1. An apparatus of the kind described comprising a table of a length to accommodate a band of material adapted to be helically wound about and between axially spaced annular members to form a carcass and a plurality of projections mounted upon said table in spaced, parallel rows for positioning a guiding device transversely across said band to indicate the locations of markings thereon, said projections being independently adjustable in each row o fixed positions in predetermined accord with said carcass whereby the aforesaid markings accurately define the turns at which said band is to be folded about said annular members in its helical path.

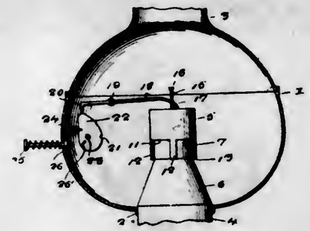
1,345,997. CASING FOR PNEUMATIC TIRES. FRED B. CARLISLE, Andover, Mass., assignor to Joseph M. Gilbert, New York, N. Y. Filed Aug. 2, 1919. Serial No. 314,930. 4 Claims. (Cl. 152—13.)



1. In a casing for pneumatic tires the combination of a pair of annular members and a plurality of parallel, adjacent cords constituting a band extending between and about said annular members in helical windings and having its ends overlapping to form a splice, at least one of said ends being flattened at said splice.

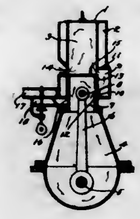
1,345,998. CASING FOR PNEUMATIC TIRES AND PROCESS OF MAKING SAME. FRED B. CARLISLE, Andover, Mass., assignor to Joseph M. Gilbert, New York, N. Y. Filed July 31, 1919. Serial No. 314,433. 4 Claims. (Cl. 154—14.)

1. The process of making casings for pneumatic tires which consists in constructing a carcass, supporting said carcass upon a core and combining said core with said carcass by vulcanization.



1,345,999. MEANS FOR IGNITING THE CHARGE IN INTERNAL-COMBUSTION ENGINES. FRANK CARTER and EVERSHED CARTER, Stamford, England, assignors of one-third to George Mills Blackstone, Stamford, England. Filed Mar. 26, 1919. Serial No. 285,312. 2 Claims. (Cl. 123—143.)

1. In an internal combustion engine of the kind in which a main fuel charge is injected into the combustion chamber near the end of the compression stroke, the combination of a sprayer for injecting the main charge, a spring-pressed piston *f'* provided in said sprayer, means for igniting said main fuel charge said means comprising a fuel and air mixing block (*h*), a spraying nozzle (*h'*), a mixing port (*j*), air circulating ports (*j'*) in the block (*h*), a communication passage leading from the block (*h*) to the combustion chamber, electrical means for igniting the charge sprayed by the nozzle (*h'*), and a single compressed air valve such as (*b*) to control both the main spray and the ignition spray.



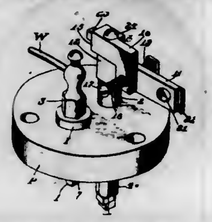
1,346,000. AUTOMATIC SAFETY GAS-VALVE. DON C. CARVER, Cambridge, Ohio. Filed Feb. 5, 1919. Serial No. 275,162. 1 Claim. (Cl. 67—115.)

An automatic safety gas valve, comprising a nozzle having gas ports in the discharge end thereof, a cap slidably mounted upon said nozzle and also formed with corresponding gas ports, and a spring pressed lever means for automatically limiting the opening movement of said cap, said cap being raised by the pressure of the gas received

in the nozzle, said spring pressed lever means also serving to hold said cap in a closed position upon the fall in the pressure of the gas, and means for releasing said spring pressed lever means from a locked position.

1,346,001. INTERNAL-COMBUSTION ENGINE. THOMAS B. CASEY, Boston, Mass. Filed Oct. 25, 1919. Serial No. 333,143. 3 Claims. (Cl. 123—76.)

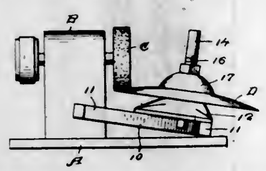
1. In an internal combustion engine, a cylinder having an intake and exhaust port, a crank case, a crank shaft in the crank case, a by-pass having openings for establishing communication between the combustion chamber of the cylinder and the crank case, a piston in the cylinder and provided with an opening adapted to register with one of the openings of the by-pass, the opening of the piston being adapted to be closed by the portion between the openings of the by-pass, a piston rod connecting the piston with the crank shaft, and a manifold connected with the intake port of the cylinder and having a valved inlet for explosive mixture and a valve inlet for a scavenging medium.



1,346,002. PROCESS OF PRODUCING ALKALI-METAL HYDRATES. HARRY WILLIAMS CHARLTON, Jones Point, N. Y., assignor to American Potash Corporation, a Corporation of Virginia. Filed Oct. 12, 1916. Serial No. 125,164. 13 Claims. (Cl. 23—22.)

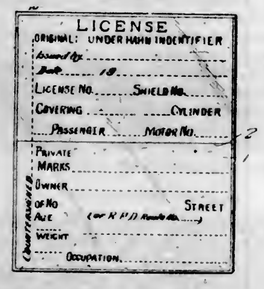
1. The process of producing an alkali metal hydrate from rock material containing an alkali metal which consists in heating and digesting said rock material with a reagent containing an alkali metal hydrate mixed with a reagent containing an alkali earth metal hydrate at a pressure and for a time sufficient to produce the desired alkali metal hydrate and suitably recovering said last named hydrate, substantially as described.

1,346,003. SPARK-PLUG. CARL D. CLELAND, Jean, Nev. Filed July 3, 1917, Serial No. 178,429. Renewed Dec. 2, 1919. Serial No. 342,013. 2 Claims. (Cl. 123—157.)



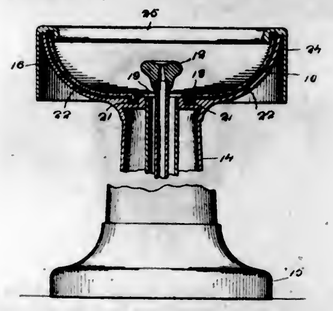
2. In an oscillating-electrode sparking igniter of the type described, the combination with a rock shaft adapted to be mounted through the head of a cylinder and having

a threaded socket in its upper end and a rocker arm at its lower end for contact with the fixed electrode, and an actuating arm having at its inner end a hub provided with a hole loosely mounted on the upper end of said shaft and at its outer end means for connection with the trip mechanism; of a finger having at its inner end an upright hole adapted to be mounted on the rock shaft above the



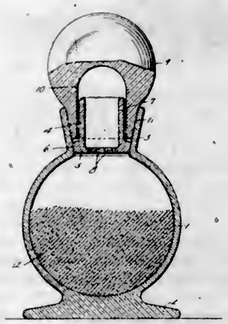
hub of said arm and at its outer end a downturned tip adapted to be placed selectively along either side of said arm, the tip and arm being pierced with registering perforations, a bolt extending through said perforations and carrying springs at opposite sides of the finger and tip for holding them normally in contact, a screw in said socket for holding the finger on the rock shaft, and a set screw for permitting its adjustment thereon.

1,346,004. DISK-HOLDER. RALPH COLLEY, Tonica, Ill. Filed Sept. 19, 1919. Serial No. 324,787. 1 Claim. (Cl. 51—7.)



A device of the character described comprising a frame provided with handles, a plate secured upon said frame and provided with a hole, an axle member cylindrical and of the same diameter at each end with either end insertible within said hole, a frusto-pyramidal enlargement formed upon said axle member intermediate the ends thereof and adapted for conforming engagement with the square hole provided in the center of harrow disks, said axle member being provided adjacent said enlargement with a threaded portion, and a cup member engaged upon said threaded portion and adapted to bear against a harrow disk engaged upon said axle against said enlargement, said cup member having an annular portion engageable by a wrench.

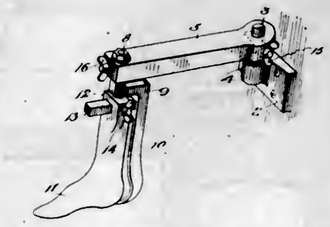
1,346,005. LICENSE-CARD. CHARLES HIRAM CORNELL, Valentine, Nebr. Filed July 12, 1918. Serial No. 244,606. 1 Claim. (Cl. 283—18.)



In combination, a license card adapted to be folded upon itself to define two similar portions, one portion bearing data identifying a motor car and the other portion bearing data identifying the owner, and a plate tag arranged over a disfiguring opening in a car body and bearing identification data corresponding with data on the card.

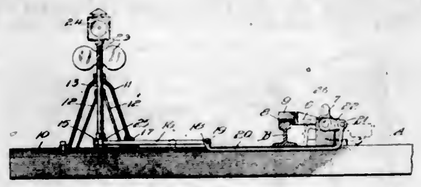
1,346,006. DRINKING-FOUNTAIN. STANLEY RICE CURTIS, Royal Oak, Mich. Filed May 29, 1918. Serial No. 237,347. 2 Claims. (Cl. 40—125.)

1. In a device of the class described, a standard, a bowl mounted thereon, said bowl having a lower central outlet opening and an annular channel surrounding the opening, an inner bowl of transparent material within the bowl first named and having a central opening and an annular flange projecting from the edges of the walls of the opening into the aforesaid channed, packing material between the flange and the walls of the channel, and a display sheet between the walls of the bowls and protected by the joint effected between the flange and the channel.



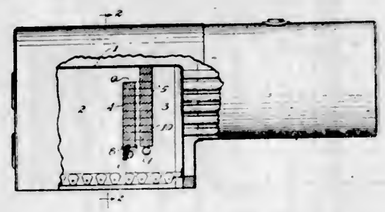
1,346,007. CONDIMENT-HOLDER. PEDRO PABLO DE AGUIAR, Habana, Cuba. Filed May 5, 1920. Serial No. 379,184. 3 Claims. (Cl. 65—45.)

2. A condiment holder, comprising a body having a conical open neck at its upper end, a stopper having a conical lower portion adapted to fit in the lower portion of the neck, said stopper having a perforated bottom and a spout integral with the stopper and with which the perforations communicate, said spout spaced from the interior surface of the neck, and a cover for said holder.



1,346,008. SHOE-SUPPORT. VINCENZO DI MAGGIO, New York, N. Y. Filed Apr. 5, 1919. Serial No. 287,875. 2 Claims. (Cl. 12—128.)

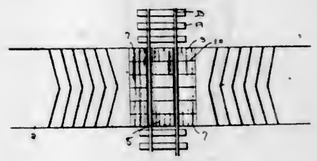
1. A device of the character described, comprising a fixed bracket support; a bracket arm pivoted thereon to swing in a horizontal plane; and a sectional shoe form, the heel part of which has an angular top turnably supported on the swinging end of the arm, and having there-



below a horizontal shank on which the toe section is slidably adjustable to vary the length of the foot part of the form.

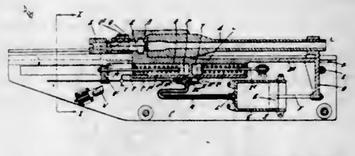
1,346,009. DERAILER. JERRY M. ESTES, Brecknridge, Okla. Filed Feb. 25, 1920. Serial No. 361,121. 1 Claim. (Cl. 246—163.)

The combination with a railway track construction having a rail and cross ties, of a derailer device comprising a pair of bearings mounted upon a pair of spaced cross ties contiguous to the rail, a derailer block having trunnion ends journaled in the bearings and adapted for vertical swinging movement to be positioned in superimposed relation to the rail, a signal stand supported upon the ties at a distance from the rail, a shaft journaled vertically in the stand and having a rack gear, signal vanes on said shaft, a signal lamp on said shaft above the vanes, a rack bar meshing with the rack gear, a crank on one of the trunnions, a link pivoted to the crank and to the rack bar and extended beneath the rail, a manually operable lever mounted at one side of the stand, a crank on the other side of the derailer block, a shift rod pivotally connected to the last named crank and to the operating lever, a guide in the stand for the rack, and means in the stand to hold the rack bar in engagement with the rack gear.



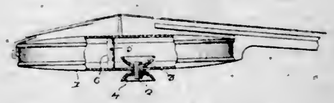
1,346,010. ARCH FOR FURNACES. IRA W. FOLTZ, Chicago, Ill. Filed Apr. 25, 1918. Serial No. 230,677. 3 Claims. (Cl. 110—93.)

2. A furnace of the class described, comprising a boiler forming a firebox, a grate in said firebox, a boiler pipe extending through the firebox above the grate and communicating with the sides of the boiler, a dividing wall in the firebox above said boiler pipe, and a metallic rider



between said boiler pipe and dividing wall, said rider having a vertical flange extending along one side of the lower edge of said wall.

1,346,011. ROAD-CROSSING. SAMUEL H. FURRY, Lancaster, Ohio. Filed Nov. 5, 1919. Serial No. 335,929. 10 Claims. (Cl. 238—8.)



1. A road crossing for railways constructed and arranged to lie in spaced relation to the track rails and ties to prevent transmission of the vibratory movement of said rails and ties to the crossing.

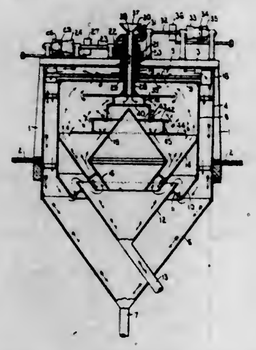
1,346,012. AUTOMATIC FIREARM. HUGH WILLIAM GARRETT-FAIRFAX, London, England. Filed Apr. 22, 1920. Serial No. 375,824. 6 Claims. (Cl. 42—4.)

1. In a firearm, a recoiling breech and barrel, an air-cylinder, a piston movable in said cylinder, gearing connecting said piston to said breech and barrel, means for taking compressed air from said cylinder at any desired point in the recoil, breech mechanism, means actuated by such compressed air for operating the breech mechanism and opening the breech, and means for closing the breech and returning the recoiling parts of the firearm to their forward position.

1,346,013. VIOLIN ATTACHMENT. HUGH GALBRAITH, Wahiawa, Oahu, Hawaii. Filed July 12, 1919. Serial No. 310,362. 1 Claim. (Cl. 84—44.)

A violin having a tubular post passing through its rear wall, and a pair of bells carried by said post, one bell being located within the violin and engaging the inner face of the back thereof and the other bell engaging the other face of the back for increasing the power and improving the tone of the instrument.

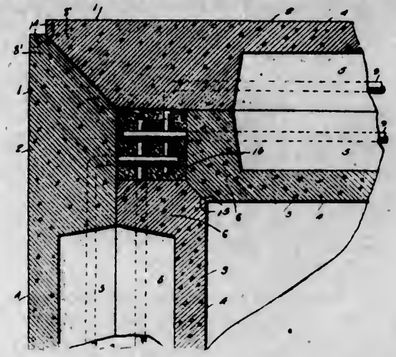
1,346,014. SHAWL MUFFLER. LOUIS GARWITT, New York, N. Y. Filed Aug. 23, 1919. Serial No. 319,385. 2 Claims. (Cl. 2—118.)



2. As a new article of manufacture, a combined shawl-muffler and hood, comprising a relatively long narrow strip of material, a hood formed on the intermediate portion of the strip having its forward edge rolled backwardly

said hood adapted to be folded back over the shoulders of the wearer and when the hood is in folded position said

backwardly rolled portion of the hood forms a collar for the shawl and said hood being located between the body of the shawl and the collar.

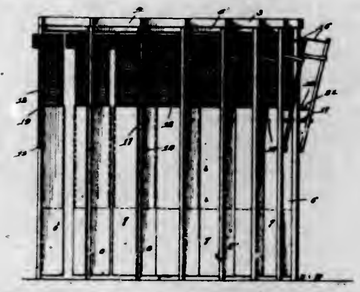


1,346,015. AIR-SEPARATOR. WILLIAM A. GIBSON and CHARLES E. NEEDHAM, Allentown, Pa., assignors to Bradley Pulverizer Company, Boston, Mass., a Corporation of Maine. Filed Apr. 1, 1918. Serial No. 225,906. 9 Claims. (Cl. 83—40.)

1. An air separator comprising a closed outer casing having a delivery hopper for the finished material, an inner casing spaced apart from said outer casing and having a delivery hopper for tailings, adjustable means for creating a continuous circulation of air upwardly through said inner casing and downwardly through the space between said inner and outer casings, a feed pipe for the material extending into said inner casing, rotary distributing means located beneath said feed pipe and adjustable means operated independently of the air circulating means for rotating said distributing means.

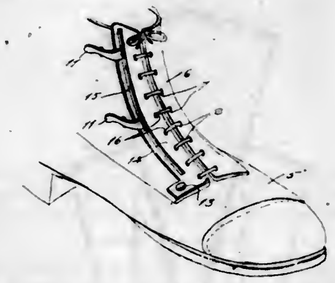
1,346,016. CONCRETE CONSTRUCTION. AXEL GOMSRUD, Portland, Oreg. Filed Jan. 23, 1919. Serial No. 272,734. 1 Claim. (Cl. 72—30.)

In a concrete building construction, a pair of blocks formed from an inner molded section and an outer molded section, each section having transverse strengthening ribs and vertical strengthening ribs, and metallic stay rods extending through said ribs, the outer vertical ribs of the outer sections of the blocks being extended beyond the outer vertical ribs of the inner sections of the block, the inner corners of the vertical rib of the outer section beveled to form meeting faces, the inner corners of the vertical ribs of the inner sections being beveled to form meeting faces, the inner and outer sections of the blocks at the meeting points thereof being arranged to form a hollow space, the stay bars being extended into said hollow space, and



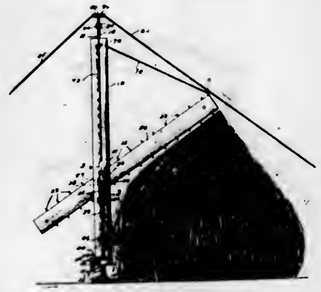
a binding material adapted to be poured into the said space.

1,346,017. TOY BOOK. MILTON GOODMAN, New York, N. Y. Filed Nov. 22, 1919. Serial No. 339,774. 4 Claims. (Cl. 46—37.)



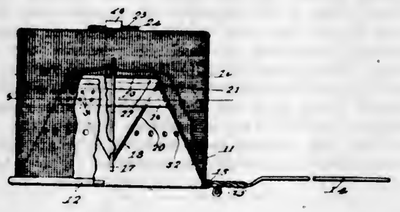
1. The herein described toy book comprising a plurality of leaves, there being formed adjacent to corresponding edges of said leaves a plurality of representations of half figures, and a mirror carried by the book and extending at one edge in close proximity to said corresponding leaf edges and adapted to be brought successively into correlation with the edges of the leaves bearing said half figures, to disclose in connection with the several half figures the complements thereof.

1,346,018. MAIL-HANDLING APPARATUS. THOMAS GRUBB, Johnston City, Ill. Filed Dec. 29, 1919. Serial No. 347,955. 7 Claims. (Cl. 211—36.)



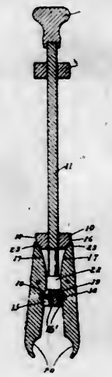
6. A mail handling apparatus comprising a horizontal trackway, frames movably supported thereon, means for securing the frames together, and a vertical row of boxes mounted in each frame and movable vertically therein.

1,346,019. ATTACHMENT FOR SHOES. PHILIP HAAG, Brooklyn, N. Y. Filed July 26, 1919. Serial No. 313,463. 2 Claims. (Cl. 36—50.)



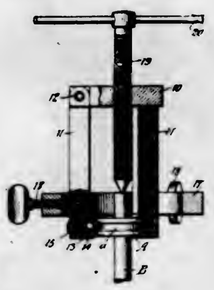
1. The combination with a shoe, of a plurality of fastenings near one edge of the upper of said shoe, a plate adapted to be connected with the upper by said fasteners, said plate being provided with a plurality of apertures arranged in a longitudinal row near one edge, the opposite edge of the upper being provided with a similar series of apertures and a lace for insertion in the apertures for adjusting the upper about the foot and ankle of the wearer.

1,346,020. GRAIN AND HAY STACKER. JOHN HABBART, Prairie du Chien, Wis. Filed May 28, 1919. Serial No. 300,276. 4 Claims. (Cl. 193—16.)



2. A stacker comprising, a frame, a conveyer pivoted adjacent its lower end to said frame, means connected to the upper end of said frame and the upper end of said conveyer for disposing said conveyer in an inclined position, and power transmitting means for said conveyer.

1,346,021. SANITARY FLY CATCHER AND TRAP. RAYMOND J. HARRIS, Camp Travis, Tex. Filed Sept. 8, 1919. Serial No. 322,294. 5 Claims. (Cl. 43—133.)

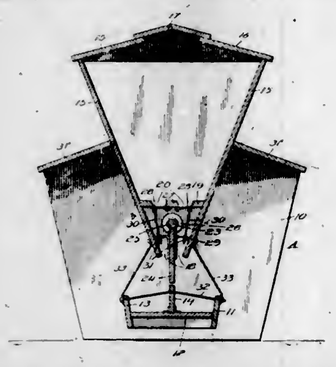


1. A fly trap comprising a receptacle having an entrance opening therein, a hollow frusto-conical member surrounding said opening and a reversely disposed conical closure movable axially of said member for controlling the opening.

1,346,022. FUSE REMOVER AND PLACER. WILLIAM G. HASSEL, Waterbury, Conn. Filed Nov. 23, 1918. Serial No. 263,919. 2 Claims. (Cl. 294—19.)

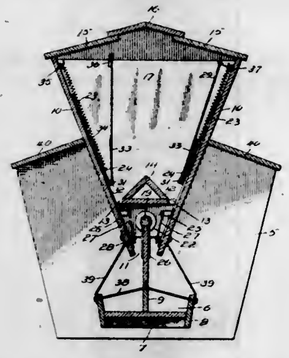
2. A fuse gripping device comprising a pair of spaced blocks, parallel rods secured to and extending between the blocks, gripping jaws carried by one of the blocks and normally spring pressed into open position, a block receiving the rods therethrough and slidable toward and away from the inner ends of the said jaws, said slidable block being beveled for wedging engagement between the adjacent ends of the jaws for causing closing movement of the jaws, and a rod carried by the slidable block and slidable through the other of the spaced blocks for manual actuating to move said slidable block into and out of engagement with the jaws.

1,346,023. BEARING-PULLER. FRANK JOSEPH HEINRICH, Yakima, Wash. Filed June 24, 1919. Serial No. 306,303. 6 Claims. (Cl. 29—85.)



1. A bearing puller including members adapted to be positioned for gripping a bearing, and balls on said members adapted to engage in the race of the bearing; together with means to exert endwise pressure on the element carrying the gripped bearing.

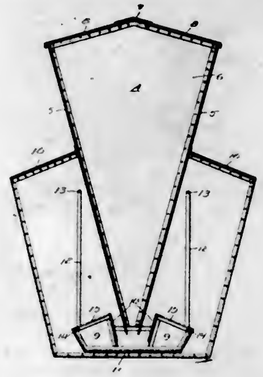
1,346,024. ANIMAL-FEEDER. ORA W. HINER, DANA C. FARNHAM, and ELI A. FARNHAM, Jr., Butler, Ind. Filed Aug. 26, 1919. Serial No. 319,872. 2 Claims. (Cl. 119—53.)



1. A feeder of the character described, comprising a frame adapted to be supported upon a foundation, a bin in the frame and having a lower open end, transverse partitions within the bin to divide the same into independent compartments, a false bottom within the bin elevated above its open lower end and forming discharge slots

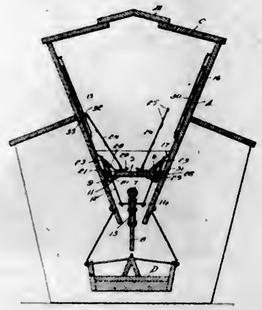
adjacent to opposite sides of said bin, a trough beneath the lower open end of the bin and having a central vertical wall, a nose board pivoted in the lower open end of the bin, disposed normally vertical and extended close to

the vertical wall in the trough, and gates swingingly connected to the false bottom for closing the discharge slots and having connection with the nose board, so that when the latter swings in one direction one gate will remain closed and the other automatically opened.



1,346,025. AUTOMATIC STOCK-FEEDER. ORA W. HINER, DANA C. FARNHAM, and ELI A. FARNHAM, JR., Butler, Ind. Filed Aug. 26, 1919. Serial No. 319,873. 7 Claims. Cl. 119—54.)

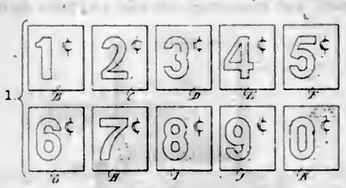
1. A feeder of the character described, comprising a trough, a container above the trough, means within the container to provide plural discharge openings and deflectors to direct the contents into the openings, a head board swingingly supported beneath said means and actuated from either side of the trough by an animal, whereby the contents of the container will discharge through one opening at one side of the board and the other opening at the opposite side thereof, and duplicate agitator means within the container and operated by movement of the head board.



1,346,026. SWINE-FEEDING APPARATUS. ORA W. HINER, DANA C. FARNHAM, and ELI A. FARNHAM, JR., Butler, Ind. Filed Sept. 23, 1919. Serial No. 325,758. 7 Claims. Cl. 119—54.)

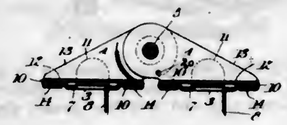
1. In a stock feeding apparatus, a feed container having an opening in its bottom, means elevating the container over a foundation or support, a movable trough arranged beneath the open bottom of said container, adapted to receive feed therefrom for access at either side of said container and having nose boards active upon the con-

tainer to dislodge feed therein for its delivery to the trough and also permit animals to seek feed from the latter between the nose boards and the outer walls of said trough.



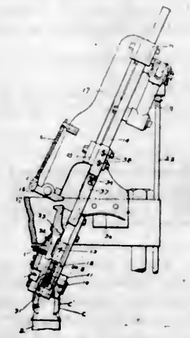
1,346,027. AUTOMATIC ANIMAL-FEEDER. ORA W. HINER, DANA C. FARNHAM, and ELI A. FARNHAM, JR., Butler, Ind. Filed Sept. 23, 1919. Serial No. 325,759. 8 Claims. (Cl. 119—53.)

1. In a feeder of the character described, a trough accessible at opposite sides thereof, a feed container above the trough and open at its lower end, a nose board swingingly supported in the open end of the container immediately above the trough, a false bottom within the container and having discharge openings therein, mouth pieces depending from the false bottom at the discharge opening, swinging closures for said mouth pieces, agitator frames slidably fitted in the container at opposite sides thereof and having extensions working through the discharge openings, connections between the closures and said frames, rake agitators swingingly connected to the frames and movable upon the false bottom, inner agitator members rising from the rake agitators and yieldably supported thereby and connections between the nose board and said closures for permitting alternate opening of said closures on swinging movement of the nose board.



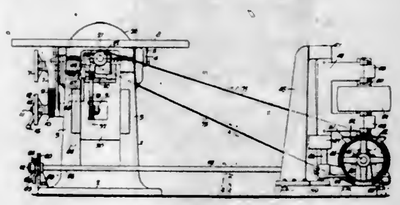
1,346,028. PRICE-MARKER SYSTEM. HERMANN HOPP and LEO HOPP, New York, N. Y. Filed Sept. 15, 1919. Serial No. 323,679. 2 Claims. (Cl. 40—2.)

1. A card for use in price-marking systems, said card being printed on one side with a numeral only and upon its opposite side with a numeral and a designating character, whereby the card is adapted to be used in either the



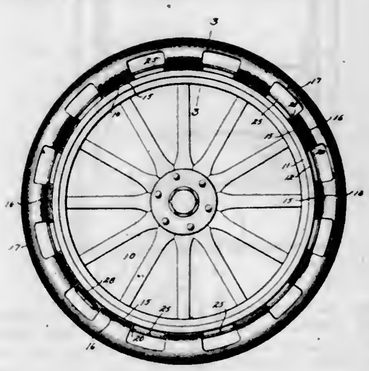
units or tens position of a multiple digit number, said card when used with the designating character displayed identifying the character of the entire number displayed.

1,346,029. HINGE. RICHARD W. HUBBARD, Ashtabula, Ohio. Filed Sept. 2, 1919. Serial No. 321,201. 2 Claims. (Cl. 16—25.)



1. In a hinge, the combination of a base plate having a longitudinal central channel extending throughout the length of said plate whereby a raised portion is produced, barbs struck from said channel, a screw hole in said channel, between the barbs, flanges extending from said channel portion and arranged in parallel relation thereto, arms formed integral on the ends of the raised portions of the base plates, and members comprising a body portion, a ledge formed on the lower ends of the channel, arms formed integral on the ends of the body portions and disposed at right angles thereto, side flanges formed in the body portions, and extending throughout the lengths of the body portions and in opposite directions with respect to the arms of the body portions, a pintle for connecting the arms in hinged manner, whereby the body members will rest on the ledge of the channel of the base plates and the flanges of the body members will embrace the parallel flanges of the channel portion.

1,346,030. DOFFER MECHANISM FOR COUNTER-MOLDING MACHINES. AUGUSTE F. JACQUEMIN, Kennebunk, Me., assignor to Rogers Fibre Company, Kennebunk, Me., a Corporation of Maine. Original application filed May 7, 1918, Serial No. 233,031. Divided and this application filed Sept. 17, 1918. Serial No. 254,505. 9 Claims. (Cl. 12—66.)

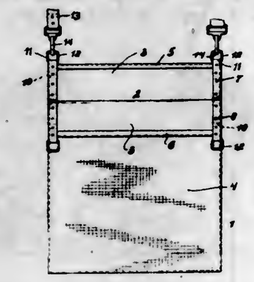


1. In a counter molding machine, a counter doffing mechanism comprising a counter engaging device constructed to engage the flange of a molded counter and operating mechanism therefor arranged to give said device a relatively slow movement to initiate the counter doffing action and thereafter to give the device a greatly accelerated movement in the same general direction to complete said operation.

1,346,031. COMBINATION SAW-TABLE AND SINGLE-SPINDLE SHAPER. NATHAN JOSIAS, Philadelphia, Pa. Filed Jan. 17, 1920. Serial No. 352,057. 5 Claims. (Cl. 144—1.)

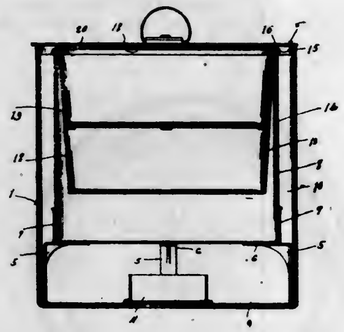
1. In a combined saw table and single spindle shaper, the combination with a standard, a table carried thereby, and a frame mounted to slide vertically on one side of the standard, said frame having a pivot pin between the center of and said side of the standard, of a second frame pivotally hung at one end upon said pin, and having its free end provided with a segmental projection, a spindle mounted in bearings on the pivoted frame with its tool carrying end adjacent said pivot, and tiltable therewith through an arc of substantially 90°, and coacting means between the sliding frame and the segmental projection for clamping the latter in place with the spindle in either a horizontal or vertical position.

1,346,032. CUSHION-TIRE. IVAN N. KEIM, Mount Holly, N. J. Filed Dec. 18, 1919. Serial No. 345,734. 6 Claims. (Cl. 152—1.)



2. A cushion tire for vehicle wheels, comprising spaced flanged seats on the peripheral face of the felly of the vehicle wheel, a tread provided on its inner face with resilient integral spaced blocks seated on the said seats, and retaining means holding the said blocks in the seats.

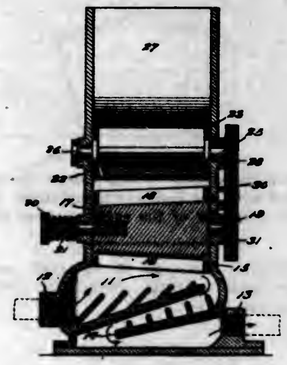
1,346,033. HARVEST-SACK. JOHN W. KEITH and RICHARD W. WILLIAMS, Hornbeak, Tenn. Filed Jan. 16, 1920. Serial No. 351,756. 1 Claim. (Cl. 150—2.)



A harvest stack comprising a body and flaps between which is formed a mouth; the said body and flaps being of textile material and the flaps constituting continua-

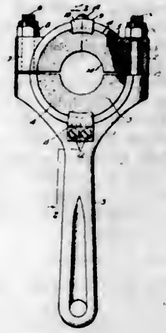
tions of the side walls of the body, leather straps arranged against the inner sides of the flaps at the side edges thereof and each extending from the transverse edge of one flap to the transverse edge of the other flap and each having a bight at its transverse center and also having outer end portions and bights that project beyond the transverse edges of the flaps, rivets extending through

and connecting the flaps and the straps, other rivets extending through and connecting the major portions of the straps to flaps and the outer end portions of the straps, metallic loops the inner end bars of which are disposed in the said bights of the straps, and a shoulder strap equipped with snap-hooks detachably engaged with the said metallic loops.



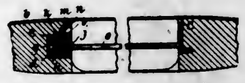
1,346,034. DINNER-PAIL. ROBERT B. KELSO, Seattle, Wash. Filed Dec. 17, 1918. Serial No. 267,200. 1 Claim. (Cl. 220—20.)

A dinner pail comprising an outer receptacle, brackets secured in said receptacle and having horizontal portions arranged in spaced relation to the bottom of said receptacle, an annular collar formed on the horizontal portions, an inner receptacle supported by said portions within the collar, trays supported within the inner receptacle, and covers for said trays and outer receptacle.



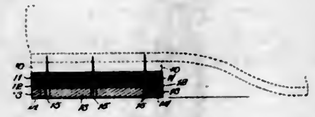
1,346,035. FIRE-EXTINGUISHER. JOHN W. LONGSTRETH, Waynesburg, Pa. Filed Feb. 9, 1920. Serial No. 357,126. 2 Claims. (Cl. 169—15.)

1. A device of the character described comprising a casing including a lower portion provided with water inlet and outlet openings, a substantially cylindrical portion located above and communicating with said lower portion, a rotary drum within said cylindrical portion having its periphery provided with pockets, said casing further including a laterally enlarged portion within and communicating with said cylindrical portion, a pair of feed drums within said last named portion and rotatable in opposite



directions, a hopper leading into the top of said last named casing portion, and means for simultaneously rotating said feed drums and said first named drum.

1,346,036. GRINDING-TOOL. PAUL UCLAIR LOVELACE, Clinton, Okla. Filed Feb. 9, 1920. Serial No. 357,252. 2 Claims. (Cl. 51—205.)



1. A grinding tool, comprising two members, a handle on one member, said members having semicircular recesses therein, grinding stones in the recess, shims between the grinding stones preventing rotary movement thereof in the members, and means secured on the members for preventing lateral movement of the stones.

1,346,037. SHUTTLE. JOHN MCCANN, Paterson, N. J. Filed May 10, 1920. Serial No. 380,075. 3 Claims. (Cl. 139—27.)

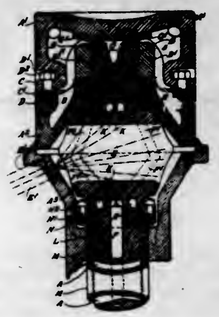
1. In combination, with a shuttle bow structure having in one side an interior groove to receive one end of the quill spindle and with such spindle having its said end received in said groove, a screw-threaded bearing device tapped into the opposite side of said structure and having a bearing recess open toward the groove and receiving the other end of the spindle, said device being adjustable screw-fashion in the bow structure.

1,346,038. COMBINATION-HEEL. FRANK J. MCEWAN, Chicago, Ill. Filed Jan. 2, 1920. Serial No. 348,720. 3 Claims. (Cl. 36—35.)

1. A combination heel comprising a wear resisting bottom portion, said bottom portion being formed with a plurality of openings arranged to extend transversely therethrough, a layer of hard rubber disposed above and secured to said wear resisting bottom portion, a layer of soft resilient rubber surmounting said layer of hard rubber and secured thereto, and a plurality of tacks for securing said combination heel to a shoe or similar article, each of said tacks being inserted through one of said openings until the head thereof is substantially flush with the under surface of said layer of hard rubber.

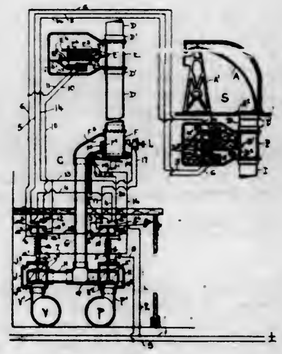
1,346,039. CUFF-LINK. ARTHUR A. MCRAE, Attleboro, Mass. Filed Dec. 3, 1919. Serial No. 342,212. 3 Claims. (Cl. 24—102.)

1. In a separable cuff-link, the combination with a button-member having a post for insertion through the buttonhole of the cuff and a tapered stud projecting therefrom said stud having an extended neck of a length several times its diameter with a conical point at its end, of a second button-member having a post provided with an enlarged socket at its end adapted to receive the stud on the first member with a clearance around its sides, and a spring-detent in the socket adapted to clasp the tapered sides of the stud to hold the parts of the link together while allowing them to play back and forth to a considerable extent and to rock laterally in relation to each other without becoming unclasped.



1,346,040. ROWING-GEAR. DANIEL MCRAE, Central Islip, N. Y. Filed Feb. 17, 1920. Serial No. 359,424. 3 Claims. (Cl. 9—26.)

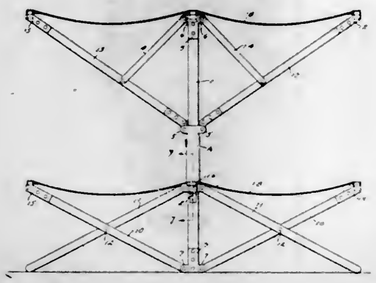
1. In an oar lock, the combination with the stirrup thereof, of anti-friction devices carried thereby and protruding from the inner face thereof, said anti-friction members constituting a bearing surface for directly receiving an oar.



1,346,041. PISTON AND PISTON-ROD FOR INTERNAL-COMBUSTION ENGINES. JOHN CAMPBELL MACCALL MACLAGAN, Glasgow, Scotland. Filed Sept. 16, 1919. Serial No. 324,106. 5 Claims. (Cl. 123—176.)

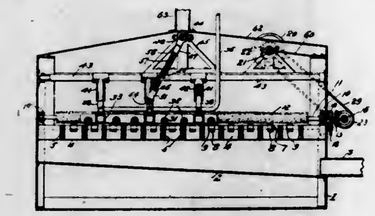
5. In an internal combustion engine, a piston cylinder, a hollow piston working therein, a piston rod connected to the piston and having, adjacent the piston, a double-core enlargement shaped at one end to the internal contour of the cylinder and at its other end to a counterpart recess in the piston end, said enlargement being apertured to afford an internal combustion space when the piston is at the end of its stroke, in combination with a water-cooling system for the piston comprising a central longitudinal passage in the piston rod, communicating passages in the double-cone enlargement at the end of said rod, radial distributing passages leading therefrom

and conducting the cooling fluid to and from the interior of the piston, a sleeve spaced around the piston rod and affording an annular passage, means for establishing connection between the latter and the interior of the piston, a pipe forming a continuation of the central longitudinal passage in the piston rod, but affording an annular passage around the same, and a passage establishing communication between the interior of the piston rod sleeve and said annular passage around the pipe, substantially as described.



1,346,042. PNEUMATIC-DESPATCH-TUBE APPARATUS. JAMES G. MACLAREN, Harrison, N. Y. Filed July 26, 1915. Serial No. 41,898. 16 Claims. (Cl. 243—10.)

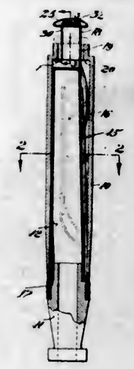
1. In an apparatus of the character described, the combination of a pressure source and a suction source, a single transit tube for the transmission of carriers in either direction from a central station to a substation and from the sub-station to the central station, a valve controlling the passage of air from said transit tube to said suction source, a valve controlling the passage of air from said pressure source to said transit tube, electrically operated means for opening one of said valves to cause air to propel a carrier from the sub-station to the central station, electrically operated means including a device in the path of the traveling carrier for causing such valve to close, electrically operated means to open the other valve



to cause air to propel a carrier from the central station to the sub-station, electrically operated means including a device in the path of the traveling carrier for causing the last-mentioned valve to close, and interlocking means for preventing the opening of one of said valves when the other of said valves is open.

1,346,043. FOLDING CAMP-BERTH. WILLIAM F. MOODY, Denver, Colo., assignor of one-tenth to John P. Moody, Denver, Colo. Filed Nov. 12, 1919. Serial No. 337,391. 6 Claims. (Cl. 5—60.)

1. A device of the character stated, comprising collapsible frames, each frame consisting of a central post, a pair of supporting devices at each side of the post, said supporting devices connected at their lower ends to the post, a second pair of supporting devices at the upper portion of the post connected to the upper end of the post, and a sliding sleeve on the post connected to both pairs of supporting devices.

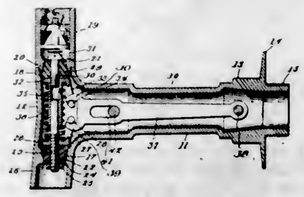


1,346,044. BLOWER AND SUCTION CARPET AND RUG CLEANER. FRANK P. MOORE, St. Joseph, Mo. Filed Feb. 17, 1920. Serial No. 359,237. 9 Claims. (Cl. 15—8.)

1. In an apparatus of the class described, the combination with a frame, of a table carried by said frame, a blower carriage traveling upon said table, said carriage comprising a body provided with rollers and with a nozzle, means for supplying air to said nozzle, posts extending from the body, connecting devices connected to said posts, and means for moving the connecting devices for causing travel of the blower carriage over the table.

1,346,045. PRESSURE-BAR MECHANISM. WILLIAM EDGAR MOORE, Janesville, Wis., assignor to Geo. S. Parker and W. F. Palmer, Janesville, Wis. Filed Apr. 23, 1919. Serial No. 292,113. 4 Claims. (Cl. 120—46.)

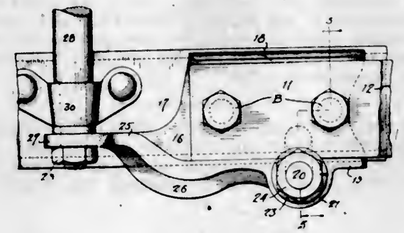
4. In a fountain pen, a pressure device of the class described extending rearwardly from the barrel of said pen, said rearward extension beyond the barrel of said pen having a locking member extending into and adapted to engage the barrel to normally hold the pressure device



against removal, the locking member being resilient to allow of disengaging it from the barrel to permit withdrawal of the pressure device from the barrel.

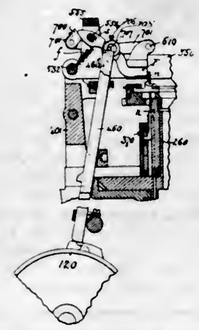
1,346,046. CHAIN-FASTENER. CLARENCE AUGUSTUS MOREHOUSE, Lawrence, Kans. Filed Jan. 23, 1920. Serial No. 353,621. 2 Claims. (Cl. 24—241.)

2. A chain fastener comprising a body member, a plurality of spaced hooks carried thereby, bifurcated extremities located at each end of the body member, a bar adapted to contact with the ends of the spaced hooks, a slotted annular extension formed on said bar for said pivotal and sliding engagement with the bifurcation at one end of the body member, an angular extension also located at the opposite end of the bar for removable engagement with the bifurcation at the opposite end of the body member and means for holding said body member and bar against relative movement.



1,346,047. COMBINATION DRINKING-FOUNTAIN AND FAUCET. ARTHUR B. NAFZIGER, Odessa, Wash. Filed June 14, 1919. Serial No. 304,180. 2 Claims. (Cl. 299—9.)

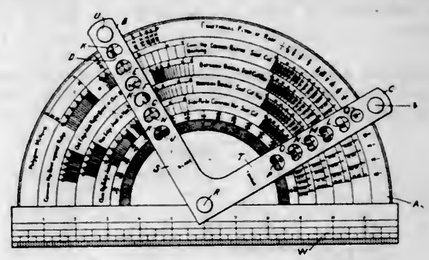
1. A device of the character described comprising a hollow body formed of substantially T-shape and including a shank portion and a head portion, the lower end of said head portion being provided with a valve seat and constituting a faucet discharge, a cup connected with the upper end of said head portion and provided with a valve seat, a valve disposed within each valve seat and normally closing the same, a yoke connected with each valve and provided at its inner end with a transverse lug, a lever disposed longitudinally within said shank portion and



pivoted at one end, a fork on the other end of said lever having arms engaging said lugs, and means for moving said lever laterally whereby to unseat a selected one of said valves.

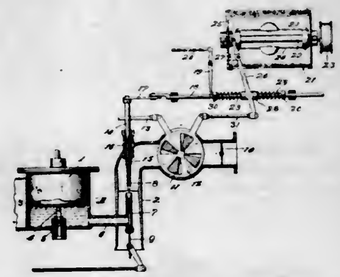
1,346,048. BRACKET. RICHARD T. NEWTON, New York, N. Y. Filed Apr. 24, 1919. Serial No. 292,474. 5 Claims. (Cl. 293—55.)

1. A bumper bracket comprising a bracket body adapted to receive and rigidly engage a bumper end, a draw-up member engaging the bracket and adapted to pass beneath the chassis side bar and engage the lower flange of the latter together with a strut-like bracket extension arm rigid with the bracket body and engaging a chassis element beyond the end of the bracket body.



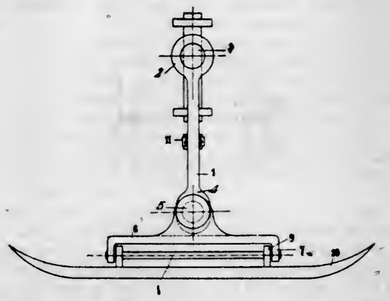
1,346,049. YARN-FEEDING MEANS FOR KNITTING-MACHINES. FRED C. NICHOLSON, Chattanooga, Tenn., assignor to Scott and Williams, Incorporated, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 6, 1919. Serial No. 269,852. 3 Claims. (Cl. 66—12.)

1. A knitting machine having needles and operating means therefor in combination with a yarn finger having a slotted pivotal mounting, adjustable means to move the finger over toward the line of needles on the descent of the finger, and a spring to withdraw the finger, as it is raised.



1,346,050. GAGE FOR BEVELS, MITERS, AND THE LIKE. JOHN SHAW MCLUCKIE NICHOLSON, Durham, England. Filed Sept. 6, 1919. Serial No. 322,143. 3 Claims. (Cl. 33—93.)

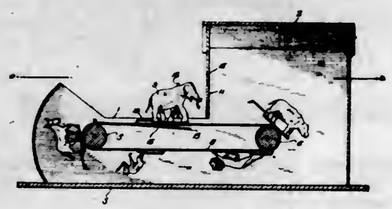
1. A gage comprising a semicircular scale-plate which has a straight edge along its base-chord and has on one side a series of concentric scales, indicator-arms connected to form a square, the angle of which is pivotally connected to said plate at the center of the concentric scales, pointers on said indicator-arms registering with the graduations of said scales, fence-arms connected to form a square the angle of which is pivotally connected to the other side of the scale-plate about the same center as the



indicator-arms, and means for clamping the indicator and fence-arms to one another and to the scale-plate for the purposes specified.

1,346,051. AUTOMATIC GAS-CONTROLLER. ERNEST THEODORE OFELDT, Spring Lake, N. J., assignor of one-half to Robert A. Chesebrough, Spring Lake, N. J. Filed Sept. 30, 1919. Serial No. 327,548. 5 Claims. (Cl. 123—100.)

1. The combination with a carbureter, of a gasolene feed valve, an air valve, a pair of air intake shutters for said air valve, automatic means for controlling the position of the gasolene feed valve and the movement of one of the shutters by the speed of the engine, and manually operated means for moving the gasolene feed valve and moving the other of said shutters.

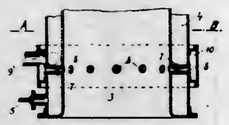


1,346,052. RUNNER-CARRIER FOR MOTOR-VEHICLES. JOCELYN EMILE OLLIVIER, St. Gervais-les-Bains, France. Filed Sept. 5, 1917. Serial No. 189,767. 8 Claims. (Cl. 280—14.)

2. An attachment to be substituted for an automobile wheel, comprising a runner carrier: a runner pivotally connected with said carrier to rock relatively thereto about

both its transverse and its longitudinal axis; means for attaching the carrier to the adjacent steering spindle; and a stop device directly associated with said carrier for preventing it from turning about the axis of the spindle.

1,346,053. TOY. ALBERT PEDEN, Johnstown, Pa. Filed Apr. 12, 1920. Serial No. 373,208. 1 Claim. (Cl. 46—40.)

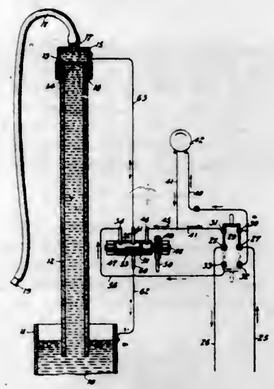


A toy comprising a receptacle, rollers journaled in the receptacle, an operating handle for one of the rollers, an endless band around the rollers, toy figures arranged in pairs upon the band, contact members upon the band, a pivoted rod having offset ends upon one of the sides of the receptacle and one of the said offset ends being disposed within the path of engagement between the contact members, and the other offset end passing through an opening in the side of the receptacle, a normally vertically disposed figure pivotally secured to one of the sides of the receptacle, and said figure having an offset finger disposed within the path of contact of the last mentioned offset end of the rod.

1,346,054. METHOD OF RIVETING. HARRY R. PENNINGTON, Kansas City, Mo., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Oct. 19, 1918. Serial No. 258,806. 7 Claims. (Cl. 219—2).

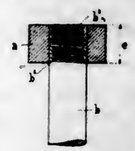
1. A method of riveting which consists in placing a rivet in riveting position, heating said rivet by local application of an electric arc, and depositing metal upon and around said rivet in close proximity to one of said members.

1,346,055. FURNACE FOR BURNING REFUSE. WALTER PIERNAY, Stettin, Germany, assignor to Stettiner Channotte-Fabrik Aktiengesellschaft vormals Didier, Stettin, Germany. Original application filed May 16, 1914, Serial No. 839,129. Divided and this application filed Dec. 27, 1915. Serial No. 68,760. 2 Claims. (Cl. 110—8.)



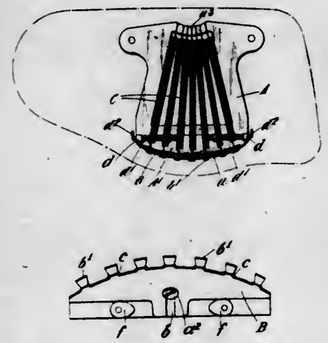
1. In a furnace for burning refuse, the combination of a furnace shaft, a cooling jacket surrounding the same, and a plurality of air-feeding nozzles passing through the jacket and surrounding and communicating with the shaft, each said nozzle having an opening therethrough in the form of two truncated cones, the longitudinal axes of which coincide, and with the narrower ends thereof in contact, to provide a smooth air passage through the nozzle.

1,346,056. DIAMOND-POINT CUTTING-TOOL. PAUL POULAIN, Paris, France. Filed June 2, 1920. Serial No. 386,086. 3 Claims. (Cl. 29—96.)



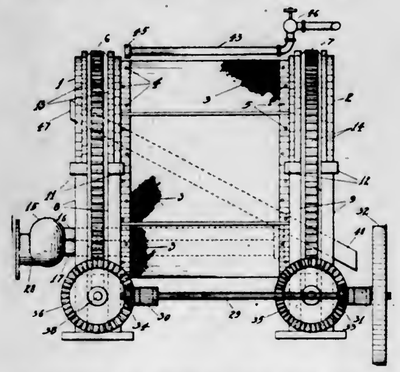
1. A cutting tool comprising a shank, two jaws at the forward end of said shank, a diamond mounted between said jaws, a plate forming a rear abutment for said diamond, and means for clamping the jaws upon the diamond and the abutment plate.

1,346,057. APPARATUS FOR MEASURING OHMIC RESISTANCE OF LIQUIDS AND SOLUTIONS. TIMOTHY HENRY REARDON, North Adams, Mass. Filed Nov. 8, 1918. Serial No. 261,672. 4 Claims. (Cl. 175—183.)



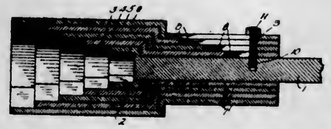
1. An apparatus for measuring ohmic resistance of liquids and solutions, comprising a vessel of conductive material and adapted to contain the liquid or solution, a tube of non-conducting material having one end inserted in the said liquid or solution and adapted to be filled with the same, conducting material in contact with said liquid or solution at the other end of the tube, an electric circuit connected at one end with the said vessel and at its other end with the conducting material in contact with the liquid or solution, and means for measuring the voltage or potential difference of the said current in passing through the liquid or solution.

1,346,058. PROCESS FOR THE MANUFACTURE OF BOLTS. GABRIEL ROBERGEL, Montreuil-sous-Bois, France. Filed Aug. 24, 1918. Serial No. 251,273. 3 Claims. (Cl. 85—9.)



3. A bolt having a shank and an independent bolt head compressed thereon, the head end of the shank having a part screw threaded to the right, and an adjacent part screw threaded to the left, to form an interlocking engagement with the bolt head when the latter is compressed thereon.

1,346,059. FOOT-ARCH SUPPORT. WILLIAM HENRY ROBSON and ALFRED POWELL, London, England. Filed Dec. 29, 1919. Serial No. 348,121. 9 Claims. (Cl. 36—71.)

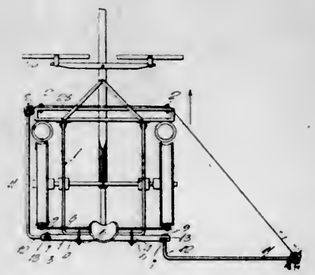


1. A foot-arch support comprising a base member having one side higher than the other, and a support comprising a number of readily and individually removable spring members extending between and secured to the two sides of the base member.

1,346,060. COLANDER FOR DEFECATED CANE-JUICE. RAMON RODRIGUEZ Y RODRIGUEZ, Central Mercedes, Cuba. Filed June 28, 1919. Serial No. 307,411. 2 Claims. (Cl. 210—199.)

1. A colander for defecated cane juice, comprising a drum; a pair of supports for said drum, the upper surfaces of which are of semi-circular section, serving as surface bearings to the drum; flanges secured to the upper ends of the supports and semi-circular hoops or bands secured to the said flanges, which clasp the upper half of the drum and avoid any displacement of same, due to rotation.

1,346,061. WRENCH. SIDNEY CLARENCE ROSENBERG, New Haven, Conn. Filed Feb. 24, 1920. Serial No. 360,749. 3 Claims. (Cl. 81—185.)

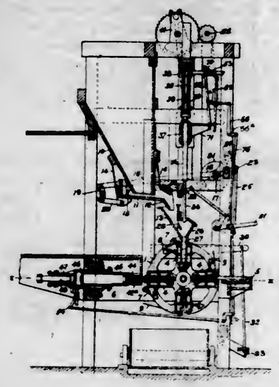


3. A wrench, comprising a handle, a nut engaging socket on one end of the handle, a series of telescoping nested socket members on the handle and on the first-mentioned socket, said series of socket members increasing in diameter and in length in regular succession, telescoping sleeves on the series of socket members movable on the handle, said sleeves having longitudinal slots therein, and a set screw projecting through the slots and screwed into the handle, said slots of varying lengths, the slots of the respective sleeves increasing in length in relative ratio from the inner to the outer sleeve.

1,346,062. PROCESS OF TREATING METALS. WILLIAM E. RUDER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 10, 1918. Serial No. 244,166. 4 Claims. (Cl. 91—70.1.)

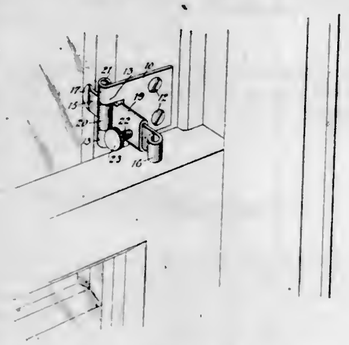
1. The process of treating metals to render them inoxidizable at high temperatures which consists in diffusing into the metal another metal which forms an inoxidizable alloy with it, and then heating the metal under non-oxidizing conditions in the presence of the other metal to form the inoxidizable alloy at the surface.

1,346,063. MARKER FOR PLANTERS. ORVA L. SHADFORD, Los Angeles, Calif. Filed Dec. 15, 1919. Serial No. 345,065. 6 Claims. (Cl. 97—83.)



1. A marker attachment for planters comprising a marker carrying arm, an attaching member including upper and lower bearings, said upper bearing being provided with an elongated slot and said lower bearing being provided with an aperture disposed beneath said slot, and a T-member carried by the inner end of the marker carrying arm, and adapted for disposition between the upper and lower bearings of the attaching member, the lower portion of the T-member being adapted to rotate in said aperture and the upper portion being rotatable and slidable in said slot.

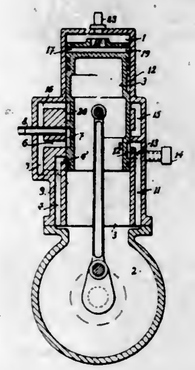
1,346,064. MACHINE FOR CHARGING SHELLS. JORGEN REMMEN, Pittsburgh, Pa., assignor to George T. Ladd Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 20, 1918. Serial No. 218,286. 10 Claims. (Cl. 86—20.)



1. In a machine for charging shells, the combination of a plurality of shell holders, a plurality of cylinders and

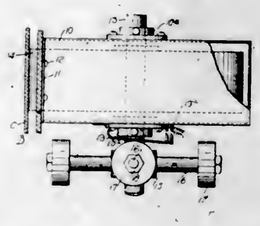
rams, the latter being subjected to fluid pressure and a reciprocating cross-head movable relative to the cylinders

and adapted to move the rams away from the holders and against the fluid pressure.



1,346,065. WINDOW-LOCK. DAVID SPIVAK, New Haven, Conn. Filed Oct. 22, 1919. Serial No. 332,374. 4 Claims. (Cl. 292—67.)

2. A window lock comprising a face plate adapted to be fixedly mounted on a window stile, said face plate having hinge knuckles extending in service beyond the edge of said stile, said knuckles being spaced apart to form a recess therebetween; a hinge plate pivotally mounted upon said face plate between said knuckles, said hinge plate embodying a slide member, a bolt mounted in said member to pass through said recess to be held thereby in perpendicular relation to said face plate; and a knurled clamp screw provided to clamp the bolt in inwardly disposed or outwardly disposed relation in the slide.

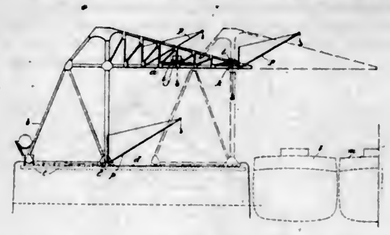


1,346,066. TWO-STROKE-CYCLE INTERNAL-COMBUSTION ENGINE. VICTOR SPUHLER, Rothkreuz, Switzerland. Filed Feb. 11, 1916. Serial No. 77,769. 1 Claim. (Cl. 123—73.)

An internal combustion engine comprising a cylinder open at one end, a crank case at and open at said end of the cylinder so that communication is established between them, a piston in the cylinder, and provided with a chamber opening into said open end of the cylinder and also into the crank case, said piston having a transverse passage near its inner end, also having an opening at its inner end communicating with said passage; and being further provided on its exterior with two pairs of spaced passages, said cylinder having a fuel inlet, and a passage leading to said crank case, which inlet and passage are placed in communication with each other by one of said passages of the piston, when the latter is in instroke position, said cylinder having exhaust ports closed by the piston when the latter is in such position, and being further provided with an air inlet; a pair of communicating passages which are put in communication with the air

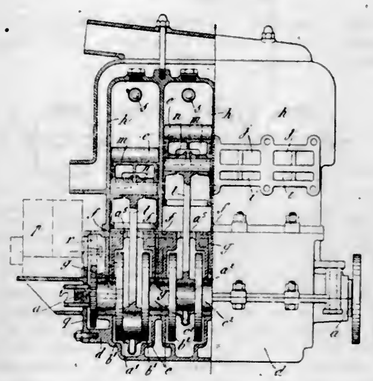
inlet and the interior of the crank case, cylinder and piston by one of the passages of the piston when the latter is in such position; said cylinder also having a passage leading therefrom to the interior of the crank case, and put in communication therewith by the other passage of the piston when the latter is in outstroke position, the transverse passage of the piston being in communication with the passages of the cylinder when the piston is in such position.

1,346,067. SPEED-OPERATED CIRCUIT-CLOSER. FRANK EARL TOUCHY, Galveston, Tex. Filed July 3, 1919. Serial No. 308,398. 2 Claims. (Cl. 200—52.)



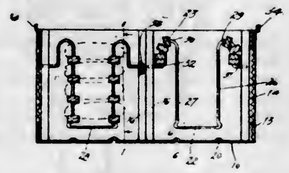
1. An attachment of the class described including a shaft, a friction pulley on said shaft, and adapted to be driven by engagement of a belt, radial arms on said shaft, rollers loose on said arms to be maintained in an outer position under centrifugal force and adapted to gravitationally assume an inner position when an arm is at the top of the shaft and in the absence of centrifugal action, and a circuit closer controlled by a roller when in the inner position.

1,346,068. CRANE. WILLIAM STEAINS VAUGHAN, Newcastle-upon-Tyne, England. Filed Jan. 24, 1920. Serial No. 353,700. 3 Claims. (Cl. 212—74.)



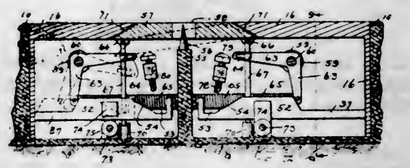
1. In a crane, the combination of a vehicular frame comprising a pair of parallel cantaliver members a traveler

mounted for movement on said cantaliver members in the direction of their extension said traveler comprising



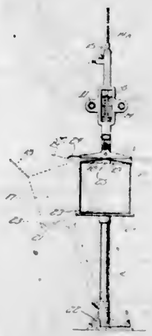
a transversely movable member, and a crab carried by said transversely movable member.

1,346,069. MULTICYLINDER TWO-STROKE MOTOR. MARCEL ACHILLE VIOLET, Levallois-Perret, France. Filed Nov. 21, 1917. Serial No. 203,195. 2 Claims. (Cl. 123—73.)



1. In a multicylinder engine comprising a crank casing, partitions dividing the casing into compartments, a crank shaft extending through the compartments with a crank in each compartment, a cover for each compartment having a piston rod opening, oil collecting grooves formed in the upper faces of the cover beneath the lower end of the piston, oil ducts extending from said grooves to the shaft-bearings and means to vent gases from each compartment through the piston rod opening and the interior of the piston into the explosion chamber.

1,346,070. SEED-CORN CABINET AND DRIER. OLE G. VOLD, Forest City, Iowa. Filed July 16, 1919. Serial No. 311,378. 4 Claims. (Cl. 34—26.)

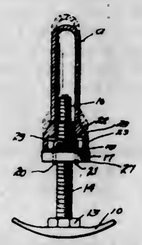


3. A seed corn cabinet and drier, having sections formed with a bottom, end members and a side wall, said sections being designed to be locked together side by side with their open sides adjacent to each other, vertical corner members within each of said sections, spaced resilient guide members comprising vertical spaced up-rights, having a horizontal portion at their lower ends, and inverted U-shaped members at their upper ends; the free end of said inverted U-shaped members being fixed to said vertical upright corner members; corn rests comprising slats, slidably mounted on said guides, and outwardly and upwardly extending flange on said side wall forming a guide whereby sections may be plated one upon another, the bottom of one forming a cover member for the other.

1,346,071. SPEED-CONTROL DEVICE. OLE G. VOLD, Forest City, Iowa. Filed Jan. 24, 1920. Serial No. 353,896. 42 Claims. (Cl. 264—1.)

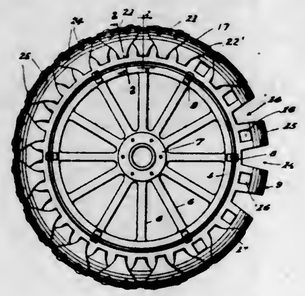
1. In a device of the class described, means mounted in the road for injuring a tire, and mechanism adapted to be operated by a rapidly moving vehicle for making said means operative.

1,346,072. SEALING-MACHINE. EMERY L. WALKER, Milwaukee, Wis. Filed July 16, 1919. Serial No. 311,174. 10 Claims. (Cl. 93—2.)



1. In a sealing machine of the character described the combination with a pair of platens adapted for box end sealing purposes, the box structure being held in a preparatory position prior to sealing, and means carried by said machine adapted when said box structure is in a preparatory position to hold a box flap in an intermediate position.

1,346,073. VALVE-CAP FOR PNEUMATIC TIRES. RAY P. ADAMS, Lohrville, Iowa. Filed Aug. 25, 1919. Serial No. 319,843. 3 Claims. (Cl. 152—12.)

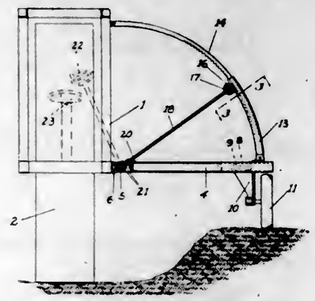


1. In a device of the class described, a casing having external screw threads thereon, a washer having a central opening therein threaded to coact with the threads of the casing, wires of resilient material having one end secured into the washer, and central portions bowed to form a hook member and their other ends curved in the reverse direction relative to the curve of the hooked portions, a cap member having a central, longitudinal opening therein adapted to receive the extending end of the casing and an

enlarged recess adjacent to the open end of the cap, and pins fixed into said cap and extended into the recess,

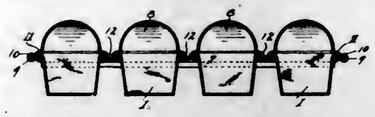
whereby said pins may engage the bent portions of the wires to hold the cap from movement relative to the washer.

1,346,074. TIRE FOR VEHICLE-WHEELS. LLOYD S. ATKINSON, Los Angeles, Calif. Filed Oct. 30, 1917. Serial No. 199,292. 4 Claims. (Cl. 152—8.)



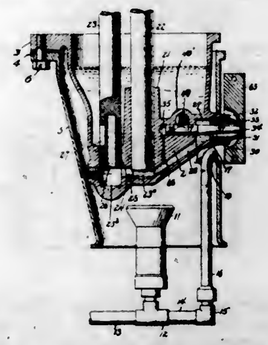
3. A spring tire construction, comprising annular metallic side members secured together, said members adapted to be detachably secured upon the felly of a vehicle wheel, each of said side members having cutaway portions equally spaced apart around its entire circumference, a plurality of spring members mounted on said side members, one at each of the cutaway portions of said side members, and other spring members detachably mounted on said side members and overlapping the first named spring members.

4. A spring tire construction, comprising annular metallic side members, said members adapted to be detachably secured upon the felly of a vehicle wheel, each of said side members having cutaway portions equally spaced apart around its entire circumference and forming substantially semicircular spring tongues, each of said tongues being provided with an aperture, a plurality of spring members having locking tongues mounted on said side members, one at each of the cutaway portions of said side members, and a plurality of other spring members having locking tongues passing through the apertures formed in the semi-circular spring tongues to lock the same thereto.



1,346,075. DITCH-DIGGER. ROBERT A. BAYLES, Stockton, Calif. Filed Apr. 24, 1919. Serial No. 292,260. 3 Claims. (Cl. 37—29.)

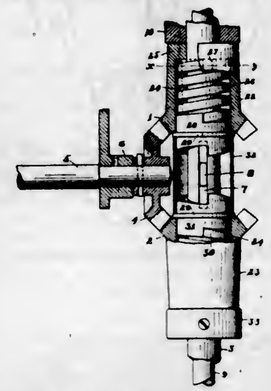
1. In combination with a ditch digger having a digger wheel, a horizontal frame pivotally mounted on a shaft to one side of the wheel at right angles thereto, a supporting wheel mounted to the frame at the outer end thereof, braces adapted to telescope mounted to the supporting wheel frame and to the frame of the ditch digger and means operable from the driver's seat of the digger where-



by the relative telescopic position of the brace may be adjusted at will, the braces being concentric with the pivotal shaft of the supporting wheel frame.

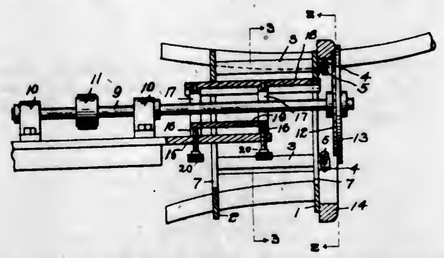
1,346,076. BAKING APPARATUS. GEORGE W. BOLLINGER, Columbus, Ohio. Filed Feb. 1, 1919. Serial No. 274,493. 1 Claim. (Cl. 53—6.)

A baking apparatus comprising a plurality of separate pan members rigidly held together in spaced relationship, a hinged cover for said pan members provided with a number of cavities of semi-circular cross sectional formation, said cavities being disposed when said cover occupies its closed position to register with said pan members, divisional ribs integrally formed with said cover and situated between the cavities thereof, said ribs being adapted to enter between said pan members so as to maintain the relatively separated state of the latter, rolled edges formed upon said pan members to provide a seat for said cover, and flanges formed upon the marginal edges of said cover and arranged to overlap and seat upon the rolled edges of said pan members.



1,346,077. MELTING-POT AND METAL-INJECTING MECHANISM FOR TYPE-CASTING MACHINES. JAMES THOMAS CARTER, Baltimore, Md. Filed Apr. 13, 1920. Serial No. 373,680. 13 Claims. (Cl. 22—71.)

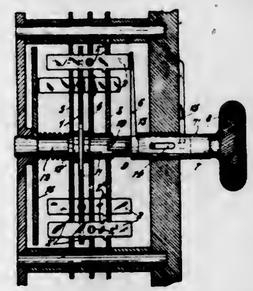
5. In a metal injecting mechanism for type-casting machines the combination with a melting pot, of a choker



valve controlling the exit of metal from said pot, and mechanism for governing the movement of said choker valve, including an operating spindle rotatably mounted in said melting pot and engaging said choker valve, a segmental gear carried by said spindle and a cam controlled rack meshing with said gear.

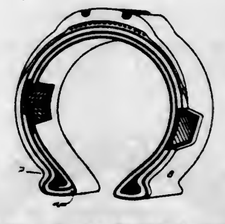
1,346,078. SHOCK-ABSORBING CLUTCH. FORREST J. COUCH, Rochester, N. Y., assignor to Rochester Washing Machine Corporation, Rochester, N. Y. Filed Sept. 19, 1918. Serial No. 254,830. 6 Claims. (Cl. 192—9.)

5. A device of the character described comprising a shaft, a clutch member mounted to turn about the shaft, a driven member mounted to turn about the shaft, one of the last two named parts being provided with a chamber closed by the other part, a helical spring surrounding the shaft and forming a driving connection between the clutch member and the driven part and expansible into frictional engagement with the walls of the chamber, and a second clutch member driven by the driving member and movable into and out of connection with the first named clutch member.



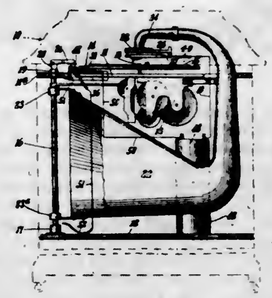
1,346,079. RABBETING APPARATUS. FRANK A. DANIELS, Pittsburgh, and GEORGE SCHUSTER, Carrick borough, Pa. Filed June 27, 1919. Serial No. 307,195. 4 Claims. (Cl. 144—136.)

1. A centering device for use in cutting rabbets, comprising a frame provided with a plurality of radial adjustable clamping members for attachment to the article being rabbeted, the inner periphery of said frame being of the contour of periphery of the rabbet to be cut and arranged to contact with and move on a support adjacent a rabbeting saw.



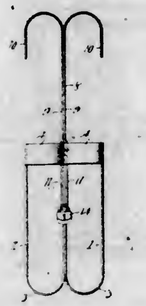
1,346,080. KEYLESS LOCK. JOSEPH DE LEEUW, The Hague, Netherlands. Filed Feb. 28, 1920. Serial No. 362,134. 6 Claims. (Cl. 70—54.)

1. A keyless lock comprising a key-plate controlling the movement of a locking bolt, a plurality of elements co-operating therewith, and adapted to be pressed in in a direction perpendicular to the key-plate, and means adapted



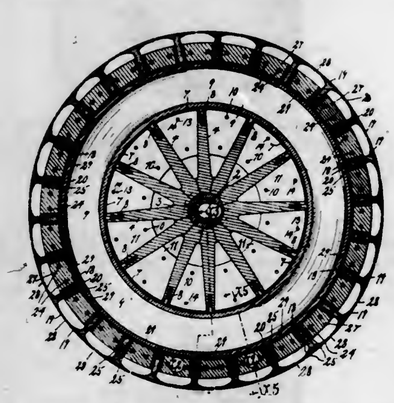
to move the key-plate, said means including a member common to all of said elements adapted to press them in.

1,346,081. TIRE. CLARENCE J. DROPE, Minneapolis, Minn. Filed Feb. 8, 1919. Serial No. 275,903. 4 Claims. (Cl. 152—13.)



4. As an article of manufacture a circular bead core for a tire having a general triangular shaped cross section and having a recess formed in one of its faces to receive the free end of a tire cord.

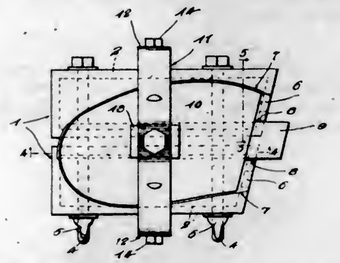
1,346,082. STOP MECHANISM FOR TALKING-MACHINES. RAYMOND DUNCAN, New York, N. Y. Filed Apr. 21, 1915. Serial No. 22,776. 20 Claims. (Cl. 74—46.)



1. In a machine of the character described, in combination, a rotatable record support, a record thereon, means for operating the support, a sound-box comprising a plurality of parts one of which is movable with respect to the other thereof, and a brake mechanism, certain of said parts of said sound-box being operatively connected to the brake mechanism and being operable by the record for controlling the operation of the brake mechanism to arrest the movement of the record support, substantially as specified.

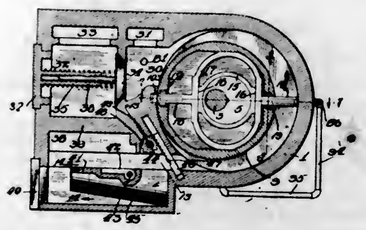
1,346,083. TIRE-HOLDER. AUGUST FRANK ENGEL, Defiance, Ohio. Filed Sept. 5, 1919. Serial No. 321,820. 4 Claims. (Cl. 224—29.)

1. A tire holder, comprising a tire receiving frame having normally vertical and normally horizontal portions, a holding member pivotally connected to one side of the center of the said horizontal portions, and having one end adapted to be transversely positioned over the upper portion of a tire in the frame.



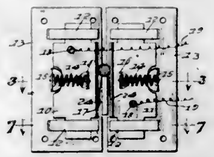
1,346,084. AUTOMOBILE-WHEEL. EPHRAIM W. FAIRBANKS, San Diego, Calif. Filed Apr. 15, 1919. Serial No. 290,307. 1 Claim. (Cl. 152—31.)

In a wheel, an annular resilient cushion on the rim of the wheel; outer annular flanges secured to the wheel and extending beyond said cushion; bearings secured between said flange extensions; segmental tread members arranged outside of the periphery of the annular flanges and provided with inward extensions slidably mounted in said bearings, said inward extensions having segmental plates secured thereto and adapted to bear on the resilient cushion for reciprocating said tread members; and blocks secured between said bearings and said flange extensions, said blocks being adapted to reinforce the walls of the bearings and to space the flange extensions a definite distance apart and also to restrict the outward movement of the tread members by the contact of the blocks with said plates.



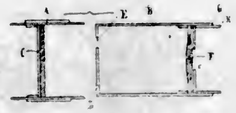
1,346,085. VULCANIZER. WILLIAM FISHBAUGH, Newark, Ohio. Filed June 23, 1919. Serial No. 306,175. 10 Claims. (Cl. 18—17.)

2. A device of the character described comprising a pair of spaced heater sections each having a chamber for the reception of a heating means, said sections having a sole receiving recess, said sections having a pair of transversely alined longitudinally extending grooves in the



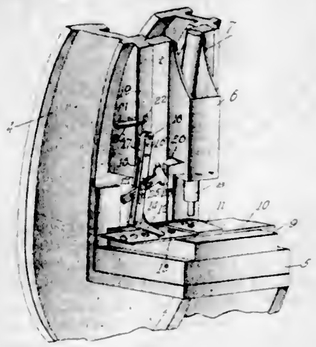
outer opposite sides of said sections, and means connecting the sections, said means having portions received in said grooves to permit relative longitudinal movement of said sections.

1,346,086. HYDRAULIC TRANSMISSION. CARLYLE B. FUNK, Chicago, Ill. Filed June 5, 1916. Serial No. 101,737. 21 Claims. (Cl. 60—53.)



1. In a fluid power transmission device, a driving power element for maintaining a flow of fluid, a driven power element to be driven by the flow of fluid, a unitary casing incasing said driving and driven elements and cored out on its interior to afford communication therebetween for passage of the fluid, and slidable means for controlling the quantity of fluid passing through the device to vary the speed transmitted.

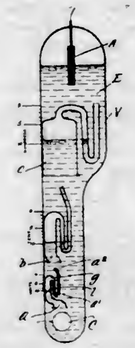
1,346,087. LOCK-OPERATED CIRCUIT-CLOSER. WALTER B. GARRETT and HARRY M. HOFFMAN, Caruthersville, Mo. Filed Feb. 7, 1919. Serial No. 275,627. 2 Claims. (Cl. 200—55.)



1. As an article of manufacture a lock-operated circuit closer for hotel doors and the like having a base plate adapted for arrangement under the escutcheon plate of a door lock and having upstruck guides, contact plates slidably mounted in said guides and provided with binding posts for circuit wire connections, said plates forming circuit terminals and being provided with deflected key guiding flanges disposed in obstructing relation with the keyhole of the door lock, and yielding means for retaining said contact plates in their normal positions.

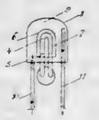
1,346,088. EXPOSURE-METER. MARIE LÉON GODEFROY, Paris, France. Filed Aug. 1, 1919. Serial No. 314,789. 3 Claims. (Cl. 88—23.)

1. A photometer, comprising front and rear parts, one of which is rotatable while the other is held stationary; a translucent screen carried by the front part and divided into a larger number of equal sectors of regularly-increasing opacity and of small angularity; and a disk carried by the rear part and provided with a pair of juxtaposed radial slots which are caused to travel across the successive sectors during the movement of the rotatable part until a point is reached in the course of such rotation when one of the slots disappears from vision while the other slot still remains faintly visible.



1,346,089. FEEDING DEVICE FOR PUNCH-PRESSES. IVAR S. HASSELSTROM, Chicago, Ill., assignor, by mesne assignments, to McGill Manufacturing Company, Valparaiso, Ind., a Corporation of Indiana. Filed Sept. 23, 1918. Serial No. 255,248. 7 Claims. (Cl. 164—88.)

1. A feeding device for punch presses comprising a lever, a feed-pawl carried by the lever and adapted to directly engage a transverse shoulder on the material to advance it from its antecedent progressive position, said shoulder being produced by the press-die, an adjustable cam on said lever and means operated in synchronism with the punch press for engaging the cam and operating the feed-pawl.



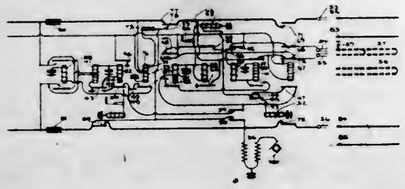
1,346,090. ELECTROLYTIC METER. HENRY STAFFORD HATFIELD and GEORGE HOOKHAM, Birmingham, England. Filed June 2, 1919. Serial No. 301,301. 2 Claims. (Cl. 171—266.)

2. In combination with an electrolyte contained in a vessel, a cathode at the lower end thereof and an anode at the upper end of the vessel, of a series of graduated self-emptying siphons of tubular form open at both ends and flared at the lower end and immersed in the electrolyte between the cathode and the anode so that gas liberated from the cathode is ultimately delivered directly to the anode, and the capacities of the siphons being such

that the indication of each siphon corresponds to an integer of the number or numbers expressing the measured quantity.

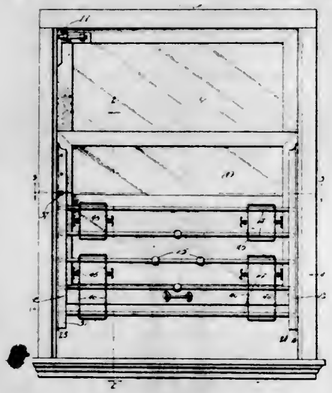
1,346,091. METHOD OF DRYING PATENT-LEATHER. ERNST HINTZ, Wiesbaden, and HEINRICH SCHULZ, Worms, Germany. Filed Feb. 5, 1918. Serial No. 215,554. 2 Claims. (Cl. 34—24.)

1. The method of drying patent leather, which consists in subjecting it to the action of ultraviolet rays all above a minimum wave length of 200 micromillimeters; substantially as described.



1,346,092. ARTIFICIAL-LIMB LOCK. LYNUS E. HULLINGER, Brooklyn, N. Y., assignor to Pomeroy Company, New York, N. Y., a Corporation of New York. Filed Aug. 5, 1919. Serial No. 315,420. 5 Claims. (Cl. 3—12.)

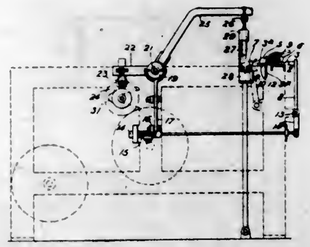
1. An artificial limb lock, including an upper arm, a forearm associated with said upper arm, means for locking such forearm with respect to the upper arm in any



number of positions, operating means extending from one of such arms whereby to actuate such locking means, a shoulder strap associated with the shoulder of the wearer for supporting the upper arm, a strap adjustably secured to such shoulder strap, and a hook provided with an outwardly-sidewise, and upwardly-extending end adapted to engage such operating means.

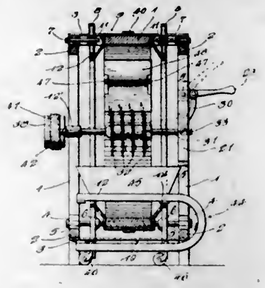
1,346,093. AUTOMATIC TELEPHONE SYSTEM. EMIL JACOBSEN, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 4, 1918. Serial No. 232,616. 13 Claims. (Cl. 179—18.)

1. In a telephone system, an automatic switch, contacts accessible to said switch, means for operating said switch and for causing it to rotate over said contacts, ground connections for certain of said contacts, means in the switch controlled by the ground on said contacts when connection is made therewith, for stopping the rotation of said switch, and means for then operating the switch in response to a series of impulses corresponding to a digit of the called number before the switch is released.



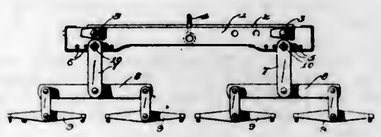
1,346,094. WINDOW-GUARD. ANGELO JOSLER, Chicago, Ill., assignor of one-half to Franklin P. Smith, Chicago, Ill. Filed Mar. 1, 1919. Serial No. 280,118. 12 Claims. (Cl. 189—79.)

12. A window guard comprising supporting members, horizontal rods extending therebetween and removably seated therein, means under the control of the lower sash of the window for locking said rods in said supporting members, and reinforcement members freely and slidably mounted on said rods, each reinforcement member connecting a plurality of rods.



1,346,095. WEFT-SPOOL CHANGER FOR WEAVING-LOOMS. ALBERT GEORG KOECHLIN, Basel, Switzerland. Filed May 1, 1919. Serial No. 294,030. 4 Claims. (Cl. 139—85.)

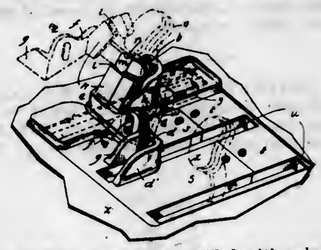
1. In an automatic weft replenishing loom, an oscillating lay, a shuttle arrangement, a pusher for introducing a full weft spool into the empty shuttle, said pusher being movably mounted on the lay so as to be capable of being lowered thereon, an actuating arm for the pusher, arranged in coöperative relationship therewith, an independent device for automatically operating the said ac-



tuating arm, weft failure detecting means to set said operating device into operation when the weft fails, said operating device having coöperating means for determining the operation for said actuating arm, substantially as and for the purpose described.

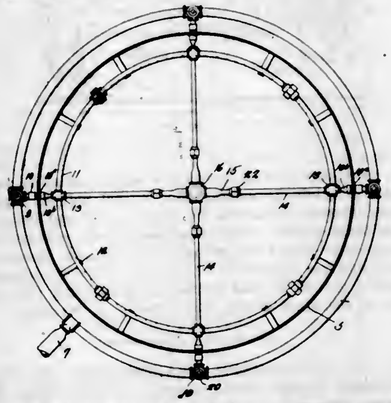
1,346,096. MEAT-CHOPPING MACHINE. GEORGE REED NAPIER, Cleveland, Ohio. Filed Oct. 23, 1919. Serial No. 332,642. 12 Claims. (Cl. 17—19.)

7. A device of the class described comprising a rotating hollow drum, rotating cutters operating within said drum against the curved surface thereof, and means for varying the angularity between said cutters and the direction of rotation of said drum.



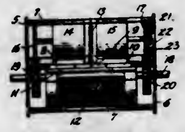
1,346,097. EQUALIZER. JAMES M. ELLIS, Canton, Ill. Filed Sept. 9, 1919. Serial No. 322,634. 2 Claims. (Cl. 21—78.)

1. An equalizer comprising a plurality of parallel beams rigidly connected together, a clevis connected to one of said beams only, and a swingle-tree support connected to each of the ends of the other beam only.



1,346,098. AUTO-PEDALS LOCK. FRANK P. MAIZE, Portland, Oreg. Filed Nov. 4, 1919. Serial No. 335,773. 9 Claims. (Cl. 70—126.)

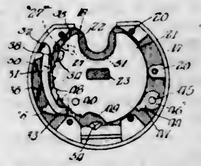
8. In an auto lock, the combination of a base provided with a lug adapted to be inserted in the slot provided for the clutch-pedal in the dash floor plate, a flange-abutment on the base adapted for embracing one side of the shank of the clutch-pedal, a strap hinged to said flange-abutment adapted for embracing the opposite side of said clutch-



pedal, one of the parts being provided with a leg having its head-end adapted for bearing against the head of the clutch-pedal when the latter is in its neutral position, and means for locking the strap in its closed position.

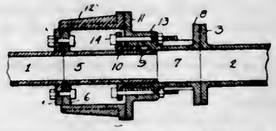
1,346,099. FIRE-EXTINGUISHING DEVICE. WILLIAM HARVEY BYRD, Sour Lake, Tex. Filed Jan. 6, 1920. Serial No. 349,720. 2 Claims. (Cl. 169—4.)

1. In a fire extinguishing apparatus, a tubular ring at the bottom of the tank exteriorly thereof, risers extending therefrom, radially extending pipes connected to the risers and extending crosswise of the tank near the top, a hollow spider to which the pipes are connected, the said pipes having perforations therein, a sprinkler ring connected to the pipes within the tank, a vertically disposed perforated pipe connected to the center of the spider and radiating sprinkler pipes connected to the bottom of the vertically disposed perforated pipe.



1,346,100. REGISTERING APPARATUS. GEORGE G. GROWER, Ansonia, Conn. Filed May 31, 1918, Serial No. 237,537. Renewed Aug. 26, 1919. Serial No. 320,052. 14 Claims. (Cl. 235—104.)

1. The combination of an electric motor and its energizing circuit, a time registering device, a register recording the number of actuations of said time register, electro-responsive means controlling said registers, and electro-responsive means interposed in the motor energizing circuit and controlling the first mentioned electro-responsive means.



REISSUES.

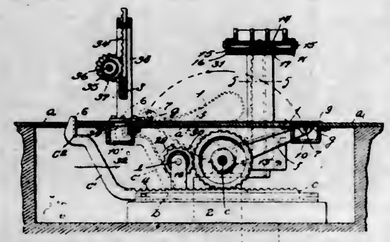
14,905. CHECK-DETECTOR FOR CHECK-ACTUATED MACHINES. ALFRED D. ANTOINE, Chicago, and CLARENCE C. TRAVIS, Evanston, Ill., assignors to Advance Machine Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 20, 1916. Serial No. 121,300. Original No. 1,193,967, dated Aug. 8, 1916, Serial No. 804,339, filed Dec. 3, 1913. 17 Claims. (Cl. 194—102.)

1. A device of the character described, embodying a casing having a check entrance and a check discharge opening, a rotatable check carrier provided with a chek receiving orifice, a normally inactive catch, said catch having a shoulder, means operating to move the catch to cause the said shoulder to enter the check receiving orifice when the latter is positioned adjacent the shoulder and in the absence of a check in the orifice, an additional catch disposed between the casing and the periphery of the check carrier, and being also disposed entirely within the plane formed by the side faces of the check carrier, and a shoulder on the periphery of the check carrier and with which shoulder the second recited catch coöperates when the first said catch is inactive, a portion of the second recited catch projecting into the path of movement of the edge of the check in the receiving orifice.

14,906. EXPANSION-JOINT. JOHN ALBERT BOGART, Port Chester, N. Y., assignor to Alberger Gas Engine Company, Buffalo, N. Y., a Corporation of New York. Filed May 20, 1920. Serial No. 382,992. Original No. 1,319,457, dated Oct. 21, 1919, Serial No. 48,805, filed Sept. 3, 1915. 8 Claims. (Cl. 285—22.)

1. In combination with two sections of a pipe line, a casing attached to the end of one pipe section, a tubular member on the end of the other pipe section and slidably disposed in said casing, an annular head on said tubular member, and a sleeve secured to said casing and extending over said head to form a protective chamber in which the sliding surface of said tubular member is disposed.

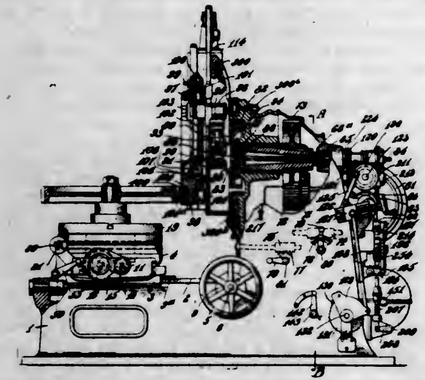
2. A device of the character described comprising a casing, a tubular member slidably mounted in said casing, and a sleeve secured to said casing and extending over the sliding surface of said tubular member to prevent the accumulation or discharge thereon of foreign material.



3. A device of the character described comprising a casing, a tubular member slidably mounted in said casing, an annular head on said tubular member, a sleeve secured to said casing and extending over such head to form a protective member in which the sliding surface of said tubular member is disposed, and stopping means formed on the free edge of said sleeve overhanging said head and extending into the path of movement of said head so that the outward movement of said tubular member is limited.

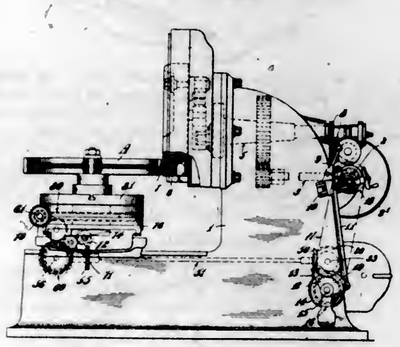
4. In combination with two sections of a pipe line, a casing attached to the end of one pipe section and recessed to receive packing and a packing gland and having holes to receive through-bolts for said gland, a tubular member on the other pipe section and slidably disposed in said casing, an annular head on said tubular member, a sleeve

secured to said casing and extending over said head, packing and a packing gland in said casing, and gland-bolts engaging said gland and extending through said holes in said casing and adapted to the adjustment of said gland, whereby a closed chamber is formed to protect the joint and whereby said gland may be adjusted without disturbance or disassembling of said other parts.



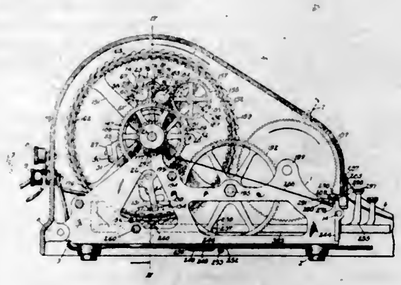
5. An expansion joint comprising a main body secured to one side of the pipe line provided with a recess for packing and a gland, an extension flange to attach a cylindrical sleeve and offsets bored to receive gland-bolts, packing, gland-bolts and a gland, a slidable pipe section secured to the other side of said pipe line externally machined and sliding within said main body, and a cylindrical sleeve rigidly secured to said main body, internally machined and taking over the flange of said slidable pipe section to form a closed chamber and support for the joint so formed.

14,907. SHEET-METAL-DOUBLING MACHINE. JOHN G. GRAHAM, Granite City, Ill. Filed Dec. 31, 1919. Serial No. 348,683. Original No. 1,252,270, dated Jan. 1, 1918, Serial No. 151,479, filed Feb. 28, 1917. 13 Claims. (Cl. 153—21.)



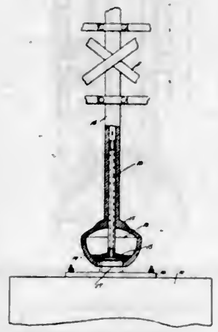
1. A sheet-metal doubling machine comprising, in combination, means including a member adapted for engagement with the sheet for folding the sheet upon itself, a second member adapted for engagement with the sheet for slidably moving the sheet, and means for effecting sheet-sliding movement of the second member during and approximately throughout folding-movement of the first member for bringing the ends of the folded sheet substantially in alinement at the end of the folding movement of the first member.

14,908. GEAR-CUTTING MACHINE. MAX MAAG, Zurich, Switzerland. Filed Dec. 22, 1919. Serial No. 346,790. Original No. 1,290,270, dated Jan. 7, 1919, Serial No. 115,469, filed Aug. 17, 1916. 44 Claims. (Cl. 90—9.)



1. In a gear cutting machine, a multiple tooth cutter of rack form, a reciprocable holder therefor, a blank carrier, means for rolling the blank past the cutter an integral number of pitches during the cutting operation, means for arresting the rolling of the blank at a predetermined point, and means for moving the blank back past the cutter a distance equal to the rectilinear travel of the beforementioned rolling movement.

14,909. GEAR-CUTTING MACHINE. MAX MAAG, Zurich, Switzerland. Filed Dec. 22, 1919. Serial No. 346,791. Original No. 1,270,183, dated June 18, 1918, Serial No. 112,714, filed Aug. 2, 1916. 14 Claims. (Cl. 90—9.)



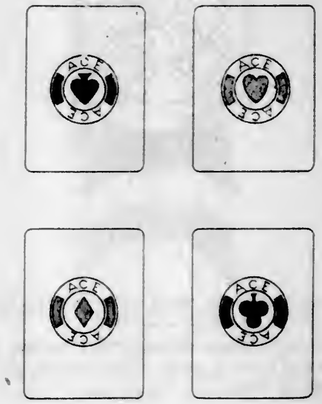
1. In a gear cutting machine working according to the rolling principle, in combination, a tool holder, a blank-carrier, means for moving the tool holder, and imparting to the blank-carrier a rotary movement and a longitudinal travel, said means comprising two separate drums for controlling the movements of the blank-carrier, and means actuated by one of said drums for influencing the movement of the other drum, substantially as described.

14,910. TELEGRAPH-TRANSMITTER. EDWIN H. PIERSEN, Topeka, Kans, assignor to The Piersen Telegraph Transmitter Company, Topeka, Kans., a Corporation of Kansas. Filed Feb. 9, 1917. Serial No. 147,709. Original No. 1,157,040, dated Oct. 19, 1915, Serial No. 737,239, filed Dec. 17, 1912. 239 Claims. (Cl. 178—17.5.)

5. The combination with a movable transmitting element comprising a character member and a positioning device, of a setting element comprising a series of movable setting dogs and means for setting the dogs in functional position, means for moving either of said elements to effect operative engagement of the setting dogs, and means for effecting operation of the character member following the setting operation.

14,911. INTERNAL-LOCK BAIT FOR DRAWING GLASS. JOHN R. SCOHY, Okmulgee, Okla. Filed May 6, 1920. Serial No. 379,396. Original No. 1,311,137, dated July 22, 1919, Serial No. 260,319, filed Oct. 30, 1918. 4 Claims. (Cl. 49—17.1.)

1. In a bait for glass drawing apparatus, a tubular portion having at one end a substantially semi-spherical bowl provided with an opening on the lower side thereof, a movable tubular member telescoping in said tubular portion and having a flange, the edge of the flange overlapping the edge of the opening and operating to be lifted when the bowl is inserted in the glass and to be lowered to form and engage a rim of glass above the outer edge of the flange.

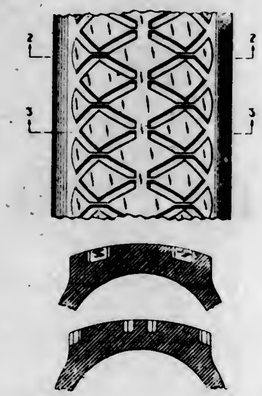


DESIGNS.

55,582. ARTICLE OF MANUFACTURE. HARRY T. ABOLIN, Woodridge, N. J., assignor to Witcombe, McGeachin & Co., New York, N. Y., a Partnership composed of H. A. Witcombe and George McGeachin. Filed May 7, 1920. Serial No. 379,675. Term of patent 7 years.

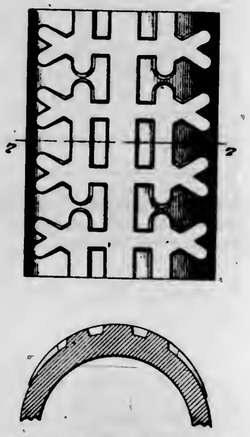
The ornamental design for an article of manufacture, substantially as shown and described.

55,583. PLAYING-CARD. ALFRED BACIGALUPI, San Francisco, Calif. Filed Feb. 12, 1920. Serial No. 358,150. Term of patent 14 years.



The ornamental design for a playing card as shown.

55,584. HELP-SELF COUNTER. WILLIAM J. BAILEY, Cleveland, Ohio. Filed Apr. 17, 1920. Serial No. 374,764. Term of patent 14 years.

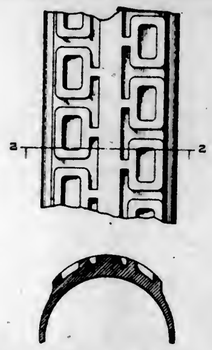


The design for a help self counter substantially as herein shown.

55,585. AUTOMOBILE-TIRE. GEORGE E. BATCHELLER, Forest Hills, N. Y. Filed Mar. 1, 1920. Serial No. 362,564. Term of patent 7 years.

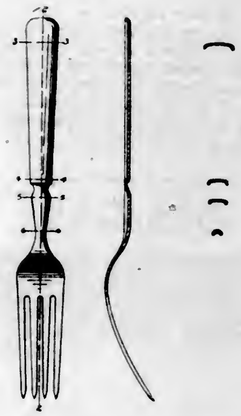
The ornamental design for an automobile tire, as shown.

55,586. TIRE-CASING. RUSSELL DEAN BELDEN, Marion, Ohio. Filed Mar. 10, 1920. Serial No. 364,753. Term of patent 14 years.



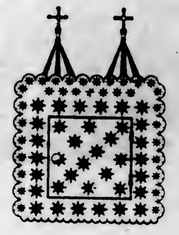
The ornamental design for a tire casing, as shown.

55,587. TOY BLOCK. ELIZABETH BRATTON, Columbus, Ohio. Filed Dec. 26, 1919. Serial No. 347,617. Term of patent 14 years.



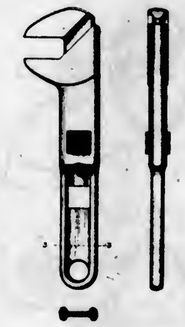
The ornamental design for a toy block, as shown.

55,588. TIRE-TREAD. WILLIAM O. BRUESS, Port Clinton, Ohio. Filed Feb. 2, 1920. Serial No. 355,775. Term of patent 3½ years.



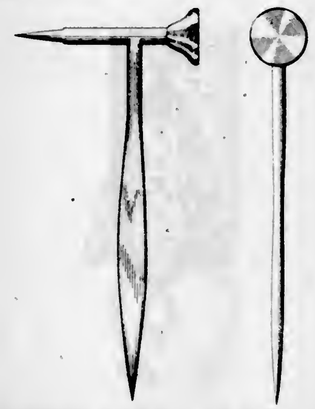
The ornamental design for a tire tread, substantially as shown.

55,589. FORK. FRANK E. BURCHFIELD, Derby, Conn., assignor to Shelton Tool & Machine Co., Shelton, Conn., a Corporation. Filed Nov. 14, 1919. Serial No. 338,122. Term of patent 7 years.



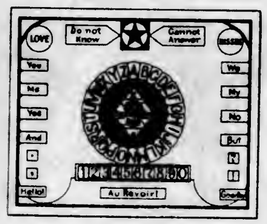
The ornamental design for a fork, as shown.

55,590. SACRAMENTAL SHRINE. SIMON BUSCAVAGE, Shenandoah, Pa. Filed Dec. 11, 1919. Serial No. 344,150. Term of patent 3½ years.



The ornamental design for a sacramental shrine as shown.

55,591. WRENCH. ADDISON B. CABLL, New York, N. Y., assignor to Practical Tools Company, New York, N. Y., a Corporation of New York. Filed Nov. 6, 1919. Serial No. 336,219. Term of patent 14 years.

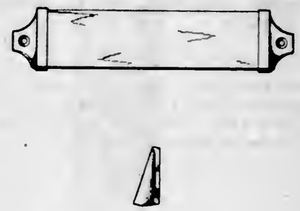


The ornamental design for a wrench, substantially as shown.

55,592. COMBINATION HAMMER, CAN-PUNCH, AND ICE-PICK. ALFRED H. CRAMPTON, Stockton, Calif. Filed Feb. 4, 1920. Serial No. 356,244. Term of patent 14 years.

The ornamental design for a combination hammer, can punch, and ice pick, as shown.

55,593. COMMUNICATION-BOARD. ALBERT S. CROCKETT, New York, N. Y. Filed Sept. 27, 1919. Serial No. 326,995. Term of patent 7 years.

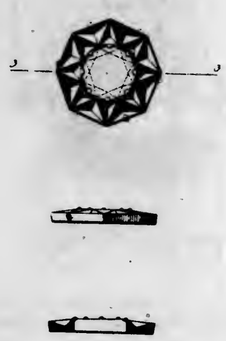


The ornamental design for a communication board, as shown.

55,594. DOLL. GRACE CORRY, New York, N. Y. Filed Mar. 29, 1920. Serial No. 369,756. Term of patent 3½ years.

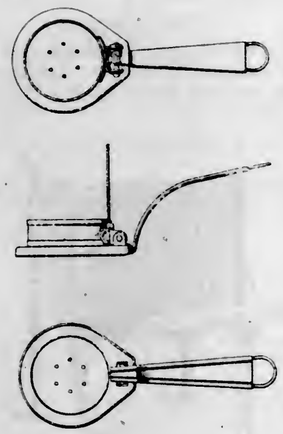
The ornamental design for a doll, as shown.

55,595. DRAWER-PULL. CLIFFORD A. CUTLER, Buffalo, N. Y. Filed Aug. 26, 1918. Serial No. 251,591. Term of patent 7 years.



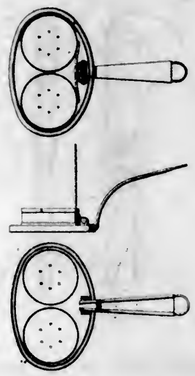
The ornamental design for a drawer pull, as shown.

55,596. PHONOGRAPHIC-DISK-RECORD CABINET. ERNEST HAYWARD FAIRBANKS, Merchantville, N. J. Filed May 14, 1920. Serial No. 381,477. Term of patent 14 years.



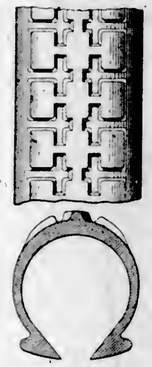
The ornamental design for a phonographic disk record cabinet, as shown.

55,597. PLATE FOR MOUNTING GEMS IN JEWELRY. FREDERICK H. FELGER, Newark, N. J., assignor to F. & F. Felger, Inc., Newark, N. J. Filed Mar. 16, 1920. Serial No. 366,421. Term of patent 7 years.



The ornamental design for a plate for mounting gems in jewelry, as shown.

55,598. EGG-POACHER. GUY W. FERDON, Cresskill, N. J., assignor to Silver & Co., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 27, 1920. Serial No. 377,119. Term of patent 14 years.

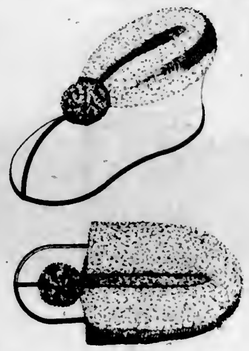


The ornamental design for an egg poacher, as shown.

55,599. EGG-POACHER. GUY W. FERDON, Cresskill, N. J., assignor to Silver & Co., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 27, 1920. Serial No. 377,120. Term of patent 14 years.

The ornamental design for an egg poacher, as shown.

55,600. TIRE. THOMAS FOLLEN, La Fayette, Ind. Filed Mar. 18, 1920. Serial No. 366,995. Term of patent 14 years.

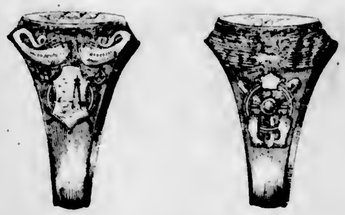


The ornamental design for a tire, as shown.

55,601. WEEDER. JOHN GILSON, Sr., Port Washington, Wis., assignor to J. E. Gilson Company, Port Washington, Wis., a Copartnership consisting of John Gilson, Sr., and John E. Gilson, Jr. Filed June 17, 1918. Serial No. 240,513. Term of patent 14 years.

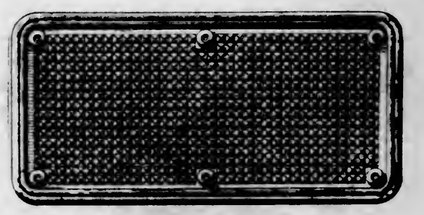
The ornamental design for a weeder, as shown.

55,602. SLIPPER. PIERRE E. GIROUX, Johnstown, N. Y. Filed Jan. 3, 1920. Serial No. 349,339. Term of patent 7 years.



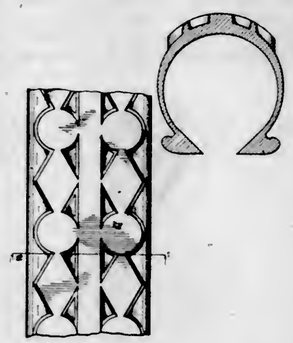
The ornamental design for a slipper, as shown.

55,603. BRACKET. JOSEPH GLASSBERG, New York, N. Y. Filed Jan. 16, 1920. Serial No. 351,954. Term of patent 14 years.



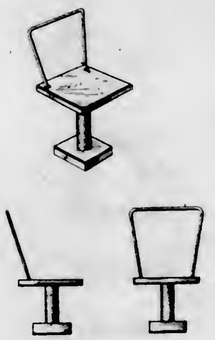
The ornamental design for a bracket substantially as shown.

55,604. RING. NICHOLAS GOROD, Brooklyn, N. Y., assignor to Aaron Elkonin, New York, N. Y. Filed Apr. 17, 1920. Serial No. 374,757. Term of patent 14 years.



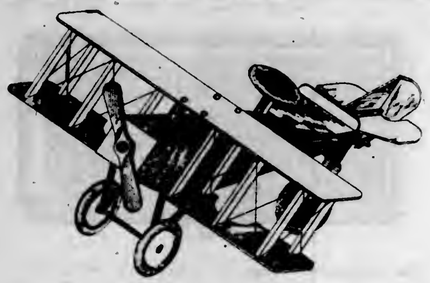
The ornamental design for a ring as shown.

55,605. STEP-PLATE. EDWARD E. GREEN, San Francisco, Calif. Filed Oct. 29, 1919. Serial No. 334,370. Term of patent 14 years.



The ornamental design for a step plate as shown.

55,606. TIRE. CHARLES W. GREENE, Toledo, Ohio, assignor to The Bowling Green Rubber Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 26, 1920. Serial No. 369,100. Term of patent 14 years.



The ornamental design for a tire as shown.

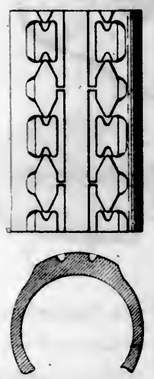
55,607. TOY CHAIR. MILFRED L. GREENSTREET, Maplewood, Mo., assignor, by mesne assignments, to Blocker Toy Manufacturing Company, Maplewood, Mo., a Corporation of Missouri. Filed Nov. 17, 1919. Serial No. 338,768. Term of patent 7 years.

The ornamental design for a toy chair, as shown.

55,608. PUSH AND COASTER CAR. ALBERT GRILL, Pittsburgh, Pa. Filed Jan. 10, 1920. Serial No. 350,706. Term of patent 14 years.

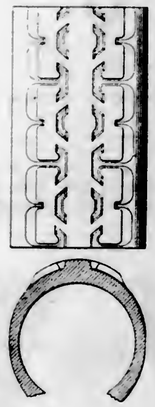
The ornamental design for a push and coaster car, substantially as shown and described.

55,609. JEWELRY—NAMELY, A RING-TOP, PENDANT, A PAIR OF CUFF-BUTTONS, PIN, OR ARTICLE OF SIMILAR NATURE. CASSRIEL J. GROSSMAN and SAMUEL M. GROSSMAN, Chicago, Ill.; said Samuel M. Grossman assignor, by mesne assignments, to S. M. Grossman & Co., a Corporation of Illinois. Filed Jan. 20, 1919. Serial No. 272,207. Term of patent 3½ years.



The ornamental design for jewelry, namely, a ring top, pendant, a pair of cuff buttons, pin or article of similar nature.

55,610. COVER FOR AN INKSTAND. HARRY HAUPT, Elmsford, N. Y., assignor to Kimpton, Haupt & Co., New York, N. Y., a Firm. Filed Feb. 21, 1919. Serial No. 278,528. Term of patent 14 years.



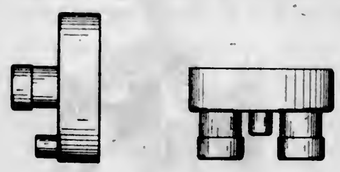
The ornamental design for a cover for an inkstand, as shown.

55,611. TIRE-TREAD. CHESTER O. HENDERSON, Columbus, Ohio, assignor to Henderson Tire & Rubber Corporation, Columbus, Ohio. Filed Mar. 25, 1920. Serial No. 368,757. Term of patent 7 years.

The ornamental design for a tire tread, substantially as shown.

55,612. TIRE-TREAD. CHESTER O. HENDERSON, Columbus, Ohio, assignor to Henderson Tire & Rubber Corporation, Columbus, Ohio. Filed Mar. 25, 1920. Serial No. 368,758. Term of patent 7 years.

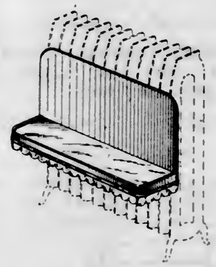
The ornamental design for a tire tread, substantially as shown.



55,613. PHONOGRAPHIC-RECORD-DISK CABINET. EMMETT M. HOWARD, High Point, N. C. Filed Feb. 13, 1920. Serial No. 358,402. Term of patent 14 years.

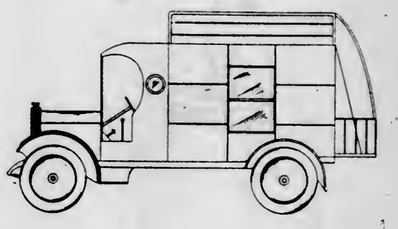
The ornamental design for a phonographic record disk cabinet, as shown.

55,614. SWITCH-CASING. ANSEL C. HULBERT, San Francisco, Calif. Filed Oct. 2, 1919. Serial No. 328,067. Term of patent 14 years.



The ornamental design for a switch casing substantially as shown.

55,615. RADIATOR-CAP ORNAMENT FOR AUTOMOBILES. SALOME C. JACKSON, New York, N. Y. Filed Apr. 2, 1919. Serial No. 287,082. Term of patent 3½ years.

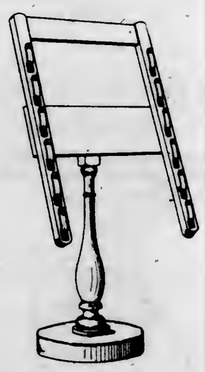


The ornamental design for a radiator cap ornament for automobiles as shown.

55,616. FOOT REST AND WARMER. JAMES G. JOHNSON, Chicago, Ill. Filed Jan. 21, 1920. Serial No. 353,090. Term of patent 3½ years.

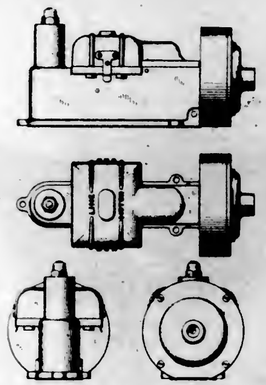
The ornamental design for a foot rest and warmer, as shown.

55,617. AUTOMOBILE-BODY. JOHN H. KAMMERER, Oakland, Calif. Filed Apr. 12, 1920. Serial No. 373,401. Term of patent 14 years.



The ornamental design for an automobile body, as shown.

55,618. WINDSHIELD. CLARENCE D. KELLER, Los Angeles, Calif. Filed Mar. 1, 1920. Serial No. 362,560. Term of patent 7 years.

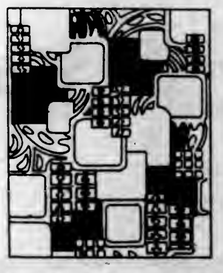


The ornamental design for a windshield, as shown.

55,619. BELT-DISPLAY STAND. WILLIAM C. KLEE, Rochester, N. Y. Filed Nov. 1, 1919. Serial No. 335,191. Term of patent 7 years.

The ornamental design for a belt display stand as shown.

55,620. CONTROLLER. GEORGE A. KNAAK, Milwaukee, Wis. Filed Nov. 28, 1919. Serial No. 341,310. Term of patent 14 years.

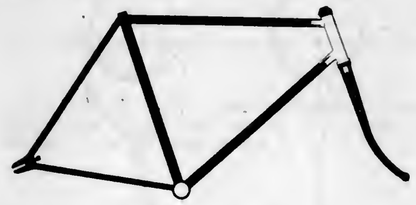


The ornamental design for a controller substantially as shown.

55,621. WREATH. LEOPOLD KOROPP and VICTOR F. BERGMAN, Chicago, Ill. Filed Feb. 4, 1920. Serial No. 356,243. Term of patent 3½ years.

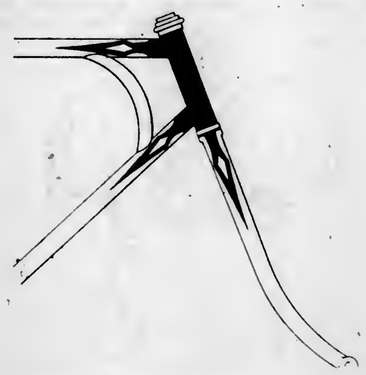
The ornamental design for a wreath as shown.

55,622. TEXTILE FABRIC. ELLA KRUPICKA, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed Mar. 24, 1920. Serial No. 368,423. Term of patent 3½ years.



The ornamental design for a textile fabric as shown.

55,623. TEXTILE FABRIC. CHRETIEN LOEGLER, Clifton, N. J., assignor to Monica Textile Corporation, a Corporation of New York. Filed Apr. 21, 1920. Serial No. 375,630. Term of patent 14 years.

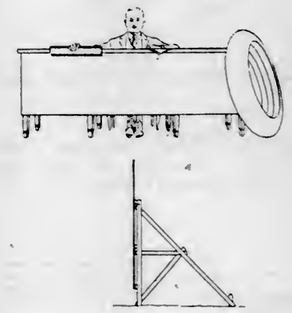


The ornamental design for a textile fabric, as shown.

55,624. BICYCLE-FRAME. EDWARD JULIUS LONN, Laporte, Ind., assignor to Great Western Manufacturing Company, Laporte, Ind., a Corporation of Indiana. Filed Oct. 23, 1919. Serial No. 332,838. Term of patent 14 years.

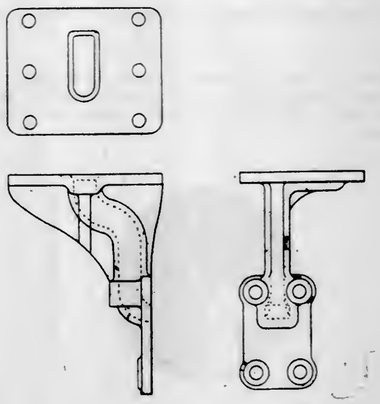
The ornamental design for a bicycle-frame, as shown.

55,625. BICYCLE-FRAME. EDWARD JULIUS LONN, Laporte, Ind., assignor to Great Western Manufacturing Co., Laporte, Ind., a Corporation of Indiana. Filed Jan. 29, 1920. Serial No. 354,940. Term of patent 14 years.



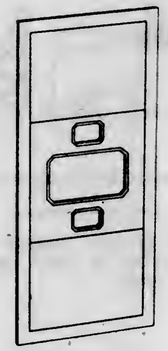
The ornamental design for a bicycle-frame, as shown.

55,626. BULLETIN-BOARD. HAROLD J. MAHIN, New York, N. Y. Filed Oct. 17, 1919. Serial No. 331,472. Term of patent 7 years.



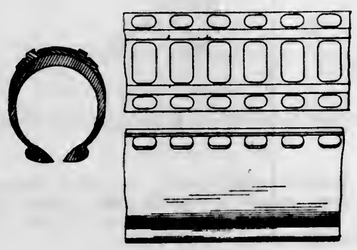
The ornamental design for a bulletin board, as shown.

55,627. BULLETIN-BOARD. HAROLD J. MAHIN, New York, N. Y. Filed Dec. 20, 1919. Serial No. 346,394. Term of patent 7 years.



The ornamental design for a bulletin board, as shown.

55,628. MANIFOLD-BRACKET. CHARLES E. MASON, Detroit, Mich., assignor to Grant Waldref, Ramsey county, Minn. Filed Oct. 28, 1919. Serial No. 334,084. Term of patent 14 years.



The ornamental design for a manifold bracket, as shown.

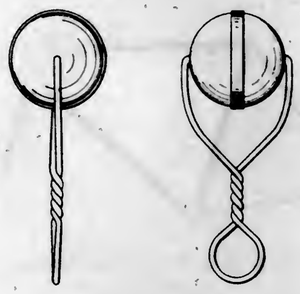
55,629. CALENDAR-MOUNTING. ANDREW J. MCDADE, New York, N. Y. Filed Sept. 24, 1919. Serial No. 326,086. Term of patent 14 years.

The ornamental design for a calendar mounting, as shown.

55,630. PNEUMATIC TIRE. RICHARDS P. MCELRATH, Lakewood, Ohio. Filed May 26, 1919. Serial No. 299,998. Term of patent 14 years.

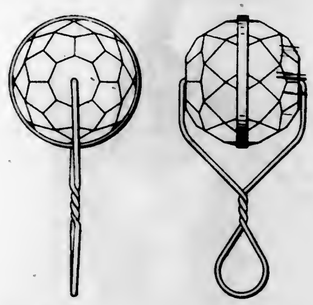
The ornamental design for a pneumatic tire, as shown.

55,631. GUIDE DEVICE. WARNER E. MCMULLAN and HENRY JAMES HICKEY, Fort Dodge, Iowa. Filed Mar. 20, 1920. Serial No. 367,492. Term of patent 14 years.



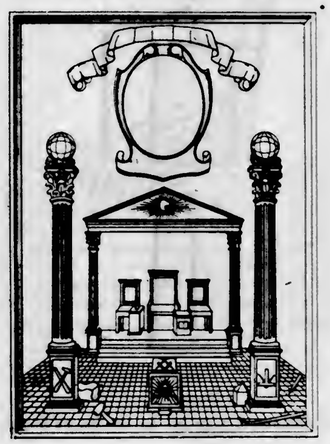
The ornamental design for a guide device, as shown.

55,632. COMBINED PAPER-WEIGHT AND MAGNIFYING-GLASS. PETER H. MEYER, Buffalo, N. Y. Filed Jan. 22, 1920. Serial No. 353,339. Term of patent 14 years.



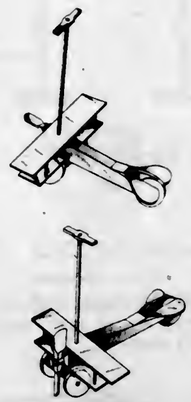
The ornamental design for a combined paper weight and magnifying glass, as shown.

55,633. RATTLE. FREDERICK C. MONKHOUSE, Rochester, N. Y. Filed Mar. 30, 1920. Serial No. 370,010. Term of patent 3½ years.



The ornamental design for a rattle as shown.

55,634. RATTLE. FREDERICK C. MONKHOUSE, Rochester, N. Y. Filed Mar. 30, 1920. Serial No. 370,012. Term of patent 3½ years.



The ornamental design for a rattle as shown.

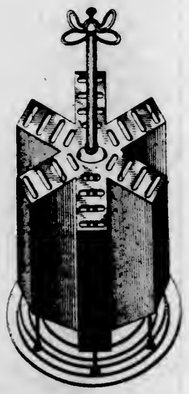
55,635. PICTURE-FRAME. PETER MOREA, Woodside, N. Y. Filed Mar. 10, 1920. Serial No. 364,750. Term of patent 14 years.

The ornamental design for a picture frame as shown.

55,636. AEROPLANE-COASTER. ERASTUS G. MOORE, Long Beach, Calif. Filed Dec. 11, 1919. Serial No. 344,152. Term of patent 7 years.

The ornamental design for an aeroplane coaster, as shown.

55,637. SPOOL-HOLDER. PAUL OTTO MUELLER, Brooklyn, N. Y., assignor of one-half to William C. Mueller, Brooklyn, N. Y. Filed July 23, 1919. Serial No. 312,841. Term of patent 7 years.

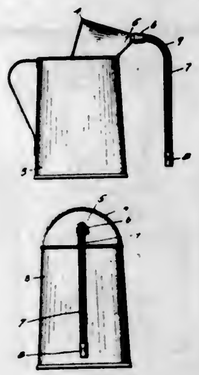


The design for a spool holder substantially as shown and described.

55,638. DRESS. JOSEPH NEMSER, New York, N. Y. Filed Jan. 6, 1920. Serial No. 349,821. Term of patent 3½ years.

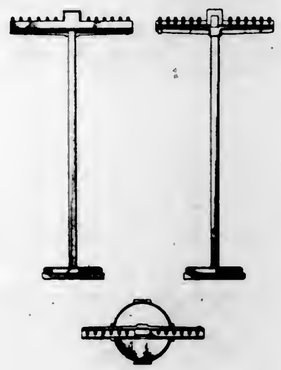
The ornamental design for a dress as shown.

55,639. DINING-CUTLERY HOLDER. ANDREW ONUFRYK, Rochester, N. Y. Filed Mar. 12, 1920. Serial No. 365,323. Term of patent 7 years.



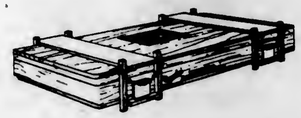
The ornamental design for a dining cutlery holder as shown.

55,640. DOLL. ADELAIDE M. PORTER, Greenwich, Conn., assignor to Huyler's Inc., New York, N. Y., a Corporation of New York. Filed Mar. 5, 1920. Serial No. 363,571. Term of patent 7 years.



The ornamental design for a doll substantially as shown.

55,641. OIL-CAN. STEPHEN C. PRICE, Louisiana, Mo., assignor, by direct and mesne assignments, to P. R. B. Pump Company, Hannibal, Mo., a Corporation of Missouri. Filed Jan. 2, 1920. Serial No. 349,036. Term of patent 14 years.

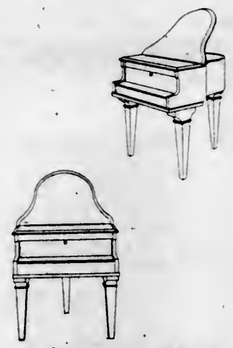


The ornamental design for an oil can as shown and described.

55,642. DISPLAY-STAND. ANTHONY PRINI, Brooklyn, N. Y. Filed Apr. 26, 1920. Serial No. 376,877. Term of patent 3½ years.

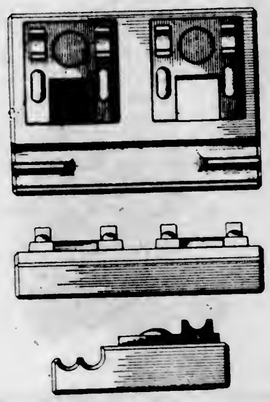
The ornamental design for a display stand, as shown.

55,643. CANDY-BOX. ERASMUS COLLINS QUINBY, Los Angeles, Calif. Filed Feb. 16, 1920. Serial No. 359,183. Term of patent 14 years.



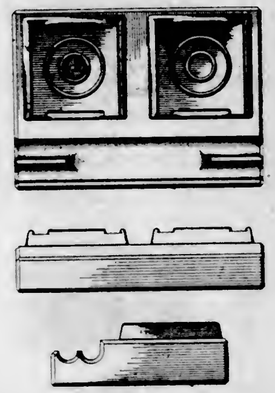
The ornamental design for a candy box, as shown.

55,644. GOLF-CLUB. WILLIAM F. REACH, Springfield, Mass., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Mar. 27, 1920. Serial No. 369,447. Term of patent 7 years.



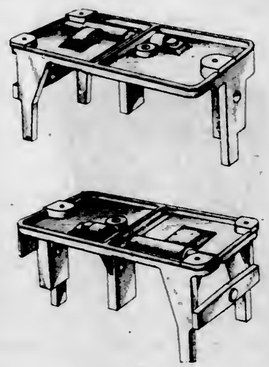
The ornamental design for a golf club, as shown.

55,645. CASING FOR A SOUND-PRODUCING INSTRUMENT. MAX RICHTSTEIG, Cincinnati, Ohio. Filed Mar. 25, 1920. Serial No. 368,755. Term of patent 14 years.



The ornamental design for a casing for a sound-producing instrument, as shown.

55,646. INKSTAND. JAMES T. RILEY, Brooklyn, N. Y., assignor to Kimpton, Haupt & Co., New York, N. Y., a Firm composed of Charles F. Kimpton, Harry Haupt, and Elizabeth H. Harbottle. Filed Jan. 19, 1920. Serial No. 352,628. Term of patent 14 years.

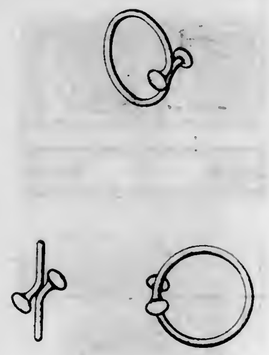


The ornamental design for an inkstand, as shown.

55,647. INKSTAND. JAMES T. RILEY, Brooklyn, N. Y., assignor to Kimpton, Haupt & Co., New York, N. Y., a Firm composed of Charles F. Kimpton, Harry Haupt, and Elizabeth H. Harbottle. Filed Jan. 19, 1920. Serial No. 352,629. Term of patent 14 years.

The ornamental design for an inkstand, as shown.

55,648. MOUNTING-FRAME FOR SPRING-MOTORS. HENRY G. SAAL, Chicago, Ill. Filed Nov. 17, 1919. Serial No. 338,767. Term of patent 14 years.

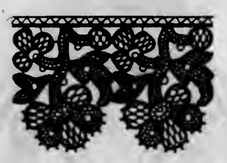


The ornamental design for a mounting frame for spring motors, as shown.

55,649. EMBLEM, MEDAL, BADGE, INSIGNIA, OR AN ARTICLE OF A SIMILAR NATURE. MYRON D. SALISBURY, East Orange, N. J., assignor to Edison Storage Battery Company, West Orange, N. J., a Corporation of New Jersey. Filed Apr. 24, 1920. Serial No. 376,420. Term of patent 14 years.

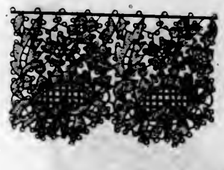
The ornamental design for an emblem, medal, badge, insignia, or an article of a similar nature as shown.

55,650. RING. LUCIAN W. SANBORN, Framingham, Mass. Filed June 25, 1919. Serial No. 306,744. Term of patent 7 years.



The ornamental design for a ring, as shown.

55,651. LACE AND EMBROIDERY. WERNER SCHMID, Brooklyn, N. Y., assignor to National Lace & Embroidery Company, New York, N. Y., a Corporation of New York. Filed Jan. 17, 1920. Serial No. 352,215. Term of patent 3½ years.



The ornamental design for lace and embroidery, as shown.

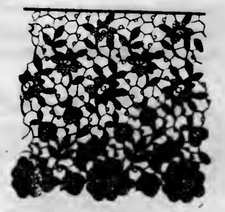
55,652. LACE AND EMBROIDERY. WERNER SCHMID, Brooklyn, N. Y., assignor to National Lace & Embroidery Company, New York, N. Y., a Corporation of New York. Filed Jan. 17, 1920. Serial No. 352,216. Term of patent 3½ years.

The ornamental design for lace and embroidery, as shown.

55,653. LACE AND EMBROIDERY. WERNER SCHMID, Brooklyn, N. Y., assignor to National Lace & Embroidery Company, New York, N. Y., a Corporation of New York. Filed Jan. 17, 1920. Serial No. 352,217. Term of patent 3½ years.

The ornamental design for lace and embroidery, as shown.

55,654. LACE AND EMBROIDERY. WERNER SCHMID, Brooklyn, N. Y., assignor to National Lace & Embroidery Company, New York, N. Y., a Corporation of New York. Filed Jan. 24, 1920. Serial No. 353,881. Term of patent 3½ years.

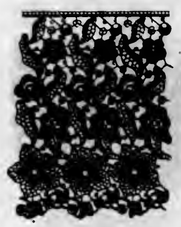


The ornamental design for lace and embroidery, as shown.

55,655. LACE AND EMBROIDERY. WERNER SCHMID, Brooklyn, N. Y., assignor to National Lace & Embroidery Company, New York, N. Y., a Corporation of New York. Filed Jan. 24, 1920. Serial No. 353,882. Term of patent 3½ years.

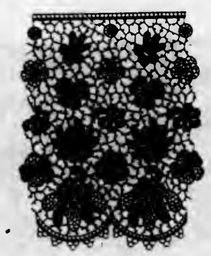
The ornamental design for lace and embroidery, as shown.

55,656. LACE AND EMBBROIDERY. WERNER SCHMID, Brooklyn, N. Y., assignor to National Lace & Embroidery Company, New York, N. Y., a Corporation of New York. Filed Jan. 24, 1920. Serial No. 353,883. Term of patent 3½ years.



The ornamental design for lace and embroidery, as shown.

55,657. LACE AND EMBROIDERY. WERNER SCHMID, Brooklyn, N. Y., assignor to National Lace & Embroidery Company, New York, N. Y., a Corporation of New York. Filed Jan. 24, 1920. Serial No. 353,884. Term of patent 3½ years.

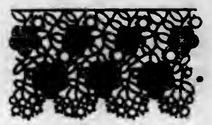


The ornamental design for lace and embroidery, as shown.

55,658. LACE AND EMBROIDERY. WERNER SCHMID, Brooklyn, N. Y., assignor to National Lace & Embroidery Company, New York, N. Y., a Corporation of New York. Filed Jan. 24, 1920. Serial No. 353,885. Term of patent 3½ years.

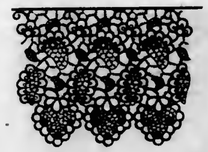
The ornamental design for lace and embroidery, as shown.

55,659. LACE AND EMBROIDERY. WERNER SCHMID, Brooklyn, N. Y., assignor to National Lace & Embroidery Company, New York, N. Y., a Corporation of New York. Filed Jan. 24, 1920. Serial No. 353,886. Term of patent 3½ years.



The ornamental design for lace and embroidery, as shown.

55,660. LACE AND EMBROIDERY. WERNER SCHMID, Brooklyn, N. Y., assignor to National Lace & Embroidery Company, New York, N. Y., a Corporation of New York. Filed Jan. 30, 1920. Serial No. 355,179. Term of patent 3½ years.

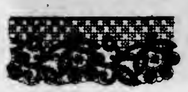


The ornamental design for lace and embroidery, as shown.

55,661. LACE AND EMBROIDERY. WERNER SCHMID, Brooklyn, N. Y., assignor to National Lace & Embroidery Company, New York, N. Y., a Corporation of New York. Filed Jan. 30, 1920. Serial No. 355,180. Term of patent 3½ years.

The ornamental design for lace and embroidery, as shown.

55,662. LACE AND EMBROIDERY. WERNER SCHMID, Brooklyn, N. Y., assignor to National Lace & Embroidery Company, New York, N. Y., a Corporation of New York. Filed Jan. 30, 1920. Serial No. 355,181. Term of patent 3½ years.

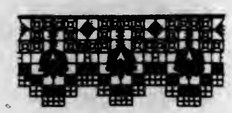


The ornamental design for lace and embroidery, as shown.

55,663. LACE AND EMBROIDERY. WERNER SCHMID, Brooklyn, N. Y., assignor to National Lace & Embroidery Company, New York, N. Y., a Corporation of New York. Filed Jan. 30, 1920. Serial No. 355,182. Term of patent 3½ years.

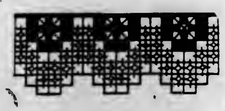
The ornamental design for lace and embroidery, as shown.

55,664. LACE AND EMBROIDERY. WERNER SCHMID, Brooklyn, N. Y., assignor to National Lace & Embroidery Company, New York, N. Y., a Corporation of New York. Filed Jan. 30, 1920. Serial No. 355,183. Term of patent 3½ years.



The ornamental design for lace and embroidery, as shown.

55,665. LACE AND EMBROIDERY. WERNER SCHMID, Brooklyn, N. Y., assignor to National Lace & Embroidery Company, New York, N. Y., a Corporation of New York. Filed Jan. 30, 1920. Serial No. 355,184. Term of patent 3½ years.



The ornamental design for lace and embroidery, as shown.

55,666. LACE AND EMBROIDERY. WERNER SCHMID, Brooklyn, N. Y., assignor to National Lace & Embroidery Company, New York, N. Y., a Corporation of New York. Filed Jan. 30, 1920. Serial No. 355,185. Term of patent 3½ years.

The ornamental design for lace and embroidery, as shown.

55,667. LACE AND EMBROIDERY. WERNER SCHMID, Brooklyn, N. Y., assignor to National Lace & Embroidery Company, New York, N. Y., a Corporation of New York. Filed Jan. 30, 1920. Serial No. 355,186. Term of patent 3½ years.

The ornamental design for lace and embroidery, as shown.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

EX PARTE DUNCAN.

Decided November 30, 1918. Petition for rehearing, decided January 8, 1919.

1. PATENTS—CLAIMS—AGGREGATION—RECORD-TAPE.

Claims for a record-tape for guidance in running a train provided with a standard-speed line and a maximum-allowable-speed line and perforations *Held* not objectionable as aggregations, as they enable the engineer to so regulate his speed as to keep an indicator between the two lines and so indicate at a glance that his instant speed is between the normal and maximum.

2. SAME—SAME—DUPLICATE OR REDUNDANT—INDEFINITENESS.

Where an applicant defines the same invention in numerous ways, he not only fails to secure his invention, but he fails to comply with the provision of the law that "he shall particularly point out and distinctly claim the part, improvement * * * which is his invention," and the claims are therefore indefinite. If an applicant writes two claims which define the same invention, then by that very fact he fails to point out his invention.

3. SAME—SAME—SAME—REJECTION FOR DUPLICATION AND INDEFINITENESS.

Duplication of claims invariably leads to indefiniteness, and an entire set of claims should be rejected as indistinct whenever by reason of duplication it is made uncertain what the invention is. The different claims must be on their face obviously different in substance.

4. SAME—SAME—INDEFINITENESS.

Claims which are confused by reciting numerous unnecessary limitations and using indefinite terms, making things appear of essence which are not of essence, are indefinite.

ON PETITION for rehearing.

5. PATENTS—CLAIMS—DUTY OF APPLICANT TO POINT OUT DISTINCTIONS.

Where an applicant presents a multiplicity of claims to define a simple invention and many are substantial duplicates of others, it is applicant's duty rather than that of the Examiner to point out how each claim patentably differs from every other one.

6. SAME—APPEAL TO COMMISSIONER—REVIEW NOT RESTRICTED TO QUESTIONS PUT IN ASSIGNMENT OF ERRORS.

On appeal to the Commissioner he is not bound to decide merely the specific questions put to him by the assignments of error, because it is his duty to refuse a patent whenever he has an opinion that the patent ought not to be granted, and it is immaterial how he gets the information upon which he bases his opinion.

(Affirmed by the Court of Appeals, District of Columbia, 276 O. G., 211.)

APPEAL from Examiners-in-Chief.

SPEED AND DISTANCE INDICATOR RECORD.

Mr. Harry L. Duncan pro se.

CLAY, *Assistant Commissioner:*

The applicant appeals from the affirmance by the Examiners-in-Chief of a rejection of claims 1 to 12, inclusive, and 16, 18, and 21, drawn to a form of record-tape for guidance in running a train, for example. The rejection was on the ground that the claims define aggregations, both tribunals below apparently assuming that the invention is new and patentable. Examples of claims are as follows:

1. The distance feed combined tape record, adapted to coöperate with the distance feed device of a speed or distance indicator or recorder, and having thereon time scale, speed scale, distance scale and route indications, and having a standard speed schedule and a coöperating maximum speed schedule adapted to indicate the maximum allowable speed for the various parts of the route in connection with an actual speed marking indicating the corresponding actual momentary speed of the vehicle, and having oscillatory distance schedule adapted to coöperate with an actual distance marking and indicate the relation of the actual distance traveled by the vehicle to the scheduled distance for the same time, and having perforated alining devices at regularly spaced distance intervals and adapted to periodically control the feeding of the record and aline the same in connection with alining devices actuated by correspondingly spaced route members along the route of the vehicle.

20. The record, adapted to coöperate with a speed or distance indicator or recorder, and having thereon a maximum speed schedule adapted to indicate the maximum allowable speed for the various parts of the route.

21. The record, adapted to coöperate with a speed or distance indicator or recorder, and having thereon a standard speed schedule and a coöperating maximum speed schedule adapted to indicate the maximum allowable speed for the various parts of the route.

In the applicant's divisional application, Serial No. 137,446, which is simultaneously up on appeal, the applicant has set forth more fully an apparatus for the guidance of a locomotive operator in running a train. Substantially he provides a continuous recorder of the speed and distance, and the records being made upon a moving paper in the form of a tape or a disk. This recording-paper is provided with guiding data, so that the engineer may know his position and condition with respect to prearranged schedule. In this case the applicant is claiming the paper record itself, it being provided with a line showing the normal or standard speed and the distance from one station to another, and also another line showing the maximum allowable speed. Various markings to show tunnels, curves, and stations along the track are provided, and the paper record also has a series of perforations, which engage mechanism at intervals to stop the normal feed of the paper record until the motion of the train causes a readjustment of the ideal and actual rec-

ords being made. This is accomplished by running the paper record normally at a slightly excessive rate, so that the actual record being made tends to run ahead of the ideal or standard, and then the speed of the tape is checked at intervals to readjust so that the actual and the ideal are brought to coincide. What he is claiming is the paper record itself, with the various markings thereon.

I am unable to agree with the Examiners-in-Chief or the Examiner on the question of aggregation. It seems to me perfectly plain that the tape represented in Figure 1, having the standard-speed line 52 and the maximum-speed line 53 and the perforations 80, is thus defined by features which clearly coöperate with the actual-speed indicator 40. The engineer has only to so regulate his speed as to keep the indicator 40 between the lines 51 and 53 in order to know that he is running his train between the standard speed and the maximum allowable speed. The lines 52 and 53 as clearly coöperate in function as the two blades of a pair of shears, and as plainly the perforations 80 coöperate with these record-lines, because they are the means by which the record-lines are kept in the proper relation to the actual position of the indicator 40. Conceding that the line 52, which shows the standard speed, performs exactly the same function when it is on the tape by itself as it does when it is on a tape together with a maximum-allowable-speed line 53, it nevertheless in the latter case coöperates with the line 53, because it is the two lines together that show the engineer at a glance that his instant speed is between the normal and the maximum. Without the maximum-line 53 the engineer certainly could know whether he was running above or below the normal; but he could not know at a glance how much below or above the normal nor what relation his excess of speed was to the limit of excessive speed.

I think in this case, as I have also remarked in my decision of even date in the other case, the applicant has confused the issues by reason of indefiniteness of claim, caused both by indistinct language and by duplicating claims. When a simple invention is claimed over and over in mere variations of language, the necessary result is to confuse and to fail to point out the invention as the statute requires. The sole and clear meaning of the word "definite" is the state of standing out clearly and alone, different, and separated from other things. If one points out the same thing twice, he does not point out that thing distinctly. The very fact that the same structure is claimed twice renders the set of claims indistinct, because there is no justification in a patent for two claims to the same thing, and when the reader finds two claims he necessarily looks for them to be drawn to different things. The applicant has a simple invention which could not possibly be defined in more than ten or a dozen claims without repetition. He has a tape with (1) a normal-speed curve, with (2) a maximum-allowable-speed curve, with (3) speed-correction perforations, with (4) an actual-speed record, with (5) a normal-distance record, with (6) an actual-distance record. These six features are all the features there are to the tape, and it is impossible to work out of this structure in definitions as many as twenty inventions, as the applicant has done.

Again, he has confused his claims, as in claim 1 above, by reciting numerous unnecessary limitations and using indefinite terms, making things appear of essence which are not of essence. To mention only a few in claim 1, it is not material whether the record is a tape or disk. If the record is a distance-record, it must of necessity have a distance-scale. If there is a coöperating maximum-speed schedule, this must inevitably indicate the maximum allowable speed for various points of the route in connection with the actual-speed marking. This speed-marking must necessarily indicate the actual momentary speed. The applicant has left out any positive statement that there is an actual-speed record, but has made all sorts of intimations about its presence. And, again, if there is a coöperating distance-marking it must inevitably indicate the relation of the actual distance to the scheduled distance for the same time. The claim contains a description of an invention, but it obscures rather than distinguishes it. This claim would cover exactly the same structure if it were worded as follows:

> A continuous record adapted to coöperate with speed and distance indicators, provided with time and speed scales, a standard-speed-schedule line, a maximum-allowable-speed-schedule line, and having also alining perforations at intervals, adapted to coöperate with a feed control for the record and at intervals reset the record to correspond with the actual movements of a vehicle on which the record is used.

The Examiner was right in rejecting the applicant's claims 1, 2, 3, 7, 11, 12, etc., as aggregations if he must assume that all the verbiage describes structure; but the fact is that the claim is merely indistinct, including immaterial things, repetitions of language, and indefinite expressions. The most emphatic and important requirement of the patent law is that the patentee shall distinctly point out his invention. He has no right to a patent which contains any claim or set of claims which for any reason fail to do this thing. Duplicating claims invariably brings this about, and an entire set of claims should be rejected as indistinct whenever by reason of duplication it is made uncertain to the reader what the invention is. The different claims must be on their face obviously different in substance.

The claims in this case are all rejected because, taken as a whole, they fail to point out the invention; but the applicant has an invention and is entitled to a reasonable number of claiming-clauses covering it, and upon revision of the claims as herein suggested the patent will be allowed.

The decision of the Examiners-in-Chief is reversed in the holding that the claims cover aggregations by including the several features of the paper record. The case is returned to the Primary Examiner with directions to admit a proper amendment within thirty days hereof containing a small set of claims each of which is clearly distinguished from every

other in a patentable sense. The present claims 14, 17, 20, and 21, for example, are allowable.

ON PETITION for rehearing.

CLAY, *Assistant Commissioner:*

By petition for rehearing the applicant insists that my decision of November 30 herein went farther than the assignments of error called for, and, moreover, that in deciding certain points not raised and argued by the applicant on appeal I have fallen into error on the merits of the case. Notwithstanding the petitioner's full and careful brief I see no occasion for a rehearing; but it is apparently opportune to treat the merits more fully and to call more particular attention to the necessity of the Commissioner's discretion to review the whole case before him, especially for the purpose of insisting upon applications for patent fulfilling the requirement that they distinctly point out the invention.

The Examiners-in-Chief discovered no aggregation in claims 13, 14, 15, 17, 19, 20, and thereupon said that "in their opinion these claims should be allowed;" but otherwise they agreed with the Primary Examiner. The essence of my decision was that while several other claims also were erroneously held to be for aggregations and, so far as that ground alone was concerned, should be allowed, yet as to all the claims they should be rejected for another reason. That other reason was explained rather fully, and it was concluded that—

> the several claims must be on their face obviously different in substance.

I did not then consider it necessary to say that the Examiners-in-Chief had overlooked or not discussed a fault in the claim which is probably worse than aggregation.

The Examiners-in-Chief allowed, for example, claims 19 and 20, which as a matter of fact are two claims to identically the same substantial thing and by their very presence together interfere with the pointing out of the invention. These claims are worded as follows:

> 20. The record, adapted to coöperate with a speed or distance indicator or recorder, and having thereon a maximum speed schedule adapted to indicate the maximum allowable speed for the various parts of the route.
>
> 19. The (distance feed) record, adapted to coöperate with (the distance feed device of) a speed or distance indicator or recorder, and having thereon a maximum speed schedule adapted to indicate the maximum allowable speed for the various parts of the route.

The only difference is in the words in brackets.

Claim 20 covers simply a speed-record having a maximum speed line thereon. Claim 19 describes this record as a "distance feed" record, which apparently means nothing, but is in any case a mere name and not an element of the claim, and, further, instead of saying that the record is to coöperate with a recorder, as in claim 20, it specifies that it is to coöperate "with the distance feed device of" a recorder, which expression, if it defines anything at all, defines the only thing in a recorder with which the record in claim 20 could coöperate. The thing claimed is the same. No one could infringe one of these claims and not infringe the other. Yet they pretend to claim different things.

I did not consider it necessary to point out specifically which of the claims were duplicates, since the crux of the decision was that the pointing out of essential differences was the applicant's duty. In effect, the applicant insists upon the right to have a patent with several claims to the same thing. As a matter of fact the twenty-one claims in the case had been previously carefully analyzed and found to contain many duplicates, as is obvious from a mere reading of them. Claim 17 covers nothing whatever except the tape with a maximum-speed marking, in substance the same as claims 19 and 20 above. Moreover it differs from claim 18 in just the same point as 20 differs from 21. The same features cannot be patented over and over again.

Claims 13 and 15 differ only in the single word "perforated" occurring before the term "alining devices" in claim 15. Since there is no suggestion of any possible form of alining devices other than a perforation in the tape, it is not invention to make the alining device in the most obvious way. Claim 11 differs from claim 12 only in specifying that the record is a "tape" record and that the alining devices are perforations at regular intervals. Putting the record on the tape is not part of the invention, and as to the alining devices they must be assumed in claim 12 to be regularly spaced to operate at all. Even the long detailed claims 1 and 2, which are the narrowest claims, differ in nothing except that claim 2 omits to say that the distance-schedule is "oscillatory" and that the alining device is a perforation at regular intervals. This is not material. In the first place there is nothing to suggest that the actual distance-marking itself is to oscillate, without which there would be no function in the schedule-line being oscillatory. If the limitation is material in claim 1, then claim 2 is incomplete and when completed would be the same as claim 1. Similarly the alining devices of claim 2 must be assumed to be perforations, as specified in claim 1, or their pure equivalents, since no possibility of anything else is suggested. Beyond this if the structure defined in claim 2 were patented there would be no room for an additional invention based on the slight differences claim 2 recites over the structure recited in claim 1. Meanwhile the two claims pretend to set forth substantially different inventions.

The applicant undertakes by analysis to say that claim 1 includes essential features not included in the claim proposed in my prior decision; but as a matter of fact the distance-scale is included in the time-scale or else the time-scale is included in the distance-scale, while it is immaterial that the distance-schedule is oscillatory or even that it is present at all, because the tape itself is a distance-schedule. "Route indications" mean nothing. Several of the claims (as claim 15) seem to include in this term the speed-schedule, etc. The applicant has played extensively upon the terms "speed," "time," and "distance," as if he ignored the fact that there can be no speed-scale or speed-schedule without involving both a time and distance scale or schedule. Speed is merely the relation between time and dis-

ords being made. This is accomplished by running the paper record normally at a slightly excessive rate, so that the actual record being made tends to run ahead of the ideal or standard, and then the speed of the tape is checked at intervals to readjust so that the actual and the ideal are brought to coincide. What he is claiming is the paper record itself, with the various markings thereon.

I am unable to agree with the Examiners-in-Chief or the Examiner on the question of aggregation. It seems to me perfectly plain that the tape represented in Figure 1, having the standard-speed line 52 and the maximum-speed line 53 and the perforations 80, is thus defined by features which clearly coöperate with the actual-speed indicator 40. The engineer has only to so regulate his speed as to keep the indicator 40 between the lines 51 and 53 in order to know that he is running his train between the standard speed and the maximum allowable speed. The lines 52 and 53 as clearly coöperate in function as the two blades of a pair of shears, and as plainly the perforations 80 coöperate with these record-lines, because they are the means by which the record-lines are kept in the proper relation to the actual position of the indicator 40. Conceding that the line 52, which shows the standard speed, performs exactly the same function when it is on the tape by itself as it does when it is on a tape together with a maximum-allowable-speed line 53, it nevertheless in the latter case coöperates with the line 53, because it is the two lines together that show the engineer at a glance that his instant speed is between the normal and the maximum. Without the maximum-line 53 the engineer certainly could know whether he was running above or below the normal; but he could not know at a glance how much below or above the normal nor what relation his excess of speed was to the limit of excessive speed.

I think in this case, as I have also remarked in my decision of even date in the other case, the applicant has confused the issues by reason of indefiniteness of claim, caused both by indistinct language and by duplicating claims. When a simple invention is claimed over and over in mere variations of language, the necessary result is to confuse and to fail to point out the invention as the statute requires. The sole and clear meaning of the word "definite" is the state of standing out clearly and alone, different, and separated from other things. If one points out the same thing twice, he does not point out that thing distinctly. The very fact that the same structure is claimed twice renders the set of claims indistinct, because there is no justification in a patent for two claims to the same thing, and when the reader finds two claims he necessarily looks for them to be drawn to different things. The applicant has a simple invention which could not possibly be defined in more than ten or a dozen claims without repetition. He has a tape with (1) a normal-speed curve, with (2) a maximum-allowable-speed curve, with (3) speed-correction perforations, with (4) an actual-speed record, with (5) a normal-distance record, with (6) an actual-distance record. These six features are all the features there are to the tape, and it is impossible to work out of this structure in definitions as many as twenty inventions, as the applicant has done.

Again, he has confused his claims, as in claim 1 above, by reciting numerous unnecessary limitations and using indefinite terms, making things appear of essence which are not of essence. To mention only a few in claim 1, it is not material whether the record is a tape or disk. If the record is a distance-record, it must of necessity have a distance-scale. If there is a coöperating maximum-speed schedule, this must inevitably indicate the maximum allowable speed for various points of the route in connection with the actual-speed marking. This speed-marking must necessarily indicate the actual momentary speed. The applicant has left out any positive statement that there is an actual-speed record, but has made all sorts of intimations about its presence. And, again, if there is a coöperating distance-marking it must inevitably indicate the relation of the actual distance to the scheduled distance for the same time. The claim contains a description of an invention, but it obscures rather than distinguishes it. This claim would cover exactly the same structure if it were worded as follows:

> A continuous record adapted to coöperate with speed and distance indicators, provided with time and speed scales, a standard-speed-schedule line, a maximum-allowable-speed-schedule line, and having also alining perforations at intervals, adapted to coöperate with a feed control for the record and at intervals reset the record to correspond with the actual movements of a vehicle on which the record is used.

The Examiner was right in rejecting the applicant's claims 1, 2, 3, 7, 11, 12, etc., as aggregations if he must assume that all the verbiage describes structure; but the fact is that the claim is merely indistinct, including immaterial things, repetitions of language, and indefinite expressions. The most emphatic and important requirement of the patent law is that the patentee shall distinctly point out his invention. He has no right to a patent which contains any claim or set of claims which for any reason fail to do this thing. Duplicating claims invariably brings this about, and an entire set of claims should be rejected as indistinct whenever by reason of duplication it is made uncertain to the reader what the invention is. The different claims must be on their face obviously different in substance.

The claims in this case are all rejected because, taken as a whole, they fail to point out the invention; but the applicant has an invention and is entitled to a reasonable number of claiming-clauses covering it, and upon revision of the claims as herein suggested the patent will be allowed.

The decision of the Examiners-in-Chief is reversed in the holding that the claims cover aggregations by including the several features of the paper record. The case is returned to the Primary Examiner with directions to admit a proper amendment within thirty days hereof containing a small set of claims each of which is clearly distinguished from every other in a patentable sense. The present claims 14, 17, 20, and 21, for example, are allowable.

ON PETITION for rehearing.

CLAY, *Assistant Commissioner:*

By petition for rehearing the applicant insists that my decision of November 30 herein went farther than the assignments of error called for, and, moreover, that in deciding certain points not raised and argued by the applicant on appeal I have fallen into error on the merits of the case. Notwithstanding the petitioner's full and careful brief I see no occasion for a rehearing; but it is apparently opportune to treat the merits more fully and to call more particular attention to the necessity of the Commissioner's discretion to review the whole case before him, especially for the purpose of insisting upon applications for patent fulfilling the requirement that they distinctly point out the invention.

The Examiners-in-Chief discovered no aggregation in claims 13, 14, 15, 17, 19, 20, and thereupon said that "in their opinion these claims should be allowed;" but otherwise they agreed with the Primary Examiner. The essence of my decision was that while several other claims also were erroneously held to be for aggregations and, so far as that ground alone was concerned, should be allowed, yet as to all the claims they should be rejected for another reason. That other reason was explained rather fully, and it was concluded that—

> the several claims must be on their face obviously different in substance.

I did not then consider it necessary to say that the Examiners-in-Chief had overlooked or not discussed a fault in the claim which is probably worse than aggregation.

The Examiners-in-Chief allowed, for example, claims 19 and 20, which as a matter of fact are two claims to identically the same substantial thing and by their very presence together interfere with the pointing out of the invention. These claims are worded as follows:

> 20. The record, adapted to coöperate with a speed or distance indicator or recorder, and having thereon a maximum speed schedule adapted to indicate the maximum allowable speed for the various parts of the route.
>
> 19. The (distance feed) record, adapted to coöperate with (the distance feed device of) a speed or distance indicator or recorder, and having thereon a maximum speed schedule adapted to indicate the maximum allowable speed for the various parts of the route.

The only difference is in the words in brackets.

Claim 20 covers simply a speed-record having a maximum speed line thereon. Claim 19 describes this record as a "distance feed" record, which apparently means nothing, but is in any case a mere name and not an element of the claim, and, further, instead of saying that the record is to coöperate with a recorder, as in claim 20, it specifies that it is to coöperate "with the distance feed device of" a recorder, which expression, if it defines anything at all, defines the only thing in a recorder with which the record in claim 20 could coöperate. The thing claimed is the same. No one could infringe one of these claims and not infringe the other. Yet they pretend to claim different things.

I did not consider it necessary to point out specifically which of the claims were duplicates, since the crux of the decision was that the pointing out of essential differences was the applicant's duty. In effect, the applicant insists upon the right to have a patent with several claims to the same thing. As a matter of fact the twenty-one claims in the case had been previously carefully analyzed and found to contain many duplicates, as is obvious from a mere reading of them. Claim 17 covers nothing whatever except the tape with a maximum-speed marking, in substance the same as claims 19 and 20 above. Moreover it differs from claim 18 in just the same point as 20 differs from 21. The same features cannot be patented over and over again.

Claims 13 and 15 differ only in the single word "perforated" occurring before the term "alining devices" in claim 15. Since there is no suggestion of any possible form of alining devices other than a perforation in the tape, it is not invention to make the alining device in the most obvious way. Claim 11 differs from claim 12 only in specifying that the record is a "tape" record and that the alining devices are perforations at regular intervals. Putting the record on the tape is not part of the invention, and as to the alining devices they must be assumed in claim 12 to be regularly spaced to operate at all. Even the long detailed claims 1 and 2, which are the narrowest claims, differ in nothing except that claim 2 omits to say that the distance-schedule is "oscillatory" and that the alining device is a perforation at regular intervals. This is not material. In the first place there is nothing to suggest that the actual distance-marking itself is to oscillate, without which there would be no function in the schedule-line being oscillatory. If the limitation is material in claim 1, then claim 2 is incomplete and when completed would be the same as claim 1. Similarly the alining devices of claim 2 must be assumed to be perforations, as specified in claim 1, or their pure equivalents, since no possibility of anything else is suggested. Beyond this if the structure defined in claim 2 were patented there would be no room for an additional invention based on the slight differences claim 2 recites over the structure recited in claim 1. Meanwhile the two claims pretend to set forth substantially different inventions.

The applicant undertakes by analysis to say that claim 1 includes essential features not included in the claim proposed in my prior decision; but as a matter of fact the distance-scale is included in the time-scale or else the time-scale is included in the distance-scale, while it is immaterial that the distance-schedule is oscillatory or even that it is present at all, because the tape itself is a distance-schedule. "Route indications" mean nothing. Several of the claims (as claim 15) seem to include in this term the speed-schedule, etc. The applicant has played extensively upon the terms "speed," "time," and "distance," as if he ignored the fact that there can be no speed-scale or speed-schedule without involving both a time and distance scale or schedule. Speed is merely the relation between time and dis-

tance. Claims 4 and 5 differ only in specifying that the distance-schedule is oscillatory, which is the same respect in which other claims differ, as claims 1 and 2. The same new idea can not form several inventions.

My decision was intended to prevent the result the applicant has actually brought about in this case—namely, that of setting forth the particular invention in a manner so indefinite and obscure that claims to the same thing may be supposed, even by experts, to be claims to different things. I think this is strikingly illustrated by the allowance of claims 17, 19, and 20 by the Examiners-in-Chief.

The applicant seems to insist that he has a right to avoid a distinct pointing out of his invention, for while he asks a rehearing on the ground that the Commissioner did not understand his invention he makes no attempt to explain the invention or wherein the claims differ in inventive substance. Walker in his work on patents says at page 226, (5th edition:)

> In contemplation of law each claim of a patent is considered as setting forth a complete and independent invention, and so where a patent contains two claims which are alike, except that the narrower one of them calls for an unpatentable addition to what is called for by the other, the narrower claim is void. But two claims which may appear to be alike, will, if practicable, be construed to differ rather than agree, because there is a presumption that no applicant will do so useless and inexpedient an act as to repeat a claim.
>
> Letters Patent which contain a needless multiplication of nebulous claims, calculated to mislead the public, are void for that reason, if for no other.

Undoubtedly a patentee may claim his invention in several scopes—that is, in its broad aspect and also in its narrow aspect—and he may also separately claim several related inventions; but there is no authority for the Commissioner to issue a patent with several claims to the same thing. It is the priniary duty of the Commissioner to see that the patentee delimitates his invention and each of his inventions distinctly. This for the guidance of others and in order to definitely fix the patentee's rights.

This is the reason for the well-settled rule that—

> it belongs exclusively to the Commissioner to decide the question for himself, whether a patent ought to issue,

as was said by the Supreme Court in *Butterworth v. Hoe*, (112 U. S., 50, at p. 68.) All the acts of the Patent Office are in legal force and effect the acts of the Commissioner, and specifically it has been settled that the Commissioner may deny a patent in the form in which the Examiners-in-Chief have allowed it. (*Moore* v. *United States, ex rel. Chott*, 40 App. D. C., 591; 192 O. G., 520.)

The applicant in insisting, as he does, that his appeal raised the single clear and sharp issue as to whether certain specified claims were drawn to aggregations, and that this was the only point involved, supports a vicious doctrine and one that finds no support in the best court decisions. The exact question raised in the Chott case above was whether the applicant could have a mandamus to compel the Commissioner to enforce a decision in his favor which had been rendered by the Examiners-in-Chief. The court below had erroneously held that there was no method by which the favorable judgment of the Examiners-in-Chief could be reviewed or reversed by the Commissioner. In view of the nature of the patent system it is remarkable that any such view could ever have been held. The responsibility of issuing patents is upon the Commissioner, and while of course the Commissioner may not dictate an opinion to the Examiners-in-Chief (nor for that matter to the newest Fourth Assistant Examiner) this is a very different thing from reviewing the question whether a given proposed patent should be issued or not. The power to grant the patent is as closely bound up with the power to refuse it as is the obverse to the reverse side of a coin.

By section 481 of the statute the Commissioner is to superintend or perform—

> all duties respecting the granting and issuing of patents directed by law,

but he has no authority to issue a patent not directed by law. The law does not direct the issue of a patent with claims such as those the applicant insists upon having, being a set of claims having the effect, if not the design, to confuse rather than to distinctly point out the invention. Section 4893 of the statute provides that the Commissioner shall cause an examination to be made—

> and if on such examination it shall appear that the claimant is justly entitled to a patent under the law, and that the same is sufficiently useful and important, the Commissioner shall issue a patent therefor.

It would be absurd if the Commissioner, who is to issue the patent under these conditions, could under any circumstances be debarred from forming and expressing an opinion as to whether these conditions exist. It is the manifest duty of the Commissioner, under guidance of the court, to instruct the Examiners-in-Chief as to the proper form of the papers constituting Letters Patent. As will be clear from a consideration of the history of the Board of Examiners-in-Chief and the appellate practice (see *ex parte Stephen Hull*, C. D., 1869, p. 68,) there is not a close parallel between the relations of the Board of Examiners-in-Chief and the Commissioner and the relations between an inferior and superior court. The Commissioner could not be bound to decide merely the specific questions put to him by the assignments of error upon taking an appeal, because it is his duty to refuse a patent whenever he has an opinion that the patent ought not to be granted, and this entirely irrespective of how the case comes to his attention or how he gets the information upon which he forms his opinion. His review is more like that of a court which under writ of certiorari orders up a record on its own motion and review whatever part of it it sees fit.

The applicant's claims have been considered twice, and so far as this Office is concerned they are finally rejected and patent refused in the present form of the claims. In view of the obvious good faith of the petition for rehearing the time for the applicant to submit a small set of claims each of which distinguishes from every other in patentable substance is extended an additional thirty days. Otherwise the petition is denied.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

IN RE DUNCAN.

Decided May 3, 1920.

PATENTS—CLAIMS—REJECTION FOR INDEFINITENESS AND REDUNDANCY.

The statute requires an applicant to so formulate his claims that the experts of the Patent Office may understand definitely what they mean, and the invention must be so distinctly described as to be understood by one ordinarily skilled in the art to which the invention belongs, and where a multiplicity of claims was presented on a simple invention, some of which were inherently indefinite, all of the claims were properly rejected for failure to point out the invention, as required by the law.

(Decision of the Assistant Commissioner, 276 O. G., 207, affirmed.)

Mr. Archibald Cox, Mr. W. G. Henderson, and *Mr. Harry A. English* for the appellant.

Mr. T. A. Hostetler for the Commissioner of Patents.

VAN ORSDEL, *J.:*

Appeal from rejection of application for patent for improvements for speed and distance indicator records for use on railroad-locomotives.

The rejection of the appealed claims is on the ground that they fail to point out invention. The statute requires an applicant to so formulate his claims that the experts of the Patent Office may understand definitely what they mean, and the invention must be so distinctly described as to be understood by one ordinarily skilled in the art to which the invention belongs.

We agree with the tribunals below that, for the reasons suggested, the claims should be rejected. Appellant, however, has little room for complaint; since his attention was called to the condition of his claims at every stage of the proceeding. The Commissioner found that—

> the applicant has an invention and is entitled to a reasonable number of claiming clauses covering it; and upon revision of the claims as herein suggested, the patent will be allowed.

On application for rehearing, the Commissioner again attempted to aid the applicant in the protection of his rights by entering the following order:

> The applicant's claims have been considered twice and so far as this Office is concerned they are finally rejected and patent refused in the present form of the claims. In view of the obvious good faith of the petition for rehearing, the time for the applicant to submit a small set of claims each of which distinguishes from every other in patentable substance is extended an additional thirty days. Otherwise the petition is denied.

The decision of the Commissioner of Patents is affirmed, and the clerk is directed to certify these proceedings as by law required.

Affirmed.

Court of Appeals of the District of Columbia.

IN RE SMITHEY.

Decided May 3, 1920.

PATENTS — PATENTABILITY — AGGREGATION — DIFFERENT REGISTERS MOUNTED IN THE SAME CASING.

Two manually-operated registers adapted to keep a record of the quantity of gas and oil used in an automobile, mounted in the same casing with the ordinary speedometer and odometer, constitute but an aggregation of features, the registers being independent units.

Mr. Chas. J. Williamson for the appellant.

Mr. T. A. Hostetler for the Commissioner of Patents.

ROBB, *J.:*

Appeal from a decision of the Commissioner of Patents rejecting three claims, of which the third will serve as an example:

> 3. An apparatus substantially as described comprising a casing, odometers for indicating the results accomplished, said odometers being automatically operated in securing such results, and a manually operated and controlled register or registers for indicating the material or materials consumed for effecting such results.

Applicant has placed within the casing of an ordinary speedometer and odometer two manually-operated registers, the object of which is to keep a record of the quantity of gas and oil supplied to the automobile. While these two registers are within the casing of the speedometer, they are independent units and their function is no different than that of two pads and pencils. We agree with the Commissioner that—

> any combination in such a case is entirely through the intelligence of the user, which is not sufficient of itself to constitute a valid combination. (*In re Davenport*, 23 App. D. C., 370; *Gas Machinery Co.* v. *United Gas Improvement Co.*, 228 Fed., 684.)

Decision affirmed.

Court of Appeals of the District of Columbia.

IN RE UNITED STATES RUBBER COMPANY.

Decided May 3, 1920.

TRADE-MARKS—PUBLIC INSIGNIA—"U. S." NOT REGISTRABLE.

The meaning of "U. S." is too clearly established to permit of registration of any mark containing it as the most prominent feature in view of the provisions of section 5 of the Trade-Mark Act of 1905, denying registration to any mark which "consists of or comprises the flag or coat of arms or other insignia of the United States, or any simulation thereof, or of any State or municipality, or of any foreign nation."

Mr. Chas. S. Jones for the appellant.

Mr. T. A. Hostetler for the Commissioner of Patents.

ROBB, *J.:*

Appeal from a decision of the Patent Office refusing to register as a trade-mark for shoes the letters "U. S.," written on a disk, with other less conspicuous wording around the border.

Section 5 of the Trade-Mark Act (33 Stat., 724) denies registration to any mark which—

> consists of or comprises the flag or coat of arms or other insignia of the United States, or any simulation thereof, or of any State or municipality, or of any foreign nation.

We agree with the Patent Office that—

> the meaning of "U. S." is too clearly established to permit of registration of any mark having that as the most prominent feature. (*In re Cahn, Belt & Co.*, 27 App. D. C., 173; *in re American Glue Co.*, 27 App. D. C., 391.)

The decision is affirmed.

Affirmed

ADJUDICATED PATENTS.

(U. S. C. C. A. N. Y.) Claims 2 to 7, inclusive, of the Deppermann patent, No. 1,310,405, for a bottle-stopper or pour-out suitable for ink-containers, including a metal band, the lower part of which holds the perforated stopper and bottle-mouth firmly together, while the upper portion holds the register-

ing pour-out in rotatable relation to the stopper, *Held* valid and infringed. *S. S. Stafford, Inc.*, v. *Thaddeus Davids Ink Co., Inc.*, 264 Fed. Rep., 111.

(U. S. C. C. A. Ill.) The Guth patent, No. 1,076,418, for an improved electric lamp, *Held* infringed. *Freeman-Sweet Co. et al.* v. *Luminous Unit Co.*, 264 Fed. Rep., 107.

(U. S. C. C. A. Pa.) Claims 4, 5, 7, and 8 of the Kettering patent, No. 1,223,180, for an ignition system using a thermal resistance, reducing the current on an abnormal flow, *Held* not infringed with respect to its function of reducing the current to prevent the depletion of the storage battery when the engine is not running, and also *Held* not broad enough, as limited by the prior art, to cover the function of regulating the flow of the current for variable speeds of the engine under running conditions. *Dayton Engineering Laboratories Co.* v. *Kent*, 264 Fed. Rep., 103.

(U. S. C. C. A. N. Y.) The Rosenwasser patent, No. 988,145, for improvement in leggings, *Held* void for lack of invention. *Rosenwasser Bros., Inc.* v. *B. E. Mfg. Co.*, 264 Fed. Rep., 114.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 11, 1920.

The Carbon Black Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Eagle Paint & Varnish Co., of 225 Galveston avenue, Pittsburgh, Pa., for registration of a trade-mark and trade-mark registered June 14, 1881, No. 8,344, to The Carbon Black Company, of New York, N. Y., and a notice of such declaration sent by registered mail to The Carbon Black Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless The Carbon Black Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

R. F. WHITEHEAD,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 11, 1920.

The Charles H. Brown Paint Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Eagle Paint & Varnish Co., of 225 Galveston avenue, Pittsburgh, Pa., for registration of a trade-mark and trade-mark registered January 11, 1916, No. 108,008, to The Charles H. Brown Paint Co., of 188 Montague street, New York, N. Y., and the Office having failed to secure service upon The Charles H. Brown Paint Co. at its said address notice is hereby given that unless The Charles H. Brown Paint Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

R. F. WHITEHEAD,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 11, 1920.

American Standard Composition Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Eagle Paint & Varnish Co., of 225 Galveston avenue, Pittsburgh, Pa., for registration of a trade-mark and trade-marks registered September 26, 1905, No. 46,584, and September 2, 1902, No. 38,867, to American Standard Composition Co., of Colorado Building, Fourteenth and G streets, Washington, D. C., and a notice of such declaration sent by registered mail to said American Standard Composition Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said American Standard Composition Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

R. F. WHITEHEAD,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 25, 1920.

The Stampede Company, Limited, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Eugene A. Tuchschmidt, of 113 and 115 Locust street, St. Louis, Mo., for registration of a trade-mark and trade-mark registered November 18, 1919, No. 127,689, to The Stampede Company, Limited, of St. Paul, Minn., and a notice of such declaration sent by registered mail to The Stampede Company, Limited, at the said address having been returned by the post-office undeliverable, notice is hereby given that unless The Stampede Company, Limited, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

R. F. WHITEHEAD,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 25, 1920.

Louis Robinson, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Brownstein-Louis Company, of 716–722 South Los Angeles street, Los Angeles, Calif., for registration of a trade-mark and trade-mark registered November 21, 1906, No. 57,799, to Louis Robinson, of New York, N. Y., and a notice of such declaration sent by registered mail to said Louis Robinson at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Louis Robinson, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

R. F. WHITEHEAD,
First Assistant Commissioner.

Changes in Classification.

(ORDER No. 2,585.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 16, 1920.

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 24, Buckles, Buttons, Clasps, Etc., (Division XXXV,) establish the following subclass and definition:

230.5. **Hooks.**

230.5. HOOKS. Hooks of general application. Those specific to a particular art or use are excluded.

Search Classes—
21—CARRIAGES AND WAGONS, subclass 79, Whiffletree-hooks.
248—SUPPORTS, subclass 22, Hooks.
294—HANDLING—HAND AND HOIST-LINE IMPLEMENTS, subclass 82, Hoist-line or grab hooks.

The patents contained in this subclass have been taken for the most part from class 59, Chain, Staple, and Horseshoe Making, subclass 94, Chains, Attachments, Hooks and grabs, hereinafter abolished, and from class 24, Buckles, Buttons, Clasps, Etc., subclass 231, Snap-hooks.

In class 59, Chain, Staple, and Horseshoe Making, (Division XIII,) abolish the following subclass, with its definition:

Chains—
Attachments—
94. Hooks and grabs.

The patents formerly contained in this subclass have been placed for the most part in class 24, Buckles, Buttons, Clasps, Etc., subclass 230.5, Hooks, hereinbefore established.

J. T. NEWTON,
Commissioner.

Patents Nos. 1,346,101 to 1,346,804.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 276—No. 2. TUESDAY, JULY 13, 1920. Price—$5 per year.
[PUBLISHED JULY 15, 1920.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Changes in Classification.

(ORDER No. 2,588.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 30, 1920.

A new examining division, No. XLVII, is hereby established, and it is directed that the following classes and subclasses be transferred thereto, this order to take effect immediately:

Class 188, Brakes, from Division XLVI.

Class 303, Fluid-Pressure Brake and Analogous Systems, from Division XLVI.

Class 192, Clutches, from Division XLV.

Class 74, Machine Elements, subclasses 45, Machine-brakes, Centrifugal speed-regulators, and 46, Machine-brakes, Stop mechanisms, from Division XLV.

The transfer of the following additional classes and subclasses is also directed, to take effect immediately:

Class 299, Fluid Sprinkling, Spraying, and Diffusing, from Division XXXIX to Division XLVI.

Class 50, Fluid-Pressure Regulators, from Division XVIII to Division XXXIX.

Class 74, Machine Elements, the following subclasses only, from Division XII to Division XLV:

62. **Belts—**
63. Laminated,
64. Link,
65. Metal-reinforced,
66. Round,
67. Woven wire.
Gearing—
21. Belt—
51. Guides,
31. Sprocket—
61. Expansible,
32. Sprocket-chains—
49. Connectors,
42. Endless belt,
43. Solid link,
44. Solid link and coupler.
104. **Rocker-bearings.**
103. **Universal joint and pivoted supports.**

R. F. WHITEHEAD,
Acting Commissioner.

NOTICE.

PAYMENT OF PATENT FEES—ACT OF MARCH 6, 1920.

Department of the Interior,
United States Patent Office,
Washington, D. C., June 25, 1920.

This Office has been advised by the Assistant Secretary of the Treasury that a circular letter is being forwarded to the Treasurer and Assistant Treasurers of the United States, Federal Reserve Banks, and National Bank depositaries calling attention to the act of Congress approved March 6, 1920, which requires that patent fees be paid directly to the Commissioner of Patents. (See 272 O. G., 379.)

J. T. NEWTON,
Commissioner.

APPLICATIONS UNDER EXAMINATION.

Condition at Close of Business July 3, 1920.

Room No.	Divisions and subjects of invention.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
314	1. Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders; Trees, Plants, and Flowers.	Feb. 24	Mar. 1	483
128	2. Bee Culture; Curtains, Shades, and Screens; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco.	Nov. 4	Feb. 9	969
175	3. Electric Heating and Rheostats; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Oct. 23	Jan. 6	653
234	4. Conveyers; Elevators; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pneumatic Despatch; Pushing and Pulling Implements; Railway Mail Delivery; Store-Service; Traversing Hoists.	Oct. 29	Apr. 15	1,397
167	5. Book-Making; Books, Strips and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Mar. 31	Apr. 2	358
318	6. Bleaching and Dyeing; Chemicals; Explosives; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Feb. 19	Apr. 28	516
312	7. Games and Toys; Optics; Photography; Velocipedes	Mar. 8	Apr. 16	861
131	8. Beds; Chairs and Seats; Flexible-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	Apr. 28	June 5	376
221	9. Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Jan. 27	Feb. 19	582
235	10. Carriages and Wagons; Land-Vehicles; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping; Motor Vehicles.	Jan. 26	Apr. 14	925
154	11. Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Spring Devices; Whips and Whip Apparatus.	Feb. 21	Mar. 24	786
222	12. Machine Elements	Nov. 10	Apr. 16	1,073
329	13. Bolt, Nail, Nut, Rivet, and Screw Making; Button Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	Nov. 6	Apr. 23	1,188
323	14. Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire-Working.	Jan. 12	Mar. 16	641
308	15. Bread, Pastry, and Confection Making; Coating; Fuel: Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	Oct. 28	Apr. 3	1,116
111	16. Radiant Energy; Telegraphy; Telephony	Nov. 3	Dec. 11	862
307	17. Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	Apr. 16	May 6	230
229	18. Fluid-Pressure Regulators; Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	Jan. 15	Jan. 20	992
236	19. Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	Oct. 28	Jan. 24	574
179	20. Artificial Body Members; Builders' Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	Apr. 2	Apr. 12	678
212	21. Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Dec. 19	Apr. 22	477
249	22. Aeronautics; Firearms; Ordnance	Apr. 2	May 13	292
217	23. Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Dec. 30	Apr. 26	673
144	24. Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines	Jan. 5	Apr. 23	639
315	25. Agitating; Butchering; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	May 17	May 22	203
105	26. Electricity, Generation; Motive Power; Prime Mover Dynamo Plants	Nov. 3	Nov. 21	727
214	27. Brushing and Scrubbing; Grinding and Polishing; Laundry; Washing Apparatus	Mar. 13	Apr. 5	645
225	28. Internal-Combustion Engines	Feb. 9	Apr. 15	880
147	29. Boring and Drilling; Chucks or Sockets; Coopering; Rod Joints or Couplings; Wheelwright-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking Tools.	Dec. 1	Apr. 28	681
152	30. Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines	Jan. 10	June 1	1,095
172	31. Alcohol: Ammonia, Water, and Wood Distillation; Charcoal and Coke; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	Nov. 1	Jan. 26	1,114
278	32. Gas and Liquid Contact Apparatus; Heat Exchange; Refrigeration	Nov. 1	Mar. 26	1,226
70	33. Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Mar. 1	Apr. 12	515
304	34. Railways; Railway Rolling Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Track-Sanders; Vehicle-Fenders.	May 26	June 16	155
57	35. Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet	May 19	May 21	548
204	36. Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring	Feb. 9	Feb. 13	1,131
107	37. Electric Lamps; Electricity, Circuit Makers and Breakers; Electricity, General Applications	Feb. 24	Feb. 12	1,266
378	38. Animal Husbandry; Earth Boring; Fishing and Trapping; Mining, Quarrying, and Ice-Harvesting; Stationery; Stone-Working; Wells.	Feb. 11	Apr. 24	677
220	39. Fluid Sprinkling, Spraying, and Diffusing; Joint Packings; Multiple Valves; Packed Shaft or Rod Joints; Pipe Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	Oct. 15	Nov. 14	1,119
273	40. Baggage; Bottles and Jars; Check-Controlled Apparatus; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Dec. 29	Feb. 25	860
125	41. Resilient Tires and Wheels	Nov. 3	Apr. 5	834
114	42. Electricity, Conductors; Electricity-Transmission to Vehicles; Electricity, Conduits; Electric Signaling.	Jan. 9	Feb. 24	1,113
382	43. Baths and Closets; Dispensing; Dispensing Beverages; Electricity, Medical and Surgical; Fire-Extinguishers; Sewerage; Surgery; Water Purification.	Dec. 11	Mar. 6	884
253	44. Air-Guns, Catapults, and Targets; Ammunition and Explosive Devices; Ammunition and Explosive Charge Making; Boats and Buoys; Filling and Closing Portable Receptacles; Marine Propulsion; Railway Draft Appliances; Ships.	Mar. 1	Apr. 13	291
379	45. Clutches; Journal-Boxes, Pulleys, and Shafting; Lubrication: Motors	Jan. 17	Mar. 22	665
332	46. Educational Appliances; Fire-Escapes; Ladders; Paper Files and Binders; Railway- Brakes; Wooden Buildings.	Jan. 3	May 3	312
	47.	Nov. 1	Jan. 17	745
	Oldest new case, Oct. 15; oldest amended, Nov. 14. Total number of applications awaiting action			34,727
163	TRADE-MARKS, DESIGNS, LABELS AND PRINTS:

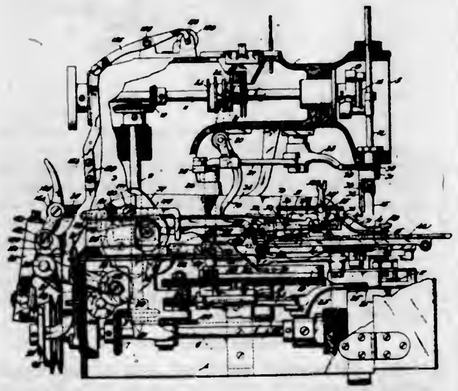
PATENTS



GRANTED JULY 13, 1920.

1,346,101. INDEX-TAB. GEORGE J. AIGNER, Chicago, Ill. Filed May 14, 1917. Serial No. 168,447. 1 Claim. (Cl. 40—2.)

A series of index tabs arranged in the form of a strip, each of the tabs having a horizontal body portion composed of a folded portion, and attachment legs for each of the tabs, projecting angularly from the rear end of the horizontal body portion, one upwardly and one downwardly when the tab is attached to a vertically-disposed sheet, the consecutive tabs of the strip being connected together only by narrow attachment portions medially-disposed in relation to the strip, away from the front and rear edges thereof, adapted to be ruptured by a manual manipulation of adjacent tabs.

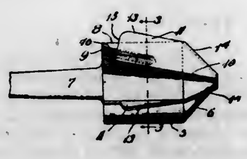
1,346,102. BUTTONHOLE-SEWING MACHINE. EDWARD B. ALLEN, Bridgeport, Conn., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Feb. 16, 1918. Serial No. 217,483. 22 Claims. (Cl. 112—71.)

1. In an automatic buttonhole sewing machine, in combination, stitch-forming mechanism, a stop-motion therefor, a work-holder, an auxiliary shaft stationary throughout the stitching and final stages of a buttonhole producing cycle and adapted to act prior to the stitching operation to perform a desired operation preparatory to stitching, and a second auxiliary shaft stationary throughout the preparatory and stitching stages of a buttonhole producing cycle and adapted to act during the final stage of such cycle to perform a desired operation after stitching.

1,346,103. TENSION-CONTROLLING MECHANISM FOR SEWING-MACHINES. EDWARD B. ALLEN, Newtown, Conn., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Original application filed Feb. 16, 1918. Serial No. 217,483. Divided and this application filed Aug. 16, 1919. Serial No. 317,903. 8 Claims. (Cl. 112—255.)

5. In an automatic sewing machine, stitch-forming mechanism, a stop-motion therefor, a tension device, a tension-controlling cam having a tension-releasing cam-rise and a declivity, a cam-follower connected to said tension device, means for turning said cam to release the tension subsequent to the stitching operation, and means connected to said stop-motion for pushing said cam-follower over the declivity of said tension-controlling cam while the latter is stationary, to effect the restoration of the tension prior to the next stitching operation.

6. In a sewing machine, an actuated element, a cam, and a cam-follower connected to said actuated element and adapted to be acted upon by said cam, and means independent of said cam for shifting the follower circumferentially thereof.

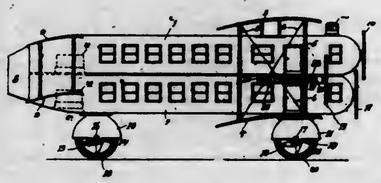


1,346,104. ELECTRIC POCKET-LAMP. CONRAD BOLTSHAUSER, Zurich, Switzerland, assignor to Comp. Phoebus E. G., Zurich, Switzerland. Filed Dec. 24, 1917. Serial No. 208,693. 1 Claim. (Cl. 240—8.5.)

An electric pocketlamp comprising in combination an oblong metallic sectional casing with wedge shaped head portion, a blade spring fast in the upper section thereof, a countersunk bulb and an inwardly sunk reflecting lamp-holder in the wedge-shaped head of the upper section, a double layer insulating pad in the lower section, a contact spring interlaced in said pad, a battery having opposite conducting faces pressed against the upper and lower spring respectively, a switch member in the wedge shaped head of the lower section, and a contact plate in permanent electric connection with the bulb and in interrupted connection with the lower contact spring.

1,346,105. ADJUSTABLE COUNTERSINK. CHARLES O. BOSSE, Tacoma, Wash. Filed June 3, 1918. Serial No. 237,997. 1 Claim. (Cl. 77—75.5.)

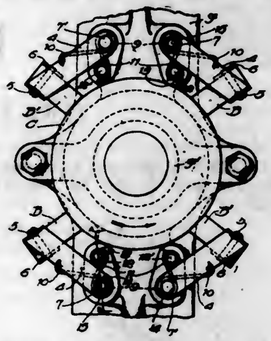
An adjustable countersink comprising a head having a substantially conical front end, said head having grooves



from end to end whose bottoms converge toward the apex of said conical end but terminate in spaced relation, blades in said grooves with their inner edges slidable along said bottoms thereof, and means for sliding said blades in said grooves; said blades having oblique cutting edges forming pointed front ends therefor, said pointed ends being movable toward each other as said blades are projected forwardly from the head, due to said converging groove bottoms.

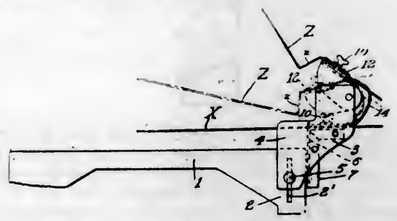
1,346,106. PURIFICATION OF AMMONIUM SALTS. VLADIMIR BREDLIK, New York, N. Y. Filed Aug. 23, 1919. Serial No. 319,507. 5 Claims. (Cl. 23—21.)

1. The method of preparing a neutralizing agent for treating ammonium salts containing free acid which consists in dissolving out the organic impurities from crude ammonia liquor.



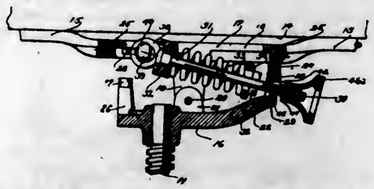
1,346,107. AEROPLANE. ANTONIO ALBERICO, Joliet, Ill. Filed May 21, 1919. Serial No. 298,688. 8 Claims. (Cl. 244—14.)

1. An aeroplane having a body divided into upper and lower stories, a propeller located centrally in front of each story, and a pair of side propellers located substantially midway of the height of the said body, separate pairs of motors having the different motor of each pair located respectively in the upper and lower stories, and common driving connections between the said different motors of each pair and the center and side propellers respectively.



1,346,108. BRUSH-RIGGING FOR DYNAMO-ELECTRIC MACHINES. EDWARD F. ANDREWS, Chicago, and RAY E. ACRE, Wheaton, Ill., assignors to Universal Engineering Company, Maywood, Ill., a Corporation of Illinois. Filed Mar. 28, 1919. Serial No. 285,775. 2 Claims. (Cl. 171—324.)

1. In combination with the commutator and framework of a dynamo electric machine, a brush rigging comprising a brush, a brush arm by which the brush is carried, a brush arm supporting pin having one end thereof embedded in the frame and projecting therefrom in a line adjacent the commutator and parallel to the axis thereof, said brush arm supporting pin constituting a pivot whereon said brush arm is mounted, the brush arm being removable over the outer end of the supporting pin, and a spring

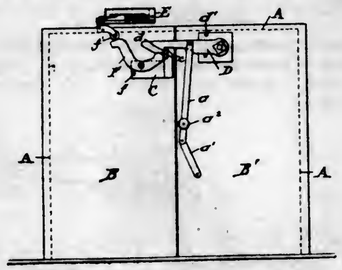


arranged and adapted to engage the brush arm to hold the brush in engagement with the commutator.

1,346,109. FOLDING DEVICE. ROBERT ASTLEY, Boston, Mass. Filed Nov. 22, 1919. Serial No. 339,949. 15 Claims. (Cl. 270—61.)

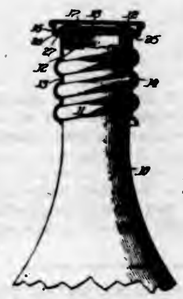
5. In a folder of the class described, a support for a sheet stack, a floating folder supported to rest by gravity on the top of the stack and adjustable thereacross.

1,346,110. CHAIR. HARRY A. ATWOOD, Milwaukee, Wis. Filed Mar. 13, 1920. Serial No. 365,455. 4 Claims. (Cl. 155—77.)



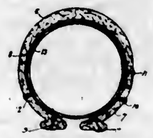
1. A chair comprising a supporting member, a tiltable iron, means pivotally connecting the tiltable iron with said member, and means for yieldingly restraining the tiltable iron from movement and including a contractile spring, a stud integral with said tiltable iron to one side of its pivotal connection with the supporting member, a guide having an end engaging one termination of the spring and its other end provided with an eye pivotally engaged with said stud, and means connecting the other end of said spring with the supporting member on the side of its pivot opposite said stud.

1,346,111. COMBINED LOCKING AND CIRCUIT-CONTROLLING DEVICE FOR DOUBLE DOORS. FRANZ A. BOEDTCHER, Bergenfield, N. J. Filed Oct. 14, 1916. Serial No. 125,757. 3 Claims. (Cl. 200—54.)



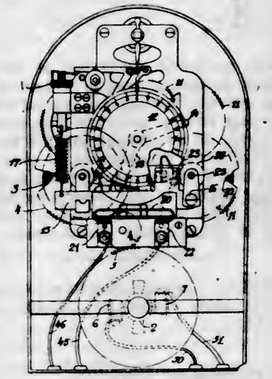
3. In a device of the class described, the combination of a door casing provided with a double door, an electric

circuit controlling switch mounted on the door casing, a pivoted and gravity controlled member located on one door with an upwardly extending portion adapted to close said switch, a locking member mounted on one door, a keeper for said locking member mounted on the other door,



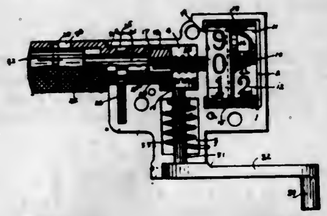
said keeper being so arranged and disposed that when the door is locked the pressure of the locking member on the pivoted member causes the pivoted member to close the switch and the pivoted member being so arranged and disposed that it will close the switch at no other time.

1,346,112. SEALING-CAP. RICHARD E. BRUNS, Chicago, Ill. Filed Mar. 4, 1918. Serial No. 220,142. 8 Claims. (Cl. 215—13.)



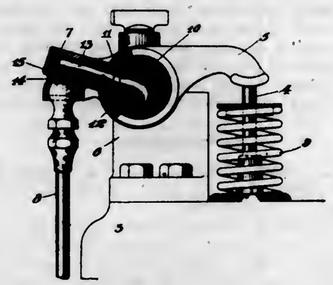
1. A closure for bottles having screw-threads, comprising in combination, a screw-cap, a metallic disk located in the upper end of said cap, said disk being provided with an annular groove shaped to conform to the extremity of the bottle, the groove being formed by upsetting the metal thereby providing a rib adapted to contact the end wall of the cap, and a non-metallic sealing disk secured to said metallic disk and adapted to be forced into the open end of the bottle, the parts being so arranged that the groove engages the extremity of the bottle as the non-metallic disk is seated in the open end thereof, substantially as described.

1,346,113. PNEUMATIC TIRE. SHELBY L. CHURCH, Houston, Tex. Filed July 1, 1918. Serial No. 242,947. 1 Claim. (Cl. 152—26.)



The combination with a tire casing, from which an edge section has been removed, of a corresponding independent section fitted into the space left by said removed section, an inner shoe fitted within the casing opposite said substituted section, said inner shoe conforming to the contour of the casing, a row of rivets securing said shoe to the casing on the injured side of the casing, a row of rivets securing said substituted section to said shoe, and a row of rivets securing the opposite side of the shoe to the casing, all of said rivets being passed through from the inner to the outer side of the casing, and having enlarged heads which are flush with the inner surface of the repaired casing, and whose outer ends are clenched over to secure them against withdrawal from the casing, and a row of staples on each side, passing through the edges of the shoe and through the adjacent heads of the casing from the inner to the outer side, the outer ends of said staples being clenched over to secure them from withdrawal.

1,346,114. TIME-SWITCH. DAVID H. DARRIN, Maywood, N. J. Filed Jan. 31, 1917. Serial No. 145,594. 6 Claims. (Cl. 200—36.)

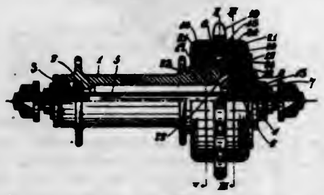


1. In an automatic timing device, the combination with timing mechanism, of a power storing spring for driving said timing mechanism, a movable controlling member, means for transmitting the back pressure of said spring to said controlling member, and yielding means opposing said back pressure and moving said member against said pressure when said pressure decreases below a predetermined minimum.

1,346,115. LINE-INDICATING DEVICE FOR TYPEWRITERS. LINDEN PETER CARHART, Brooklyn, N. Y., and SARA SHAUGHNESSY, Jersey City, N. J. Filed Apr. 18, 1917. Serial No. 162,855. 3 Claims. (Cl. 235—102.)

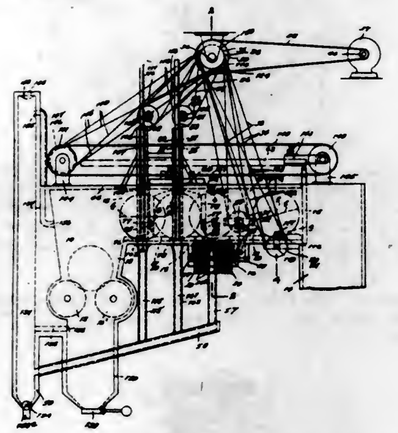
1. A device of the character described comprising a shaft adapted to operate an indicator, a gear loose upon said shaft, a sleeve slidably but non-rotatably mounted upon said shaft and having at one end a ratchet face adapted to engage a ratchet face on the said gear, said sleeve having its periphery formed with a series of notches, a pin yieldingly engaging in said notches and means for rotating said gear.

1,346,116. LUBRICATING MEANS FOR VALVE-OPERATING DEVICES. ENOS A. DE WATERS, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 25, 1919. Serial No. 306,727. 9 Claims. (Cl. 184—6.)



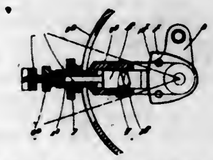
1. In a valve operating mechanism of the class described, a hollow member adapted to contain oil, and provided with an exterior bearing and an oil port leading thereto; a second member pivotally supported on said bearing and having an oil passage adapted to register at times with said oil port; an absorbent oil conveying member extending through said oil port; and a second absorbent oil conveying member in said passage and so positioned as to receive oil from said first absorbent member when the passage is in register with the oil port.

1,346,117. SPOOL. CLEMENS E. EHNBORN, Chicago, Ill. Filed Oct. 22, 1919. Serial No. 332,426. 6 Claims. (Cl. 242—123.)



1. A spool comprising a hub of wood or the like having a reduced cylindrical projection at each end, there being a peripheral groove at the base of each projection; sheet metal flanges having central hubs fitted snugly over said projections and spun into said grooves; and rings seated in the grooves thus formed in the hubs of said flanges, substantially as described.

1,346,118. BACK-PEDALING BRAKE AND COASTER. EDVARD ENSTRÖM, Lidköping, and ERNST HJALMAR WALODDI WEIBULL, Gottenborg, Sweden. Filed May 16, 1919. Serial No. 297,646. 5 Claims. (Cl. 208—57.)

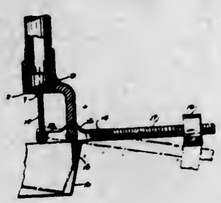


1. In a back-pedaling brake and coaster, the combination of a barrel hub, a brake ring surrounding a portion of said barrel hub, a row of engagement members around said brake ring, a second row of engagement members around a portion of said barrel hub, a common retainer for both said rows of engagement members, and a driving sprocket surrounding both said rows of engagement members and provided with eccentric surfaces for engagement with said members.

1,346,119. UNSHEATHING AND PULVERIZING MACHINE. CROSBY FIELD, Washington, D. C. Filed Nov. 14, 1918. Serial No. 262,425. 15 Claims. (Cl. 164—10.5.)

1. In a machine of the character described for removing the sheath from a sheathed mass of material, slitting means, means for supporting said sheathed mass, said slitting means adapted to engage said sheath, and means adapted to produce relative movement of one of said means with respect to the other means to cause said slitting means to slit said sheath longitudinally along its side to permit of bodily removal of said sheath from said mass.

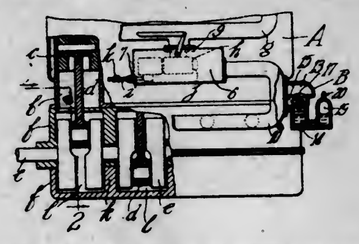
1,346,120. SEWING-MACHINE. CHARLES EDWARD FRANCIS, Westminster, London, England, assignor to Vickers Limited, Westminster, England. Filed Jan. 19, 1918. Serial No. 212,608. 16 Claims. (Cl. 112—210.)



1. Stitch regulating and reversing mechanism comprising an axially adjustable stop, and an abutment member co-acting therewith, said stop and abutment member being relatively movable, the position which one may assume relative to the other being determined by the axial adjustment of said stop, the operative face of the abutment member being of a projecting form on the outer side of an imaginary straight line between the operative extremities of said face in order to minimize the necessary axial adjustment of the stop toward and away from the abutment member.

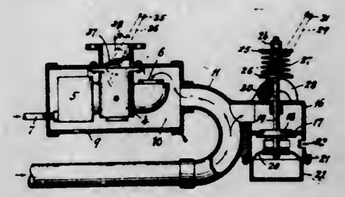
1,346,121. BEARING. LOUIS GOLLY, Brooklyn, N. Y., assignor of fifty-one per cent. to Andrew Albright, Jr., New York, N. Y. Filed May 9, 1916. Serial No. 96,270. 9 Claims. (Cl. 64—36.)

9. A bearing of the character described comprising two concentric bearing members having facing surfaces each affording two raceways, and two sets of balls engaging said raceways and being parallel with each other and in staggered order with the balls of one set entered partly between and engaging the balls of the adjacent set, the raceways on the inner member being more widely separated from each other than the raceways on the outer member, whereby the balls are caused to engage the raceways on diagonal lines convergingly extending from the more widely separated raceways to the more closely arranged raceways, and whereby also said balls, while normally having four points of contact, during the progressive action of the movable parts of the bearing are given three points of contact, two for each ball being against its offset raceways and one being the contact of the balls in one set against the balls in advance in the other set and whereby said balls of each set in the operation of the bearing and when the driven main member thereof is turning forwardly or counterclockwise are caused to roll toward and against the balls in the other set and in an outwardly direction on angular lines.



1,346,122. DRINKING-FOUNTAIN. NATHAN F. GREEN, East Haven, and JOHN PETRAKA, Shelton, Conn. Filed Sept. 4, 1919. Serial No. 321,665. 2 Claims. (Cl. 119—81.)

1. The combination with a pan, of a lever formed with a downwardly projecting lug secured to the inner edge of the said pan, said lever formed with inwardly projecting fingers and an outwardly projecting arm, a counterbalance weight adjustably mounted on said arm, a nipple adapted to be secured to the lower end of a supply pipe, said nipple formed with a downwardly projecting post pivotally connected with said fingers at a point within the periphery of the pan, said nipple formed in its lower end with a passage, and a stem pivotally connected with the inner ends of the said fingers projecting upward through said passage and formed with a head adapted to open and close the said passage.



1,346,123. INTERNAL-COMBUSTION ENGINE. FREDERICK C. GUERRLICH, Stamford, Conn. Filed May 17, 1918. Serial No. 235,148. 15 Claims. (Cl. 123—119.)

1. An inclosure containing air tending to vary in density, in combination with density controlling means normally exposed to the external atmosphere and tending to act to reduce the density of said air when said density becomes greater than a predetermined density, and means for

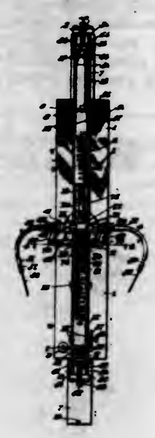
preventing said density controlling means from being substantially affected by variations in atmospheric pressure.

1,346,124. INTERNAL-COMBUSTION ENGINE. FREDERICK C. GUERRLICH, Stamford, Conn. Filed Dec. 3, 1918. Serial No. 265,090. 8 Claims. (Cl. 123—119.)

1. An inclosure for supplying air to an internal combustion engine and a carbureter therein, in combination with means for continuously supplying air to said inclosure in excess of that supplied to said engine, means for maintaining the pressure of the air in said inclosure approximately fixed for a given atmospheric pressure, means for preventing variations in surrounding atmospheric pressure from affecting the action of said pressure maintaining means, and adjustable means for modifying the action of said pressure maintaining means so as to cause an increase in pressure within said inclosure when desired.

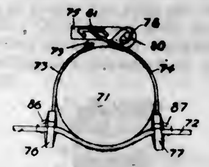
1,346,125. SANITARY TEETH-CLEANER. ROY HASBROOK, New York, N. Y. Filed June 2, 1919. Serial No. 301,253. 6 Claims. (Cl. 132—13.)

1. A device of the character described, comprising a wire frame provided with means for supporting a container and further provided with a pair of extending end portions; a shank provided with a pair of reverting edge portions for engaging said extending end portions, said shank being further provided with a tongue serving as a cutter; a leaf pivotally mounted upon said shank and provided with a portion formed into an arcuate guiding member for receiving a length of floss supplied from said container, and



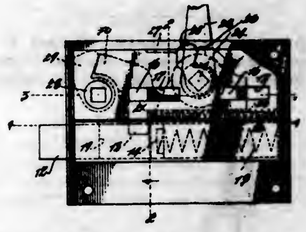
means for maintaining an exposed portion of said floss stretched across said arcuate guiding member, for use upon the teeth.

1,346,126. APPARATUS FOR PIERCING TIMBER. PAUL J. HOWE, Ridgewood, N. J. Filed Apr. 28, 1920. Serial No. 377,375. 14 Claims. (Cl. 144—2.)



1. Timber piercing means comprising a rotary toothed element and means for intermittently exerting pressure on said element transversely of its axis of rotation.

1,346,127. COMBINED BLOOD-TRANSFUSION AND ASPIRATING APPARATUS. MARTIN LEWIS JANES, New York, N. Y. Filed Mar. 20, 1920. Serial No. 367,357. 15 Claims. (Cl. 128—214.)



1. An apparatus of the class set forth comprising a support, a pair of syringes mounted on the support, means connecting the plungers of said syringes for simultaneous movement in opposite directions relatively to the syringe barrels, a member mounted on the support having two passages therethrough, means connecting each of said passages intermediate its ends with one syringe barrel, a pair of valve casings held to said member, and a pair of valve plugs rotatable in said valve casings each having a passage therethrough adapted to connect either of the passages through the member with a single passage through its valve casing.

1,346,128. DEVICE FOR ATTACHMENT OF ELECTRIC CONDUCTORS TO INSULATORS. FREDERICK HENRY KAMM, Frederiksberg, near Copenhagen, Denmark. Filed June 4, 1919. Serial No. 301,747. 6 Claims. (Cl. 173—313.)

4. A device for attaching line wires to insulators comprising a pair of bands located one on either side of the insulator and having ends engaging the line wire at spaced intervals and means for forcing the free ends of the bands toward each other, said means being a hinge, comprising a bearing member, connected to the free end of one of the bands, and a link, being attached to the free end of the other band and journaled and free to slide in the bearing member, so that the link by being turned in the bearing member, tightens the bands and the line wire about the insulator, the said bands engaging the line wire at a spaced interval in such a manner that when they become actuated by the tensions produced by the process of erection, they will adjust themselves closely to the largest possible portion of the circumference of the groove of the insulator.

1,346,129. LATCH. NIXON LEE, Brooklyn, N. Y., assignor, by mesne assignments, to National Seal Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed May 10, 1919. Serial No. 296,048. 7 Claims. (Cl. 292—169.)

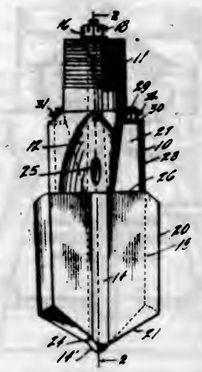
1. A latch comprising a latching-bolt, a spring constantly forcing said bolt into its extended position, a unitary laterally sliding member bearing against said bolt only to retract same, a second spring connected with said unitary member to hold the latter under outward spring pressure in all positions of said latching-bolt, and means, comprising a pair of independently operable swinging arms, each yieldingly held in inoperative position by said second spring, to actuate said sliding member against both of said springs to retract said bolt.

1,346,130. OIL-CAN LEVER MECHANISM. GUSTAVE LIDSEEN, Chicago, Ill. Filed June 28, 1917. Serial No. 174,448. 3 Claims. (Cl. 74—39.)

1. The combination with a socket member having a slot therein, a lever projecting through said slot, and

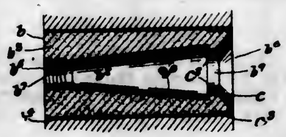
apertured members engaged on the exterior and interior portions of said lever and co-acting with said slotted member to hold the lever fulcrumed in operating position.

1,346,131. CONCRETE-FORM SUPPORT AND BRACKET. EDWARD C. MARQUA, Kansas City, Mo. Filed June 8, 1918. Serial No. 238,811. 1 Claim. (Cl. 20—94.)



A metal bracket comprising a sheet having its edges bent backe to provide attaching beads having perforations, to receive fastening devices, the outer edges of the sheet beam bent at right angles to the beads to form parallel wings, said wings having alining perforations and a stringer rest receivable in pairs of alining perforations.

1,346,132. MEDICINE. USHITARO MATSUURA, Otagi-Gun, Kyoto-Fu, Japan. Filed June 29, 1917. Serial No. 177,831. 2 Claims. (Cl. 167—9.)

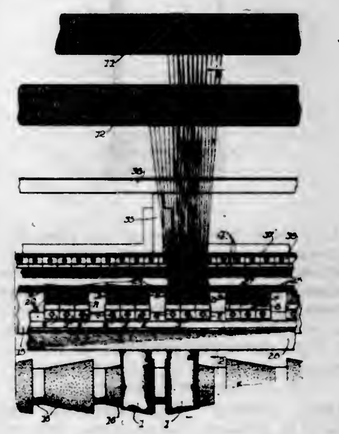


1. A new medicine for skin diseases comprising the distillate obtained by the dry distillation of rice-bran or wheat-bran.

1,346,133. WELL-DRILLING BIT. PENELTON G. MIDGETT, Dallas, Tex. Filed Feb. 28, 1920. Serial No. 361,912. 4 Claims. (Cl. 255—61.)

1. In a drill bit, a head, removable wings depending from the head, and a removable point depending from the head between the wings and projecting below the wings, the wings having continuous cutting edges along their sides and bottoms, contiguous to the point.

1,346,134. HYDROCARBON-BURNER. JOSEPH NEEDHAM, New York, N. Y. Filed Aug. 18, 1919. Serial No. 318,092. 4 Claims. (Cl. 158—78.)

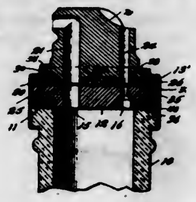


1. A hydrocarbon fuel nozzle for use in connection with hydrocarbon fuel furnaces or similar apparatus, said nozzle comprising a central tubular member having inlet and discharge ends, a metallic shell inclosing said tubular member, and a casing of asbestos or similar material between said member and said shell and extending approximately the full length thereof.

1,346,135. AUTOMOBILE-LOCK. ALLEN A. RITCHIE, Houston, Tex. Filed Dec. 2, 1919. Serial No. 341,988. 1 Claim. (Cl. 70—90.)

The combination with an automobile steering column and shaft having alined holes through the column and shaft, of a pair of arcuate clamps hinged together at one end and adapted to be secured around said column and whose free ends are outwardly turned so as to fit together when clamped in position, a locking pin formed rigidly with and extending inwardly from one of said clamps and adapted to project entirely through all of said holes and secure said shaft against turning relative to the column when the clamps are secured around said column the other clamp having a socket into which the free end of the pin projects whereby said free end is anchored to the last mentioned clamp and a lock for securing the clamps around the column.

1,346,136. MACHINE FOR AND METHOD OF PRODUCING KNITTED PUTTEES AND THE LIKE. EDWARD C. SCHWAB, Milwaukee, Wis., assignor to Phoenix Knitting Works, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 11, 1918, Serial No. 234,013. 11 Claims. (Cl. 66—33.)

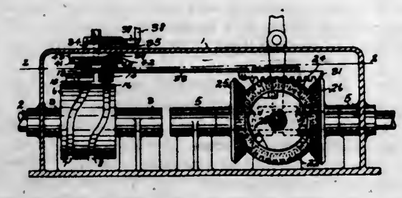


1. In combination a comb plate, a needle frame having a row of needles guided in said comb plate and separate means for feeding yarn at a greater rate along the needles on one edge of the row than along the other edge of the row.

1,346,137. BOTTLE-VALVE MOUNTING. FRANK H. SILVERTHORNE, New York, N. Y. Filed Nov. 4, 1919. Serial No. 335,735. 8 Claims. (Cl. 215—57.)

1. A closure for a bottle including a rotary valvular construction for controlling the flow from the bottle said construction including a nozzle seat provided with an opening extending therethrough, a pouring nozzle rotatably mounted on said seat and provided with an opening

adapted to register with the opening in the seat when the nozzle is rotated into its open position, a retaining ring encircling said nozzle and constituting the sole means for holding the same in rotatable relation to the seat, means constituting an extension from the ring for securing the

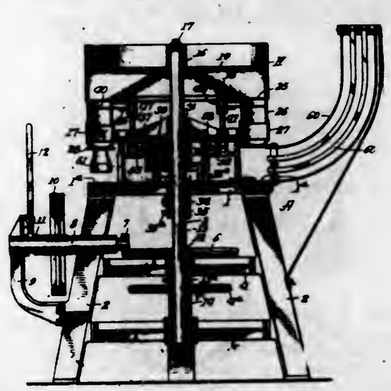


same to the rear seat and a ferrule distinct from the retaining ring and engaging the seat to fasten the closure to the bottle, said ferrule adapted to be spaced from the rotatable nozzle whereby the binding of the ferrule on the bottle will have no effect on the case of rotation of the nozzle.

1,346,138. FLASH-LIGHT DEVICE. PAUL C. SMALLEY, Newark, N. J. Filed Mar. 29, 1919. Serial No. 286,186. 2 Claims. (Cl. 240—8.5.)

2. In a flash light device of the class described, the combination of a casing, batteries and a lamp therein, a contact device for establishing electrical connections between said batteries and said lamp, a recessed lens for positioning a reflector circumferentially free within said casing provided wth a screw threaded portion for securing it to the casing and insulating the reflector from said casing.

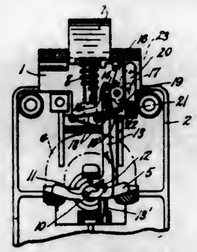
1,346,139. POWER - TRANSMITTING MECHANISM. ROBERT W. J. SMITH, Houston, Tex. Filed May 9, 1919. Serial No. 295,983. 3 Claims. (Cl. 74—14.)



1. The combination with a driving shaft, of a driven shaft, a mechanism operatively connected with and adapted to drive said driven shaft, means through which said mechanism may be connected to the shaft so as to drive it in either direction, a pair of oscillating arms, a pair of cams fixed upon and rotated by the driving shaft, and in operative connection with said arms, and through which the arms are oscillated, a link having a slidable connection at one end with each arm, a pair of rack members in operative connection with said mechanism, and to which the other ends of said respective arms are pivoted, said rack members being operatively connected with said mechanism, and alternately actuating the same continuously to impart a continuous rotation through said mechanism to said driven shaft.

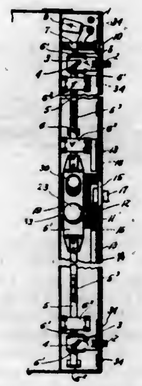
1,346,140. PROCESS OF PRODUCING PRINTS ON METAL. PHILO V. SNOW, Dallas, Tex. Filed Sept. 11, 1919. Serial No. 323,121. 7 Claims. (Cl. 41—27.)

7. In a process for producing photographic prints on metal which includes making a negative, printing on a sensitised metal plate which has been cleaned and smoothed before being sensitised, developing the print, dyeing the print, removing stains and streaks from the dyed print, drying the print, burnishing the print with suitable materials, intensifying the highlights, rubbing the print to produce a final polish, and coating the print with a preserving lacquer.



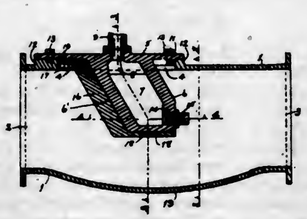
1,346,141. CAN-FILLING MACHINE. CLARENCE E. STEERE, Milwaukee, Wis., assignor to Henry Scarborough, Milwaukee, Wis. Filed Jan. 10, 1917. Serial No. 141,537. 16 Claims. (Cl. 226—96.)

1. In a can filling machine, the combination of a frame having a fixed can-supporting table member, means for moving cans on the table member, a vertical shaft supported in said frame, means for rotating the shaft, means for vertically adjusting said shaft, a multiple can filling head entirely supported and rotated by said shaft and comprising a rotating hopper and adjustable measuring funnels, said filling head being vertically adjustable as a unit by the adjustment of the shaft to adapt the structure to different sizes of cans.



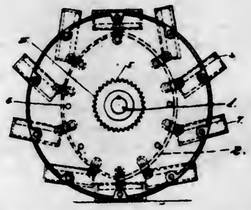
1,346,142. LOCK. ERNEST L. TRICH, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed May 1, 1919. Serial No. 293,972. 5 Claims. (Cl. 70—29.)

1. In a lock, the combination of a latch-bolt, manually operable means for dogging said latch-bolt, a guard for said dogging means holding the same out of action when the door is open, and means projecting laterally through



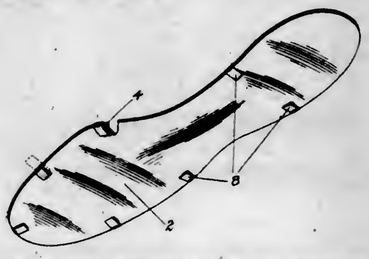
the side of the lock for automatically throwing said guard out of action when said door is closed.

1,346,143. FIRE-DOOR LOCK. ERNEST L. TRICH, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed July 14, 1919. Serial No. 310,826. 3 Claims. (Cl. 70—74.)



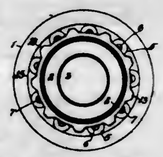
1. In a fire door lock, the combination of an angle-plate, throw bolts carried thereby, a mortise lock also carried thereby, knobs for actuating the latch of said mortise lock and said throw bolts, and a sheet metal door within which said angle-plate and mortise lock are located, the metal of said door extending partially over the face-plate of said mortise lock, said face plate having a projection which surrounds the latch bolt of said mortise lock, extending through the edge of said door and flush with the outer surface thereof.

1,346,144. PNEUMATIC CONVEYER. LOUIS C. VANDERLIP, Elkhart, Ind. Filed July 27, 1916, Serial No. 111,573. Renewed Nov. 28, 1919. Serial No. 341,270. 8 Claims. (Cl. 137—75.)



1. In a device of the class described, the combination with a channeled body member having suction intake and discharge openings substantially in axial alinement and provided with a hollow member projecting into the channel of said body member, said hollow member being adapted to introduce fluid under pressure into the channel of the body member and axially of said intake and discharge openings, of a buffer plate or wear member removably arranged in front of said hollow member and extending substantially to the end thereof.

1,346,145. TRACTOR-WHEEL. HARRY VASS, Summit, N. J. Filed June 26, 1919. Serial No. 306,899. 5 Claims. (Cl. 305—13.)

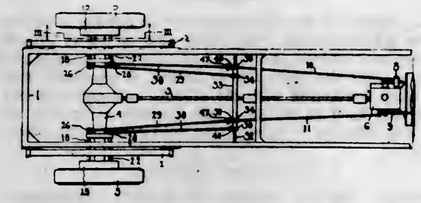


1. A device of the class described comprising a pair of wheels pivoted on an axle, a plurality of shoes pivoted between said wheels, and means on said axle to guide said shoes so that the same always assume a horizontal position when contacting with the ground, said means including a cam fixed to the axle, and a device carried by the shoe and adapted to move along said cam as the wheels rotate.

1,346,146. SHOE. GEORGE E. WARREN, Swampscott, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 6, 1917. Serial No. 189,952. 10 Claims. (Cl. 36—43.)

1. As an article of manufacture, a sole having members adapted to extend beyond its periphery and be engaged with a last to secure the sole in position on the last.

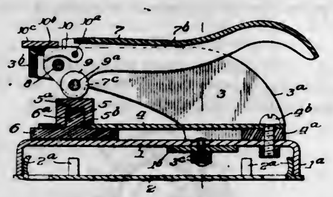
1,346,147. UNIVERSAL ROLLER-BEARING. EDGAR P. WEBSTER, Bridgeport, Conn. Filed Jan. 15, 1918. Serial No. 211,987. 2 Claims. (Cl. 64—62.)



1. In a roller bearing, an outer and an inner race ring, rollers interposed between the rings and having a recess in each end thereof, and a cage having sides connected by a peripheral portion, the latter formed with openings to receive the rollers, said cage being formed with fingers integral therewith and located at the ends of the openings in spaced relation to the sides of the openings, said cage

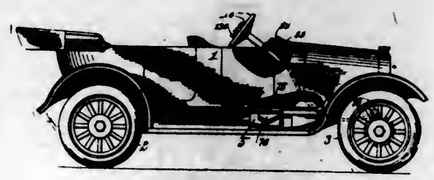
being formed of sheet metal whereby upon applying pressure to the sides of the cage said sides will be caused to approach each other to effect entry of the fingers into the roller recesses and the bridges resultant from the openings will be deflected outwardly.

1,346,148. PROCESS OF PRODUCING PYROPHOSPHATES. HYLEMAN ALISON WEBSTER, Columbia, Tenn. Filed Sept. 24, 1919. Serial No. 325,879. 4 Claims. (Cl. 23—13.)



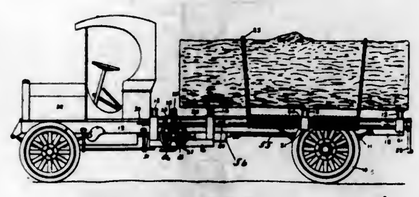
1. The process of making pyrophosphates from monocalcium phosphate, which consists in reacting upon the latter with a salt having a stronger basic ion than the calcium ion present and a weaker acid ion than that of pyrophosphoric acid, substantially as described.

1,346,149. MOTOR-VEHICLE. FRANK A. WHITTEN, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 17, 1918. Serial No. 240,370. 15 Claims. (Cl. 188—79.)



4. In a motor vehicle having a pair of service brakes, and a pair of emergency brakes, operating rods therefor, a rotatable cross shaft, a tubular shaft rotatable thereon, pairs of arms fixed respectively to the shafts, the members of each pair of arms being pivotally connected to the corresponding rod, a foot pedal and a hand lever and a pair of rods, one connected to the foot pedal and the other to the hand lever, the parts being so constructed and arranged that one of the last named rods may be pivotally connected to an arm on the cross shaft and the other likewise connected to an arm of the tubular shaft, or the first of the last named rods may be pivotally connected to the other arm of the tubular shaft and the second of the last named rods likewise connected to the other arm of the cross shaft.

1,346,150. SEAL-PRESS. ARTHUR M. WILLARD, Chicago, Ill. Filed Mar. 24, 1919. Serial No. 284,711. 13 Claims. (Cl. 101—3.)



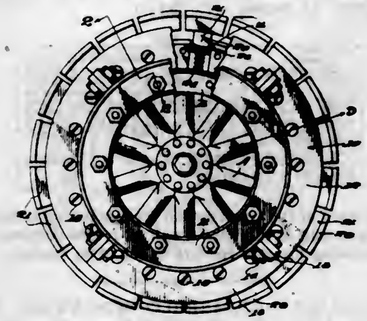
1. In a seal press, a rigid bed, a stationary die mounted on said bed, a movable die coacting with said stationary die, a transversely flexible, but horizontally rigid and longitudinally inextensible, spring plate carrying said movable die at one end thereof, means clamping the face of said plate at the other end thereof, rigidly to the bed, and leaving the plate free to act as a radius arm by its inherent transverse flexibility, but restricting such radius arm action to the portion of said plate outside of its anchorage upon the bed, and means for pressing the dies together.

1,346,151. AUTOMATIC GEAR-SHIFT FOR AUTOMOBILES. HAROLD K. ALTICK, Dayton, Ohio. Filed Mar. 26, 1917. Serial No. 157,472. 29 Claims. (Cl. 74—97.)

1. The combination with an automobile, the engine, and the transmission gear thereof, of motion transmitting means actuated directly from said engine to shift said gear, and speed controlled means for said gear shifting means.

1,346,152. LOADING AND HAULING AUTOMOBILE-TRUCK. ORA AMOS, ROY AMOS, and EPHRAIM A. MCKEE, Edinburg, Ind. Filed Sept. 25, 1918. Serial No. 255,620. 8 Claims. (Cl. 254—166.)

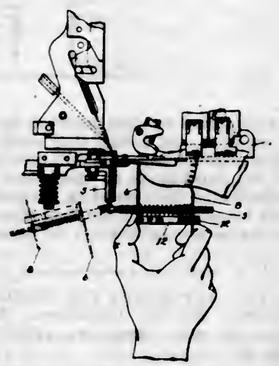
2. The combination with a truck having a motor for driving it, a frame for receiving a load, and loading chains coöperating therewith, of a windlass shaft extending longitudinally of the truck and mounted to the frame thereof along one side of the truck for operating the chains, a shaft at right angles to the windlass shaft and the driving shaft of the truck motor, a worm drive connecting said windlass shaft and right angled shaft, a friction wheel on said right angled shaft, and a friction disk on the driving shaft of the truck motor for driving the friction wheel for operating the windlass shaft, said shafts and the means for driving the same from the motor being located below the top of said frame.



1,346,153. SULFUR COLOR AND PROCESS OF MANUFACTURING THE SAME FROM ALOE RESIN. ALAN I. APPELBAUM, Trenton, N. J., assignor to The Import and By Products Company, Incorporated, Trenton, N. J., a Corporation of Delaware. Filed June 10, 1918. Serial No. 239,178. 13 Claims. (Cl. 8—1.)

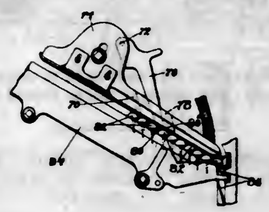
1. The process of producing a sulfur color, which comprises mixing together aloe resin, sulfur, sodium sulfid and water and applying heat thereto.

1,346,154. SULFUR COLOR AND PROCESS OF MANUFACTURING THE SAME FROM ALOES. ALAN I. APPELBAUM, Trenton, N. J., assignor to The Import and By Products Company, Incorporated, Trenton, N. J., a Corporation of Delaware. Filed Feb. 5, 1919. Serial No. 275,243. 3 Claims. (Cl. 8—1.)



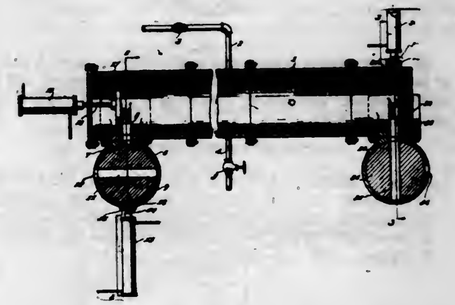
2. The process of producing a sulfur color which comprises mixing together aloes, sulfur and caustic soda and water and heating the same under a pressure greater than atmospheric pressure, thereafter dissolving the product thus produced in water and precipitating from the solution thus formed the color material.

1,346,155. RESILIENT TIRE. GEORGE A. ARNOLD, Irwin, and ELMER J. GROSS, Trafford, Pa. Filed June 10, 1919. Serial No. 303,022. 2 Claims. (Cl. 152—8.)



1. In a resilient tire, the combination of a carrying portion adapted for attachment to a wheel rim, composed of a plurality of detachably connected sections, said sections each including a body portion and a confining plate, the body portion provided with recesses opening out at one side thereof, the confining plates being attached to the body portions and closing the open sides of the recesses, a plurality of radially movable tread members provided with shanks extending into said recesses, springs engaging said tread members and normally urging them outwardly, ribs carried by said confining plates and said body portions for limiting the outward radial movement of the tread members, lateral extensions formed upon the inner ends of the shanks for engaging the ribs, bearing rollers carried by said extensions engaging the opposite side walls of the recesses in the carrying portion, bearing rollers carried by said carrying portion and engaging the sides of the shanks opposite to the sides which carry said extensions.

1,346,156. SHOE-TIP-MEASURING MECHANISM. ORRELL ASHTON, deceased, Swampscott, Mass., by Hannah Ashton, executrix, Swampscott, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 15, 1916. Serial No. 78,520. 13 Claims. (Cl. 12—4.)

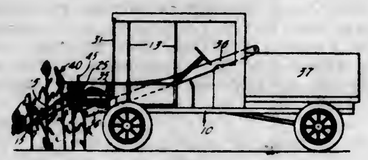


1. In apparatus of the class described, the combination with means for resting a shoe, of a supporting rod movable into a position where it extends lengthwise under the shoe, a plate which is slidingly mounted on the rod and is formed to engage the rear edge of the toe tip, a second plate slidingly mounted on the rod to engage the end face of the toe, and means extending from one plate to the other for indicating the length of the tip of the shoe as measured between said plates.

1,346,157. MACHINE FOR INSERTING FASTENINGS. ALBERT AMOS ASTON, Leicester, England, assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 15, 1916. Serial No. 115,001. 12 Claims. (Cl. 1—6.)

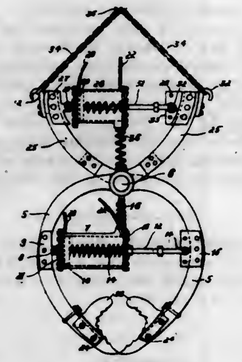
1. In a fastening inserting machine, a swinging head, mechanism carried by said swinging head for inserting previously formed fastenings successively, a raceway movable with said head for supplying fastenings to the fastening inserting mechanism, and a freely pivoted gate member associated with the raceway and constructed and arranged with relation to the raceway to retain a plurality of fastenings below the gate member from movement away from the fastening inserting mechanism upon agitation of said fastenings by movement of the swinging head in one direction.

1,346,158. CONTINUOUS TIRE-VULCANIZING MACHINE. THADDEUS F. BAILY and FRANK T. COPE, Alliance, Ohio. Filed Mar. 6, 1920. Serial No. 363,729. 6 Claims. (Cl. 18—6.)



1. A machine for vulcanizing tires comprising a cylinder, means for maintaining steam at a desired temperature within the cylinder and means for placing tires within the cylinder for vulcanizing and removing vulcanized tires therefrom without exhausting steam from the cylinder.

1,346,159. HARVESTING-MACHINE. ELBRIDGE BAKER, Los Angeles, Calif., assignor of one-fourth to E. P. Tucker, one-fourth to George W. Tackabury, and one-fourth to G. D. Robertson, Los Angeles, Calif. Filed Dec. 12, 1918. Serial No. 266,423. 8 Claims. (Cl. 56—58.)



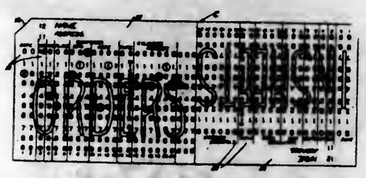
1. In a harvesting machine, the combination of a horizontal cutter and carriage means for carrying it against stalks, means for raising low heads of grain comprising a plurality of downwardly and forwardly extending fingers in front of and below the cutter, said fingers being

substantially parallel and spaced apart to pass stalks of cereals and not to pass the heads, said fingers extending

over the cutter at their rear ends so as to carry the heads above the cutter; and conveyer means behind the cutter.

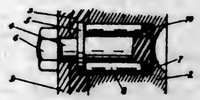
1,346,160. POWER-OPERATED TONGS. SAMUEL E. BARLOW, Denver, Colo. Filed Mar. 14, 1919. Serial No. 282,620. 15 Claims. (Cl. 294—88.)

15. Power tongs comprising a plurality of spaced pairs of jaws, an axle upon which the jaws are journaled, and a power cylinder and piston connected with and carried by each pair of jaws.



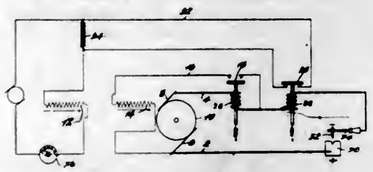
1,346,161. BENT PLY-WOOD AND METHOD OF BENDING SAME. OLIN H. BASQUIN, Evanston, Ill., assignor to Haskelite Manufacturing Corporation, a Corporation of New York. Filed Nov. 14, 1919. Serial No. 337,960. 5 Claims. (Cl. 144—309.)

1. A sharply-bent sheet of plywood of more than two plies having the number of plies in the zone in which the bend occurs reduced to two the inner of which has its grain extending lengthwise of the angle or corner and the outer of which has its grain extending transversely.



2. The method of forming sharply-bent sheets of plywood having more than two plies which consists in reducing the number of plies in each sheet in the bending zone to two having the grain transverse to each other, placing the sheets in a stack made up of sheets alternating with spacing plates provided with channels registering with the reduced portions of the sheet, introducing steam into the channels, and then bending the sheets in a direction to bring the compression stresses transverse to the grain of that ply in the reduced zone which lies on the inner side of the angle in the completed structure.

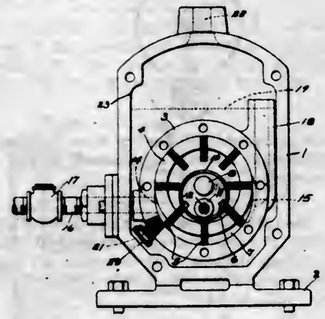
1,346,162. STATISTICAL RECORD-CARD. WILLIAM H. BASSETT, East Orange, N. J., assignor to Powers Accounting Machine Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 29, 1918. Serial No. 251,927. 11 Claims. (Cl. 283—1.)



1. A card of the type adapted for controlling accounting machines, said card having a pair of record portions, each portion being inverted relative to the other portion.

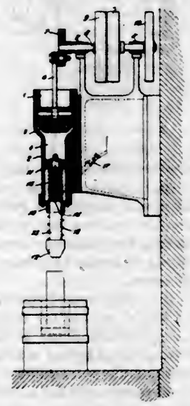
1,346,163. ROLLER-BEARING CONSTRUCTION. LEWIS C. BAYLES and FRED M. SLATER, Easton, Pa., assignors to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 21, 1918. Serial No. 250,811. 5 Claims. (Cl. 64—39.)

3. In a roller bearing construction, a rigidly mounted central shaft having an undercut flange at one end, a flange near the opposite end set into a recess of greater depth than the thickness of said flange, rollers free to revolve around said shaft having extensions on each end of smaller diameter than that of the rollers, the extensions at one end projecting into said undercut and the extensions at the other end projecting into said recess.



1,346,164. ARC-WELDING GENERATOR. ALAN M. BENNETT, Westfield, N. J., assignor of one-half to C. H. Florandin, Westfield, N. J. Filed Mar. 9, 1918. Serial No. 221,381. 8 Claims. (Cl. 171—223.)

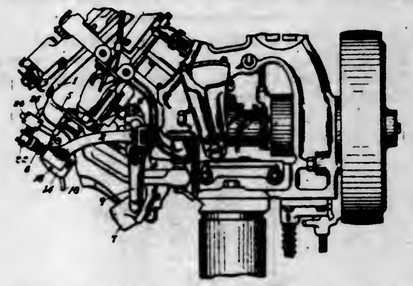
1. In a generator of the class described, the combination with the armature, and a separately excited field, of a shunt field arranged to coöperate with said separately excited field but normally in an open shunt circuit, and means controlled by the current in the armature circuit when closed for closing the shunt field circuit and simultaneously varying the excitation of the separately excited circuit.



1,346,165. APPARATUS FOR PRODUCING HIGH PRESSURES. REINOLD BERRENBERG, Boston, Mass. Filed Feb. 10, 1917. Serial No. 147,915. 3 Claims. (Cl. 230—6.)

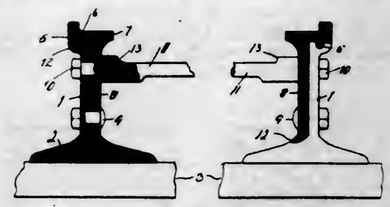
2. An apparatus for producing high pressures, having, in combination, a rotor provided with a series of radially disposed slidable blades providing buckets between said blades, a casing in which said rotor is mounted having a chamber that is traversed by said blades, said casing being provided with inlet and outlet ports at the opposite ends of said chamber and having a restricted aperture formed therethrough to lead lubricant directly to the surface of said chamber traversed by the outer ends of said blades while the buckets are in communication with said inlet port, and means coöperating with said casing to

supply lubricant to said restricted aperture and to conduct the lubricant externally of said casing from said outlet port to said aperture.



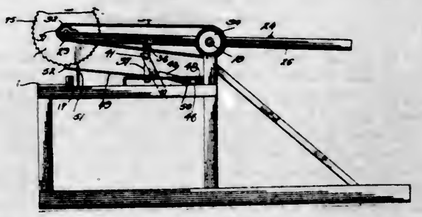
1,346,166. PNEUMATIC HAMMER. JAKOB BERNHARD, Hasle, near Ruegsau, and ARTHUR MEISTER, Ruegsau, Switzerland. Filed Dec. 9, 1919. Serial No. 343,567. 3 Claims. (Cl. 78—42.)

1. In a pneumatic hammer of the character set forth, a cylinder having two coaxial portions differing in length and width of bore and in unobstructed direct communication with each other, a plunger making an air-tight fit with the wider shorter portion of the cylinder, means for reciprocating the plunger in the cylinder, and a hammer member including a piston making an air-tight fit with the narrower longer portion of the cylinder and being reciprocable therein by the movement of the plunger.



1,346,167. TIP-MEASURING APPARATUS. BUDD D. BOHANON, Boston, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 8, 1916. Serial No. 82,883. 14 Claims. (Cl. 12—4.)

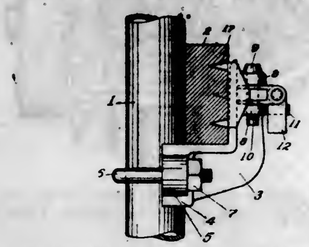
1. In a pulling-over machine, means for locating a shoe in the machine in predetermined position, an arm mounted on the machine frame at one lateral side of the pulling-over mechanism for movement about a definite fixed axis extending parallel to the longitudinal median plane of the shoe, and located at a substantial distance from said plane, and a tip line indicating means carried by said arm



and movable laterally of the shoe into and out of tip measuring relation to the shoe by movement of the arm about said axis.

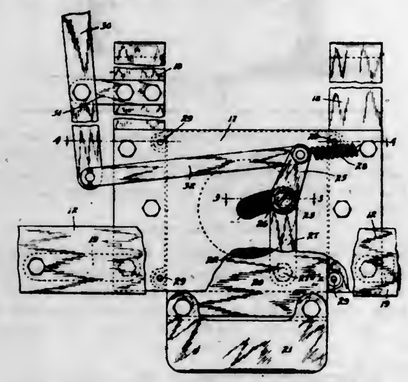
1,346,168. COMPOUND RAIL AND ELECTRICAL CONDUCTOR. FLETCHER O. BOSWELL, Philadelphia, Pa. Filed Sept. 30, 1919. Serial No. 327,371. 2 Claims. (Cl. 238—144.)

1. In a railway track, the combination of two part rails, one part superimposed upon the other, a housing formed in said rails, feed wires located in said housings and fused to the rails, and spacing rods for holding each line of rails in position relative to the other.



1,346,169. SAWING-MACHINE. GEORGE W. BRAGDON, Smyrna Mills, Me., assignor of one-fourth to P. H. Tarbell and one-fourth to H. J. Tarbell, Merrill, Me. Filed June 16, 1917, Serial No. 175,184. Renewed Apr. 2, 1920. Serial No. 370,900. 1 Claim. (Cl. 143—46.)

In sawing machines, a main frame, a saw frame rockably mounted intermediate its ends thereon, a link having its upper end pivotally secured to said saw frame, spaced arms pivotally secured at their lower ends to the main frame, said link being pivotally secured intermediate its ends between the upper ends of said arms, a transverse operating lever pivotally secured at one end to the main frame, means for normally holding said lever in rearward position, and a connecting link loosely secured at its forward end to the first mentioned link adjacent the lower end thereof and having its rearward end loosely secured to said operating lever whereby, when the operating lever is moved forwardly, the toggle lever formed by the link and arms will be folded and the link will be rocked rearwardly and downwardly about its axis and, when the op-



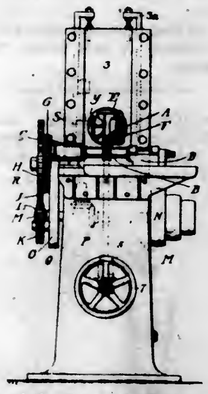
erating lever is moved rearwardly, the toggle lever will be extended and the link will be rocked upwardly and forwardly about its axis so as to raise the saw frame.

1,346,170. ADJUSTABLE STRINGER-SUPPORT FOR SCAFFOLDS. FOKKO H. G. BRANDT and GEORGE K. KRELL, Kansas City, Mo. Filed July 1, 1918. Serial No. 242,816. 3 Claims. (Cl. 304—40.)

1. The combination of an upright, an angle bracket secured to the upright, an angle arm movably carried by the bracket and adapted to hold a stringer upon the bracket and against said upright, and means movable with and independently of said angle arm for engaging the bracket to prevent disengaging action of the said arm.

1,346,171. CAR-BRAKE. SAMUEL N. BRINKER, Minneapolis, Minn. Filed Sept. 22, 1919. Serial No. 325,317. 3 Claims. (Cl. 188—41.)

1. In a car truck, the combination with truck side frames and wheels, of vertically movable shoe carriers equipped with shoes engageable with the rails between wheels, guides for said shoe carriers secured in respect to coöperating truck side frames, eccentrics journaled to said shoes, levers mounted on pivots fixed in respect to the said side frames and pivotally connected to the respective eccentrics at points eccentric to the axes thereof, said levers being movable toward and from the axis of the respective eccentrics, and brake connections to said levers for oscillating the same to throw said shoes into and out of action.



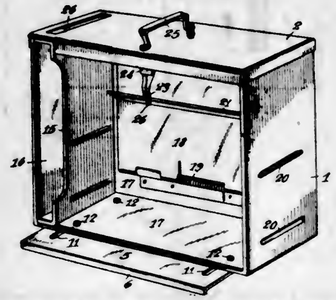
1,346,172. ILLUMINATION. LUCIAN W. BUGBEE and EDGAR D. TILLYER, Southbridge, Mass., assignors to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Jan. 2, 1917. Serial No. 140,178. 2 Claims. (Cl. 240—1.)

1. A source of luminosity comprising a spherical bulb having a supplemental radiant disposed at the center of the sphere, said bulb having the property of transmission of visible radiations and of reflection of heat radiations, and a main radiant for supplying said radiations encircling the supplemental radiant whereby outwardly directed heat radiations therefrom will be focused back to the supplemental radiant by the inclosing bulb and inwardly

directed heat radiations will have a direct heating action on the supplemental radiant, substantially as and for the purpose described.

1,346,173. MACHINE FOR GRINDING WORMS AND THE LIKE. WILLIAM CANNELL, Springfield, Mass., assignor to Baush Machine Tool Company, a Corporation of Massachusetts. Filed Dec. 8, 1914. Serial No. 876,039. 18 Claims. (Cl. 51—4.)

1. A machine of the class described comprising in combination a grinding wheel, means for rotating it about its central axis, means for rotating the work and means for simultaneously rotating the grinding wheel bodily lengthwise of the work so as to cause the wheel to grind an inclined tooth on the work.



2. A machine of the class described comprising in combination a grinding wheel, means for rotating it about its central axis, means for rotating the work and means for simultaneously moving the grinding wheel bodily in a circular orbit lengthwise of the work so as to cause the wheel to grind an inclined tooth on the work, and means for adjusting the wheel so as to bring its edge into planes corresponding with teeth of different inclinations.

3. A machine of the class described comprising in combination a carrier carrying a grinding wheel, means for rotating the carrier in a direction lengthwise of the work, means for rotating the grinding wheel and means for rotating the work about its lengthwise axis.

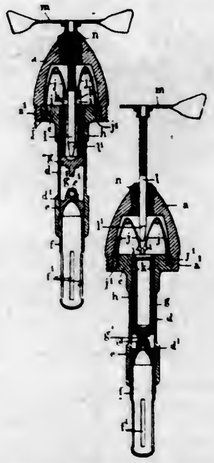
4. A machine of the class described comprising in combination a grinding wheel, means for rotating it, means for simultaneously moving it across the work, means for simultaneously moving the work in a direction at an angle to the bodily movement of the wheel so as to cause the latter to grind an inclined tooth on the work and means for effecting a relative movement between the wheel and the work during their engagement with each other in a direction to grind a tooth of varying width at different points in its length.

5. A machine of the class described comprising in combination a grinding wheel, means for rotating it, means for simultaneously moving it across the work, means for simultaneously moving the work in a direction at an angle to the bodily movement of the wheel so as to cause the latter to grind an inclined tooth on the work and means for effecting a relative movement between the wheel and the work automatically through a determined distance during their engagement with each other in a direction to grind a tooth of an automatically determined variation in width at different points in its length.

1,346,174. SAFETY-RECEPTACLE. MAX O. CANNER, New York, N. Y., assignor of one-half to Alexander Duff and Sarah Duff, New York, N. Y. Filed Apr. 17, 1917. Serial No. 162,633. 4 Claims. (Cl. 232—42.)

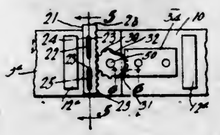
1. A safety receptacle comprising a casing open at one side thereof, and adapted to be placed outside of and to be closed by the door of the house or apartment, said casing having a compartment provided with a folding shelf hinged to the back of the same at a point above the bottom of said casing, said shelf having an inclined guiding edge portion and being adapted to guide, receive and hold an empty milk bottle so that its mouth projects slightly above the open top of said casing, the said casing also having a hinged cover provided with an automatic locking catch, whereby when the bottle is inserted so as to engage, depress and rest upon said shelf, the said cover is kept out of locking engagement, substantially as described.

1,346,175. PROCESS OF TREATING NICKEL ORES. MARTINUS H. CARON, Weltevreden, Java, Dutch East Indies, assignor to Clevenger & Caron, Washington, D. C., a Firm. Filed May 19, 1919. Serial No. 298,148. 5 Claims. (Cl. 75—18.)



1. In the process of recovering values from nickel silicate ores, the steps which consist in subjecting the ore to a preparatory reducing roast and cooling the reduced ore under non-oxidizing conditions.

1,346,176. HOT-WATER BOTTLE. ALDEN R. CHAMBERS, Winthrop, Mass. Filed Apr. 22, 1919. Serial No. 291,900. 5 Claims. (Cl. 46—40.)

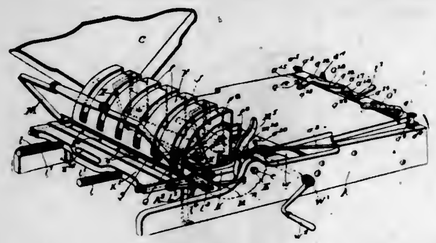


1. A hot water receptacle including a body portion of flexible material a threaded sleeve inserted therein, a hollow head portion, and a threaded sleeve inserted in said head portion for engagement with the first mentioned sleeve to form a closure.

1,346,177. FUSE FOR PROJECTILES. AUGUSTE CHANARD, Ruell, France. Filed Nov. 2, 1918. Serial No. 260,899. 4 Claims. (Cl. 102—2.)

1. A time fuse for projectiles comprising a tubular striker, spring means for operating the striker, cavities in the sides of the striker, ball members located in said cavities and locking the striker in position in readiness for operation, a central rod located in the tubular striker and having a rotating screw and a screw thread for causing axial movement thereof, spring means located at the said cavities and holding the balls in contact with the central rod, said spring means being adapted to cause the release of the striker by the ball members.

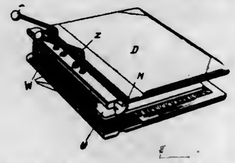
1,346,178. WHEEL-RIM. CALVIN F. CHRISTOPHER, Asheville, N. C. Filed July 12, 1919. Serial No. 310,353. 1 Claim. (Cl. 152—21.)



A demountable rim having relatively movable ends; a keeper on one of said ends; an interrupted pinion journaled on the other of said ends and coöperating with the keeper; and an actuating member mounted to slide on the last specified end of the rim, the actuating member having a rack meshing into the pinion.

1,346,179. LOOSE-LEAF-BINDING MACHINE. HENRY M. CRIPPEN, Athens, Ohio, assignor to The Athens Bindery Company, a firm composed of Henry M. Crippen, William N. Alderman, Field Scott, and H. H. Haning. Filed Oct. 14, 1919. Serial No. 330,573. 20 Claims. (Cl. 129—7.)

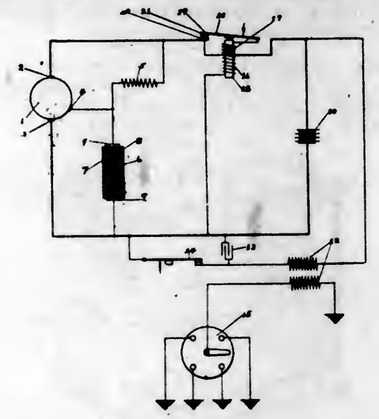
1. In a loose leaf binding machine, the combination with a plurality of receiving pins, of a bodily movable set of punches, a normally retracted stripper carried thereby; said punches being movable from the punching position into alinement with said pins, means for actuating the punches, and a connection between said punch actuating means and the stripper for actuating the latter to force the sheets from the punches to the pins.



2. In a loose leaf binding machine, the combination with a punching mechanism adapted to carry the sheets or leaves from the punching position to the filing position, of interchangeable sets of receiving or filing pins to receive punched sheets of varying width from the punches.

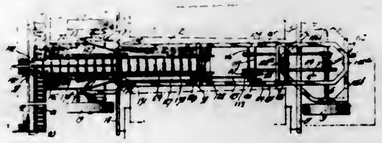
19. In a loose leaf binding machine, the combination with a plurality of receiving pins and flanged sleeves mounted removably on the pins and inclosing same from their upper ends downwardly, of a punching and transferring mechanism to punch the sheets and transfer them to the said sleeves; the upper ends of the sleeves being adapted to be bent laterally to form upper retaining flanges or tongues.

20. In a loose leaf binding machine of the character described, the combination with the punching and transferring mechanism, the transverse axle serving as the axis thereof and provided with an outer headed end and the receiving pins to which the punched sheets are transferred, of a triangular sheet-receiving box having at its lower end a slotted bracket fitting over the headed end of the axle, as described.



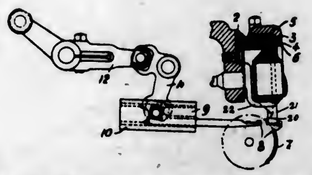
1,346,180. LOOSE-LEAF BINDER. CECIL CUTLER and DANIEL FRANCIS MORAND, Sydney, New South Wales, Australia; said Cutler assignor of his right to Ernest Verey, Sydney, New South Wales, Australia. Filed Oct. 25, 1917. Serial No. 198,383. 9 Claims. (Cl. 129—12.)

1. A loose leaf binder comprising in combination, a binder member, a plurality of riding posts mounted on said member, said posts being bent intermediate their ends so that said ends are disposed angularly to each other, a second binder member independent of and unconnected with the first member, movably mounted on said riding posts by means of apertures through which said posts pass, and means carried by the second binder member for adjustably locking the same to the posts at varying distances from the first member.



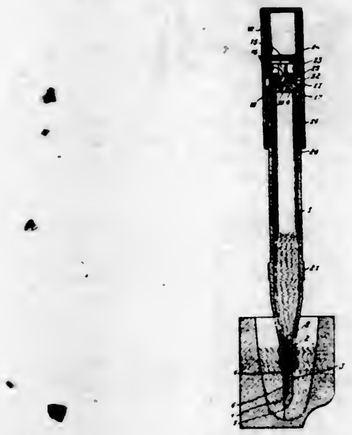
1,346,181. AUTOMATIC REGULATOR. HENRY R. DAVIES, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed May 13, 1918. Serial No. 234,284. 9 Claims. (Cl. 171—313.)

3. In a system of control for variable speed dynamo electric machines, the combination of an electric generator; power mains connected to said generator; translating devices including a storage battery connected across the mains; said generator having field poles, an armature, main brushes bearing on the armature, an auxiliary brush bearing on the armature, a shunt field winding connected to one of said main brushes and to the auxiliary brush, in which the voltage decreases as the speed increases; and means connected intermediate the auxiliary brush and the other main brush, automatically operative in response to the amount of current flowing therethrough to increase



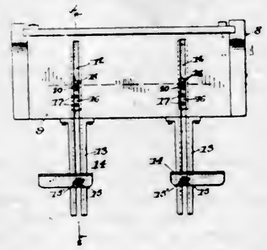
the gradient of normal decrease of shunt field voltage at the higher speeds.

1,346,182. HARVESTING-MACHINE. WILLIAM FRANCIS DE BRANDT, Melbourne, Victoria, Australia, assignor to The Fogarty Patent Interchangeable Harvester Corporation Limited, Perth, Western Australia, Australia, a Corporation of Western Australia. Original application filed June 13, 1918, Serial No. 239,711. Divided and this application filed Feb. 26, 1919. Serial No. 279,398. 3 Claims. (Cl. 56—129.)



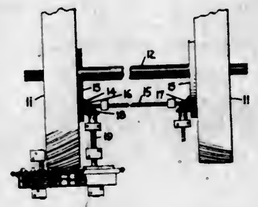
1. In a harvesting machine, the combination of a main frame; harvesting mechanism carried by the main frame; ground wheels for supporting the forward part of the main frame; a rear frame supporting the rear part of the main frame; ground wheels for the rear supporting frame; means for driving the harvester mechanism driven by the last named ground wheels; and means for connecting the rear supporting frame and the main frame, said means permitting the rear frame to pivot about a longitudinal horizontal axis relative to the main frame in accommodation to ground undulations.

1,346,183. STITCH-FORMING MECHANISM FOR SEWING-MACHINES. MARK THOMAS DENNE, Rushden, England. Original application filed Sept. 22, 1914, Serial No. 863,025. Divided and this application filed Sept. 30, 1918. Serial No. 256,211. 1 Claim. (Cl. 112—196.)



In a sewing machine, the combination with a shuttle raceway consisting of an inner fixed member having on its face an arcuate projection formed with a V-shaped ridge and an outer member having a flat face and capable of being adjusted toward and from said ridge, of a rotary shuttle provided with a hook and mounted in said raceway, said shuttle having an annular V-shaped groove on its rear face adjacent the periphery, which groove fits the V-shaped ridge of the raceway and said shuttle having on its front face a flat radial surface at its periphery which engages the flat face of the outer member of the raceway.

1,346,184. SELF-FILLING FOUNTAIN-PEN. THOMAS A. DICKINSON, Youngstown, Ohio. Filed Dec. 22, 1919. Serial No. 346,707. 1 Claim. (Cl. 120—47.)



A self-filling fountain pen comprising a barrel portion having an aperture in its rear end and a threaded reduced neck extending beyond its rear end, said neck being provided with longitudinal grooves in its outer surface, a screw threaded cap fitting upon said neck and normally closing said grooves, the interior of said neck being provided with annular grooves, a valve carried by said cap and arranged to close the aperture in the end of the barrel, a resilient peripheral washer located around the barrel and an elongated cap arranged to slide over the rear end of the barrel and tightly fitting upon said washer.

1,346,185. GAGE FOR SHEET-METAL MACHINES. WILLIAM A. EGGERS, Milwaukee, Wis. Filed Feb. 28, 1919. Serial No. 279,824. 3 Claims. (Cl. 164—59.)

1. The combination with a shearing machine having a table portion provided with T-shaped grooved ways extending at right angles to the line of cut of the machine, of a stop guide therefor comprising a holding member of T-shape in cross section, means for adjustably mounting the holding member within one of the grooved ways and below the upper surface of the table portion, said holding member being adjustable toward and away from the line of cut, and a yielding gage stop member carried by the holding member and normally projecting above the upper surface of the table portion.

1,346,186. TRACTOR-SHOE-DIRT ELIMINATOR. EMIL ERIK, Ossining, N. Y., assignor, by direct and mesne assignments, of twenty per cent. to Elroy I. Quick, Westchester county, N. Y., and thirty per cent. to Alden W. Harvey, New York, N. Y. Filed Feb. 11, 1920. Serial No. 357,869. 7 Claims. (Cl. 280—158.)

6. In combination with the wheel having lugs thereon, a frame extending across the rear of the wheel, sprockets in said frame, a chain taking around said sprockets, means on said chain for cleaning the lugs, and means for driving said sprockets.

1,346,187. PROCESS OF PRODUCING CHROMIUM-CONTAINING ALLOYS. FRANK A. FAHRENWALD, Cleveland Heights, Ohio. Filed Aug. 25, 1919. Serial No. 319,757. 8 Claims. (Cl. 75—1.)

1. The method of reducing ferrous metal ores which contains the steps of mixing the ore with sufficient carbon to reduce substantially all the metallic constituents substantially without overplus heating such mixture for a protracted time to a temperature sufficiently high to reduce the metallic constituents and too low to reduce silicon, and afterward raising the temperature to a point sufficient to melt the reduced metal and to slag out the unreduced constituents.

1,346,188. FIREARM AND ALLOY FOR MAKING SAME. FRANK A. FAHRENWALD, Cleveland, Ohio. Filed Aug. 25, 1919. Serial No. 319,822. 26 Claims. (Cl. 42—76.)

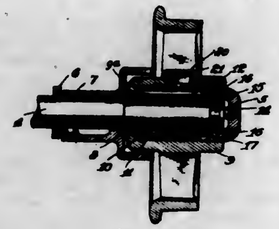
1. A firearm barrel made from an alloy of one or more iron group metals combined with one or more chromium group metals.

1,346,189. FIREARM AND ALLOY FOR MAKING SAME. FRANK A. FAHRENWALD, Cleveland Heights, Ohio. Filed Oct. 15, 1919. Serial No. 330,943. 14 Claims. (Cl. 42—76.)

4. A firearm having parts made of a metal or alloy containing nickel and iron in the proportion of approximately 36 parts of nickel to 64 parts of iron.

1,346,190. FIREARM AND ALLOY FOR MAKING SAME. FRANK A. FAHRENWALD, Cleveland Heights, Ohio. Filed Dec. 15, 1919. Serial No. 345,081. 5 Claims. (Cl. 42—76.)

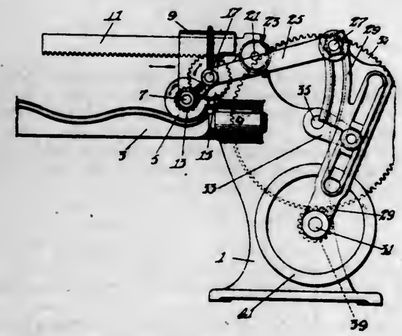
1. A firearm barrel made of an alloy containing copper alloyed with not less than about twenty-five per cent. of nickel.



1,346,191. FIREARM AND ALLOY FOR MAKING SAME. FRANK A. FAHRENWALD, Cleveland Heights, Ohio. Filed Dec. 15, 1919. Serial No. 345,083. 2 Claims. (Cl. 42—76.)

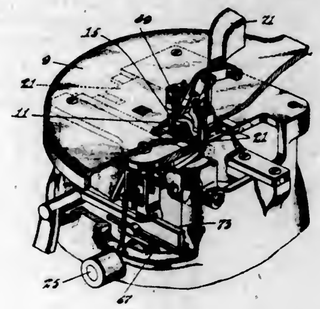
1. A firearm barrel made of an alloy containing iron combined with at least about thirty per cent. of one or more other metals of the iron group.

1,346,192. COMPOSITION OF MATTER. CHARLES L. GEBAUER, Cleveland, Ohio. Original application filed Apr. 12, 1916, Serial No. 90,585. Divided and this application filed Aug. 5, 1916. Serial No. 118,313. 3 Claims. (Cl. 75—1.)



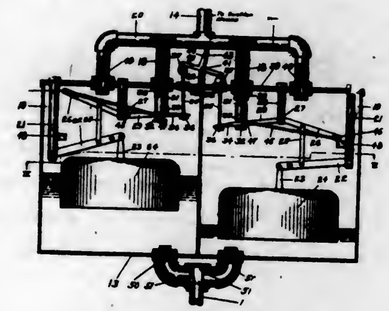
1. A composition of matter consisting of a rigid, non-homogeneous mixture of mutually insoluble metals one of which is a refractory element in a very fine state of subdivison and another of which is a noble metal wherein each particle of the more refractory metal is cast within a shell of the more fusible noble metal.

1,346,193. WHEEL-ATTACHING DEVICE FOR MINE-CARS AND OTHER PURPOSES. FREDERICK H. GIBBS, Brooklyn, N. Y., assignor to William H. Woodin, New York, N. Y. Filed July 26, 1918. Serial No. 246,849. 27 Claims. (Cl. 295—48.)



1. In combination, a wheel hub, an axle therein, bearing rollers in said wheel hub, a cap within the outer end of the hub adapted to hold said bearing rollers in position and means penetrating both hub and cap and engaging said axle to secure the hub, cap and axle in coöperative relation.

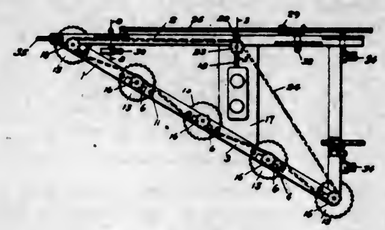
1,346,194. SEAM-RUBBING MACHINE. PERLEY R. GLASS, Brookline, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 13, 1916. Serial No. 90,871. 4 Claims. (Cl. 69—7.)



1. A machine of the class described, having, in combination, a horn for supporting a piece of stock, a roller arranged to travel over said horn, yielding means for holding said roller against said horn, means for reciprocating said roller bodily over said horn, means for rotating said roller, said means being arranged to cause a reversal of the direction of rotation of said roller at each reversal of direction of bodily movement thereof, and means for varying the location of the path of reciprocation of said roller.

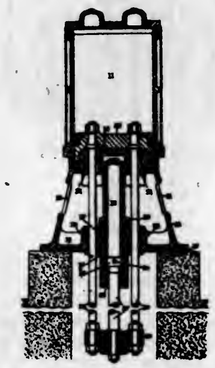
1,346,195. FOLDING-MACHINE. PERLEY R. GLASS, Brookline, Mass., assignor to P. R. Glass Company, Boston, Mass., a Corporation of Massachusetts. Filed May 14, 1917. Serial No. 168,482. 10 Claims. (Cl. 12—54.)

1. A machine of the class described, having, in combination, a support for a piece of flexible material, a creaser, a folder, and means for moving the creaser and folder backward along the edge of the material and in contact therewith to form the fold.



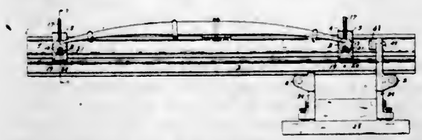
1,346,196. FUEL-FEED SYSTEM. CHARLES F. GREEN, Defiance, Ohio. Filed Nov. 14, 1918. Serial No. 262,531. 4 Claims. (Cl. 158—36.)

1. In a fuel feed system, the combination of a fuel supply source, an aspirator, a plurality of fuel holding chambers, each connected with said aspirator and said fuel supply source, and each having fuel outlet and air inlet passages, valves for the suction and air inlet passages of each of said chambers, means controlled by the rise and fall of the liquid in said tanks for alternately opening and closing said suction valves, and means connecting said air inlet valves whereby closure of the one will effect the opening of the other, and the opening of either will effect the closure of the other, said last mentioned means being actuated by said liquid controlled means.



1,346,197. BRUSH-CUTTER. FRANK GROSS, Louisville, Colo. Filed Nov. 28, 1919. Serial No. 341,131. 3 Claims. (Cl. 56—53.)

3. A brush cutter comprising a frame consisting of a pair of beams, cutting disks rotatably associated with one of the beams, and a land engaging blade having its forward end pivotally connected to the other beam, means for swinging the blade on its pivot, said blade serving to

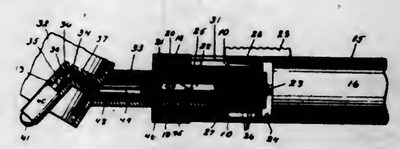


prevent lateral movement of the frame when in motion and the blade is engaged in the ground.

1,346,198. STEAM HYDRAULIC INTENSIFIER. THOMAS WILTON HAND, Sheffield, England, assignor to Davy Brothers Limited, Sheffield, England. Filed Aug. 20, 1917. Serial No. 187,271. 8 Claims. (Cl. 138—10.)

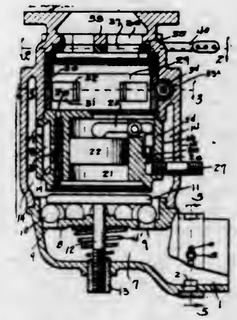
1. In a steam hydraulic intensifier, the combination of a foundation, a stool supported on the foundation, a steam cylinder supported on the stool, said stool comprising an integral open framework whereof the top member forms a bottom cover of the steam cylinder, a ram having one ram member secured within a part of the stool separated from the bottom cover of the steam cylinder, a piston fitted to work in the steam cylinder, a cross head secured to move with the other ram member, members disposed alongside of and parallel to the vertical axis of the intensifier and connected to said cross head and to said piston, said stool forming an open frame freely exposed to the atmosphere and separating the steam cylinder from the ram and means for conducting heat from the said members and away from the said ram.

1,346,199. METHOD AND APPARATUS FOR INSERTING EYE-BUSHINGS. WALTER M. HANSON, Kenosha, Wis. Filed Mar. 24, 1919. Serial No. 284,865. 20 Claims. (Cl. 22—203.)



1. The method of positioning and anchoring eye bushings in metal eye pieces, consisting in inserting a bushing therein of smaller external diameter than the interior diameter of the eye piece, doweling the bushing and the eye piece in

fixed relation to each other, and filling the space between the bushing and the eye piece with molten metal under pressure sufficient to force the metal into crevices and into contact with irregularly contoured surfaces for anchorage purposes.

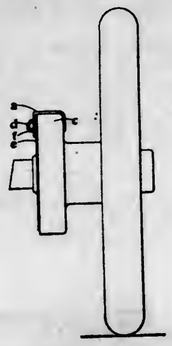


6. Apparatus for positioning and anchoring bushings in eye pieces, comprising the combination of a support provided with doweling members for the bushings and other doweling members for the eye pieces, means for closing the ends of cavities formed between the eye pieces and the bushings, and means for filling such cavities with molten metal.

1,346,200. DIAGNOSTIC INSTRUMENT. ALBERT S. HARRIS, New York, N. Y. Filed Jan. 24, 1920. Serial No. 353,780. 5 Claims. (Cl. 128—9.)

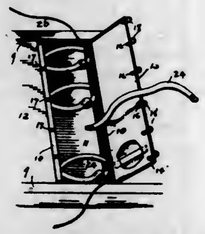
1. In a device of the character described comprising a cylindrical shell, a shank extending from one side thereof and adapted for connection with a handle, and a funnel-shaped member connected with the lower end of the shell; a cover for the upper end of said shell telescopically engageable therein and removable therefrom, said cover being rotatable with respect to the shell and provided with a pair of holes, a magnifying lens within one of said holes, a shutter pivoted upon the underside of the cover for covering and uncovering the other hole, and a handle connected with said shutter and disposed upon the top of the cover.

1,346,201. CARBURETER. FRANKLIN B. HAYS, Indianapolis, Ind. Filed Aug. 14, 1916. Serial No. 114,885. 2 Claims. (Cl. 261—122.)



1. In a carbureter a float, a needle valve operated thereby, a float chamber, a plurality of chambers one of which contains wire gauze connected to said float chamber so as to receive liquid hydrocarbon fuel therefrom, means for passing air successively through said plurality of chambers, an auxiliary chamber above said float chamber communicating with said gauze containing chamber, and means for by-passing part of the air through said auxiliary chamber.

1,346,202. REPAIR OF THE AXLES OF MOTOR-VEHICLES. EDWARD HODGES, Eastleigh, near Southampton, England. Filed Oct. 21, 1918. Serial No. 259,129. 3 Claims. (Cl. 21—5.)

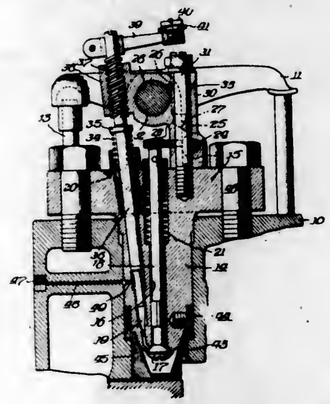


1. In motor cars having the brake drum detached from spokes, means for securing the flange end of the axle casing carrying the brake segments to the brake drum, com-

prising a U-shaped member adapted to contact with the outer face of the flange end of the axle casing aforesaid and

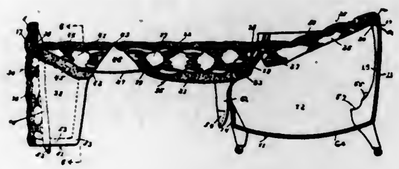
the opposite outer face of the brake drum, substantially as described.

1,346,203. ROOF-DECK FOR VEHICLES. MATTHEW R. HULL, Connersville, Ind., assignor to Rex Manufacturing Company, Connersville, Ind., a Corporation of Indiana. Filed Mar. 29, 1917. Serial No. 158,456. 4 Claims. (Cl. 296—140.)



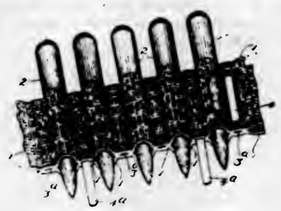
4. A vehicle top comprising a roof, a ceiling and transverse members separating and uniting the other two, said parts together forming compartments, a door in the ceiling affording access to a compartment, a cable adapted to be strung in a taut condition longitudinally of the top close to a side of the top, said cable entering said compartment and passing out through the door-opening thereof, a curtain strung on said cable and adapted to be folded with the cable into the compartment for storage and to be suspended in use from the taut cable, and straps removably secured at their ends, said straps being fastened in said compartment and adapted to hold the folded curtains.

1,346,204. VALVE FOR HYDROCARBON-ENGINES. RASMUS M. HVID, Chicago, Ill., assignor to R. M. Hvid Company, Chicago, Ill., a Corporation of Michigan. Filed May 24, 1918. Serial No. 236,319. 3 Claims. (Cl. 123—33.)



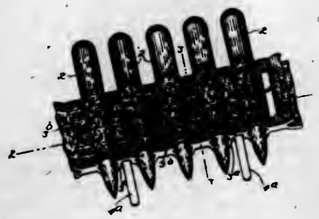
1. In an oil engine, the combination of a valve casing, a fuel cup on the lower end thereof, a puppet valve for controlling the time of admission of liquid fuel and a small quantity of air to said cup, said casing providing an inclined passage terminating at said puppet valve, a cap for closing the upper end of said passage, a governor-controlled needle valve contained in the passage, said valve being provided with an annular flange near its upper end, a spring engaging said flange, a shaft projecting into the casing and having a portion engaging said flange, and means for packing said shaft at the point of entrance thereof to the casing, substantially as described.

1,346,205. OIL-BURNING ENGINE. RASMUS M. HVID, Chicago, Ill. Filed June 9, 1919. Serial No. 302,679. 10 Claims. (Cl. 123—33.)



2. In a hydrocarbon engine, the combination with a cylinder having a main inlet valve, of a plug adapted to be seated within a recess in the cylinder head, a valve carried by the plug for controlling the admission of fuel, a rocker for actuating said main inlet valve, means operable by said rocker for actuating said fuel admission valve, and means for mounting said rocker on said plug whereby the plug and the main valve rocker may be removed and applied as a unit, substantially as described.

1,346,206. COMBINED ARMCHAIR AND BED. ERNST JANTSCH, Cincinnati, Ohio. Filed Oct. 11, 1917. Serial No. 195,960. 4 Claims. (Cl. 5—48.)

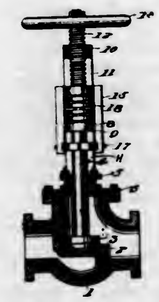


1. In a combined arm-chair and bed, the combination of a frame, a seat-section having pivot-connection therewith adjacent to the front end of said seat-section and provided with a seat-cushion at one face thereof and a mattress at the other face thereof, and a back section provided with a back cushion at one face thereof and a mattress at the other face thereof, said back section comprising forwardly extending sides as rigid portions of said back-section; the front ends of said forwardly extending sides normally located adjacent to said pivot-connection, floor-supports at the normal front ends of said sides, the normal lower end of said back section and the normal rear end of said seat-section hinged together at their mattress-faces, said seat-section and back section arranged to be swung for positioning said mattresses in end-to-end relation with the normally forward end of said seat-section supported on said pivot-connection and with said sides of said back-section extending downwardly and supported on said floor-supports, and a tension-member between said hinged ends of said sections at their faces opposite their said mattress-faces forming supporting means for said hinged ends.

1,346,207. MACHINE-GUN BELT AND THE LIKE. VICTOR H. JENNINGS, Worcester, Mass., assignor to Universal Patents Company, Woonsocket, R. I., a Corporation of Rhode Island. Filed May 1, 1917. Serial No. 165,666. 6 Claims. (Cl. 89—35.)

1. A belt or carrier having transverse loops for the reception of cartridges or other articles, and formed between the successive loops with transversely extending pockets or tubes containing reinforcing or stiffener-strips and also formed in the weaving at opposite ends of said pockets or tubes to prevent endwise displacement of said strips.

1,346,208. MACHINE-GUN BELT AND THE LIKE. VICTOR H. JENNINGS, Worcester, Mass., assignor to Universal Patents Company, Woonsocket, R. I., a Corporation of Rhode Island. Original application filed May 1, 1917, Serial No. 165,666. Divided and this application filed Jan. 2, 1920. Serial No. 348,946. 1 Claim. (Cl. 89—35.)

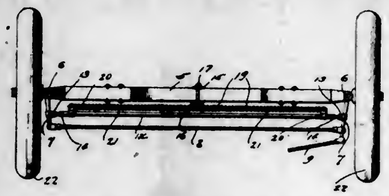


A belt or carrier having transverse loops for the reception of cartridges or other articles, having between the successive loops transversely extending pockets or tubes containing reinforcing or stiffener strips and closed at both ends thereof, and having slits or openings intermediate said ends to provide for the insertion of the reinforcing or stiffener strips.

1,346,209. GEAR-SHIFT LEVER. COLVIN L. JOHNSON, Chicago, Ill., assignor to Johnson Automobile Lock Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 10, 1919. Serial No. 281,646. 5 Claims. (Cl. 74—39.)

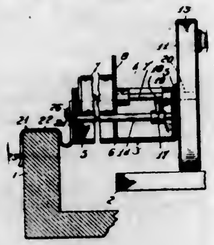
1. The combination with a gear shaft shift lever having a groove cut longitudinally therein, of a key permanently secured in position in the outer portion of said groove.

1,346,210. GLOBE-VALVE. WILLIE HARRY JOHNSON, Chicago, Ill. Filed June 13, 1919. Serial No. 303,881. 2 Claims. (Cl. 251—38.)



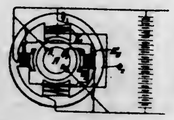
1. In combination with the valve casing having a valve seat, and the valve coöperating with the seat and having a stem extending out of the casing, of a screw, a yoke connected with the casing and having a nut through which the screw is threaded, said screw and stem having a lost motion connection for permitting them to move longitudinally with respect to each other within limits and for permitting a limited rotary movement with respect to each other, and a spring arranged between the screw and the stem and normally acting to press the valve to its seat.

1,346,211. STEERING-BALANCE. WILLIAM H. JOHNSON, Perry, Okla. Filed Nov. 26, 1919. Serial No. 340,758. 1 Claim. (Cl. 280—94.)



A steering balance for motor vehicles comprising a guide bracket for attachment to the mid-length of the front axle and having an outstanding leaf with upper and lower openings, a pair of clips for attachment to the arms of the steering knuckles, a rod pivotally connecting said clips, means for adjusting the length of this rod to adapt it to the motor vehicle, clips mounted on the rod near its

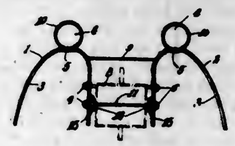
ends, rods pivoted in these clips and projecting inward and lapping each other, their inner ends being mounted



through respective holes in said leaf, and expansive springs coiled on these rods between said leaf and the last-named clips.

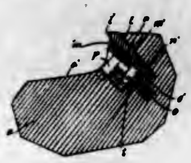
1,346,212. RAZOR-STROPPING DEVICE. EDWIN JUELSON, Chicago, Ill. Filed June 15, 1918. Serial No. 240,120. 1 Claim. (Cl. 51—16.)

In a stropping device, a stropping mechanism, a sheet metal frame for the same, having an upright wall near one end of the mechanism, a plate having spaced upwardly projecting portions adjustably secured to the end portion of the frame and curved intermediate their ends to provide resiliency, said plate being provided with spaced downwardly projecting lugs, and with a separate downwardly projecting portion whereby said plate may be placed on the upper edge of an upright wall and engage the same, and a friction disk mounted on said casing for driving the stropping mechanism.



1,346,213. CONTINUOUS-CURRENT DYNAMO. FRITZ KESSELRING, Neuhausen, Switzerland. Filed July 17, 1916. Serial No. 109,800. 3 Claims. (Cl. 171—225.)

1. In a continuous current dynamo, main and auxiliary field poles and energizing coils therefor, an armature having a main winding arranged in the magnetic fields of the main and auxiliary poles and included in circuit with said main field coils, said armature also having an auxiliary winding arranged solely in the magnetic field of the main field poles and included in series with the auxiliary field coils across the main armature winding, and a storage battery in parallel with the main field coils.



1,346,214. AEROPLANE SAFETY DEVICE. LOUIS KOVACS, Throop, Pa. Filed Feb. 28, 1920. Serial No. 361,991. 6 Claims. (Cl. 244—21.)

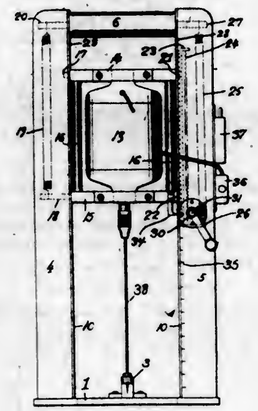
1. In combination with an aeroplane, a pair of collapsible wings, one arranged on each side of said aeroplane, each of said wings being adapted for extension in the direction of the length of said aeroplane, a series of spring motors, gears on said motors, a shaft operatively con-

nected to said wings, a gear on said shaft operatively engaging said motor gears, and a control lever for causing said shaft to rotate for extending said wings.

1,346,215. KNIFE-SECURING MEANS FOR CUTTER-HEADS. GEORGE L. KRABER, Portland, Oreg., assignor, by mesne assignments, to The Turbine Air Tool Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Apr. 27, 1918, Serial No. 229,138. Divided and this application filed Oct. 7, 1918, Serial No. 257,255. Renewed Dec. 6, 1919. Serial No. 343,142. 6 Claims. (Cl. 144—230.)

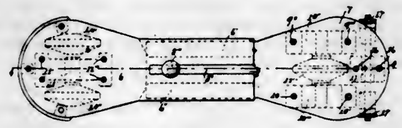
1. The combination of a cutter head provided with a slot for receiving a knife-blade, a knife-blade adapted for insertion in such slot, means directly coöperating with said blade to secure the same in place, a wedge-plate adapted for insertion in such slot in contact with said blade, and means for securing said plate in place, said plate being adapted to prevent removal of said first-named securing means.

1,346,216. AUTOMOBILE-RADIATOR. VERNON E. LA MASTER, Beardstown, Ill., assignor of one-half to Thomas J. Smedley, Frederick, Ill. Filed Oct. 16, 1917. Serial No. 196,929. 2 Claims. (Cl. 257—125.)



1. The combination with an automobile radiator; of a subjacent casing adapted to contain a heating unit, a main conduit leading from a point above said unit vertically through the center of the radiator and open at its top, and other conduits branched from the first and extending in tortuous courses upward through the radiator near its sides and top and united near the latter with said main conduit, as and for the purpose described.

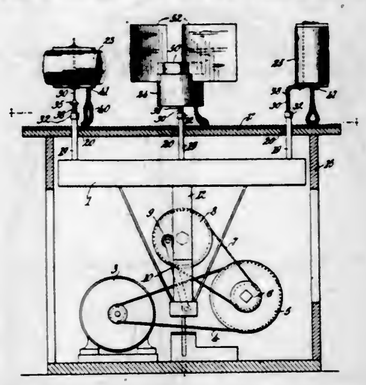
1,346,217. PERFORATING-MACHINE. FREDERICK M. LASERSON, New York, N. Y. Filed Apr. 12, 1919. Serial No. 289,661. 4 Claims. (Cl. 77—6.)



1. The combination of a circular base having a central opening, hollow upright frame members supported on said

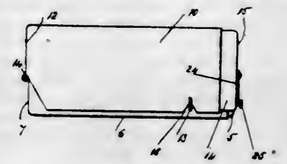
base, a handle for joining the upper ends of said frame members, a yoke suspended from within the latter, guiding means on said frame members for the said yoke, a motor

supported in the latter, a needle carried by said motor, a needle guide secured to the said base and means for raising and lowering the yoke and motor.



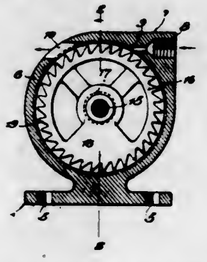
1,346,218. ROLLER-SKATE. ELMER T. LEE, Waterbury, Conn. Filed Jan. 7, 1920. Serial No. 349,924. 2 Claims. (Cl. 46—51.)

1. A roller skate comprising a supporting body consisting of a relatively flat heel-plate having guide-ways at the opposite sides of the advance portion thereof; a sole-plate having a relatively flat shank fitting and adjustably secured within said guideways; sheet-metal hangers depending, a pair thereof duly spaced from said sole-plate and one thereof from said heel-plate; an axle fixed in said pair of hangers and having a bearing-roller rotatable thereon between said pair of hangers; an axle fixed in the hanger depending from said heel-plate and having a pair of bearing-rollers rotatable thereon, at the opposite sides of the hanger supporting the same; and means for attaching said skate to the foot-covering of the user, each of said hangers affording an axle-sleeve for the reception of the axle provided for coöperaton therewith.



1,346,219. ADVERTISING OR AMUSEMENT DEVICE. CLINTON H. LEGGETT, New York, N. Y. Filed Aug. 4, 1919. Serial No. 315,069. 12 Claims. (Cl. 46—40.)

1. An advertising or amusement device comprising a vibratory frame, a platform, an article to be actuated by said frame, and a connection between said frame and article, said connection comprising a socket piece and a rod, and a resilient stop through which said rod bears



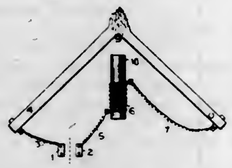
upon the socket piece, one part of said connection being carried by said vibratory frame.

1,346,220. LUNCH-BOX. FOREST LEWIS, Charleston, W. Va. Filed Mar. 24, 1920. Serial No. 368,337. 1 Claim. (Cl. 220—8.)

A lunch box, comprising a bottom portion and a top portion hinged together at one end in line with the middle portions of their sides, said box portions being of unequal width and one portion being adapted to slide over and partially inclose the other, each said portion being formed of relatively slidable inner and outer sections which enable the length of the box to be varied, the outer box portion having guides provided with notches at the edges of the sides of the outer section, and the edges of its inner section being slidable in the said guides and being each provided with a series of notches which register with the aforesaid notches, and locking pins which project laterally from the sides of the inner box portion and engage with the said notches of its top portion when the box is closed.

1,346,221. VIBRATOR. HUGO F. LIEDTKE, Hagerstown, Md. Filed Nov. 29, 1919. Serial No. 341,501. 6 Claims. (Cl. 259—72.)

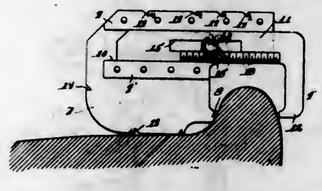
1. A vibrator comprising a fixed shaft, an unbalanced wheel journaled on said shaft and having peripheral pro-



jections, and a nozzle arranged to discharge fluid under pressure against said projections whereby to rotate said wheel.

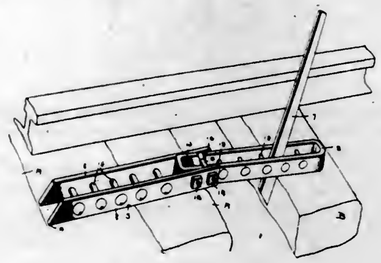
1,346,222. PLASTIC PILE. JOSEPH LINDEMAN, New York, N. Y. Filed Apr. 30, 1917. Serial No. 165,451. 1 Claim. (Cl. 61—56.)

A pile including spaced end elements, circular series of eyes on the inner faces thereof, a plurality of rings arranged in spaced relation to each other between the end elements, each ring being formed with eyes arranged in a series therearound, and a reinforcing strand rove through the eyes on the end elements and rings to provide a shell of longitudinal stretches, and led from each end eye across to an eye substantially opposite at the other end to form diagonal stretches so disposed as to cross each other substantially at the midlength of the pile; and a plastic filling inclosing all stretches and rings.



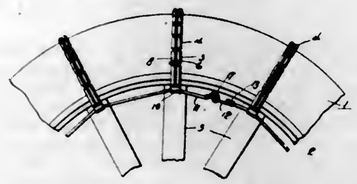
1,346,223. ELECTRIC-ARC FURNACE. LAMBERTO LOMBARDI, Rome, Italy. Filed Jan. 27, 1919. Serial No. 273,339. 4 Claims. (Cl. 204—64.)

1. The combination of the wall of an electric furnace with pairs of converging electrodes extending inward through said wall to form an electric arc between the tips of each pair, of electro-magnets having longitudinally movable cores also extending inward through said wall, one core being presented to each arc on the outer side, and electric circuit connections arranged to simultaneously energize the said electrodes and magnets, the said arcs being arranged to coöperate in heating any article between them.



1,346,224. WHEEL-DEFECT AND COUPLING-LIMIT GAGE. ANDREW MCCORMICK, Herculaneum, Mo. Filed Mar. 12, 1918. Serial No. 221,916. 1 Claim. (Cl. 33—143.)

A device of the class described comprising a body part having a relatively stationary jaw provided thereon at one end; spaced parallel plates mounted on said body, having a channel between them; a shank slidably mounted in said channel and adapted to project from said end of said body; a jaw on said shank for coöperation with said relatively stationary jaw; a bolt passing through said shank and body; a coöperating nut threaded upon said bolt, and a bow spring engaging with said bolt and body for yieldingly holding said relatively movable jaw in positions of

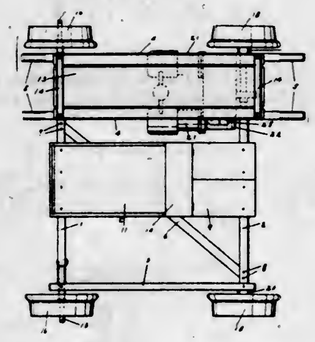


adjustment, said shank being longitudinally slotted to accommodate said bolt, the portion of said bolt registering with said slot being square and fitting snugly in said slot, whereby said bolt is held against rotary movement, substantially as described.

1,346,225. TIE-SPACER. PHILLIP MCGUIRE, Staples, Minn. Filed Oct. 10, 1919. Serial No. 329,749. 3 Claims. (Cl. 254—44.)

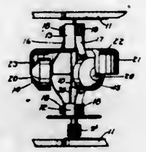
1. A tie spacer comprising a pair of engaging members movable into angular relation whereby one of said members may be engaged with a tie, and a plurality of fulcrum members carried by one of the tie engaging members.

1,346,226. ANTISKID-CHAIN. MATH MAGER, Garfield, Minn. Filed May 22, 1919. Serial No. 298,902. 2 Claims. (Cl. 152—14.)



1. An anti-skid chain device comprising a pair of flexible retaining members, anti-skid members extended between the retaining members and attached thereto, and comprising shrinkable cords folded upon themselves to provide parallel strands, and metallic sleeves arranged in pairs and fixed to the said parallel strands.

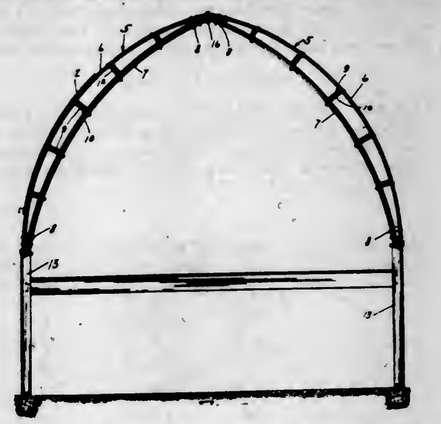
1,346,227. RAILWAY MOTOR-CAR. CHARLES G. MAHANA, EARL D. GLIDDEN, and MILTON P. LAURENT, Three Rivers, Mich, assignors to Fairbanks Morse & Company, Chicago, Ill., a Corporation. Filed Apr. 26, 1920. Serial No. 376,636. 13 Claims. (Cl. 105—138.)



1. In a railway motor car, the combination of a frame comprising front and rear cross members, a longitudinal

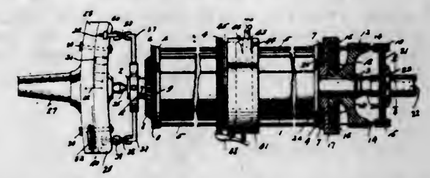
side member connecting said cross members at one side, a pair of spaced longitudinal sills connecting said cross members at the other side, spindles mounted on said front cross member, hangers provided with axle bearings mounted at the ends of the rear cross members, a live axle mounted in said hanger bearings, wheels on said axle and spindles disposed at the outer side of said longitudinal

frame members, an engine supporting saddle secured on the under side of said sills, a pair of internal combustion engines mounted horizontally on said saddle and provided with crank cases having opposed inwardly projecting crank shaft bearings, a supporting bearing for said axle mounted on the rear end of the crank case of the inner engine, a crank shaft common to both engines, and meshing gears on said crank shaft and axle.



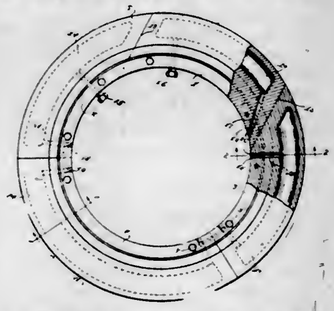
1,346,228. MEANS FOR PROTECTING GOVERNORS. RAY H. MANSON, Rochester, N. Y., assignor to The General Phonograph Manufacturing Company, Elyria, Ohio, a Corporation of Ohio. Filed July 31, 1916. Serial No. 112,218. 1 Claim. (Cl. 264—18.)

In a device of the class described, a rotatable shaft, a bell-shaped member mounted fixedly on said shaft and having openings in the top thereof, a block adapted to slide on said shaft, leaf springs secured to said member and said block, weights secured to the intermediate portion of said springs, whereby on excessive rotation the block slides on the shaft and the weights engage said member.



1,346,229. TRUSSED ROOF-ARCH. ADELBERT MECHAM, Edinburg, N. D. Filed Apr. 1, 1920. Serial No. 370,401. 6 Claims. (Cl. 108—1.)

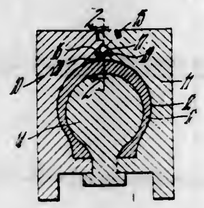
1. A roof structure comprising a plurality of laterally spaced arched trusses, each of which includes upper and lower members connected at their ends, and a plurality of laterally spaced purlins interposed between said upper



and lower members and connecting adjacent arched trusses, said purlins being progressively higher from the ends of the arches to the centers thereof.

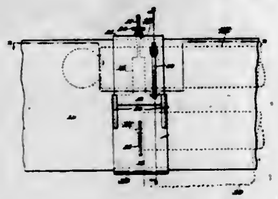
1,346,230. BORING-BAR. LEOPOLDO MEDIAVILLA and JOHN L. CANALES, New York, N. Y. Filed May 22, 1918. Serial No. 236,005. 6 Claims. (Cl. 77—57.)

1. In combination, a mandrel adapted to be angularly adjustable, a cutter head rotatable with the mandrel and adjustable thereon, a feed screw mounted on the mandrel and in engagement with the cutter head, a fixed shaft, a gear element mounted on the fixed shaft and having a universal joint connection therewith, and means between the gear element and the feed screw for imparting rotary movement to the latter as the mandrel is rotated.



1,346,231. TIRE-CORE. THOMAS MIDGLEY, Sr., Columbus, and THOMAS MIDGLEY, Jr., Dayton, Ohio, assignors to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Aug. 4, 1919. Serial No. 315,113. 4 Claims. (Cl. 18—45.)

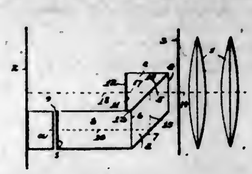
2. In a collapsible core, a plurality of core sections shaped to constitute an annulus when in assembled rela-



tion, the interiors of said sections being of hollow form, clamping means for maintaining said sections in concentrically assembled relation, and means whereby a heating medium may be circulated through at least certain of said sections and through a part of said clamping means.

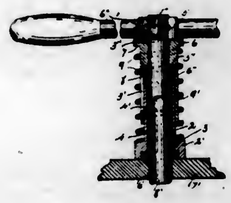
1,346,232. OVERFLOW-CAVITY FOR MOLDS. THOMAS MIDGLEY, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Aug. 11, 1919. Serial No. 316,666. 13 Claims. (Cl. 18—17.)

1. A compression mold for tire casings comprising sections adapted to be moved toward each other, and a restricted overflow opening between the sections presenting a substantially constant area during the compressing movement of the mold.



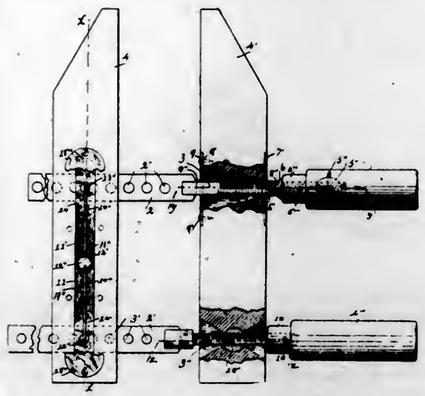
1,346,233. CURTAIN-POLE AND WINDOW-SHADE HOLDER. EWDOKIJA MIKOLYN, Charleroi, Pa. Filed Oct. 23, 1918. Serial No. 259,396. 1 Claim. (Cl. 156—24.)

A bracket of the class described comprising vertically disposed inner and outer overlapping plates, outwardly-turned guide flanges formed on the sides of the inner plate slidingly securing the plates together, the outer ends of the plates being provided with inwardly-turned portions and securing members projecting from the inwardly-turned portions adapted to engage the edges of the casing, the inner plate being in flat contact with the casing to guard against lateral tilting of the bracket, a partly flat and partly screw-threaded shank on the inner plate extending through the inwardly-turned portion of the outer plate and disposed in flat contact with the casing, a nut on the screw-threaded part of the shank adapted to be screwed against the outer face of said last-named inwardly-turned portion, and a shade or curtain supporting member carried by one of said plates.



1,346,234. MULTICOLORED APPARATUS. HENRY N. MILLER, Chicago, Ill. Filed Sept. 15, 1917. Serial No. 191,571. 1 Claim. (Cl. 88—16.4.)

In an apparatus of the character described, the combination with a lens, of a movable shutter and movable films, a prism mounted in inclined position and having a mirrored opaque surface on its lower face and a semi-opaque surface on its upper face, a triangular prism having its lower face engaging the semi-opaque face of the first prism and provided with a colored filter on its vertical side, a third prism fitting against the first prism

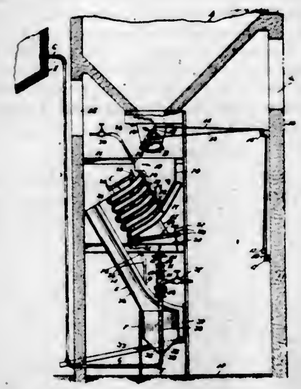


and provided at the side remote therefrom with a colored filter and a fourth prism adjacent the film and spaced slightly from the second filter.

1,346,235. TAP-GUIDE. HENRY MÜLLER, Waterbury, Conn. Filed July 18, 1919. Serial No. 311,817. 5 Claims. (Cl. 10—147.)

1. A tap guide comprising telescopically conjoined sections constituting a body for the reception of a tap; means for limiting the extent of distending relative adjustability of said sections; and means for holding said sections normally under an elastic stress against compressive relative adjustment thereof.

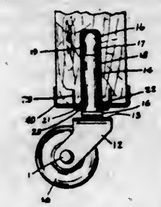
1,346,236. JOINER'S CLAMP. HENRY MÜLLER, Waterbury, Conn. Filed Nov. 8, 1919. Serial No. 336,743. 2 Claims. (Cl. 144—301.)



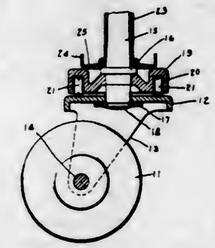
1. A joiner's clamp comprising a pair of operating-bars arranged in spaced parallel relation, one thereof having a threaded shank firmly conjoined therewith; a pair of clamping jaws mounted on said operating-bars, one for sliding adjustments thereabout, and the other having a link hinged thereto at its outer face, and being freely intersected, conjunctively with such link, by the shank aforenamed; a hand-piece swiveled to said link and affording a fixed nut having a threaded engagement with said shank, whereby direct and reverse adjustments of the last-named jaw may be effected; and means for temporarily locking the first-named jaw to said operating-bars, at variant positions therealong.

1,346,237. PISTON-RING. JOHN T. MURRAY, Danielsville, Ga. Filed Mar. 17, 1919. Serial No. 283,199. 2 Claims. (Cl. 74—109.)

1. A piston ring having its ends reduced in width to provide superposed overlapping end portions, the extremity of each end portion being reduced in thickness to provide a tongue, the body of the ring being recessed on its opposite face at the junction of the body with the end portions, each recess receiving the tongue of the opposite end portion, the tongue being wider than the end portion from which it extends, and said end portion having a longitudinally extending flange forming a continuation of one edge of the tongue, the inner face of each end portion being longitudinally recessed to receive said flange.



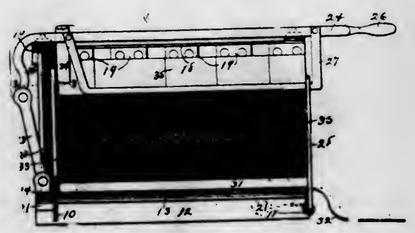
1,346,238. SAND-DRYING PLANT. HENRY W. NAGEL, Chicago, Ill., assignor of one-half to August C. Ronda. Filed Apr. 23, 1919. Serial No. 292,107. 5 Claims. (Cl. 34—33.)



1. A sand plant comprising a sand bin having an opening through which the sand is adapted to flow by gravity, a gate for controlling said opening, spaced heating elements between and over which the sand is adapted to pass after leaving said bin, each of said elements having portions having different inclinations, said inclinations being steepest where the sand first flows and is wettest, and less steep at the points to which it passes after being partially dried, an inclined screen for shifting the sand as it leaves said heating elements, and a chute and hopper for receiving the shifted sand.

1,346,239. SOCKET FOR CASTERS. WILLIAM H. NOELTING, Evansville, Ind., assignor to Faultless Caster Company, Evansville, Ind., a Corporation. Filed July 28, 1919. Serial No. 313,836. 2 Claims. (Cl. 16—4.)

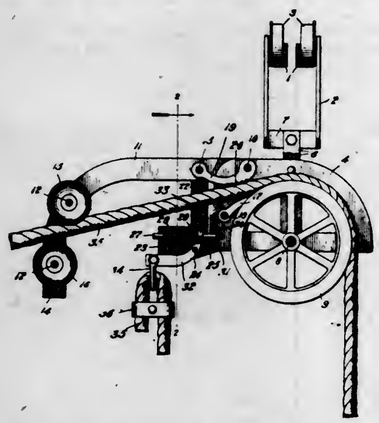
1. A tubular socket for the stem of a caster for the wooden leg of a cabinet or the like, a ferrule to cover the end of said leg, and an annular plate surrounding the lower part of said socket and secured thereto and provided with long upwardly extending prongs which are adapted to extend through said ferrule and penetrate the leg and secure thereto said ferrule and socket.



1,346,240. CASTER. WILLIAM H. NOELTING, Evansville, Ind., assignor to Faultless Caster Company, Evansville, Ind., a Corporation. Filed Feb. 14, 1920. Serial No. 358,698. 1 Claim. (Cl. 16—73.

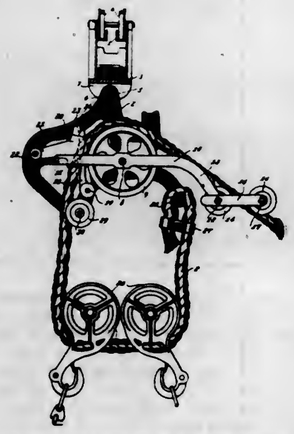
A caster including in combination a caster roller, a roller support rotatably mounting said roller and having a yoke portion, a stem rotatably mounted upon said yoke portion, a race including a roller channel secured to said stem in spaced relation with said yoke portion, rollers in said race rollable upon said yoke portion and the bed of said channel, and an apron adjacent and in spaced relation with said yoke portion and said channel to protect said rollers and insure frictionless operation.

1,346,241. SHINGLE-REBALING MACHINE. JOHN NORRIS and JESSE I. PEARSALL, Mason City, Iowa. Filed Aug. 26, 1918. Serial No. 251,989. 2 Claims. (Cl. 100—32.)



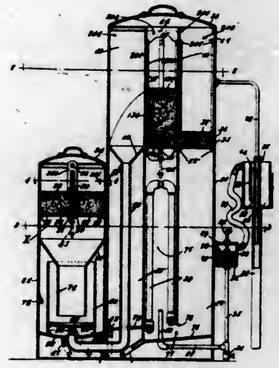
1. A re-baling machine consisting of a bottom, one side and parallel end portions suitably connected, a link rising from said bottom outside the side portion, a lever formed with a goose-neck at one end pivoted to said link, a yoke fixed to and extending longitudinally of said lever and adapted to depend on the opposite side of the side portion from the link, and a hook adapted to connect the bottom and yoke detachably.

2. A re-baling machine consisting of a bottom, one side and parallel end portions suitably connected, a link rising



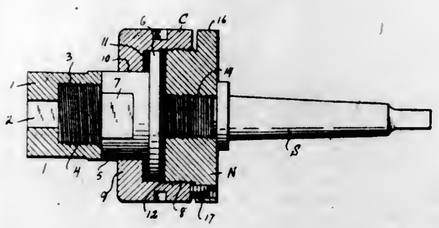
from said bottom outside the side portion, a lever formed with a goose-neck at one end pivoted to said link, a yoke fixed to said lever and adapted to depend on the opposite side of the side portion from the link, and a hook adapted to connect the bottom and yoke detachably, and a pivoted hook adapted for securing part of a bundle-retaining element to said side portion temporarily.

1,346,242. HAY-CARRIER. HENRY S. NUNAMAKER, Canton, Ohio, assignor to The V. L. Ney Hay Tool Company, Canton, Ohio, a Corporation of Ohio. Filed Feb. 28, 1919. Serial No. 279,719. 4 Claims. (Cl. 188—64.)



1. A hay carrier provided with a main sheave, a locking lever pivotally connected to said carrier, a rope grip connected to said locking lever, a spring pressed bolt operatively connected to said locking lever for holding said locking lever in the raised position, means for withdrawing said bolt to allow the locking lever to be moved downward and an elevating rope connected to said bolt withdrawing means, and passing over the sheave and forming a fall, said elevating rope passing between the sheave and the rope grip and engaging said locking lever.

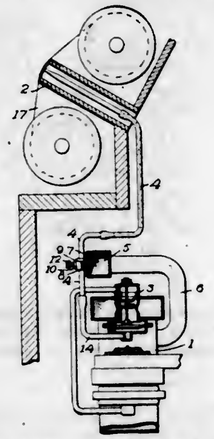
1,346,243. HAY-CARRIER. HENRY S. NUNAMAKER, Canton, Ohio, assignor to The V. L. Ney Hay Tool Company, Canton, Ohio, a Corporation of Ohio. Filed Dec. 5, 1919. Serial No. 342,733. 4 Claims. (Cl. 212—114.)



1. A hay carrier provided with a main sheave, a locking lever connected to said carrier, a rope grip pivoted within the carrier and resting upon the locking lever, an elevating rope connected to the carrier and passing over the sheave and forming a fall, the rope grip arranged to normally engage said elevating rope and means for tilting the locking lever to swing the rope grip out of engagement with the elevating rope.

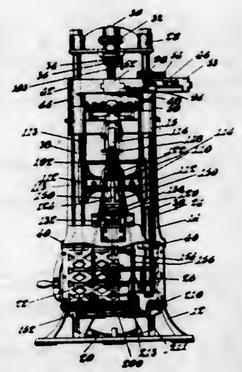
1,346,244. OIL-FILTER. JOHN H. PACKER, Liberty, Mo. Filed May 7, 1919. Serial No. 295,333. 3 Claims. (Cl. 210—43.)

1. A device of the class described, comprising first and second compartments communicating at their lower ends; filters in said compartments and dividing the same into upper and lower chambers; an outlet for the upper chamber of the second compartment; means for heating the lower chamber of the second compartment; and means for maintaining a column of water at an adjusted head in communication with the lower chamber of the second compartment, thereby to govern the height of the water in the lower chambers when an increment of water is added thereto with the oil which is to be filtered.



1,346,245. CHUCK. FREDRICK C. PALOSKY, Pontiac, Mich., assignor of one-half to Simon Zimmermann, Pontiac, Mich. Filed July 11, 1919. Serial No. 310,243. 3 Claims. (Cl. 64—106.)

1. A device of the character described comprising a cap, a head in swivel engagement therewith, a socket member carried by the head, a nut engaged within the cap for frictional action upon the head, a shank engaged with the nut, and regulating members threaded through the nut for contact with the cap.

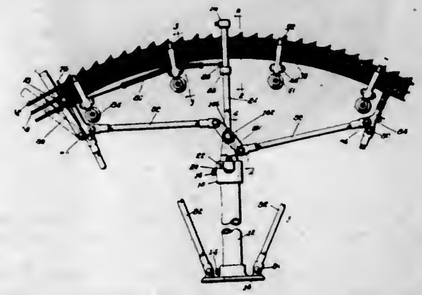


1,346,246. PNEUMATIC PIANO-PLAYYER. CLAUS E. PETERSON, Worcester, Mass. Filed May 28, 1919. Serial No. 300,283. 3 Claims. (Cl. 84—58.)

1. In an apparatus of the class described, the combination with a tracker bar and a pneumatic action, of a pipe leading from the tracker bar to the pneumatic action and having an opening therein, a cap inclosing said opening,

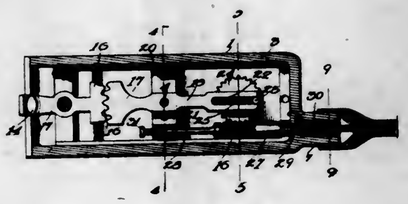
a tube inclosing a vacuum chamber and having an opening communicating with said cap, and means for attaching said cap to the side of said tube.

1,346,247. MACHINE FOR OPERATING ON HEELS. JOSEPH H. POPE, Hamilton, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 14, 1916. Serial No. 131,332. 27 Claims. (Cl. 1—36.)



1. A machine for attaching heels, having, in combination, a nailing die movable between nail loading and heel attaching positions, heel and top lift holders associated with the die and constructed and arranged to position alternatively a heel or a top lift in register with the die, and means for automatically moving said holders alternately into register with the die in proper time relation to the movements of the latter.

3. A machine for operating on heels, having, in combination, a frame having a die plate and shoe support relatively movable to subject the work to pressure, a tubular tension member connected to either end of the die plate, operating rods arranged to reciprocate within the tubular members, and a gang of tools carried thereby.

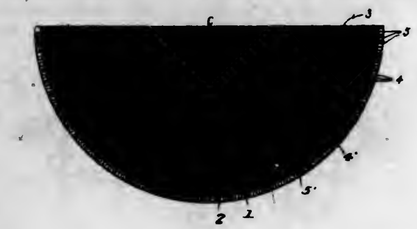


8. A machine for attaching heels, having, in combination, a pair of die blocks, a supporting member for the die blocks rotatable to present them successively in nail loading and heel attaching positions, a gang of tools, and stationary means for supporting at its outer side each die block brought into line with the tools.

1,346,248. MACHINE FOR USE IN HEEL MANUFACTURE. JOSEPH H. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 10, 1918. Serial No. 257,603. 13 Claims. (Cl. 12—42.)

1. A machine for use in heel manufacture, comprising an elongated holder constructed and arranged to contain a column of heel blanks face to face, and means for varying the longitudinal contour of said holder.

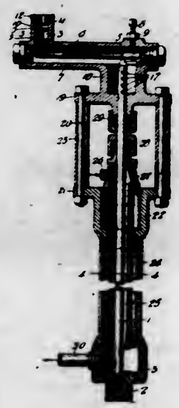
1,346,249. CLIPPER. JAMES W. PRICE, Henryetta, Okla., assignor of one-half to Hettie S. Miller, Henryetta, Okla., and one-eighth to G. W. Webster and one-eighth to S. S. Webster, Tulsa, Okla. Filed Oct. 1, 1919. Serial No. 327,665. 3 Claims. (Cl. 30—1.)



2. In clippers, a casing consisting of two portions extending at an obtuse angle with respect to each other and open at the convex side, a plate carrying a series of fixed blades detachably connected with the casing at the end of one of the said portions and arranged with the blades extending beyond the said end of the casing, a cover plate shaped to fit the open side of the casing, said casing being rabbeted to receive the edges of the cover plate and said plate extending beneath the blade carrying plate, means for detachably connecting the cover plate and the blade carrying plate to the casing, a series of movable blades coöperating with the fixed blades and operating mechanism for the blades held within the casing.

1,346,250. MATHEMATICAL INSTRUMENT. JOHN PURING, New York, N. Y. Filed May 10, 1916. Serial No. 96,548. 3 Claims. (Cl. 33—1.)

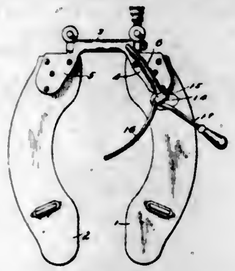
1. As an article of manufacture a mathematical instrument comprising the combination of a rule and a protractor, said instrument being adapted to use in triangulation, the protractor having a series of radii extending from the center outward and indicating degrees, a series of arcs equally spaced from each other dividing said radii into units and a second series of arcs arranged between each pair of the first mentioned arcs and dividing said radii into subdivisions, the known quantities of the triangle being adapted to be plotted on said protractor and the triangle



completed, the said rule being provided with units and subdivisions equal in size to the units and subdivisions of the protractor to measure the lengths of the unknown sides of the triangle by application thereto.

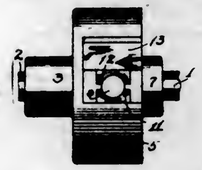
2. A combination as described in claim 1 wherein the length of said rule is equal to the diameter of the protractor.

3. A combination as described in claim 1 wherein one series of radii is provided to divide the protractor into units of a multiple of degrees, and a second set of radii so provided for dividing one of said units into smaller divisions.



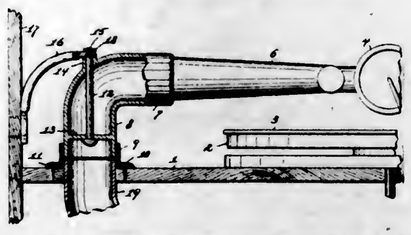
1,346,251. WATER-HEATER. DE FOREST L. RATHBONE, Jacksonville, Fla. Filed Jan. 25, 1919. Serial No. 273,206. 5 Claims. (Cl. 257—2.)

1. An automatic water heater, comprising a hot water outlet head, heater structure supported on said head and including a housing at the top with a valve tube, a heater tube carried by the supporting head with a cold water inlet at one end, a steam tube anchored in the head and passing through the heater tube to the housing at the top, said steam tube terminating in a closure providing a knife edge and having a series of steam openings; a valve bar fulcrumed on the knife edge, adjusting means bearing on one end of the bar, and a steam valve working in the valve tube and bearing on the other end of the bar, to control a steam inlet by the longitudinal expansive movement of the steam tube.



1,346,252. COMBINATION CLOSET-SEAT AND BIDET. DE FOREST LISLE RATHBONE, Jacksonville, Fla. Filed Feb. 9, 1920. Serial No. 357,387. 3 Claims. (Cl. 4—25.)

1. In combination, a seat for the closet bowl consisting of separated sections connected at the hinged end by a hollow bar, said bar having a water connection at one end and having an extension extending along the under side of one of the said portions, said extension having a valve casing at the end remote from the bar and a valve plug in the casing, said valve plug having a handle and a

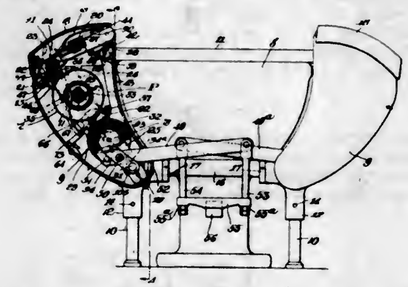


discharge tube so arranged that when the handle is swung in the proper direction the discharge tube will be moved with its free end in position on the said section for use.

1,346,253. UNIVERSAL COUPLING. GEORGE T. RAYFIELD, Chicago, Ill. Filed Sept. 20, 1917. Serial No. 192,334. 7 Claims. (Cl. 64—103.)

1. A coupling comprising a pair of coupling members, bearings slidably engaging one of the coupling members, the other coupling member having pivotal engagement with the first coupling member and means for holding each member engaged with the bearings under tension.

1,346,254. TONE-ARM FOR TALKING-MACHINES. THOMAS H. REED, Newark, N. J. Filed Sept. 14, 1918. Serial No. 254,033. 2 Claims. (Cl. 274—23.)

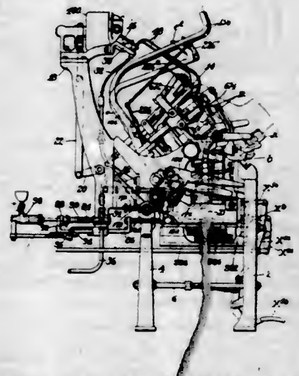


1. In a talking machine, the combination with a bracket, a vertically disposed stud secured to said bracket and a tubular tone arm provided with a vertically disposed portion having alined bearngs for the reception of said stud and upon which stud the tone arm is suspended to swing in a fixed plane.

1,346,255. SANITARY WATER-CLOSET. WARREN C. REES, Somerville, Mass., assignor to Aseptic Service Company, Boston, Mass., a Corporation of Maine. Filed Oct. 22, 1917. Serial No. 197,758. 29 Claims. (Cl. 4—18.)

1. The combination with a water closet bowl of a seat, a swinging frame carrying said seat movable to project the same over and withdraw it from said bowl substantially

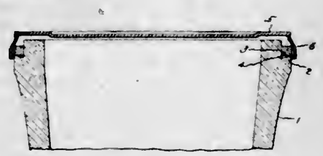
in an arc about the axis of said frame, and a housing beside said bowl within which the seat is inclosed when thus withdrawn.



2. The combination with a water closet bowl of a swinging frame mounted beside the same adapted to swing toward and away from the same, a seat carried by said frame movable thereby substantially in an arc about the axis of said frame, over and aside from said bowl, a covering strip passing over said seat, means for causing the seat when projected to draw a fresh portion of said strip over its surface, and means for taking up that portion of the strip which was previously on the surface of the seat when the seat is withdrawn.

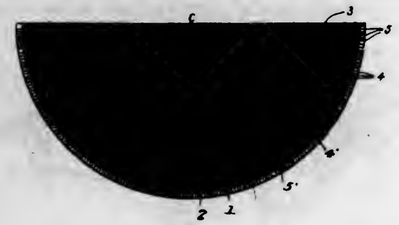
3. The combination with a water closet bowl of a casing mounted beside the same, a swing frame in said casing movable toward and away from the bowl, a seat carried by the frame extending therefrom toward the bowl being normally contained within said casing and adapted to be projected therefrom over the bowl, a supply container for the strip and a take-up spool for the strip within said casing, means for holding said take-up spool against rotation when the seat is projected, whereby the outward movement of the latter causes the strip to be fed over its surface, and means for rotating the take-up spool when the seat is withdrawn so as to roll up a part of the strip which was previously upon the surface of the seat.

4. The combination with a water closet bowl of a casing beside the same, a swing frame comprising a rock shaft mounted below the top of said bowl in the casing and arms carried by said rock shaft, a seat pivoted to said arms at approximately the height of the rim of said bowl projecting therefrom toward the bowl and adapted to be contained wholly within the casing and to be projected therefrom over the adjacent portion of the bowl, a supply spool carrying a covering strip mounted within the casing, a guide roll beneath the seat about which the strip passes to the inner edge of the seat, said strip extending over the upper surface of the seat, a take-up spool to which the strip passes from the seat, means for so swinging said frame as to advance and retract the seat, means for holding the take-up spool against rotation when the seat is projected, whereby the latter is caused to draw off a sufficient length of the covering strip to place a fresh portion thereof upon its surface, and means for rotating the take-up spool to take up the slack of the strip when the seat is withdrawn.



5. The combination with a water closet bowl of a casing beside the same, a swing frame comprising a rock shaft mounted below the top of said bowl in the casing and arms carried by said rock shaft, a seat pivoted to said arms at approximately the height of the rim of said bowl projecting therefrom toward the bowl and adapted to be contained wholly within the casing and to be projected therefrom over the adjacent portion of the bowl, a supply spool carrying a covering strip mounted within the casing, a guide roll beneath the seat about which the strip passes to the inner edge of the seat, said strip extending over the upper surface of the seat, a take-up spool to which the strip passes from the seat, means for so swinging said frame as to advance and retract the seat, means for holding the take-up spool against rotation when the seat is projected, whereby the latter is caused to draw off a sufficient length of the covering strip to place a fresh portion thereof upon its surface, a yielding pressure member bearing against the strip between said supply and guide rolls maintaining a bend in the strip and at the same time holding it under light tension, and means for rotating the take-up spool to take up the slack of the strip when the seat is withdrawn.

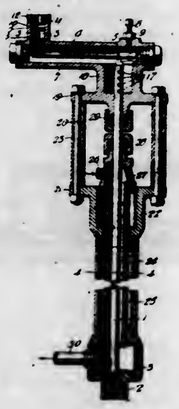
1,346,256. PULLING-OVER MACHINE. FRED RICKS, Leicester, England, assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 28, 1916. Serial No. 122,630. 31 Claims. (Cl. 12—4.)



1. A machine of the class described having, in combination, power operated means for pulling an upper over a last and for holding the upper under tension to permit relative adjustment of the upper and the last, said means being constructed and arranged to operate upon the work with the last presented bottom downward and the toe end pointing upward away from the operator at such an angle as to enable the operator to view the top and front of the upper continuously during the pulling-over operation while maintaining a natural attitude in front of the machine, and means whereby the operator may effect relative adjustment of the upper and the last after the pulling operation, said adjusting means extending into position for manipulation by the operator without necessitating any change in his position such as to affect his normal view of the work.

1,346,257. HERMETIC CLOSURE FOR RECEPTACLES. CLARENCE NORTON ROBINSON, Palatine Bridge, N. Y. Filed July 14, 1919. Serial No. 310,748. 2 Claims. (Cl. 215—81.)

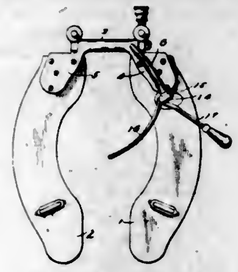
1. For hermetically sealing substances, the combination of a receptacle having on its exterior below the rim an upwardly facing shoulder that inclines outward at less than right angles to the exterior wall of the rim, a rectangular elastic gasket located on said shoulder, and a cap having a downward and outward flaring skirt with the inner wall of the flaring portion of said skirt shaped to engage the upper and outer angle of said gasket and force the gasket diagonally to its seat on said shoulder when the cap is held down by exterior air pressure.



completed, the said rule being provided with units and subdivisions equal in size to the units and subdivisions of the protractor to measure the lengths of the unknown sides of the triangle by application thereto.

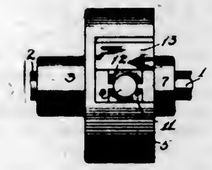
2. A combination as described in claim 1 wherein the length of said rule is equal to the diameter of the protractor.

3. A combination as described in claim 1 wherein one series of radii is provided to divide the protractor into units of a multiple of degrees, and a second set of radii so provided for dividing one of said units into smaller divisions.



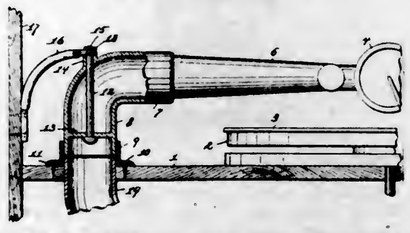
1,346,251. WATER-HEATER. DE FOREST L. RATHBONE, Jacksonville, Fla. Filed Jan. 25, 1919. Serial No. 273,206. 5 Claims. (Cl. 257—2.)

1. An automatic water heater, comprising a hot water outlet head, heater structure supported on said head and including a housing at the top with a valve tube, a heater tube carried by the supporting head with a cold water inlet at one end, a steam tube anchored in the head and passing through the heater tube to the housing at the top, said steam tube terminating in a closure providing a knife edge and having a series of steam openings; a valve bar fulcrumed on the knife edge, adjusting means bearing on one end of the bar, and a steam valve working in the valve tube and bearing on the other end of the bar, to control a steam inlet by the longitudinal expansive movement of the steam tube.



1,346,252. COMBINATION CLOSET-SEAT AND BIDET. DE FOREST LISLE RATHBONE, Jacksonville, Fla. Filed Feb. 9, 1920. Serial No. 357,387. 3 Claims. (Cl. 4—25.)

1. In combination, a seat for the closet bowl consisting of separated sections connected at the hinged end by a hollow bar, said bar having a water connection at one end and having an extension extending along the under side of one of the said portions, said extension having a valve casing at the end remote from the bar and a valve plug in the casing, said valve plug having a handle and a

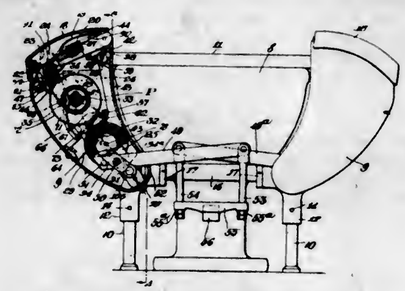


discharge tube so arranged that when the handle is swung in the proper direction the discharge tube will be moved with its free end in position on the said section for use.

1,346,253. UNIVERSAL COUPLING. GEORGE T. RAYFIELD, Chicago, Ill. Filed Sept. 20, 1917. Serial No. 192,334. 7 Claims. (Cl. 64—103.)

1. A coupling comprising a pair of coupling members, bearings slidably engaging one of the coupling members, the other coupling member having pivotal engagement with the first coupling member and means for holding each member engaged with the bearings under tension.

1,346,254. TONE-ARM FOR TALKING-MACHINES. THOMAS H. REED, Newark, N. J. Filed Sept. 14, 1918. Serial No. 254,033. 2 Claims. (Cl. 274—23.)

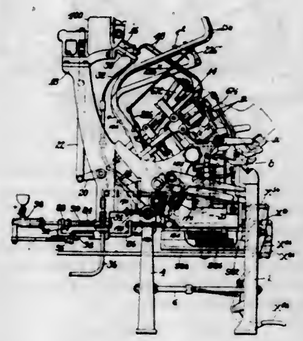


1. In a talking machine, the combination with a bracket, a vertically disposed stud secured to said bracket and a tubular tone arm provided with a vertically disposed portion having alined bearngs for the reception of said stud and upon which stud the tone arm is suspended to swing in a fixed plane.

1,346,255. SANITARY WATER-CLOSET. WARREN C. REES, Somerville, Mass., assignor to Aseptic Service Company, Boston, Mass., a Corporation of Maine. Filed Oct. 22, 1917. Serial No. 197,758. 29 Claims. (Cl. 4—18.)

1. The combination with a water closet bowl of a seat, a swinging frame carrying said seat movable to project the same over and withdraw it from said bowl substantially

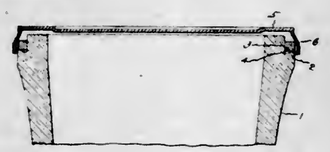
in an arc about the axis of said frame, and a housing beside said bowl within which the seat is inclosed when thus withdrawn.



2. The combination with a water closet bowl of a swinging frame mounted beside the same adapted to swing toward and away from the same, a seat carried by said frame movable thereby substantially in an arc about the axis of said frame, over and aside from said bowl, a covering strip passing over said seat, means for causing the seat when projected to draw a fresh portion of said strip over its surface, and means for taking up that portion of the strip which was previously on the surface of the seat when the seat is withdrawn.

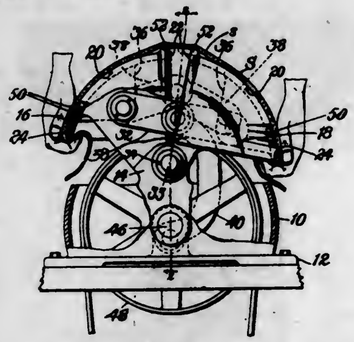
3. The combination with a water closet bowl of a casing mounted beside the same, a swing frame in said casing movable toward and away from the bowl, a seat carried by the frame extending therefrom toward the bowl being normally contained within said casing and adapted to be projected therefrom over the bowl, a supply container for the strip and a take-up spool for the strip within said casing, means for holding said take-up spool against rotation when the seat is projected, whereby the outward movement of the latter causes the strip to be fed over its surface, and means for rotating the take-up spool when the seat is withdrawn so as to roll up a part of the strip which was previously upon the surface of the seat.

4. The combination with a water closet bowl of a casing beside the same, a swing frame comprising a rock shaft mounted below the top of said bowl in the casing and arms carried by said rock shaft, a seat pivoted to said arms at approximately the height of the rim of said bowl projecting therefrom toward the bowl and adapted to be contained wholly within the casing and to be projected therefrom over the adjacent portion of the bowl, a supply spool carrying a covering strip mounted within the casing, a guide roll beneath the seat about which the strip passes to the inner edge of the seat, said strip extending over the upper surface of the seat, a take-up spool to which the strip passes from the seat, means for so swinging said frame as to advance and retract the seat, means for holding the take-up spool against rotation when the seat is projected, whereby the latter is caused to draw off a sufficient length of the covering strip to place a fresh portion thereof upon its surface, and means for rotating the take-up spool to take up the slack of the strip when the seat is withdrawn.



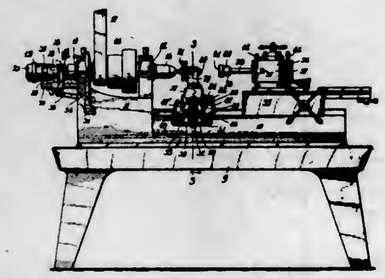
5. The combination with a water closet bowl of a casing beside the same, a swing frame comprising a rock shaft mounted below the top of said bowl in the casing and arms carried by said rock shaft, a seat pivoted to said arms at approximately the height of the rim of said bowl projecting therefrom toward the bowl and adapted to be contained wholly within the casing and to be projected therefrom over the adjacent portion of the bowl, a supply spool carrying a covering strip mounted within the casing, a guide roll beneath the seat about which the strip passes to the inner edge of the seat, said strip extending over the upper surface of the seat, a take-up spool to which the strip passes from the seat, means for so swinging said frame as to advance and retract the seat, means for holding the take-up spool against rotation when the seat is projected, whereby the latter is caused to draw off a sufficient length of the covering strip to place a fresh portion thereof upon its surface, a yielding pressure member bearing against the strip between said supply and guide rolls maintaining a bend in the strip and at the same time holding it under light tension, and means for rotating the take-up spool to take up the slack of the strip when the seat is withdrawn.

1,346,256. PULLING-OVER MACHINE. FRED RICKS, Leicester, England, assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 28, 1916. Serial No. 122,630. 31 Claims. (Cl. 12—4.)



1. A machine of the class described having, in combination, power operated means for pulling an upper over a last and for holding the upper under tension to permit relative adjustment of the upper and the last, said means being constructed and arranged to operate upon the work with the last presented bottom downward and the toe end pointing upward away from the operator at such an angle as to enable the operator to view the top and front of the upper continuously during the pulling-over operation while maintaining a natural attitude in front of the machine, and means whereby the operator may effect relative adjustment of the upper and the last after the pulling operation, said adjusting means extending into position for manipulation by the operator without necessitating any change in his position such as to affect his normal view of the work.

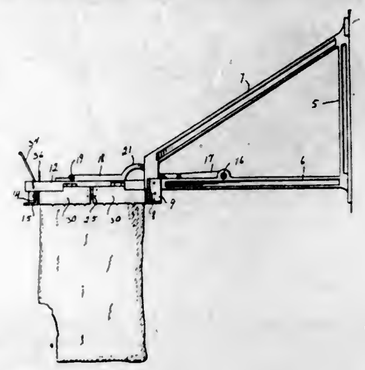
1,346,257. HERMETIC CLOSURE FOR RECEPTACLES. CLARENCE NORTON ROBINSON, Palatine Bridge, N. Y. Filed July 14, 1919. Serial No. 310,748. 2 Claims. (Cl. 215—81.)



1. For hermetically sealing substances, the combination of a receptacle having on its exterior below the rim an upwardly facing shoulder that inclines outward at less than right angles to the exterior wall of the rim, a rectangular elastic gasket located on said shoulder, and a cap having a downward and outward flaring skirt with the inner wall of the flaring portion of said skirt shaped to engage the upper and outer angle of said gasket and force the gasket diagonally to its seat on said shoulder when the cap is held down by exterior air pressure.

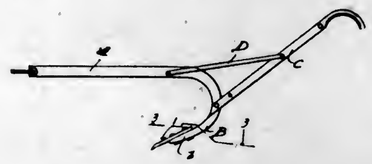
1,346,258. STRETCHING APPARATUS. ARTHUR L. RUSSELL, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 11, 1918. Serial No. 216,481. 34 Claims. (Cl. 69—8.)

1. In a stretching apparatus, a form consisting of a plurality of relatively movable sections over which the material to be stretched may be placed, and power-operated means arranged to cause successive separations and approaches of the sections to effect the stretching of each piece of work, the form being constructed and arranged to permit the material to be shifted over the sections during their successive movements.



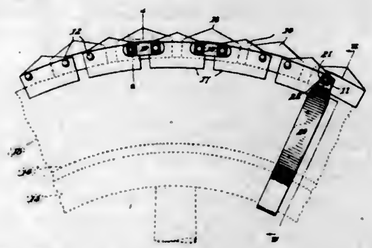
1,346,259. MACHINE FOR TRIMMING VALVES. AUGUSTUS E. SCHLIEDER, Detroit, Mich., assignor to Schlieder Manufacturing Co., Detroit, Mich., a Corporation of Michigan. Filed Mar. 23, 1916. Serial No. 86,223. 1 Claim. (Cl. 29—27.)

In a machine of the character described, the combination with a support and a rotatable work-holding element adapted to hold a work-piece, of a tool slide movable at right angles to the axis of the work-piece, means for actuating said tool slide, a second tool slide movable on said first-mentioned tool slide at right angles to the axis of the work-piece, a double-acting lever pivotally secured to said support, a link connecting one end of said lever with one end of said first-mentioned tool slide, a link connecting the opposite end of said lever with the corresponding end of said second tool slide, and a pair of cutting tools secured to said tool slides.



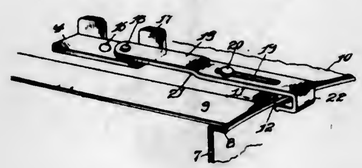
1,346,260. BAG SUPPORTING AND CLAMPING MECHANISM. JACOB EMIL SCHMANDT, Eddyville, Oreg. Original application filed Nov. 23, 1918, Serial No. 263,858. Divided and this application filed Aug. 22, 1919. Serial No. 319,161. 9 Claims. (Cl. 83—26.)

1. In combination, fixed and movable bag supporting bars, manually operable means for shifting the movable supporting bar toward the fixed bar to close the mouth of the bag, said means including a rotatable shaft, spaced rods pivotally connected at one of their ends to the movable bar, and means connecting the other ends of said



rods to the shaft, whereby said bar is moved to its effective clamping position upon a partial rotation of the shaft.

1,346,261. BLADE FOR AGRICULTURAL IMPLEMENTS. ERNEST A. SCHMUTTE, White Bluffs, Tenn. Filed Aug. 1, 1919. Serial No. 314,706. 3 Claims. (Cl. 97—11.)

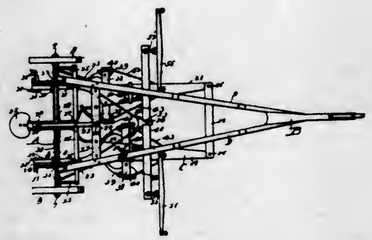


3. A device of the character described comprising, a blade of substantial triangular shape, the broader end of the blade being provided with spaced rearwardly converging relatively deep cutouts providing a central forwardly directed substantially V-shaped tooth and forwardly directed side arms contiguous thereto, the inner lateral edges of said side arms and the lateral edges of the tooth being beveled to provide rearwardly converging cutting edges.

1,346,262. AUTOMOBILE-WHEEL TREAD. JOHN SEREDIUK, Winnipeg, Manitoba, Canada. Filed Mar. 2, 1920. Serial No. 362,687. 4 Claims. (Cl. 152—16.)

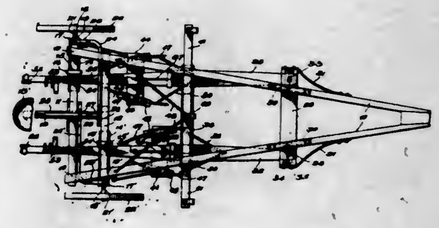
4. A tread member comprising three circumferential rows of pointed blocks arranged in staggered relations, transverse rivets secured through the blocks of the intermediate row and the adjacent blocks of each side row, whereby two opposite side blocks are pivotally connected between each adjacent pair of blocks in the middle row, removable bolts pivotally connecting the blocks of each row at one point upon the device, links at the sides of the device connecting the adjacent pairs of said bolts together and a strap attached to one of the pivotal connections for the blocks adapted for surrounding the tire rim and felly of a wheel when the device is mounted thereon.

1,346,263. DOOR-LOCK FOR REVOLVING DRUMS. RUDOLPH F. SETTLAGE, Alton, Ill., assignor to Brokaw-Eden Company, a Corporation of Delaware. Filed Oct. 17, 1917. Serial No. 197,031. 1 Claim. (Cl. 292—143.)



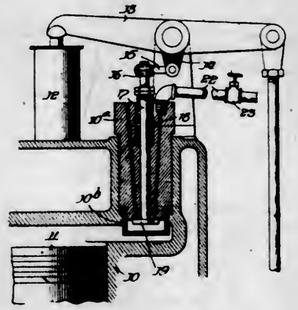
A lock of the class described comprising in combination with a receptacle and a removable cover, of an elongated slightly bent locking bar slidably supported upon the cover, the one end of the bar formed into a hook which is adapted to fit over the peripheral flange of the receptacle, said bar having a slot which allows for the movement of the bar, a locking member located on the cover, the free end of the bar being pivotally connected to said member and a pair of ears formed on the member by which the same is manipulated.

1,346,264. TORPEDO-CONTROLLING MECHANISM. WILLIAM G. SHELTON, New York, N. Y. Filed Aug. 29, 1918. Serial No. 251,932. 15 Claims. (Cl. 114—23.)



1. A torpedo comprising propelling means, a steering rudder, a diving rudder, and means controlled by said propelling means to actuate either one of said rudders upon the torpedo traveling a predetermined distance, substantially as specified.

1,346,265. MACHINE-HOE. ROBERT R. SLIPP, Fort Fairfield, Me. Filed Feb. 17, 1919. Serial No. 277,544. 1 Claim. (Cl. 97—34.)

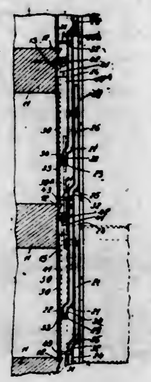


A ground-working implement comprising a frame wheel supported at its rear, stirrups depending from the frame, a cross-bar carried by said stirrups, beams pivotally connected to and trailing behind said cross-bar, ground-working elements on said beams, a draft-bar on said beams, link connections between said draft-bar and each of said beams, a draft member pivotally mounted on said draft-bar, and a draft-connection extending rearwardly from said draft member to said frame.

1,346,266. GROUND-WORKING IMPLEMENT. ROBERT R. SLIPP, Fort Fairfield, Me. Filed Dec. 29, 1919. Serial No. 348,004. 3 Claims. (Cl. 97—34.)

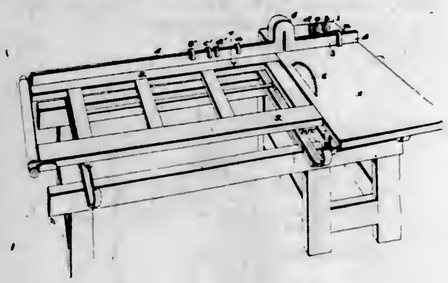
1. A ground-working implement comprising a main frame, a supporting-wheel mounted in one side of the rear portion of said frame, a cross member in the rear portion of said frame, a channel member shiftable longitudinally on said cross member, means whereby said members are held adjustably together, and a supporting-wheel on said channel member.

1,346,267. FUEL-VALVE. FRANK G. SLONEK, Chicago, Ill., assignor to R. M. Hvid Company, Chicago, Ill., a Corporation of Michigan. Filed Dec. 3, 1917. Serial No. 205,077. 2 Claims. (Cl. 123—33.)



1. In a hydrocarbon engine, the combination with a cylinder having an aperture in its head, of a plug adapted to be mounted in said aperture, an ignition cup carried at the lower end of said plug, a rotary valve mounted within said cup, said valve being provided with a stem carried by the plug, a main valve rocker, and means connecting said rocker to said valve for rotating it, substantially as described.

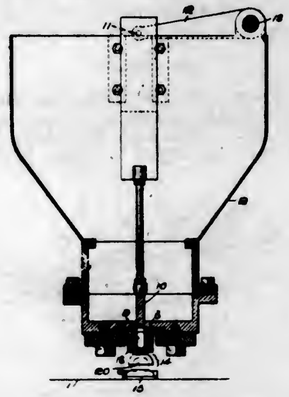
1,346,268. DOOR. EDWARD A. SMITH, New York, N. Y. Filed Dec. 12, 1918. Serial No. 266,502. 5 Claims. (Cl. 20—19.)



1. A door, guides therefor at opposite sides of the door opening, rigid brackets projecting from the door near the edges thereof, said brackets being spaced vertically a fixed distance, and members on said brackets arranged to be

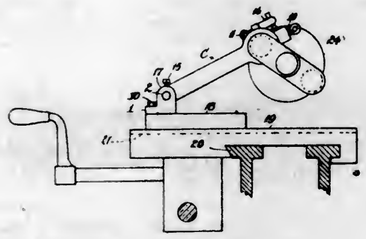
engaged by and to move in the guides, said guides having offset portions spaced vertically the same distance as that

between the brackets, arranged to impart a transverse bodily sliding movement to the door when said door is moved vertically.



1,346,269. CUT-OFF SAWING APPARATUS AND METHOD OF USING THE SAME. GEORGE ANDREWS SMITH, South Hill, Va. Filed Aug. 29, 1917, Serial No. 188,843. Renewed Dec. 6, 1919. Serial No. 343,114. 11 Claims. (Cl. 143—168.)

1. The method of operating cut off saw apparatus which apparatus includes a table, a cutoff saw and a fence, said method consisting in providing a definite series of board stops and locating the same at the farther side of the saw, providing a series of related observation stops and locating them at the near side of the saw, using one or another of the series of board stops to cut off shook lengths from the board irrespective of the observation stops, and as the end of the board approaches the location of the observation stops, determining by comparison of the end of the board with the observation stops, which of the board stops to use in order to obtain the greatest available number of shook lengths out of the remainder of the board with the least possible waste.

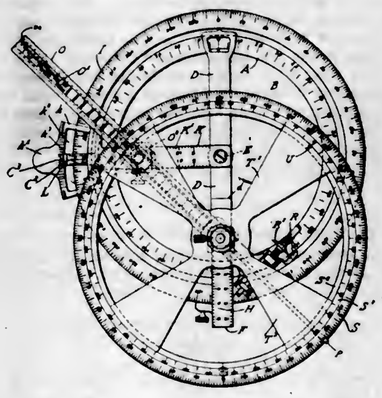


1,346,270. DEVICE AND MECHANISM FOR DEPOSITING COATING UPON FOOD PRODUCTS. JOSEPH J. SMITH, Dorchester, Mass., assignor to Loose Wiles Biscuit Company, Long Island City, New York, N. Y., a Corporation of New York. Filed Oct. 17, 1919. Serial No. 331,269. 7 Claims. (Cl. 107—28.)

1. A device for applying coating to food products consisting of a discharge member having an elongated discharge opening that is open from end to end, said member being provided interiorly with means for directing the

flow of the material toward both ends of said elongated discharge opening.

1,346,271. MEANS FOR TURNING CRANK-PINS AND ECCENTRICS AND TRUING CRANK-SHAFTS. THOMAS SMITH, Warrnambool, Victoria, Australia. Filed May 29, 1918. Serial No. 237,247. 3 Claims. (Cl. 82—9.)



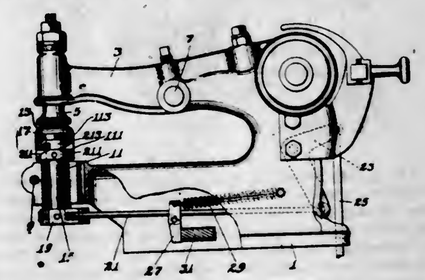
1. A machine for truing up or turning crank pins of crank shaft and eccentrics, having in combination a rotary element and a dead center between which the work is held in axial alinement, a support, a crank arm pivotally connected at one end to said support whereby the crank arm is permitted to rock in a plane at right angles to the axis of the crank shaft, and a tool holder carried on the other end of said crank arm, said holder comprising two semi-cylindrical members hinged together, one of said members having its inner periphery formed as a semi-cylindrical cutter and the other member having a non-cutting inner face, the cutting face of said cutting member having a contour corresponding with a semi-contour of the true form intended for the finished work, means for maintaining the cover closed, said cover being formed with a recess which extends in a radially outward direction from the inner periphery of the cover, and having a screw hole which extends from said recess through the outer periphery of the cover, a block located in said recess and radially slidable therein, its inner end being concave and adapted to engage the work in the holder, and a screw which is adjustable in said screw hole and is capable of being set up to engage with said block to hold the block in a position to maintain the work in operative relation to the cutter.

1,346,272. ANIMAL-POKE. DAVID B. SMITHSON, Wellston, Okla. Filed Nov. 17, 1919. Serial No. 338,713. 4 Claims. (Cl. 119—139.)

1. An animal poke comprising two pivotally connected sections, said sections including contact members, spurs pivoted to said sections and a link movably connecting the spur of each section to the opposite section.

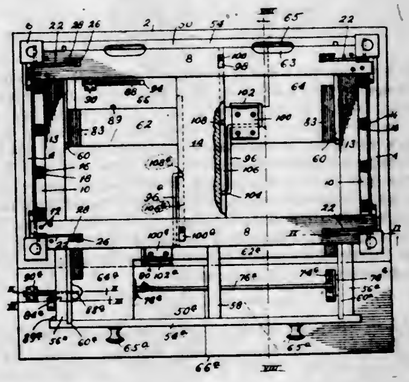
1,346,273. TORPEDO-DIRECTOR. ARISTIDES DEL SOLAR, Boston, Mass., assignor to Alfred R. Shrigley, trustee, Boston, Mass. Filed May 19, 1917. Serial No. 169,768. 21 Claims. (Cl. 33—75.)

1. In a torpedo director, a graduated base circle, a second graduated circle adjustably mounted thereon, a graduated slide member pivoted to and radially adjustable with respect to said base circle and circumferentially adjustable with respect to the second circle, a second slide member radially adjustable on the base circle, and a pointer bar pivotally connected to the last named slide member and slidably and pivotally connected to the other slide member.



1,346,274. SAFETY DEVICE FOR ELEVATORS. WILLIAM J. SPRINGER, Detroit, Mich. Filed July 7, 1919. Serial No. 309,052. 3 Claims. (Cl. 187—98.)

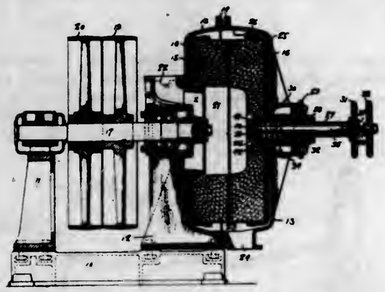
1. In a safety device for elevators, the combination with an elevator and a floor past which said elevator travels, of a pair of trap doors provided respectively in the platform of the elevator and in said floor, having their free edges in proximity when said platform is adjacent the floor, said doors being free to swing upwardly, and supporting brackets for said doors each comprising upper and lower pivotally mounted arms one of which is slotted and the



other provided with a pin engaging the slot whereby the bracket is upwardly angularly adjustable when struck from beneath.

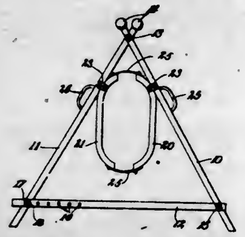
1,346,275. SEAM-POUNDING MACHINE. WILLIAM C. STEWART, Swampscott, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 11, 1916. Serial No. 96,786. 4 Claims. (Cl. 12—53.)

1. A machine of the class described, having in combination, a hammer, an anvil supporting member rigid with the frame of the machine, an anvil, said member and anvil having a common axis and being provided with coöperating cam surfaces such that relative angular movement of said anvil and member about said axis will raise said anvil or permit it to be lowered, means for normally maintaining an angular relation between the anvil and member such that the anvil is held stationary in raised position and manually controlled means for varying the angular relation at any time during the operation of the machine to permit said anvil to be lowered.



1,346,276. EXTENSION-TABLE. ANDREW H. STONE, Kansas City, Mo. Filed July 7, 1919. Serial No. 309,087. 7 Claims. (Cl. 45—113.)

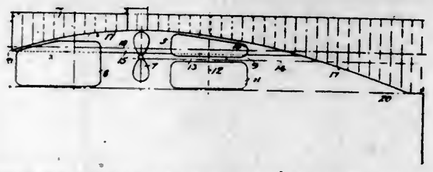
4. In a table of the character described, a table top, a frame to said top embodying superimposed slideways, two skeleton drawers one having slides in the lower slideways



the other having slides in the upper slideways, and foldable leaves in said drawers arranged to be supported in extended position and in alinement with the table top by the drawers when the same are in outward position.

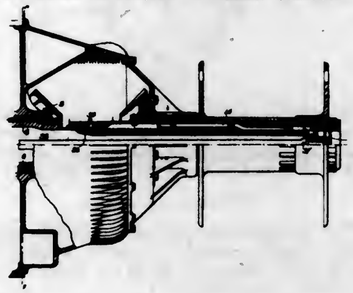
1,346,277. PULP-REFINER. HERMANN F. STORBER, New York, N. Y., assignor to J. M. Voith Company, Inc., a Corporation of New York. Filed Sept. 30, 1915, Serial No. 53,299. Renewed May 29, 1920. Serial No. 385,643. 5 Claims. (Cl. 92—26.)

1. In a pulp refiner, a runner stone, a stationary stone coöperating therewith, a carrier cup for said stationary stone, having an axial sleeve, a pressure spring within said sleeve bearing against one end of the latter, a movable abutment for the other end of said spring within said sleeve, and means for displacing said cup and spring abutment simultaneously or independently of each other to vary the position of said stones with relation to each other or the pressure of the spring on the stationary stone.



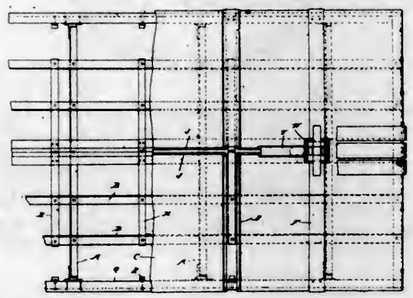
1,346,278. CATTLE-YOKE. JOHN SWITYK, Meota, Saskatchewan, Canada. Filed Mar. 23, 1920. Serial No. 368,031. 2 Claims. (Cl. 119—138.)

1. A cattle yoke for the purpose specified comprising a triangular frame made up of a pair of side bars hinged together adjacent their upper ends, a horizontal bottom bar, means connecting said bottom bar to said side bars to hold the latter at different angles of inclination toward one another, a collar mounted in said frame and split vertically into two halves, a pair of link plates connecting each collar half with a side bar, said link plates being each pivotally connected at one end to a collar half and at opposite ends to a side bar, and means for attaching the collar halves together when moved with the said side bars to expand or contract the collar.



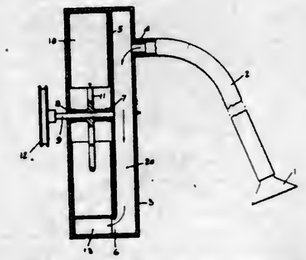
1,346,279. SCREW-PROPELLED CHAMBERED-STERN TOWBOAT. THOMAS R. TARN, Brooklyn, N. Y. Filed July 22, 1919. Serial No. 312,555. 7 Claims. (Cl. 114—57.)

1. A tow boat of the chambered type, having a rudder and a propeller both located in the chamber thereof, the chamber being formed between adjacent spaced apart longitudinally and rearwardly extending members located at the under surface of the boat hull, the proximate corners of said members being rounded and the lower surfaces of



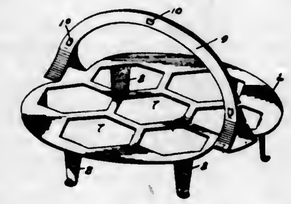
said members lying in a plane parallel to the surface level of the wated and extending the entire longitudinal length of said chamber.

1,346,280. INTERNAL-COMBUSTION ENGINE. JOHN GODFREY PARRY THOMAS, Barnes, England. Filed Mar. 25, 1918. Serial No. 224,537. 9 Claims. (Cl. 184—104.)



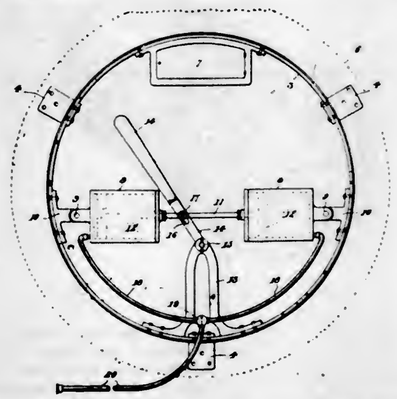
5. In an internal combustion engine the combination with a hollow crank shaft, crank and crank pin, of a hollow extension upon said shaft, a tube extending through said crank, crank pin and shaft and extension thereof but not filling the hollow therein, radiating fins formed upon said extension of the shaft, bearings for said shaft, means for circulating oil among said fins and through said bearings, and means for circulating water through said tube and through the hollow crank pin and shaft around said tube to cool the bearings and said fins and thereby cool the oil.

1,346,281. CAR-ROOF. WILLIAM D. THOMPSON, Detroit, Mich., assignor to Hutchins Car Roofing Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 10, 1919. Serial No. 329,712. 7 Claims. (Cl. 108—5.)



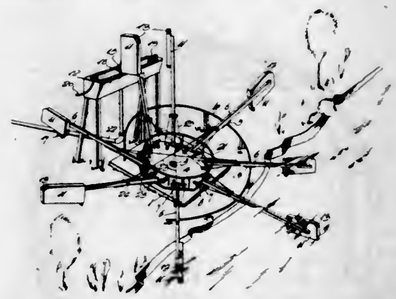
1. A car roof comprising an open frame of carlines and purlins, roofing sheets laid directly upon said frame irrespective of the spacing of the carlines and having a limited freedom of movement, means secured to the frame between adjacent sheets for limiting the movement thereof, and means embracing said limiting means for weatherproofing and holding down the sheets.

1,346,282. COTTON-PICKING MACHINE. JOSEPH B. TIBBS, Tibbs, Miss., assignor of one-half to Thomas Tibbs, Tibbs, Miss. Filed Aug. 4, 1919. Serial No. 315,159. 5 Claims. (Cl. 56—30.)



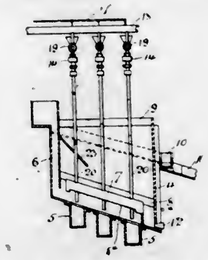
1. In a cotton picking machine, a bell member, a flexible tube connected thereto, a casing having an imperforate partition therein, a fan in one of the compartments thus formed and a connection from said casing to said flexible tube.

1,346,283. EGG-BOILING RACK. FRANK J. VIERLING, FRED R. BARTHOLOMEW, and MILO H. SMITH, Minneapolis, Minn., assignors to Sterling Specialities Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed July 12, 1919. Serial No. 310,476. 7 Claims. (Cl. 53—1.)



1. A sheet metal blank for making an egg boiling rack, having egg receiving holes, leg forming lips extending into certain of said holes, and two diametrically opposite bail forming portions located outward of the body of the rack and adapted to be turned into upright positions over the center of the rack.

1,346,284. TIRE-PUMP. PETAR WAJDIĆ, Pleasant Unity, Pa. Filed Jan. 19, 1920. Serial No. 352,328. 1 Claim. (Cl. 230—27.)

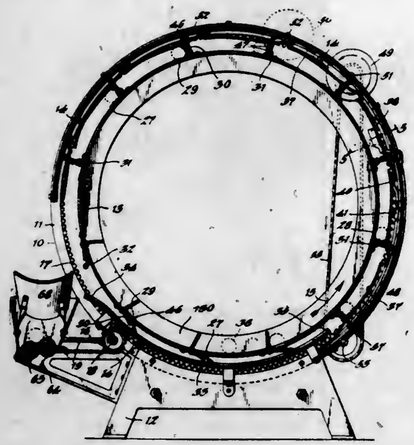


A pump of the type described comprising an annular supporting member, pump cylinders pivotally mounted at their ends on said supporting member in opposed relations, a piston in each cylinder, a single piston rod connecting the pistons, a bracket secured to the annular supporting member at a point beneath the piston rod, a handle pivotally mounted at its lower end in the upper end of said bracket and a pin and slot connection between the piston rod and handle, and a laterally offset portion carried by the handle and positioned outwardly of the annular supporting member.

1,346,285. CURRENT-MOTOR. THOMAS H. WALKER, Wallace, Idaho. Filed Oct. 16, 1919. Serial No. 330,995. 3 Claims. (Cl. 103—69.)

1. In a current motor, a hub mounted to rotate on an upright axis, a plurality of arms pivotally connected to said hub and adapted to extend radially therefrom into a current of water so that the hub and arms can be turned by the action of said current, hollow propelling and water-carrying paddles fixed on said arms and provided with valved outlets, a receiver for receiving water from the hollow paddles, and means operable by movement of the paddles to open the valves of said valved outlets when the latter are in position to discharge into said receiver.

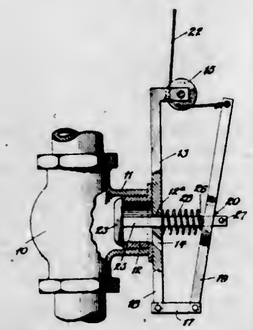
1,346,286. APPARATUS FOR THE TREATMENT OF SULFID ORES. LESLIE VICKERY WATERHOUSE, Queenstown, Tasmania, Australia. Filed Jan. 3, 1917. Serial No. 140,354. 4 Claims. (Cl. 83—85.)



1. In a sulfid-separation apparatus, a frothing vessel; means for delivering pulp to be treated to said vessel and having a discharge opening adpacent the floor of said vessel; baffling means located in said vessel; a dash-pot adjacent the floor of the vessel; and frothing fluid delivering means extending through the vessel and having a discharge opening adjacent the dash-pot and below the baffling means, the stream of fluid from said delivering means discharging downwardly toward the dash-pot.

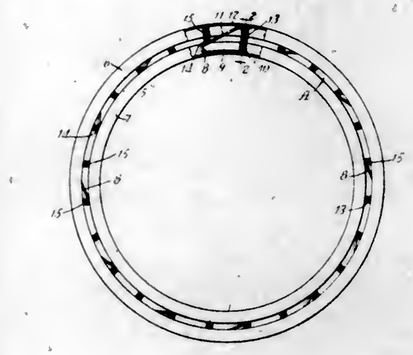
1,346,287. FIREPROOFING OF WOOD. HOWARD F. WEISS, Madison, Wis., assignor to C. F. Burgess Laboratories, Madison, Wis., a Corporation of Wisconsin. Filed Aug. 17, 1918. Serial No. 250,328. 4 Claims. (Cl. 99—12.)

1. A one-solution method of fireproofing wood, which comprises impregnating the wood with an aqueous solu-



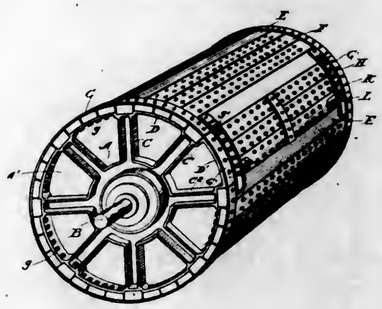
tion of a soluble barium sulfid, and then converting said soluble barium compound into insoluble barium carbonate by treatment with gaseous carbon dioxid, whereby the sulfur of the said barium sulfid is expelled as hydrogen sulfid and the said insoluble barium carbonate is formed within the body of the wood, extending inwardly from the periphery of the same.

1,346,288. MACHINE FOR TRIMMING THE ENDS OF ARTICLES. HENRY J. WHEELER, Buffalo, N. Y. Filed Feb. 20, 1920. Serial No. 360,129. 18 Claims. (Cl. 146—11.)



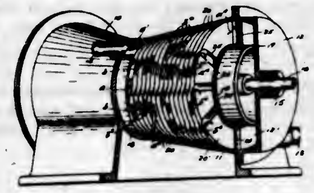
1. A machine for trimming the ends of articles comprising a circular carrier rotatable about a horizontal axis and provided with a plurality of openings arranged in an annular row, means for transferring the articles to be trimmed from the interior to the exterior of said carrier through said openings thereof, and cutting means which are arranged adjacent to the exterior of said carrier and past which said articles are propelled by the propulsion of said carrier.

1,346,289. VALVE. LE ROY G. WILBER, Sequim, Wash. Filed Mar. 5, 1920. Serial No. 363,605. 2 Claims. (Cl. 103—60.)



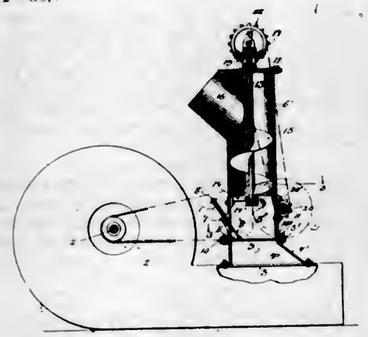
2. In combination, a water pipe, a T coupling in said pipe formed with a drain opening, a valve for closing a lateral opening in the T coupling, an arm secured to one end of the T coupling, a lever, a link between one end of the lever and the arm, a connection between the valve and the opening, and a rope connected to the opposite end of the lever to operate the valve.

1,346,290. RESILIENT INNER TUBE FOR VEHICLE-TIRES. FREDERICK P. WOODWARD, Topsfield, Mass., assignor of one-half to Esther A. Woodward, Boston, Mass. Filed Feb. 21, 1919. Serial No. 278,505. 2 Claims. (Cl. 152—8.)



1. An inner tube for vehicle tires having, in combination, an outer convexo-concave ring, an oppositely disposed inner concavo-convex ring and a plurality of V-shaped springs interposed between said rings, one leg of each of said V-shaped springs being fastened to the inner face of said outer ring and the other leg of each of said V-shaped springs being fastened to said inner ring, a spiral spring interposed between one leg of each of said V-shaped springs and said outer ring, and another spiral spring interposed between the legs of each of said V-shaped springs.

1,346,291. WASHING-MACHINE CYLINDER. WILLIAM BARTHOLOMEW, Chicago, Ill., assignor to Troy Laundry Machinery Company, Limited, Chicago, Ill., a Corporation of New York. Filed Oct. 23, 1915. Serial No. 57,461. 2 Claims. (Cl. 68—18.)

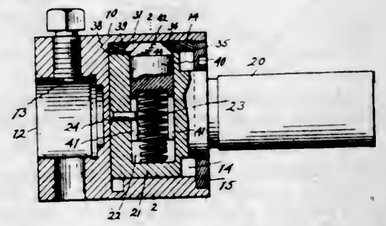


1. In a cylinder for washing machines, the combination with end walls, of staves overlying at their ends the peripheries of said end walls, hoops formed in sections surrounding the ends of the staves, the corresponding sections of the hoops overlying the opposite ends of the same staves, and means for separately detachably securing the sections of the hoops to the end walls.

1,346,292. STEAM TUURBINE-ENGINE. JOHN A. BECKLUND, Centralia, Wash. Filed Oct. 27, 1919. Serial No. 333,667. 5 Claims. (Cl. 253—44.)

1. In a turbine of the class described, a rotary member having interconnected peripheral blades to afford a primary series of convoluting passages and a secondary series of convoluting passages constituting branches of the first named series.

1,346,293. FEED-DRUM FOR PNEUMATIC ELEVATORS. GEORGE BERNERT and JACOB BERNERT, Milwaukee, Wis., assignors to Bernert Manufacturing Company, Milwaukee, Wis., a Corporation of South Dakota. Filed Dec. 5, 1914. Serial No. 875,556. 2 Claims. (Cl. 302—50.)

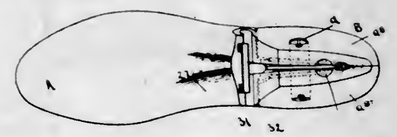


2. In a pneumatic conveying apparatus, the combination of a conveying air duct, means for procuring a pressure current of air through said duct, an elongated feed conveyer casing having one end in communication with the air duct above the path of the air current therein, a valve pivotally mounted within the feed conveyer casing adjacent its point of communication with the air duct, said valve extending transversely across the casing, and a spiral conveyer in the feeder casing having its axis intersecting the plane of the valve when closed.

1,346,294. SAFETY-RAZOR. GEORGE BROWNING, Chicago, Ill. Filed Sept. 27, 1918. Serial No. 255,968. 3 Claims. (Cl. 30—12.)

3. A device of the kind described, comprising a handle, a supporting blade fixedly secured to the handle, a coöperating razor blade and means for operatively securing the blade on the guard, in combination with a lever extended transverse the guard, pivotally supported between its ends in a central position on the device, with one end extending to a point near the front of the guard and thence bent to extend through an opening therein, in contact with the blade, and its other end extended for operative purposes.

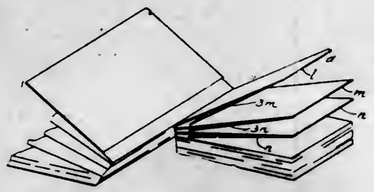
1,346,295. TOOL OR WORK HOLDING DEVICE. WILLIAM J. BURGER, East Cleveland, and MAX E. LANGE, Cleveland, Ohio, assignors to The Warner & Swasey Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 27, 1919. Serial No. 333,584. 10 Claims. (Cl. 10—89.)



1. A tool or work holding device, comprising, in combination, a shank, a tool or work holding hood or member which is rotatably mounted on or in said shank and is capable of limited endwise movement on or in said shank, one of said parts being provided with a ratchet recess both side walls of which may serve as pawl engaging teeth, and a spring actuated pawl movably mounted on the other of said two parts,—said pawl having a tooth whose opposite side walls are of different lengths and are disposed for engagement with opposite side walls of said ratchet recess, and means whereby an endwise movement of the hood on the shank will move the pawl far enough to disengage the short side of said tooth from the opposed side wall of the ratchet recess but not far enough to prevent the engagement of the long side of said tooth from the other side wall of said ratchet recess.

1,346,296. SHOE-FORM. JEREMIAH F. COLLINS and LOUIS B. WESTON, Brockton, Mass. Filed Sept. 7, 1916. Serial No. 118,906. 8 Claims. (Cl. 12—128.)

1. A shoe form comprising laterally contractible and expansible front and rear portions connected by a transversely-extending hinge, and means operated by relative movement of said front and rear portions on the connecting hinge for contracting and expanding them.

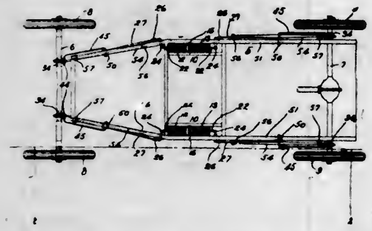


1,346,297. LAST. JEREMIAH F. COLLINS and LOUIS B. WESTON, Brockton, Mass. Filed Dec. 1, 1916. Serial No. 134,300. 23 Claims. (Cl. 12—136.)

1. A longitudinally expansible and contractible last comprising a fore part and a laterally expansible and con-

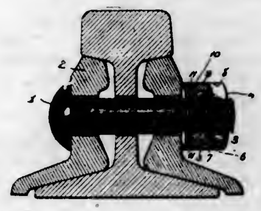
tractible heel part having means for readily connecting and disconnecting them, and means for laterally expanding the heel part to a width corresponding to that of the fore part.

1,346,298. CONTAINER. CHARLES H. CONGDON, East Stroudsburg, Pa. Filed May 7, 1919. Serial No. 295,324. 6 Claims. (Cl. 129—20.)



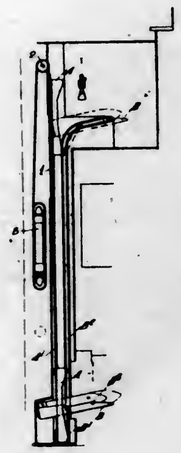
1. In a device of the kind described, the combination of two envelops the flap of one of which is secured to the inside of the front of the other.

1,346,299. LADDER. HAMILTON A. COOPER, Toledo, Ohio, assignor of one-half to Charles A. Briggs, Toledo, Ohio. Filed July 14, 1917. Serial No. 180,671. 1 Claim. (Cl. 228—61.)



In a device of the class described, the combination with a member to be supported, of a shoe comprising spaced straps extending upon opposite sides of said member and connected by a transverse end wall carrying a bracket portion having a longitudinal recess formed therein provided with a tapered end, a floor engaging device having a square cut end adapted to seat upon the tapered portion of the recess and a pointed end for engaging the floor, and means for retaining the floor engaging device within the socket portion.

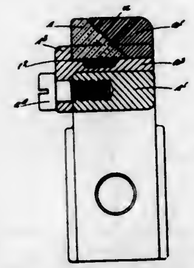
1,346,300. SPRING MECHANISM FOR AUTOMOBILES AND OTHER VEHICLES. ERNEST P. DARGIN, Denver, Colo. Filed Sept. 26, 1917. Serial No. 193,282. 7 Claims. (Cl. 267—15.)



1. The combination with the chassis frame and axle of a vehicle, of radius rods pivotally connected directly with the frame at one extremity and with a bearing mounted on the axle at their opposite extremities, the rod extremities having axes extending parallel with the axis of the axle, the bearings having axes connected with the axle by pivots whose axes are disposed horizontally and crosswise of the axis of the axle to permit the axle to rock on said pivots.

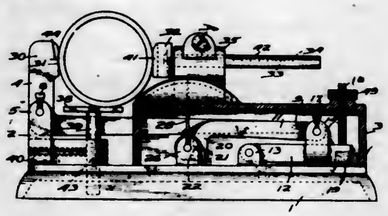
1,346,301. NUT-LOCK. JOHN Q. DAUGHERTY, Broken Arrow, Okla., assignor of one-fourth to Knox M. Rowe, Broken Arrow, Okla. Filed Apr. 23, 1920. Serial No. 376,021. 2 Claims. (Cl. 151—21.)

2. The combination of a split nut having a tubular body portion and a head having an undercut inner end portion, and a ring in which said tubular body portion of the nut is freely movable and against one end of which the edge of the nut formed by the undercut portion bears, said ring having an internal shoulder and the tubular portion of the nut having a tit overlying said shoulder to prevent separation of the nut and ring.



1,346,302. AMMUNITION-HOISTING APPARATUS. ARTHUR TREVOR DAWSON, Westminster, London, and JAMES HORNE, Barrow-in-Furness, England, assignors to Vickers Limited, Westminster, London, England. Filed June 4, 1915. Serial No. 32,250. 6 Claims. (Cl. 89—46.)

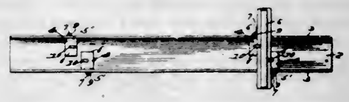
1. In an ammunition hoisting apparatus, an auxiliary projectile cage additional to the usual hoist cage for lifting ammunition to the working chamber, said auxiliary cage being adapted to lift the ammunition while the latter is in a vertical position and to permit its assuming a horizontal position in the working chamber, a trunk which is constructed to receive both the usual hoist cage and the auxiliary projectile cage and in which these cages move during their travel to and from the working chamber, and



means for raising and lowering the cage, which means extends to a point above the upper end of the hoist, whereby the ammunition will be free to move from its vertical to its horizontal position.

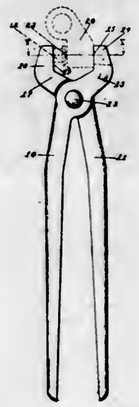
1,346,303. SIGHTING DEVICE FOR GUNS. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, assignors to Vickers Limited, Westminster, England. Filed Feb. 7, 1918. Serial No. 215,944. 5 Claims. (Cl. 33—52.)

1. In a sighting device for guns, a foresight composed of a light-transmitting prism and a luminous compound or substance situated beneath said prism to illuminate it for night use, said prism having a reflecting surface adapted to reflect the rays of the luminous substance rearwardly.



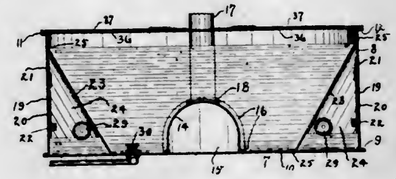
1,346,304. MICROMETER. AUGUSTUS F. DONALDSON, Toledo, Ohio, assignor to The Bunting Brass & Bronze Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 26, 1917. Serial No. 144,584. 10 Claims. (Cl. 33—148.)

1. In a micrometer a supporting part, an adjustable member connected to the supporting part and having a pair of vertical ridges, a plate having a broad plane horizontal surface located beneath the ridges for supporting cylindrical bodies having their axes extending in a direction at right angles to the said ridges, a lever pivoted to the supporting part, one arm of the lever having an edge substantially parallel to the ridges and opposing the ridges and located opposite a point between the ridges, means connected to the lever for pressing the said edge toward the said ridges to press the cylindrical bodies against the ridges by the pressure of the edge on the cylindrical bodies, and means connected to the lever for indicating relative movements of the said edge.



1,346,305. RAILWAY TIE AND FASTENER. EDWARD W. DRUMMOND, Wollaston, Mass. Filed Nov. 9, 1918. Serial No. 261,833. 1 Claim. (Cl. 238—62.)

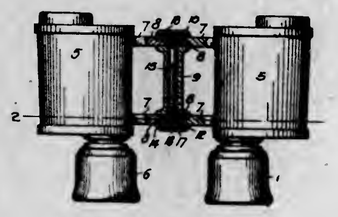
The combination of a tie of substantially U-shaped conformation in cross section and embodying a pair of spaced parallel side portions, with a rail and fastening means therefor, the said fastening means comprising a pair of angle plates each having one leg lying against the inner face of one of the side portions of the tie, fasteners passing through the said legs and securing the said angle plates to the said side portions, the remaining legs of the angle plates lying with their faces flush with the upper edge of the side portions of the tie, and hook bolts passing



through the said remaining legs and engaging the base flange of the rail on opposite sides, the said base flange seating upon said remaining legs and upon the upper edges of the said side portions, as herein shown and specified.

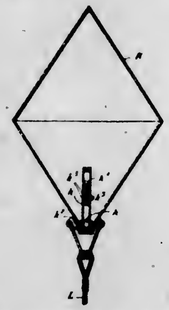
1,346,306. PLIERS. HENRY T. DUKET, Toledo, Ohio. Filed July 30, 1917. Serial No. 183,520. 1 Claim. (Cl. 294—43.)

A tool for removing battery terminal connections comprising a pair of lever arms pivotally connected together, each of said lever arms being provided with an angular portion located adjacent its point of pivotal connection to the other lever arm and an offset head extending from the angular portion, the inner face of one head comprising a continuous flat surface while the other head is provided with a pair of forked arms adapted to releasably engage a portion of a battery terminal connection, the inner faces of said heads being substantially parallel when in operative position.



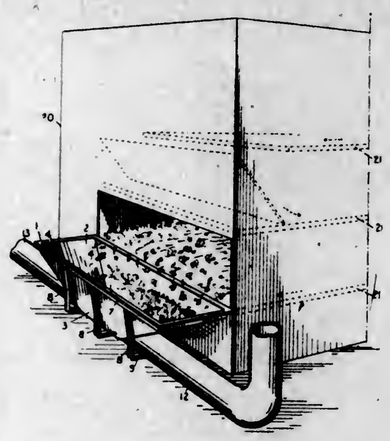
1,346,307. STOCK-WATERING TANK. ALBERT N. EATON, Omaha, Nebr. Filed Apr. 10, 1920. Serial No. 372,736. 1 Claim. (Cl. 119—73.)

A watering tank, comprising, in combination with a receptacle having a drink-aperture in its side wall and a pair of drink-apertures in its top, and having a drinking-compartment opening on the drink-aperture of its side wall, a valve for controlling a communication of the re-



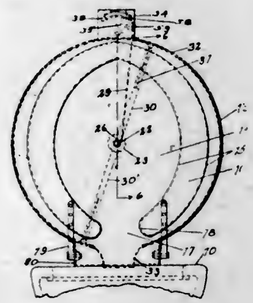
ceptacle with said drinking-compartment, a hingeably mounted door in said drinking-compartment, doors provided with fastening-devices and having their inner ends hingeably mounted adjacent to each other upon the top near the medial line of the receptacle and adapted to swing upwardly to permit engagement of their fastening devices, and adapted to be swung downwardly to make closures of the drink-apertures of said top, and a wall of inverted U-shape in cross-section mounted upon the bottom to provide a heating-compartment extending from the front to the rear side of the receptacle, said drink-aperture in the side being disposed in a plane adjacent to a drink-aperture of the top of said receptacle.

1,346,308. BINOCULAR-TELESCOPE. KARL A. EDSTROM, Denver, Colo., assignor of one-half to The Weiss Instrument Company, a Corporation of Colorado. Filed Aug. 14, 1918. Serial No. 249,799. 3 Claims. (Cl. 88—34.)



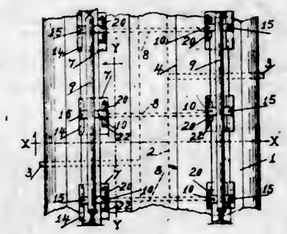
1. In a binocular telescope, the combination of a pair of casings having a hinge-connection including two axially alined joints, an internally threaded bushing turning with one of the members of one of the joints and providing a bearing for the other member of the same, a smooth-bored bushing turning with one of the members of the other joint and forming a bearing for the other member of the same, and a screw bearing upon the last-mentioned bushing and having a threaded end within the other.

1,346,309. SUBMARINE MINE. GIOVANNI EMANUELE ELIA, Rome, Italy, assignor to Vickers Limited, Westminster, London, England. Original application filed Sept. 6, 1917, Serial No. 190,095. Divided and this application filed Dec. 9, 1918. Serial No. 265,827. 4 Claims. (Cl. 102—3.)



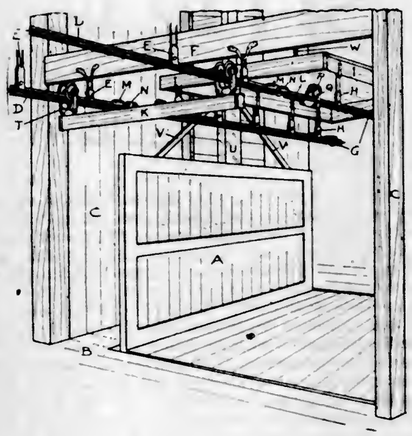
4. A submarine mine provided with a float controlling the mechanism for anchoring the mine at a predetermined distance below the surface of the sea, said float being provided with a passage for admitting sea water to the interior thereof, soluble material normally closing the passage, a liquid within the buoy which, when brought into contact with the soluble material, dissolves it to permit the entrance of water into the buoy through the passage, means for normally maintaining the float in such a position that said liquid is out of contact with said soluble plug the relation of the parts being such that after the mine has been launched said liquid comes automatically into contact with said soluble material.

1,346,310. HOPPER. THOMAS F. FEHRLE, Philadelphia, Pa. Filed Feb. 12, 1919. Serial No. 276,599. 2 Claims. (Cl. 302—52.)



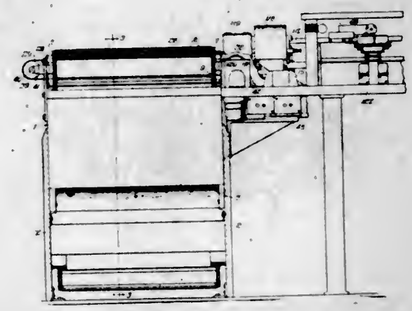
1. A hopper comprising flaring walls, a bottom portion connecting the flaring walls, an outlet conveyer pipe connected with the hopper above the apex of the angle formed by the said walls of the hopper, an air inlet pipe connected with the hopper, a deflector plate located within the inlet pipe adjacent to the end thereof attached to the hopper, and said deflector plate inclined at an angle to direct the air toward the bottom of the inlet pipe and the bottom of the hopper.

1,346,311. SANITARY TOILET. ERNEST G. FRIEDRICH, Indianapolis, Ind. Filed Mar. 31, 1919. Serial No. 286,504. 3 Claims. (Cl. 4—18.)



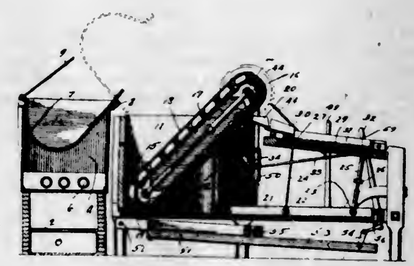
1. In combination with a toilet bowl a housing rigidly fixed to said bowl, a seat hingedly mounted on said housing, a stud centrally located within said housing, an arm rotatably mounted on said stud, a sleeve fixedly attached to said arm, a wiping element carried by said arm, a flexible element mounted on said sleeve for rotation of said arm, means for operating said flexible element, means for ejecting water upon said seat when in said vertical closed position and means for carrying said ejected water from said housing to said bowl, substantially as described.

1,346,312. RAILWAY STRUCTURE. EDWARD FURROW, Springfield, Ill. Filed July 14, 1919. Serial No. 310,588. 5 Claims. (Cl. 238—7.)



5. In a structure of the class described, a pivoted locking block having transverse grooves adjacent to the free end of the block; in combination with an extension having members adapted to engage in the transverse grooves of the block.

1,346,313. TRACK FOR OVERHEAD CARRIERS. PAUL M. HASSLER, Fairfield, Iowa, assignor to the Louden Machinery Company, Fairfield, Iowa, a Corporation of Iowa. Filed Apr. 30, 1920. Serial No. 377,844. 16 Claims. (Cl. 104—91.)

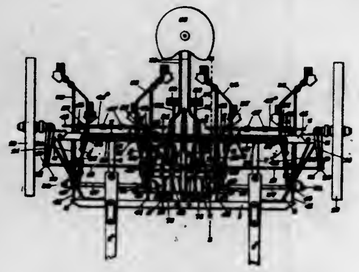


1. In tracks for overhead carriers, the combination with an elevator adapted to be raised and lowered through upper and lower rooms of a building, of a track connected to each of the overhead portions of a plurality of said rooms, a corresponding track connected to the overhead portions of the elevator, a trolley adapted to run on said overhead tracks, and means when in horizontal alinement to connect the track in each of the rooms with the track in the elevator, and to form a continuous trackway for the passage of the trolley from the track in a room to the track in the elevator, and vice versa.

1,346,314. CONVEYING MECHANISM. ALLEN B. HAZARD, Berwyn, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Sept. 1, 1915, Serial No. 48,513. Divided and this application filed Nov. 8, 1917. Serial No. 200,916. 11 Claims. (Cl. 193—24.)

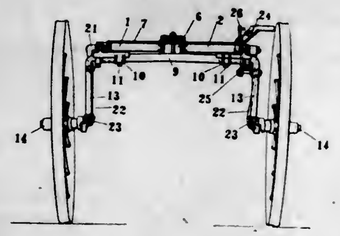
1. In a testing machine, a conveyer consisting of a pair of chains, buckets secured at opposite ends to said chains, said buckets consisting of sheet metal having a cross-section similar to the letter M, and forming a long narrow trough with side reinforcements.

1,346,315. PRUNE-TREATING MACHINE. AUGUST HILFIKER, Salem, Oreg. Filed Sept. 12, 1919. Serial No. 323,239. 6 Claims. (Cl. 146—14.)



2. In a machine of the type described, the combination with a tank, and elevating means leading upward from said tank; of a lip under the delivery end of said elevator, a fixed drip pan beneath the lip, a frame movably supported above said pan and having a second lip underlying the first, a strainer tray in said frame above the pan and extending under the second lip, means for driving the elevator and for agitating the frame, and controls for said means.

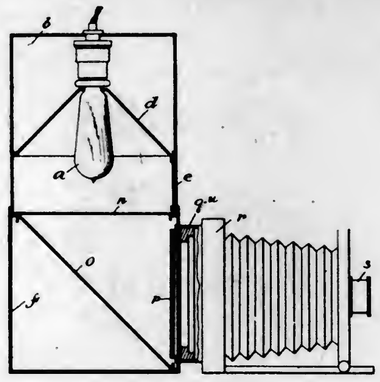
1,346,316. PROCESS OF BLEACHING ASBESTOS. CHESTER L. HILL, Lancaster, Pa. Filed May 1, 1920. Serial No. 378,046. 9 Claims. (Cl. 252.)



1. The herein described process of bleaching asbestos, which consists in subjecting asbestos fibers to the action of an acid in a gaseous condition in the presence of moisture, and then washing the fibers with water to remove the soluble salts so formed.

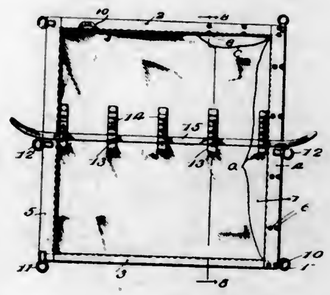
1,346,317. TWO-ROW CULTIVATOR. JOHN V. HOLSTEIN, Moline, Ill., assignor to Deere and Company, Moline, Ill., a Corporation of Illinois. Filed Nov. 27, 1915, Serial No. 63,730. Renewed Oct. 20, 1919. Serial No. 332,016. 12 Claims. (Cl. 97—35.)

1. A cultivator having a frame, supporting wheels therefor, a laterally movable element with which said wheels are connectible for simultaneous adjustment angularly to the frame, a rigid element with which said wheels are connectible to hold them non-adjustable, foot levers pivotally supported on the frame and connected with the laterally movable element and operable to actuate the latter, gangs of cultivating devices movably supported on the frame and connectible at will to the laterally movable element for adjustment simultaneously with the adjustment of the wheels and adjustable laterally with said element when the wheels are connected with the rigid elemnt, said cultivating devices adapted to be disconnected from the movable element and connected to the rigid element whereby the wheels only are adjustable by the laterally movable element when connected therewith.



1,346,318. CULTIVATOR-WHEEL ADJUSTMENT. OTIS W. HOWARD, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Oct. 7, 1912, Serial No. 724,353. Renewed May 31, 1916. Serial No. 100,967. 18 Claims. (Cl. 97—35.)

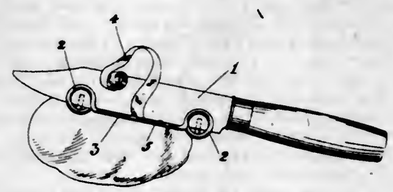
1. In a cultivator, the combination of a main frame, crank axles having upper and lower portions substantially parallel to each other, the upper portions of the crank axles supported on the main frame angular to the horizontal plane of the main frame, and supporting wheels on the lower portions of the crank axles.



1,346,319. PHOTOGRAPHIC PROJECTION APPARATUS. ANTON KONIECZNY, Vienna, Austria. Filed July 21, 1915. Serial No. 41,148. 2 Claims. (Cl. 88—24.)

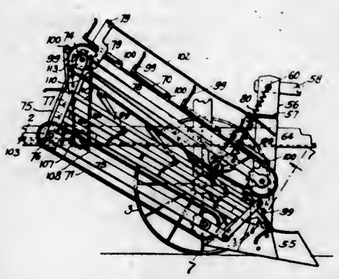
1. A photographic projecting apparatus for the purpose specified, comprising a casing, an elongated source of light thereon, and a reflector surrounding and coaxial with said source of light, said reflector consisting of an upper wall

at right angles to the axis of the source of light and a lateral wall at an obtuse angle to the upper wall.



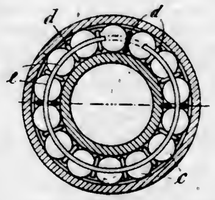
1,346,320. CONVERTIBLE PROTECTIVE COVERING. E MCIVOR LAW, Arcadia, Fla. Filed Nov. 24, 1917. Serial No. 203,823. 1 Claim. (Cl. 2—60.)

An article of the class described including a substantially rectangular sheet of flexible material having front and rear faces, a longitudinal series of fasteners secured to the front face of said sheet along one longitudinal edge portion thereof, a second series of fasteners secured to the rear face of the sheet along the opposite longitudinal edge portion thereof, said first named longitudinal edge portion being adapted to overlap the second named longitudinal edge portion whereby said first and second named fasteners may be connected, a transversely extending series of fasteners secured to the front face of said sheet along the lower end portion of the same and extending only half way across said sheet; and a second series of transversely extending fasteners secured to the rear face of said sheet at the same end portion of the sheet and extending across the other half of the sheet only, the first named half of the lower end portion of said sheet being adapted to be folded upon said second half of the same whereby the first and second named series of transversely extending fasteners may be connected.



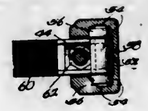
1,346,321. GAGE FOR PARING-KNIVES. ALBERT B. LEE, Minneapolis, Minn. Filed Mar. 14, 1919. Serial No. 282,690. 2 Claims. (Cl. 30—20.)

1. A paring gage for knives comprising a straight gage member adapted to extend along the cutting edge of a knife in spaced relation with the same, terminal coils located at the ends of the gage member adapted to embrace the blade of the knife, and extending terminals on said



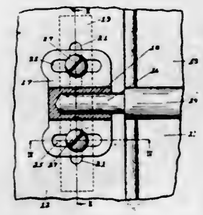
coils located within the end convolutions and projecting inwardly and adapted to insure a tight frictional engagement with the knife blade.

1,346,322. BEET-HARVESTER. WILLIAM K. LEWIS and DAVID T. BLEVINS, Denver, Colo., assignors to The National Beet Harvester Company, a Corporation of Colorado. Filed July 22, 1918. Serial No. 246,185. 2 Claims. (Cl. 55—138.)



2. In a beet harvesting machine, the combination of a digging element for lifting roots from the soil, composed of two laterally converging blades adapted to admit and support the lifted roots between them, an endless conveyer overhanging the digging element, drags having a limited pivotal movement on the conveyer to fall into the space between the blades at the forward end thereof and move rearwardly through the same for the conveyance of the lifted roots, the drags being formed to loosely fit within the space between the blades of the digging element, and a second conveyer extending rearward of the element beneath the line of movement of the drags on the lower stretch of the upper conveyer, to provide a moving support for roots conveyed by the drags.

1,346,323. BALL-HOLDER FOR BALL-BEARINGS AND METHOD FOR MANUFACTURING THE SAME. KONRAD WERNER LINDMAN, Stockholm, Sweden, assignor, by mesne assignments, to Nordiska Kullager Aktiebolaget, Gottenborg, Sweden, a Limited Company of Sweden. Filed Apr. 10, 1918. Serial No. 227,617. 2 Claims. (Cl. 64—59.)

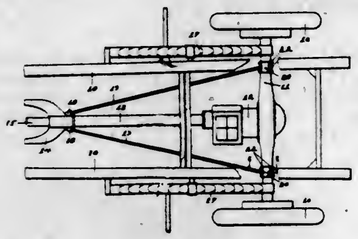


1. A ball holder for ball bearings, consisting of a ring of sheet metal provided at its edge with a plurality of single laps formed integrally with the ring and twisted in such a manner that they extend from the edge of the ring in axial radial direction so that they may lie between adjacent balls of the bearing.

1,346,324. CAR-HOIST. ANDREW H. MCDOUGALL, Harvey, Ill., assignor to Whiting Foundry Equipment Company, Harvey, Ill., a Corporation of Illinois. Filed Mar. 17, 1919. Serial No. 283,104. 4 Claims. (Cl. 254—100.)

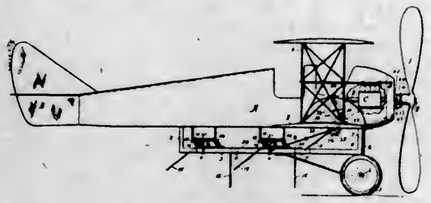
1. In mechanism of the class described, a traveling wheeled truck or trolley, a load engaging lifting member provided with wheels only one above the other movable vertically of said truck, a vertical lifting screw located between said wheels and the load engaging portion of the lifting member engaging and propelling said lifting member, means for rotating said screw, a vertical housing, adjacent to the screw inclosing opposite vertical sides of said wheels, in which the lifting member travels positioned to relieve the screw of part of the thrust created when a load is engaged by the lifting member, said three enumerated parts being so mounted on the trolley that the path of travel of that part of the lifting member which engages the load is in approximately the central vertical axis of the truck, and that the center of gravity of the device is inside the wheels of the truck.

1,346,325. HOOD-HINGE SUPPORT. CHARLES W. MCKINLEY, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 29, 1917. Serial No. 199,092. 14 Claims. (Cl. 180—69.)



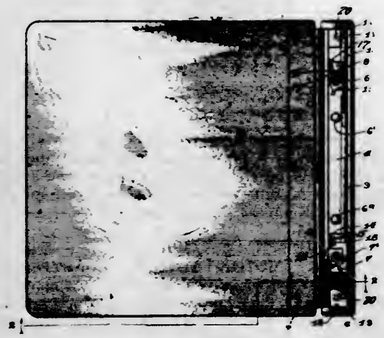
1. In a motor vehicle, the combination with a body, of a hood comprising a plurality of sections connected together by a longitudinally extending hinge; and a support for the pintle of said hinge adjustable longitudinally of the pintle and mounted on said body.

1,346,326. MOTOR-VEHICLE CONSTRUCTION. CHARLES W. MCKINLEY, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 7, 1917. Serial No. 205,972. 2 Claims. (Cl. 280—106.5.)



1. The combination with a motor vehicle, having a frame, an axle, and hound rods connecting said frame and axle; of a pair of split sleeves embracing said axle,

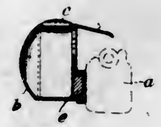
adjacent the ends thereof, each of said sleeves being provided with a downwardly projecting boss; a pin adjustably



mounted in each boss; and pivotal connections between said pins and the rear ends of said hound rods.

1,346,327. AEROPLANE-DRIVE. HIRAM F. MCNUTT, Richmond, Ind. Filed Dec. 20, 1918. Serial No. 267,581. 4 Claims. (Cl. 244—25.)

1. In combination with a fuselage having a motor carried thereby and a revolving propeller operated by the motor, sets of propellers slidably mounted, under said body, each set moving in a direction opposite to the set next thereto, all of said sliding propellers being adapted to push the body forward when they are moving in one direction and to operate idle when moving in the opposite direction, all of said sliding propellers being adapted to be placed in and out of gear with said motor, and means for placing the revolving propeller into and out of gear with the motor, all substantially as shown and described.



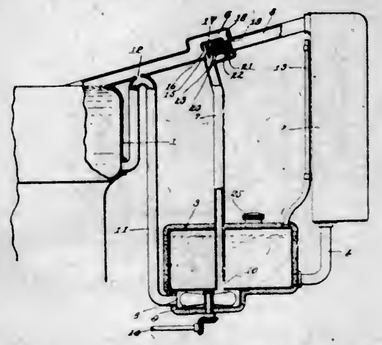
1,346,328. BINDER. FRED L. MANNY, Benton Harbor, Mich., assignor to Baker-Vawter Company, Benton Harbor, Mich., a Corporation of Michigan. Filed Oct. 2, 1917. Serial No. 194,349. 3 Claims. (Cl. 129—12.)

1. In a binder equipped with a pair of posts, post-engaging means comprising a plate member formed with a longitudinal face adapted to receive a lateral thrust, a clamping block arranged to slidingly engage said face of said plate and formed with an inclined face, said block being provided with a stem having a hollow, internally-threaded inner end, a screw rod having a threaded inner end engaging said stem and formed with a shoulder adjacent its outer end, and a second clamping block loosely engaging said screw rod and coöperating with said shoulder and also arranged to slidingly engage said face of said plate member, said screw rod being manually rotatable to draw said clamping blocks toward each other and into wedging engagement between said posts and said longitudinal faces on the plate member.

3. In a binder having a pair of covers and a post-plate equipped with posts attached to one cover, a hollow orificed casing forming the opposite post plate and equipped with inclosed locking mechanism arranged to engage said posts, said casing comprising a longitudinal flanged plate, a flanged cover plate making interlocking sliding engagement with said first-mentioned casing plate, and shouldered corner blocks seated in the ends of said casing and both secured to one of said casing plates to prevent displacement of one plate relatively to the other.

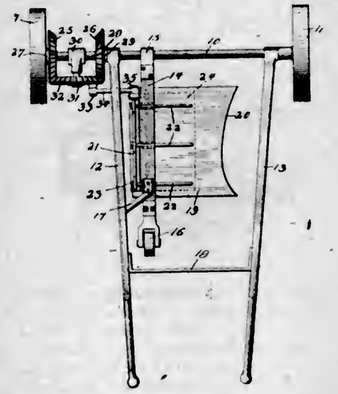
1,346,329. RIFLE. PHIROZESHAW MUNCHERJI MEHTA, Poona, India. Filed June 2, 1919. Serial No. 301,230. 6 Claims. (Cl. 224—0.5.)

1. A device for catching spent cartridges cases as they are ejected from a rifle, comprising in combination, a receptacle having an opening a deflecting plate secured to the said receptacle adjacent the opening, and means for fastening the receptacle to the rifle with the opening adjacent the point of ejection of the cartridges and the deflecting plate above the said point of ejection.



1,346,330. HOSE CONNECTION TO NIPPLES. ERIC C. MITCHELL, Vancouver, British Columbia, Canada. Filed June 30, 1919. Serial No. 307,709. 3 Claims. (Cl. 285—73.)

1. A means for connecting a hose-pipe to its nipple, said means comprising the combination with the hose-pipe and its nipple, of a clamp encircling the outside of the hose-pipe where the nipple is inserted, and bolts with nuts for securing the clamp on the hose-pipe and also for connecting the clamp to a collar secured on the nipple.

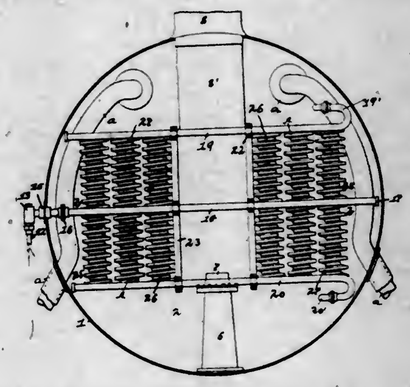


1,346,331. COOLING SYSTEM. WELLINGTON W. MUIR, Lockport, N. Y. Filed July 15, 1919. Serial No. 311,009. 29 Claims. (Cl. 123—174.)

1. In a cooling system for internal combustion engines, a circuit for cooling fluid comprising a jacket, a radiator, normally acting as a condenser, means for maintaining an excess supply of cooling liquid, and means for mixing the fluid from the radiator with said supply and thereby

trapping and condensing the vapor which has passed through the radiator without being condensed.

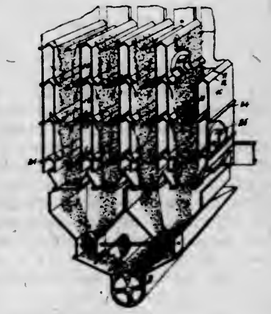
1,346,332. SUGAR-BEET BLOCKER. SIGFRED NORDENBERG and STEPHEN DONNER, Jennings, Mich. Filed June 16, 1919. Serial No. 304,392. 4 Claims. (Cl. 97—45.)



1. In a beet blocker, a frame, a blade, a plurality of guide rods fixed on the blade and slidably engaging the frame for supporting the blade, a supporting wheel for the frame, and a reciprocating connection between the wheel and the blade for sliding the latter during the travel of the machine.

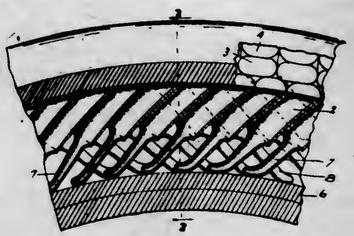
1,346,333. PROCESS FOR PRODUCING ARTICLES OF IRON SILICID. NAPOLEON PETINOT, New York, N. Y. Filed Aug. 18, 1919. Serial No. 318,325. 6 Claims. (Cl. 22—186.)

1. The process of making articles of iron silicid resistant to corrosion, comprising the casting of the alloy in molds made of graphite.



1,346,334. WATER-HEATER FOR BOILERS. PAOLO A. PETRUCCI, Pittsburgh, Pa. Filed Apr. 7, 1919. Serial No. 287,958. 3 Claims. (Cl. 122—426.)

1. A water heating device for steam boilers having a smoke box and smoke flues opening into said box, said device comprising coil members within said smoke box and arranged in upper and lower groups, a main delivery pipe within said smoke box connected to a source of water supply and with the lower portions of the upper groups and upper portions of the lower groups, and discharge pipes in said smoke box connected to the upper portion of the upper groups and lower portions of the lower groups and leading into the water space of the boiler, said

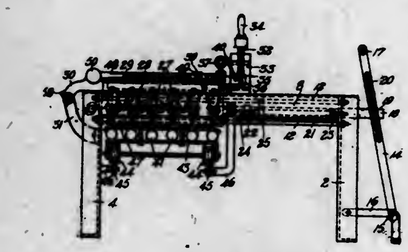


members and pipes adapted to be heated by the products of combustion passing through said smoke flues and smoke box.

1,346,335. GRAIN-DRIER. OLIVER W. RANDOLPH, Toledo, Ohio. Filed Feb. 3, 1919. Serial No. 274,736. 6 Claims. (Cl. 34—34.)

1. In a grain drier, a series of air-ducts arranged in vertical and horizontal rows, the vertical rows being spaced apart to form therebetween grain-columns, said ducts consisting respectively of elongated members having parallel side-walls which converge to form a top, and having at bottom downwardly flaring flanges, said flanges and the subjacent converging tops being spaced apart to form air passages between said ducts and said grain-columns.

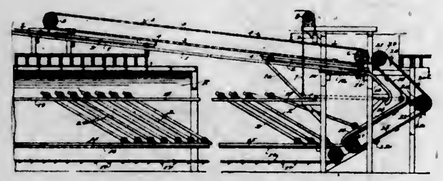
1,346,336. VEHICLE-TIRE. RICHARD S. REED, Kokomo, Ind. Filed July 5, 1919. Serial No. 308,795. 4 Claims. (Cl. 152—15.)



1. A vehicle tire including a central series of air tight cushioning sections, and series of cushioning sections on

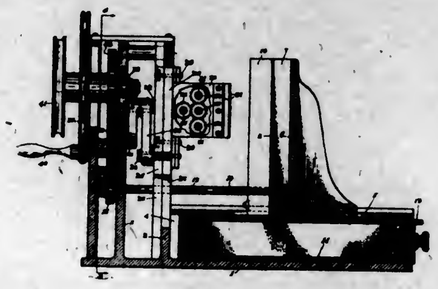
opposite sides of the central series and extending obliquely from their inner ends to the tread portion of the tire structure.

1,346,337. DEODORIZING MATERIAL. RUBIC C. ROARK, Chicago, Ill., assignor to U. S. Sanitary Products Corporation. Filed Oct. 23, 1918. Serial No. 259,313. 3 Claims. (Cl. 167—3.)



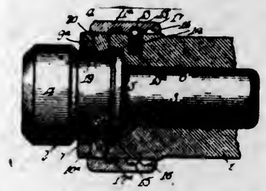
1. As a new article of manufacture, a deodorizing material consisting of a volatile substance in solid cake form having for its base paradichlorbenzol, the substance having the property of evaporating without leaving a residuum when exposed to the air.

1,346,338. CONE-BAKING MACHINE. GEORGE O. ROBINSON, Port Dover, Ontario, Canada. Filed Sept. 19, 1919. Serial No. 324,966. 1 Claim. (Cl. 107—66.)



In a machine of the class described, the combination with a suitable frame structure, of a plurality of transverse female die members each comprising one half part of two separate series of female dies and having transverse holes in their end parts, rods rigid with the frame and sleeved through the holes in said members to permit longitudinal movement of the latter in the frame, folding links connecting members means for actuating said members in said movement, a press for securing rigid engagement of said members, a plate hingedly secured to said frame, a plurality of male dies rigid with the plate and adapted to register and engage with said female dies, a press for assuring rigid engagement of the male dies between the female dies, and means for distributing heat to said dies.

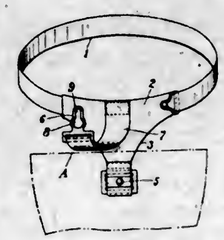
1,346,339. MACHINE FOR TRANSPORTING AND DRYING PLASTER-BOARD AND THE LIKE. ORVILLE L. ROUTT, GROVER C. MCCONNELL, and HERBERT L. GLAZE, Los Angeles, Calif., assignors, by direct and mesne assignments, to Plastoid Products, Inc., Los Angeles, Calif., a Corporation of California. Filed Apr. 15, 1919. Serial No. 291,972. 6 Claims. (Cl. 193—2.)



1. Means for moving carriers of the character referred to along a runway one after the other in combination with means for automatically grouping said carriers with their opposite ends of stationary supports at different levels in close overlapping positions.

1,346,340. GRATING DEVICE. STEFANO SANTILLI, Canton, Ohio. Filed Apr. 16, 1920. Serial No. 374,499. 4 Claims. (Cl. 146—15.)

1. A grating device comprising a grater, a reciprocating head and automatic means for simultaneously reciprocating the head across the face of the grater and for feeding the grater toward the head.



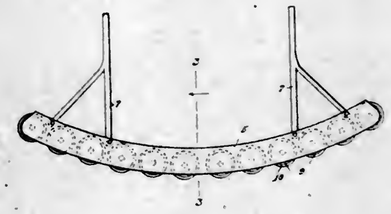
1,346,341. PERCUSSION-TOOL. ALBERT SCHINKEZ, Grand Haven, Mich., assignor to Keller Pneumatic Tool Company, Grand Haven, Mich., a Corporation of Michigan. Filed May 29, 1918. Serial No. 237,206. 1 Claim. (Cl. 121—32.)

In a percussion tool, the combination with a barrel and a tool reciprocable therein, of a ring constructed to fit neatly upon the barrel and having in its inner surface a plurality of depressions disposed in longitudinal relation, the barrel having an aperture and a socket in its wall also disposed in longitudinal relation, two holding members entered in the aperture and socket for holding respectively the ring and, in the normal position of the ring, the tool in operative relation to the barrel, the ring holding member being adapted to engage in certain of the depressions in the ring, and the tool holding member being adapted to engage in certain other of said depressions when the ring is in abnormal position upon the barrel whereby to release the tool holding member, and a spring in said socket permitting the ring holding member to yield whereby to allow movement of the ring longitudinally of the barrel.

1,346,342. GARMENT SUPPORTER AND FASTENER. JOHN K. SEYMOUR, Elyria, Ohio, assignor of one-fifth to Milo H. Stearns and one-fifth to Roscoe W. Kauffman, Elyria, Ohio. Filed Mar. 24, 1919. Serial No. 284,539. 1 Claim. (Cl. 241—6.)

In a garter, a band adapted to pass around the leg of the wearer and comprising an elastic portion and a relatively inelastic portion, a relatively inelastic hanger and an elastic strip superposed over the said hanger, said hanger and said strip being independently supported from the said inelastic portion, a stud on the lower portion of the inelastic hanger, and a clip on the lower portion of the said strip, said clip having a slot with an enlargement at the upper end, said strip and said hanger being of such relative lengths as to require the stretching of only the said elastic strip to bring the said slot enlargement to register with the said stud, said strip and said hanger

comprising freely depending portions sufficiently long to permit a substantial length of the wearer's stocking to lie flat therebetween.



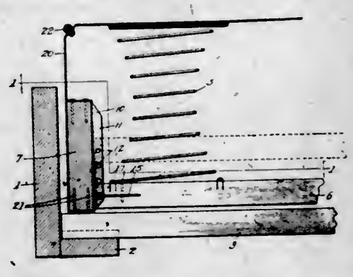
1,346,343. ALLOY OF IRON, CHROMIUM, AND TITANIUM AND PROCESS FOR THE PRODUCTION THEREOF. HUGH C. SICARD, Buffalo, N. Y., assignor to United States Ferro-Alloys Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 18, 1919. Serial No. 318,331. 4 Claims. (Cl. 75—1.)

1. A method for the production of alloys of iron, chromium and titanium comprising the mixture of chromium ore, futile ore, scrap iron and carbon in sufficient quantity not only to reduce the chromium and titanium oxids present in the ores but enough to combine with the chromium, titanium and iron to form a complex carbid in the finished alloy, and then smelting this mixture in an electric furnace.

1,346,344. METHOD FOR MAKING CHROME-STEEL. HUGH C. SICARD, Buffalo, N. Y., assignor to United States Ferro-Alloys Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 18, 1919. Serial No. 318,332. 3 Claims. (Cl. 75—1.)

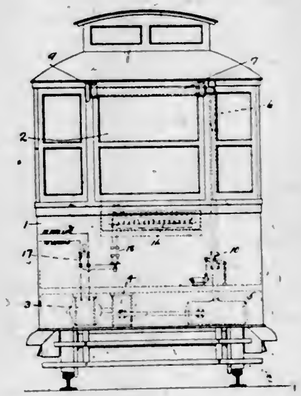
1. An improved process for making chromium steel which consists in adding to molten steel an alloy of iron, chromium, titanium and carbon.

1,346,345. AUTOMOBILE-FENDER. GEORGE W. SINGER, South Bend, Ind. Filed Feb. 28, 1920. Serial No. 361,959. 4 Claims. (Cl. 293—49.)



1. A fender of the class described, comprising a frame having spaced bars, rollers having their axes journaled in and adapted to revolve between said bars, and elements in part forming bearings for one end of said axes and adapted to have a constrictive engagement with the bar for securing same in operative position.

1,346,346. TIRE. HARRY A. SIPRELLE, Cleveland, Ohio. Filed Nov. 6, 1919. Serial No. 336,110. 7 Claims. (Cl. 152—14.)



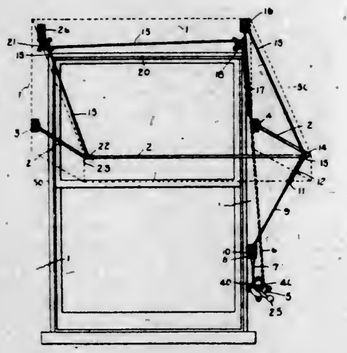
1. A tire having molded therein pairs of ribs, the ribs of each pair being arranged on opposite sides of the central portion of the tire and converging circumferentially of said tire, and blocks removably fitted between said ribs.

1,346,347. SLAT-SUPPORT FOR UPHOLSTERY. MATHIAS STADTLER, Chicago, Ill. Filed Mar. 24, 1919. Serial No. 284,651. 9 Claims. (Cl. 5—29.)

1. A spring cushion for use in furniture, having upholstery springs, side rails for supporting the cushion, flexible means for anchoring the forward end of the springs to the side rails, slats for supporting the springs, and racks mounted on the rails for supporting the ends of the slats, said racks having side wings for preventing motion of the slats lengthwise of the rails, and said slats being adjustable in said rails for varying the tension of the springs.

1,346,348. WINDOW-CLEANING DEVICE. AUGUST SUNDH, Hastings-upon-Hudson, N. Y. Filed Dec. 30, 1918. Serial No. 269,019. 6 Claims. (Cl. 20—40.5.)

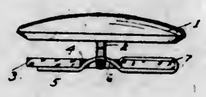
1. A window-glass cleaning device comprising means for heating the surface of the glass and means for imposing a blast of compressed air upon the heated surface to clean the same.



1,346,349. ABSORBING AND PURIFYING COMPOSITION. JOHN C. TATE, Oakland, Calif. Filed Sept. 21, 1916. Serial No. 121,482. 18 Claims. (Cl. 252.)

13. A composition for purifying gaseous products of combustion comprising lime, clay, charcoal and a binder.

1,346,350. ELECTRICAL WELDING PROCESS. EARL A. TAYLOR, Buffalo, N. Y., assignor to Maxwell Motor Co., Inc., Detroit, Mich., a Corporation of Delaware. Filed May 20, 1920. Serial No. 382,925. 5 Claims. (Cl. 219—8.)



1. A process of electric welding consisting in forming a succession of dead short circuits between the work and a filling in electrode under a voltage sufficiently low to avoid appreciable arcing, and the development of sufficient localized heat by each of said short circuits to weld a small portion of the electrode to the work.

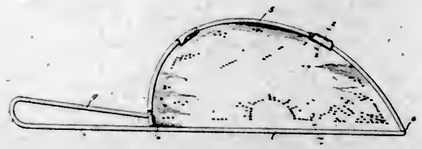
1,346,351. AWNING DEVICE. HENRY E. THOMPSON, Newark, N. J. Filed May 21, 1919. Serial No. 298,608. 5 Claims. (Cl. 156—44.)

5. In a hoisting means for awning frames, the combination of a spindle; means comprising a sprocket wheel on said spindle for receiving and moving a flexible connection; a handle for turning said spindle; a locking star wheel rigid with said handle the adjacent walls of any two adjacent teeth of the said wheel being at right angles to each other; and a pair of opposed gravity dogs having finger holds for moving the same in opposite directions, and having a pair of weighted holding members for positively engaging a pair of said teeth and thereby preventing said handle from turning in either direction, substantially as described.

1,346,352. BUTTON-FASTENER. DANIEL E. TWEEDDALE, San Francisco, Calif., assignor of one-half to Joseph Chiodo, San Francisco, Calif. Filed Feb. 25, 1920. Serial No. 361,307. 3 Claims. (Cl. 24—90.)

1. A button fastening, comprising, in combination, a washer of flexible material, adapted to surround the eye of a button, and a wire having a loop adapted to engage the eye of a button, and its ends adapted to engage the said washer.

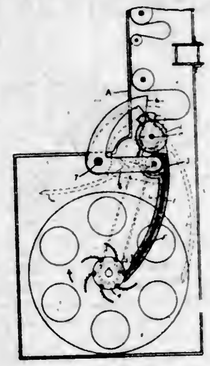
1,346,353. HEAT AND VAPOR BATH CABINET. EDGAR B. ULLMAN, EUGENE B. SIMMONDS, and ARTHUR F. ATKINSON, Muncie, Ind.; said Simmonds assignor of all his right to said Atkinson. Filed Sept. 16, 1918. Serial No. 254,354. 3 Claims. (Cl. 219—43.)



3. In an applicator a vapor generator and heater comprising a receptacle, a heating unit erected within the receptacle and having an outlet only through the bottom of the receptacle, energizing conductors leading into the compartment through the opening in the bottom, a heat insulating cover member positioning over the top of the receptacle, a conduit forming communication between the receptacle and the applicator, and means to introduce water into the receptacle without removing the insulating cover.

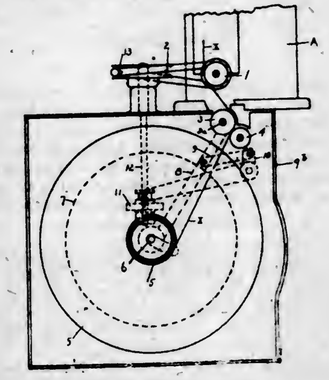
1,346,354. SUPPORT FOR WINDOW-BLIND ROLLERS, CURTAINS, VALANCES, AND THE LIKE. HENRY UMPHREY, Carleton Place, Ontario, Canada, assignor of one-third to Elmer Donald Benjamin Robertson and one-third to Harry David Humphrey, Ontario, Canada. Filed Mar. 12, 1920. Serial No. 365,182. 4 Claims. (Cl. 156-23.)

4. A support of the class described comprising a bar, a bracket adjustably mounted on the bar and having means for securing the bar to a window frame, a second bracket adjustably mounted on the bar and having a roller supporting member and an upwardly extending arm, the said arm having a projection on its rear edge and a shoulder on its front edge adjacent to the roller supporting member, and a third bracket having a guide means coacting with the vertically disposed arm and engaging with the projection and a shoulder coacting with the said shoulder, the last said bracket being designed to support curtain supporting means.



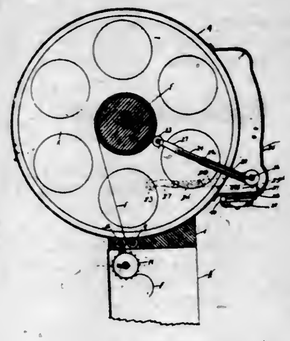
1,346,355. KETTLE-DRAINER. JULIUS H. WALD, Chicago, Ill. Filed Aug. 25, 1919. Serial No. 319,606. 6 Claims. (Cl. 53—8.)

1. A kettle drainer comprising a strainer portion to fit over the top of a kettle, and having an edge curved to conform to the edge of the kettle and a handle portion extending laterally from one side of the strainer portion,



and means for positioning said strainer portion with respect to the kettle, regardless of which side of the strainer portion is applied to the kettle.

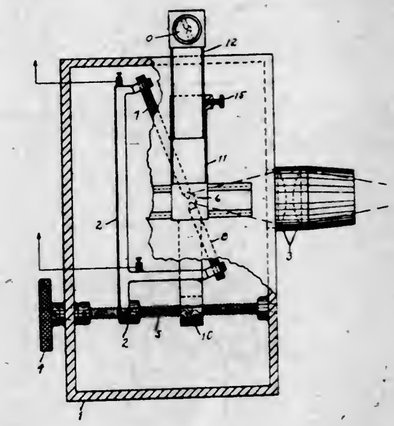
1,346,356. AUTOMATIC REEL-THREADING DEVICE. WILLIAM WENDERHOLD, New York, N. Y., assignor to Cru Patents Corporation, a Corporation of New York. Filed July 20, 1915. Serial No. 40,985. 4 Claims. (Cl. 88—17.)



1. In a film winding device, a reel, driving means therefor, projections on the hub of said reel to engage a film during rotation, and a film guide extending into said reel near said hub to deliver a film to the hub, and means controlled by the film to move said guide away from said reel when the film is being wound on said reel, automatically and substantially as described.

1,346,357. VARIABLE-SPEED MECHANISM. WILLIAM WENDERHOLD, New York, N. Y., assignor to Cru Patents Corporation, a Corporation of New York. Filed July 20, 1915. Serial No. 40,986. 5 Claims. (Cl. 242—55.)

1. In a film winding device having a variable speed drive controlled by the weight of the film reel consisting of a rotatable film reel support carried by a pivotally mounted lever, a friction disk mounted on said reel support, a friction pulley in contact with said disk, a lever secured to said pulley to control the position of the same, said lever being operatively connected with the first mentioned lever and said first mentioned lever being operated by the weight of the film reel substantially as described.



1,346,358. SIGNAL DEVICE FOR KINETOSCOPES. WILLIAM WENDERHOLD, New York, N. Y., assignor to Cru Patents Corporation, a Corporation of New York. Filed Jan. 13, 1916. Serial No. 71,860. 7 Claims. (Cl. 33—169.)

1. The combination with a film roll, a supporting structure therefor, a roller adapted to contact with the film on said film roll, a support for said roller, an arm pivotally carried by the supporting structure, means for adjustably attaching said roller to said arm, a signal device, and means controlled by the movement of said arm for actuating said signal device.

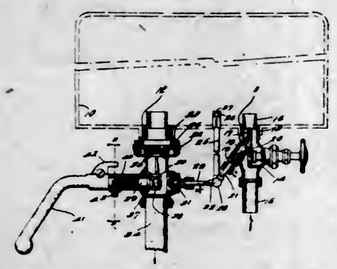
7. In a motion picture apparatus means to indicate the approaching termination of the film supply from a film roll said means comprising a film reel, a support for said reel, a member pivotally mounted on said support, a roller carried at the end of said member and adapted to bear against the periphery of the film roll during the revolution of said roll, said member being adapted to move past and out of contact with the periphery of said roll when the roll has been reduced to a pre-determined diameter, a signal indicating device, and means operated by the movement of said member past the periphery of said roll for actuating said signal indicating device.

1,346,359. PROJECTION-LAMP HOUSE. WILLIAM WENDERHOLD, New York, N. Y., assignor to Cru Patents Corporation, a Corporation of New York. Filed Apr. 9, 1917. Serial No. 160,882. 7 Claims. (Cl. 88—24.)

1. In a projection lantern, a movably mounted source of light, and means for moving the same, in combination

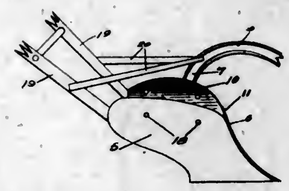
with a device for observing the light source, said device being mounted and maintained in fixed relation to the light source and movable coincidentally therewith.

1,346,360. LUMINOUS MARKING DEVICE. CHARLES EUGENE WHITE, Orange, N. J., assignor to Radium Luminous Material Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 1, 1919. Serial No. 327,632. 13 Claims. (Cl. 240—1.)



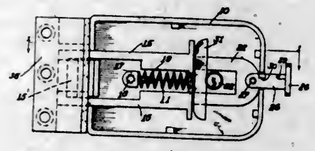
6. In a device of the character described, the combination of a transparent sheet, a film applied to the rear of said sheet and having a cut out portion, forming a shallow recess, a body of self-luminous material in said recess, means for supporting said material, adhesive means for attaching said device to a supporting surface and means for holding said sheet, material supporting and adhesive means in assembled relation.

1,346,361. PEDAL EXTENSION. FRANK LESTER WILLIAMS, Detroit, Mich. Filed Dec. 17, 1917. Serial No. 207,534. 2 Claims. (Cl. 74—81.)



2. A pedal attachment comprising a member recessed to provide opposing walls adapted to overlie the opposite faces of a normal pedal with the upper wall of greater length than the lower wall, said walls being joined to produce a stop formation at the bottom of the recess, a threaded element carried by the upper wall adjacent its outer end and adapted to engage the upper face of the normal pedal, and an extension carried by the upper wall and projecting therefrom at a point intermediate the stop formation and said element, said extension carrying a pedal face extending in approximate parallelism with the normal pedal face and spaced therefrom.

1,346,362. FLUSHING SYSTEM. CHARLES A. WULF, Indianapolis, Ind. Filed Dec. 28, 1917. Serial No. 209,244. 6 Claims. (Cl. 4—5.)

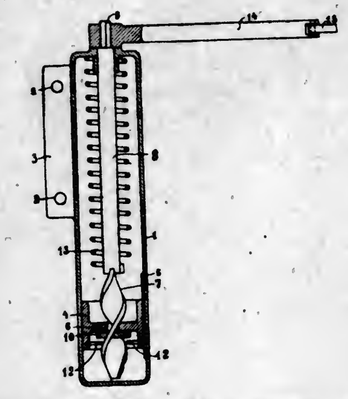


1. A flushing system, comprising an air-tight tank having a water-supply inlet and a valved discharge outlet, an air injector associated with said water-supply inlet, said air injector having a restricted air inlet opening and a separate opening to the valved discharge outlet on the discharge side of the valve thereof, and a check valve associated with said separate opening for permitting outflow of fluid to the valved discharge outlet and preventing inflow of fluid from such valved discharge outlet.

1,346,363. EXTENSION-MOLDBOARD. AARON L. YORK, Jr., Liberty, N. C. Filed Sept. 22, 1919. Serial No. 325,330. 3 Claims. (Cl. 97—18.)

1. In combination with a plow beam, and a stationary mold board having a beveled upper edge, a removable mold board incldlng a member having a beveled lower edge coöperting with the beveled upper edge of the stationary mold board, a wedge shaped block carried by the removable mold board, said wedge shaped block adapted to be wedged between the plow beam and stationary mold board, for preventing lateral displacement thereof with relation to the stationary mold board, and means carried by the removable mold board and having connection with the plow for securing the removable mold board against vertical displacement.

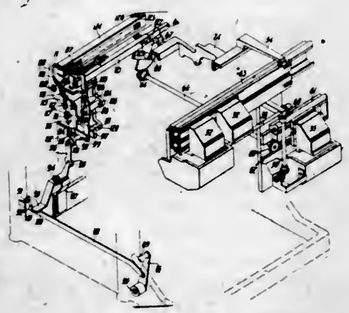
1,346,364. BURGLAR-PROOF LOCK. ANDREW YUROW, New York, N. Y. Filed Jan. 13, 1920. Serial No. 351,102. 4 Claims. (Cl. 70—46.)



1. A block comprising a casing, a bolt therein comprising a skeleton frame adapted to engage a keeper upon inward movement of the bolt in the casing, a spring normally pressing said bolt inwardly, a key actuated lever for moving said bolt outwardly, and a latch pivotally secured to said bolt and projecting through the casing and adapted to hold the bolt in either locked or unlocked position.

1,346,365. METHOD FOR THE DECOMPOSITION OF ALKALI-METAL MINERALS. EINAR BERGVE, Notodden, Norway, assignor to Norsk Hydro-Elektrisk Kvaelstofaktieselskab, Christiania, Norway, a Joint-Stock Company of Norway. Filed Apr. 30, 1919. Serial No. 293,876. 2 Claims. (Cl. 23—22.)

1. The method of decomposing alkali metal silicates, which consists in subjecting the silicate to the action of sulfur vapors at temperatures of about 800° to 1400° C.

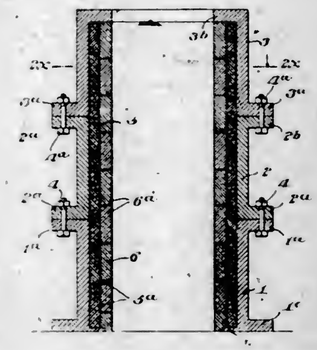


1,346,366. AUTOMATIC DOOR-CLOSER. HELGE LINUS CLAESSON, Gottenborg, Sweden. Filed Dec. 22, 1916. Serial No. 138,364. 11 Claims. (Cl. 16—46.)

1. In a device of the character described, in combination a casing, an apertured piston movable axially within said casing but prevented from rotation therein, a threaded member within said casing co-acting with said piston, said member and casing being relatively rotatable to effect axial movement of said piston, and valve means on said threaded

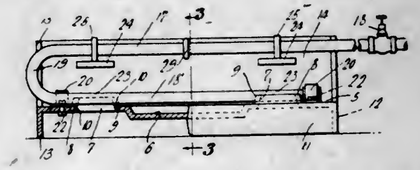
member operating in one direction of movement thereof to open the aperture in the piston, and in the other direction of movement thereof to close said aperture.

1,346,367. COMBINED TYPEWRITING AND COMPUTING MACHINE. CLIFTON B. CORELL, New York, N. Y., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Nov. 21, 1918. Serial No. 263,481. 20 Claims. (Cl. 235—59.)



2. In a typewriting machine, the combination with a pair of bars, each carrying a series of settable stops, of a stop-setting device for each of said series, including a movable member through which the device is actuated, an actuating piece mounted so that movement in one direction will effect actuation of one of said movable members, and movement in another direction will effect actuation of the other of said movable members, and means, including a lug on one of said movable members, whereby actuation of said lug-carrying member will effect actuation of the other.

1,346,368. ELECTRIC CIGAR-LIGHTER. CHARLES F. CUNO, Meriden, Conn. Filed Mar. 8, 1920. Serial No. 364,260. 6 Claims. (Cl. 175—296.)

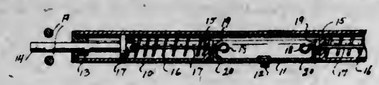


4. A holder and guard for the purposes described, comprising a cylindrical socket having one or more angular slots intersecting its outer edge, a contact terminal in said socket, a translating device having a contact terminal at its rear arranged to coöperate with the first mentioned contact terminal, said translating device being surrounded by a sleeve slidably fitting within said socket, said sleeve having a projection arranged to interlock with said angular slot to hold said translating device in operative position with the contacts in engagement, a guard including a flanged guard portion, and a contracted cylindrical portion arranged to slide on the outer side of the aforesaid socket with a lug on the inner side of said contracted portion arranged to interlock in the angular slotted portion of the socket.

1,346,369. INGOT-MOLD. JOHN A. DRAIN, Philadelphia, Pa. Filed Jan. 13, 1920. Serial No. 351,218. 6 Claims. (Cl. 22—139.)

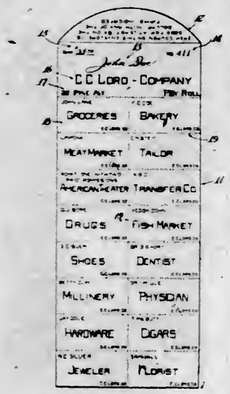
1. An ingot mold having a lining of refractory material and an inner lining of heat insulating material.

1,346,370. COAL-OIL GENERATOR. HENRY GASTON EPPS, Waco, Tex. Filed Sept. 9, 1919. Serial No. 322,616. 1 Claim. (Cl. 158—63.)



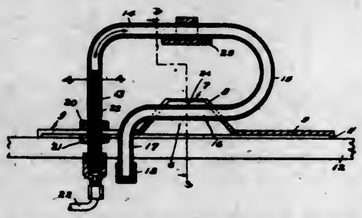
In a burner, a base, flanges depending from the base to provide supports for the base, one of said flanges being cut away to provide an air passageway, said base being provided with an opening adjacent each end thereof, and having a depressed portion providing a receptacle, the depressed portion being substantially long, the ends thereof terminating at points adjacent the openings, a rear wall formed integral with the base, said rear wall having integral end walls, a supporting arm having an eye formed at one end thereof, means for securing the opposite end of the supporting arm to the rear wall, a pipe extending through the eye of the supporting arm, means for securing a portion of the pipe to the base, and said pipe having burner openings.

1,346,371. AUTOMOBILE-LOCK. THEODORE C. FISCHER, Philadelphia, Pa. Filed Apr. 23, 1919. Serial No. 292,078. 8 Claims. (Cl. 70—90.)



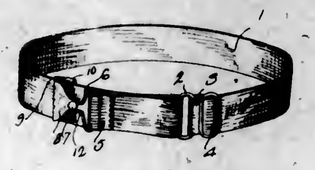
8. A locking device for automobiles comprising a tubular casing having an open end, a bolt longitudinally shiftable within the casing and projectible from its open end into

engagement with an automobile wheel, a spring in the casing urging the bolt to a projected position, a door



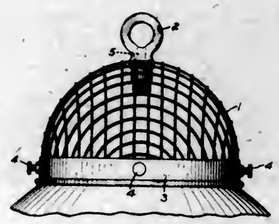
forming part of the casing and giving access to the inner end of the bolt whereby the bolt may be retracted, and means for locking said door in a closed position.

1,346,372. PAY-ENVELOP. ROBERT E. FISHER, and WILLIAM M. YORK, Long Beach, Calif; said Fisher assignor to said York. Filed Dec. 16, 1916. Serial No. 137,459. 1 Claim. (Cl. 283—1.)



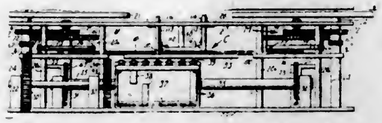
A pay envelop adapted to contain an employee's wages; and a plurality of coupons formed in the body of the envelop, each coupon having plainly marked thereon a symbol identifying a merchant who has agreed to accept same as part payment in trade, and each coupon bearing a symbol serving to identify the employee originally issuing the envelop; said envelop also bearing symbols indicating that said coupons will be accepted by said merchants.

1,346,373. OIL-BURNER. CHARLES A. HART, Seattle, Wash. Filed Dec. 13, 1919. Serial No. 344,702. 3 Claims. (Cl. 158—64.)



1. An oil burner comprising a flat base having a slot extending from one end thereof inwardly and provided with a hollow portion of truncated pyramidal shape that projects above the upper surface thereof said hollow truncated portion being open at its top end and having two of its oppositely disposed walls notched from the top downwardly, and a burner pipe comprising a U-shaped coil arranged in a vertical plane with its lowermost side resting in said notches and its two ends bent downwardly and projecting through the slot in said base, the lowermost side of said U-shaped coil having an upwardly directed gas outlet perforation located centrally of said hollow truncated portion.

1,346,374. ARMBAND. ARTHUR L. HERRMANN, Detroit, Mich. Filed Dec. 23, 1918. Serial No. 268,115. 3 Claims. (Cl. 241—5.)

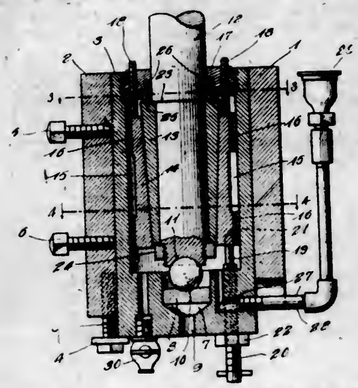


3. In an arm band or garter, the combination of an elastic body band, means for adjusting the operative length of said band, a stud carried by one end of the body band, and an eye adjustably carried by the body band and arranged to engage said stud.

1,346,375. GLOBE OR SHADE HOLDER FOR ELECTRIC LAMPS. JOHN C. HOLLINGS, Boston, Mass. Filed July 28, 1919. Serial No. 313,915. 5 Claims. (Cl. 240—115.)

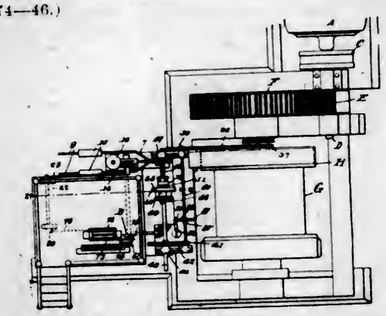
1. A globe or shade holder for electric lamps comprising a wire mesh frame, a shade-attaching rim secured to the edges of said frame and supporting means located at a mid portion of said frame.

1,346,376. PHONOGRAPH-DRIVING MECHANISM. ORLANDO E. KELLUM and SIDNEY A. MURDOCK, Los Angeles, Calif.; said Murdock assignor to said Kellum. Filed July 31, 1917. Serial No. 183,707. 13 Claims. (Cl. 74—38.)



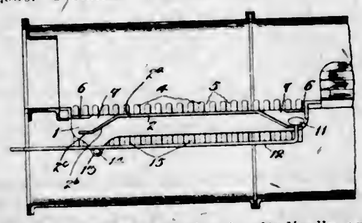
1. In combination, a plurality of driving mechanisms each with a driven shaft, a constantly running means connectible to either of said mechanisms, mechanical means in positive coöperation with the driving mechanisms to bring the driven shaft up to speed, and control means to control connection of the driving mechanisms with the constantly running means.

1,346,377. SELF-OILING METAL BEARING. NORTON W. KINNEY, Haverhill, Mass. Filed June 19, 1919. Serial No. 305,414. 3 Claims. (Cl. 64—49.)



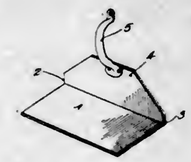
2. In a vertical spindle bearing, an outer shell, a vertical cup mounted in said shell for vertical adjustment, means for holding said cup in adjusted position, an anti-friction ball-bearing in the lower end of said cup, a vertical spindle resting on said ball-bearing, a downwardly tapered sleeve carried by said spindle, a bushing in said cup having a tapered bore rotatably receiving said tapered sleeve, means for raising said bushing to compensate for

wear, a circular nut threaded into the upper end of said cup, a washer carried by the lower side of said nut and contacting with the upper end of said sleeve, and a set

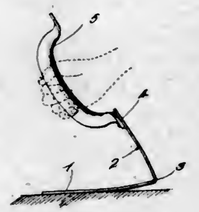


screw threaded through said nut and bearing against the upper end of said bushing to clamp the same tightly against said raising means.

1,346,378. STOP MECHANISM. DANIEL F. LEPLEY, Connellsville, Pa. Original application filed Sept. 19, 1917, Serial No. 192,162. Divided and this application filed July 9, 1918. Serial No. 244,071. 3 Claims. (Cl. 74—46.)

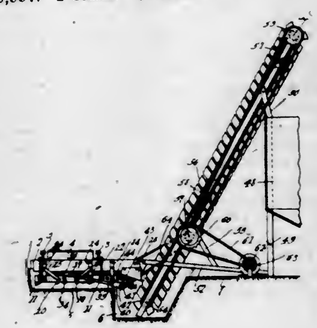


1. In apparatus of the class described, the combination with a hoisting drum, an electric motor for driving the same, and a controller, of normally inactive means for imparting a step by step movement to the controller to cut off the current to the motor, a clutch member operatively connected to said normally inactive means, a movable clutch member receiving motion from the motor, and means for automatically feeding the revoluble clutch member into engagement with the other clutch member after a predetermined number of revolutions of the drum.



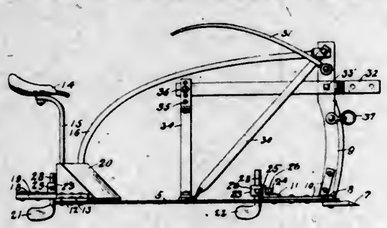
1,346,379. STOKING APPARATUS. NAOSABURO MINORIKAWA, Tokyo, Japan. Filed May 7, 1917. Serial No. 166,936. 5 Claims. (Cl. 126—173.)

1. A grate bottom comprising longitudinally arranged bars spaced apart having flanges on their opposing sides, and removable sections arranged at right angles to the grate bars, in the spaces between the grate bars and bearing on and supported by said flanges.



1,346,380. DUSTPAN. FIELDS J. MORRIS, Durango, Colo. Filed Apr. 28, 1919. Serial No. 293,114. 2 Claims. (Cl. 65—20.)

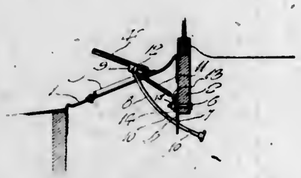
1. A dust pan comprising a substantially rectangular piece of resilient sheet metal bent at right angles at approximately its longtiudinal center to form a flat bottom capable of springing upwardly at its rear edge, and a vertical wall of considerable height capable of springing forwardly at its upper end, said upper end having its corners cut away, a handle secured centrally to the upper edge of the wall and rising vertically therefrom, said handle providing means for bending the wall forwardly to force the front edge of the bottom into contact with the floor.



1,346,381. COMBINATION LOADER AND UNLOADER. CHARLES A. PERFECT, Sunbury, Ohio. Original application filed Oct. 20, 1916, Serial No. 126,739. Divided and this application filed Aug. 22, 1918. Serial No. 250,997. 1 Claim. (Cl. 193—48.)

In a device of the class described, an approximately horizontal feeder including a reciprocating element; a conveyer frame; first shafts journaled at the ends of the frame; a bucket conveyer carried by the shafts and extended beneath the delivery end of the feeder; a drive shaft journaled in the frame between the first shafts; means for operatively connecting the drive shaft with the reciprocating element

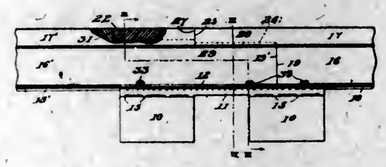
of the feeder independently of the bucket conveyer; a belt connection between the drive shaft and one of the first shafts, the belt connection being independent of the bucket conveyer; and means for operating the drive shaft.



1,346,382. BRUSH-CUTTER AND GROUND-EVENER. FRANK POMIJE, New Prague, Minn. Filed July 10, 1919. Serial No. 309,894. 7 Claims. (Cl. 55—60.)

1. The combination of a pair of substantially horizontal blades having their cutting edges diverging rearwardly, a substantially vertical cutting blade having its lower end rigidly united with the front ends of said horizontal blades, a tongue-member pivotally connected to said vertical blade, and a pair of struts secured to and converging upward from said horizontal blades and being adjustably secured to said tongue member.

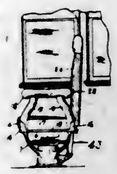
3. The combination of a pair of substantially horizontal and forwardly movable cutting blades joined together at their front ends and diverging rearward, and a vertically and angularly adjustable ground penetrating guiding blade having its lower end subjacent to said cutting blades, whereby the operation of said cutting blades can be controlled substantially as described.



1,346,383. AUTOMOBILE-VENTILATOR. JOHN W. RAAB and RILEY EDWARDS, Maquoketa, Iowa. Filed Apr. 12, 1920. Serial No. 373,199. 1 Claim. (Cl. 98—22.)

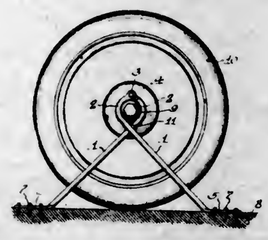
The combination with a dashboard and a windshield cowl, the latter being provided with an opening, of a frame secured to the cowl and surrounding the opening, a door hinged to the rear portion of the frame, being adapted to be swung upwardly to admit air, a plate secured to and depending from the dashboard, the depending portion thereof being apertured, an arcuate door operating rod, having pivotal connection at one of its ends with the door, the opposite end thereof extending through the aperture in the plate and having this portion formed with notches which interlock with the aperture, and a coiled spring, connected at one of its ends with the door and at its other end with the plate.

1,346,384. JOINT AND CHAIR FOR RAILWAY-RAILS. GEORGE E. RIGHTNOUR, Kearney, Pa. Filed May 12, 1920. Serial No. 380,748. 4 Claims. (Cl. 238—235.)



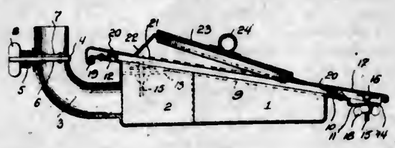
1. A joint for rail ends comprising a rail having the web and base flanges thereof cutaway at one end of the rail and with the tread extended with a central longitudinal slot in the bottom of the extended tread portion of the same width as and terminating adjacent the end face of the web, a tongue at the end of said tread extension of less thickness than such extension and cut away in different vertical planes at its opposite sides forming shoulders out of alinement with each other, the tongue having an oval-shaped terminal head of tapered formation, a complementally formed adjacent rail end having its tread cutaway with a receiving recess in the top thereof for said tongue and head with abutting portions of said shoulders and with the web portion of said shoulders and with the web portion upwardly extended positioned within the said slot when the joint is assembled.

1,346,385. PROCESS OF MAKING LEATHER. ALLEN ROGERS, Brooklyn, N. Y. Filed May 5, 1920. Serial No. 379,050. 4 Claims. (Cl. 149—6.)



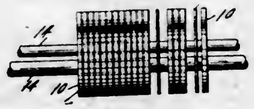
1. In the conversion of hides and skins into leather, the process which comprises submitting the material to a mineral tanning operation and then to a treatment with shark liver oil.

1,346,386. PEDESTAL CAR-SEAT. FRANK SMOLAR, Dayton, Ohio. Filed Sept. 29, 1919. Serial No. 327,040. 10 Claims. (Cl. 155—96.)



1. In a device of the type described, the combination with a pedestal, of a sleeve surrounding said pedestal and rotatable around it, a car seat supported by said sleeve, and stationary horizontal means removably insertible in said pedestal above the sleeve, to prevent the latter from working above the pedestal.

1,346,387. HOLDDOWN APPLIANCE. REUBEN B. STIPES and JOSEPH DE FRAIN, Flint, Mich. Filed Mar. 8, 1920. Serial No. 363,956. 3 Claims. (Cl. 248—41.)



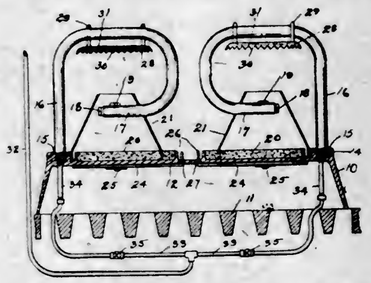
1. A hold-down appliance for automobiles comprising diverging leg members having hook-shaped ends pivotally connected together so as to form a loop when said leg members are crossed, and means adapted for fixing said leg members when crossed.

1,346,388. SANITARY BEDPAN. EDWARD W. STOLER and HOWARD TREASE, Mansfield, Ohio. Filed June 26, 1919. Serial No. 306,978. 2 Claims. (Cl. 4—19.)

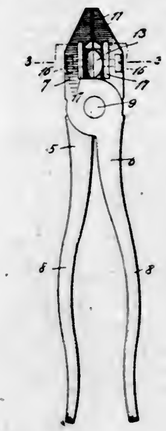
1. A bed pan made of metal and comprising a receptacle having a rear offset portion, said receptacle having an inclined overhanging top wall, an elbow communicating with the rear offset portion of said receptacle, means for closing said elbow, an inclined main cover hinged at the rear edge of the overhanging top wall, said main cover including an auxiliary cover carried by said main cover and disposed at an angle thereto, and means carried by the front edge of said overhanging top wall and by the side edges thereof adjacent the rear edge of said top wall adapted to be swung into engagement with said top wall and fixed relative thereto so as to hold said main cover on said receptacle.

1,346,389. PROCESS OF MAKING CUSHION-TIRES. FRED W. STRANG, Dallas, Tex., assignor to Gibraltar Tire & Rubber Company, Dallas, Tex., a Common Law Company having as its trustees Fred W. Strang, Justin C. Daspit, and Joseph C. Sloan, Dallas, Tex. Filed Sept. 8, 1919. Serial No. 322,325. 4 Claims. (Cl. 154—12.)

1. The process of making cushion tires which includes forming a plurality of rubber-fabric blanks, then assembling said blanks with alternate blanks of rubber therebetween, then forming a core by subjecting the blanks to a considerable pressure and vulcanization, and then disposing the core in a circular shape and vulcanizing a rubber jacket around the core.



1,346,390. APPARATUS FOR GATHERING AND CONVEYING MATERIAL. FRANCIS LEE STUART, New York, N. Y. Filed Aug. 18, 1919. Serial No. 318,391. 10 Claims. (Cl. 193—8.)



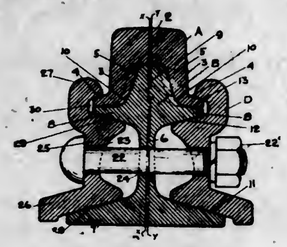
1. Apparatus for gathering and conveying material, comprising a conveyer for the material and a plow delivering thereto provided with a top plate over which the material passes to the conveyer, inclined from its outer edge inwardly and downwardly by the side of the conveyer belt and also from its front edge upwardly and inwardly toward the side of the conveyer belt.

1,346,391. OIL-GAS BURNER. JAMES O. TAYLOR, Providence, R. I. Filed Nov. 29, 1918. Serial No. 264,548. 2 Claims. (Cl. 158—64.)

1. In an oil gas burner, a hollow base having a draft opening through its top plate, a substantially P-shaped burner pipe secured to said top plate near one end thereof, a cone-shaped mixing chamber over said opening and into which the jet end of said pipe extends, and the walls of said chamber being spirally corrugated.

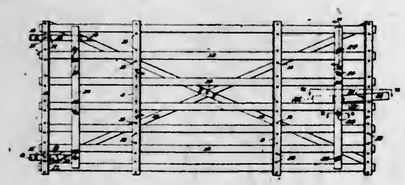
1,346,392. PLIERS. RICHARD WHITAKER, Jr., New Brunswick, N. J., assignor to Manufacturers Iron & Steel Company, New Brunswick, N. J., a Corporation of New Jersey. Filed Mar. 8, 1919. Serial No. 281,462. 3 Claims. (Cl. 7—3.)

1. A pair of side cutting pliers comprising a pair of jaws, handles by which the jaws may be manipulated, a removable cutter for each jaw consisting of a thin flat base and a cutting edge formed at substantially right angles thereto, said base being of substantially uniform thickness except where the cutting edge is formed and being prolonged at one side beyond the end of the cutting edge to form a tongue, and recesses in the opposed faces of the jaws to receive the cutters, each recess being provided with a groove to receive the tongue of a cutter.



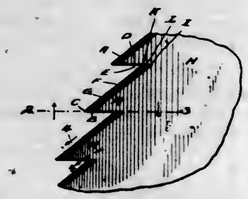
1,346,393. PEN OR PENCIL CLIP. GEORGE WOODHOUSE, Butte, Mont. Filed Oct. 20, 1919. Serial No. 331,881. 4 Claims. (Cl. 24—81.)

1. An article of manufacture comprising a clip consisting of a piece of metal bent back upon itself at one side



and then rebent to provide a clamp, the metal at the other side being rolled over toward the clamp to form a holder for a pencil or the like.

1,346,394. COMPOUND RAIL. JAMES K. BOYD, Wilkinsburg, Pa. Filed Apr. 7, 1920. Serial No. 372,020. 4 Claims. (Cl. 238—143.)

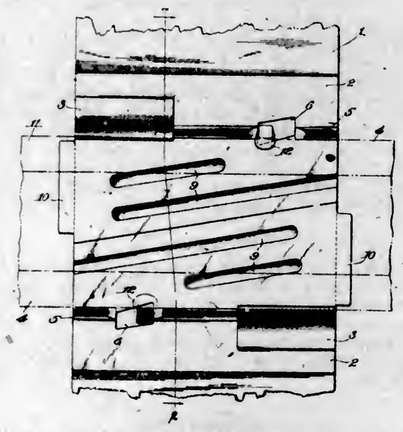


4. In a compound rail, the combination of a girder member and a head member, detachably secured together, said girder and head being so constructed and fitted that the end surface of the head of one rail will abut the end surface of the girder member of an adjoining rail to prevent creeping of said head with relation to said girder.

1,346,395. FENCE-GATE. WILLIAM L. BUTCHER, Flora, Ind. Filed Dec. 2, 1919. Serial No. 341,871. 4 Claims. (Cl. 256—73.)

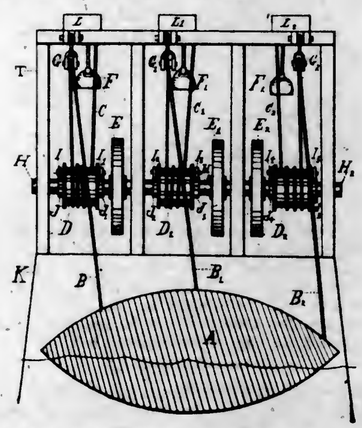
1. A device of the class described comprising spaced pairs of connected bars, rail slats freely slidable between the bars of each pair and means independent of said bars and anchored relative thereto for holding said bars and the rail slats relatively immovable.

1,346,396. GIN OR LINTER SAW. ROBERT H. BUTTERS, Atlanta, Ga., assignor to The Butters-Camp Mfg. Co., a Corporation of Georgia. Original application filed Nov. 28, 1916, Serial No. 133,923. Divided and this application filed Mar. 6, 1917, Serial No. 152,894. Renewed Dec. 3, 1919. Serial No. 342,304. 11 Claims. (Cl. 13—14.)



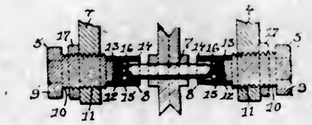
2. A linter saw whose teeth have each side faces in the planes of the sides of the saw and a base provided with a terminal point and parallel lateral cutting edges in the planes of said side faces, said cutting edges tapering toward said terminal point from other points slightly in the rear thereof.

1,346,397. COMPOSITION AND PROCESS OF MANUFACTURE. JOHN F. CAVANAGH, Meriden, Conn., assignor to Connecticut Telephone & Electric Company, Incorporated, Meriden, Conn., a Corporation of Connecticut. Filed Mar. 7, 1919. Serial No. 281,102. 11 Claims. (Cl. 106—31.)



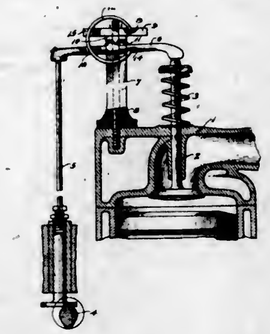
2. A composition in fine granular form and adapted for cold molding and comprising a finely divided mixture of an inert substance about 83%, a drying oil about 10% and an asphaltic substance about 7%.

1,346,398. RAIL-ANTICREEPER TIE-PLATE. WILLIAM H. CLEVELAND, Wellington, Kans. Filed July 7, 1919. Serial No. 309,028. 3 Claims. (Cl. 238—291.)



2. In a rail gripping means, the combination of a tie plate formed of two members each having a jaw arranged on one side thereof, a flange on said side, a downwardly extending tie engaging portion on the end of each member and a tongue and groove provided in each member that are engaged by the tongue and groove of the other member and so constructed and arranged that movement longitudinally of a rail that normally rests on the members, will cause wedging of the jaws of each member and the rail base.

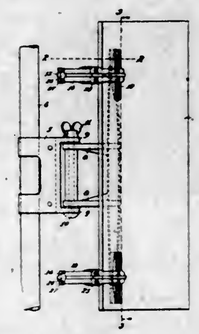
1,346,399. WAVE-ENERGY MOTOR. WILLIAM A. CRAWFORD-FROST, Baltimore, Md. Filed Jan. 28, 1920. Serial No. 354,743. 1 Claim. (Cl. 253—8.)



In a wave energy motor, in combination, a plurality of piers, a long, narrow float having narrow ends located between each two adjacent piers and positioned with its broadside presented to the incoming waves, a plurality of slack cables mooring the narrow ends of said float to said piers, a unitary tower structure upon each pier, said structures being independent of each other, shafts supported by said piers, power cables attached to said floats, and transmission mechanism supported by said structures whereby said power cables rotate said shafts upon movement of said floats.

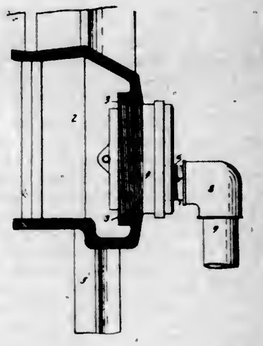
1,346,400. SEMISPHERICAL BALL-BEARING STRUCTURE. GEORGE WILLIAM DOVER, Cranston, R. I. Filed Nov. 25, 1919. Serial No. 340,598. 2 Claims. (Cl. 64—49.)

1. A semi-spherical ball-bearing structure comprising a screw having a reduced and hardened end portion terminating into a flat hardened end, a hardened collar over the reduced end of the screw and extending beyond the end of the screw, said screw end and collar forming a raceway, a row of balls in the raceway, a shaft having a semi-spherical end engaging with the row of balls, means for supporting the screw, means for adjusting the screw and means for locking the screw in the adjusted position.



1,346,401. VALVE-ACTUATING MECHANISM. WARREN E. ELLIS, Lebo, Kans., assignor of one-half to Wayne M. Traylor, Lebo, Kans. Filed Apr. 2, 1919. Serial No. 286,957. 6 Claims. (Cl. 123—90.)

1. The combination with a valve and actuating cam, of a support having a knife edge, a rocker arm intermediate the cam and valve and seated against said edge, and means engaging about said support and arm to hold the latter against the edge.

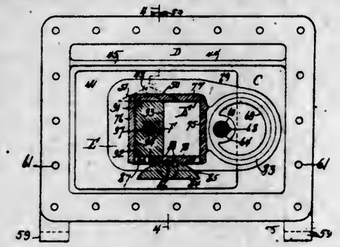


1,346,402. WINDSHIELD ATTACHMENT. GEORGE GLAUDEL, Los Angeles, Calif. Filed May 19, 1919. Serial No. 298,184. 4 Claims. (Cl. 296—84.)

2. In a wind deflector attachment for wind shields, a wind deflecting plate formed with channels having arcuate bottom walls extending longitudinally of the plate adjacent to one edge thereof, a vertical bracket having bosses adapted to bear on said plate rearward of said channels, laterally extending arms rigid on said bracket, and clamping members adjustably connected to said arms arranged to

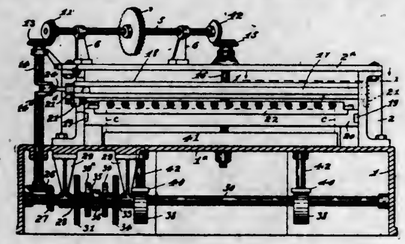
extend over the edge of said wind deflecting plate formed with arcuate end portions adapted to seat in the aforesaid channels.

1,346,403. ECCENTRIC BUSHING FOR STEAM-RADIATORS. JOHN G. GRIERSON, Richmond, Calif. Filed May 5, 1919. Serial No. 294,946. 3 Claims. (Cl. 137—75.)



1. In a device of the character described, a cylindrical bushing adapted to be screwed into the lowermost portion of a radiator; closed at one end and open at the other, and having a threaded hole in the lower portion of said closed end, a pipe screwed into said hole, the cylindrical portion of the bushing being internally threaded at the open end, a disk having an externally threaded crown flange, screwed into said internally threaded bushing and having an opening in its lowermost portion, and a check-valve comprising a disk adapted to be seated against the edge of said opening, and a hanger to the lower portion of which said latter disk is attached, said hanger pivotally depending from a portion of the first-named disk on the side of the vertical plane through said opening opposite to said second-named disk.

1,346,404. OSCILLATING-TYPE COMPRESSOR. CHARLES D. HAVENSTRITE, Chicago, Ill. Filed July 30, 1918. Serial No. 247,369. 12 Claims. (Cl. 230—29.)

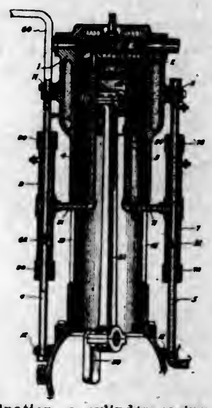


1. In a compressor the combination of a housing forming a compression chamber, an inlet and a discharge port in the housing for the chamber, an oscillating and reciprocating cylinder in the chamber, a pivoted piston in the cylinder and oscillating therewith, a discharge valve for

the cylinder, and means to simultaneously oscillate and reciprocate the cylinder to cause gas to flow therein from

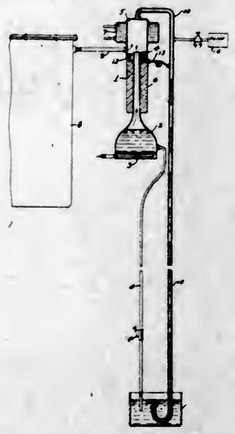
said inlet port and to be discharged from said cylinder after compression therein and flow into the compression chamber.

1,346,405. ICE-CREAM-CUTTING MACHINE. JOHN H. HENDRICKSON and RALPH E. FRIZZELL, Cleveland, Ohio; said Frizzell assignor to said Hendrickson. Filed July 14, 1919. Serial No. 310,586. 6 Claims. (Cl. 107—20.)



6. In a machine for cutting bulk ice cream into rectangular sections, the combination of a housing, a series of longitudinal cutter wires carried in a holder adapted to reciprocate longitudinally in said housing, a series of transverse cutter wires carried in a holder adapted to reciprocate transversely in said housing, crank-shafts connected with said holders, power mechanism for driving said crank-shafts, a vertically movable table for supporting the bulk to be operated upon, a cam shaft mounted in a horizontal plane below the movable table, vertically acting cams on said cam shaft, vertical connection between said cams and the table, a jack-shaft mounted parallel with the cam shaft, gear connection between said jack-shaft and one of the crank-shafts, changeable gear connection between the jack-shaft and the cam shaft, said connection including gears of different diameters normally revoluble on the jack-shaft and in mesh with gears carried by the cam shaft, clutch means for engagement of the revoluble gears and the jack-shaft, and means on the cam shaft for automatically shifting said clutch means to a neutral position.

1,346,406. WINDOW-SHADE ROLLER. JOHANNES A. HOLMES, Eureka, Calif. Filed Oct. 27, 1919. Serial No. 333,600. 2 Claims. (Cl. 156—36.)



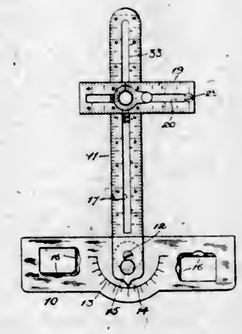
2. A window shade roller comprising a tubular roller, a central shaft within the roller, wheels secured to the ends of said shaft, vertical narrow bands wound around said wheels, guides secured to the window frame on each side of the window and upon which said bands rest, the upper ends of said bands being secured at the upper ends of said guides, a sleeve around said shaft having a member engaging the adjacent guide, a spring coiled around said shaft, and attached thereto at one end, the other end being attached to the sleeve, a second spring coiled around said shaft, attached thereto at one end, the other end being attached to said outer tube, and pawls secured to said outer tube and engaging notches in the shaft.

1,346,407. PISTON-COOLING DEVICE FOR INTERNAL-COMBUSTION ENGINES. WALTER J. LARSON, Wrangell, Alaska. Filed June 30, 1919. Serial No. 307,498. 2 Claims. (Cl. 123—176.)

1. In combination, a cylinder casing, a hollow piston reciprocable therein, fluid inlet and discharge pipes secured in said piston to be reciprocable therewith, and adapted to permit a flow of liquid through the piston, inlet and discharge standpipes alined with the axis of said cylinder, and fixedly secured to said casing, an inlet tube and a discharge tube each closed at both ends and surrounding the inlet and discharge standpipes, respectively, and reciprocable thereon, fluid passages connecting said standpipes with the interior of said tubes, and means connecting the inlet and discharge pipes with the inlet and discharge tubes, respectively.

1,346,408. HIGH-VACUUM PUMPING SYSTEM. WILLIAM V. LOVELL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 26, 1917. Serial No. 171,218. 9 Claims. (Cl. 230—13.)

1. The combination with a diffusion pump, of a Sprengel pump in series therewith and means whereby the latter is operated by the condensate of said diffusion pump.

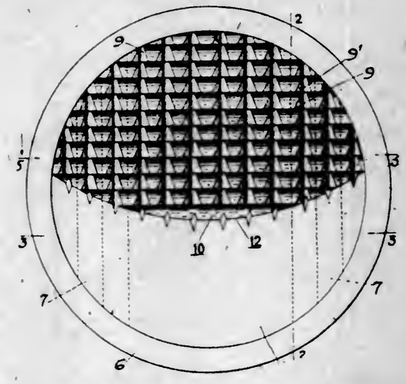


2. The combination with a mercury diffusion pump, of a Sprengel roughing pump in series therewith, and means whereby said roughing pump is operated by the mercury condensed in said diffusion pump.

3. In a pump, the combination with a fluid boiler, of a closed container provided with heat-dissipating means, a nozzle connected to said boiler and arranged to project a vapor blast into said container, an inlet port in the wall of said container adjacent to said nozzle, an outlet port in the wall of said container opposite said nozzle, a fall tube connected to said outlet port and terminating beneath the surface of a liquid pool, and a drainage tube from the lower portion of said container to said fall-tube, whereby gas, entering at said inlet port, is entrained and diffused in said vapor blast, swept onward and compressed thereby at said outlet port and withdrawn therethrough by the action of condensate entering said fall tube through said drainage tube.

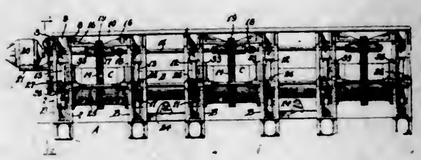
4. The combination with a diffusion pump, of a fall-tube, a connection from the outlet port of said diffusion pump to said fall-tube, and a drainage tube from the condensate pool of said diffusion pump to said fall-tube, whereby the action of the pump condensate is to withdraw gas from said diffusion pump.

5. The combination with a diffusion pump, of a fall-tube, a connection from the outlet port of said diffusion pump to said fall-tube, a drainage tube from the condensate pool of said diffusion pump to said fall-tube, said fall-tube terminating beneath the surface of a liquid pool, and a return tube from said pool to said boiler, whereby the material of said pool is caused to circulate through said boiler, the vapor blast, and said fall-tube.



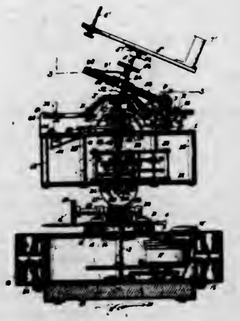
1,346,409. COMBINATION-TOOL. AUGUST L. LUCAS, New Haven, Conn. Filed Feb. 10, 1919. Serial No. 276,139. 5 Claims. (Cl. 33—102.)

2. In a geometrical instrument, an arm, a blade slidably mounted thereupon, clamping means for securing said blade to said arm, said arm having a plurality of holes formed therein longitudinally thereof in spaced relation, a pin engageable with any one of said holes, and a flexible clip having said pin projecting laterally from one face thereof and constructed to yieldingly retain said pin in engagement with any one of said holes to thereby accurately position said blade longitudinally of said arm.



1,346,410. LENS. JAMES J. MADDEN, Aberdeen, S. D. Filed Jan. 9, 1920. Serial No. 350,348. 1 Claim. (Cl. 240—48.4.)

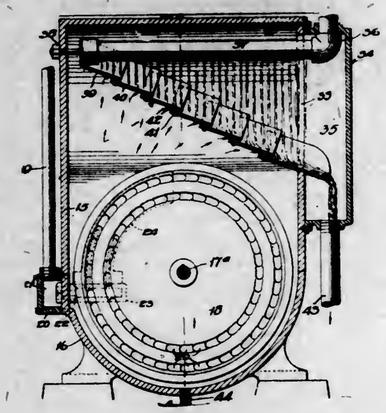
A headlight lens having its front or outer face with a centrally disposed, flat surfaced, vertical, panel-like portion, and a series or group of vertical, convex flutes disposed at either side of said panel-like portion and embracing the remaining areas of said outer face; the rear face of the lens having its lower portion a plane surface, and vertically and horizontally intersecting prismatic ribs



forming prisms and covering the upper or remaining portion of said rear face.

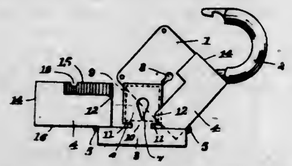
1,346,411. POLE-MAKING MACHINE. CHARLES F. MASSEY, Chicago, Ill., assignor to Massey Concrete Products Corporation, Chicago, Ill., a Corporation of Virginia. Filed Apr. 18, 1919. Serial No. 291,010. 9 Claims. (Cl. 25—30.)

5. In a concrete pole making machine, the combination of a frame, a plurality of mold supporting units adapted to receive the pole mold rotatably mounted in said frame, a gear on each unit, a sectional drive shaft extending longitudinally of the frame having gears meshing with said first gears, and clutch mechanism between sections of the shaft, and a motor coupled directly to an end of said shaft.



1,346,412. ASTRONOMICAL INSTRUMENT. ELEMER MEITNER, Brooklyn, N. Y. Filed May 17, 1917. Serial No. 169,166. 22 Claims. (Cl. 35—3.)

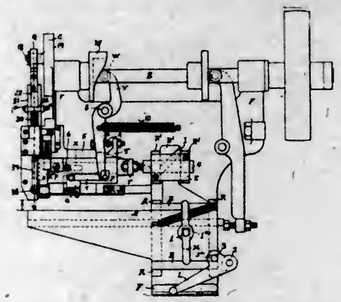
1. In an astronomical instrument, in combination, a sighting instrument, means connected to said sighting instrument for positioning the latter with its sighting axis in a predetermned relation to the rays from a heavenly



body and means connected to said sighting instrument for indicating the longitude of the point of observation when said sighting instrument is so positioned.

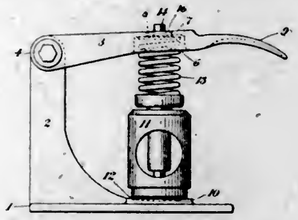
1,346,413. STEAM-CONDENSING TURBINE. ERNST MÜHL, Philadelphia, Pa. Filed Sept. 9, 1919. Serial No. 322,608. 5 Claims. (Cl. 60—94.)

1. A steam turbine including a casing; a water pipe leading into said casing; a trough spaced from said water pipe whereby water from said pipe impacts with the steam in said casing to condense the steam and passes through the space between the water pipe and the trough; and means for taking off the water from said trough; substantially as described.



1,346,414. PADLOCK SEAL-HOLDER. THOMAS MURPHY, New York, N. Y. Filed May 20, 1920. Serial No. 382,832. 4 Claims. (Cl. 70—97.)

2. A seal-holder for padlocks comprising a casing to embrace the body of a lock and having a seal-carrying plate to cover the key-hole of the lock, a base portion in the form of a tray to fit around the bottom portion of the lock, said plate being connected to said base portion by a reduced neck, and wings hinged to the end portions of the base member and adapted to overlap the lateral edges of the plate at the sides of the neck, said wings being engaged by the shackle of the lock for retaining the holder in place.

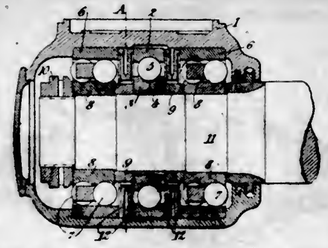


1,346,415. STITCHING-MACHINE. JOHN W. NASMITH, Heaton Mersey, England. Filed Dec. 20, 1918. Serial No. 267,623. 2 Claims. (Cl. 1—7.)

1. A wire stitching machine comprising an anvil adjustable in a predetermined path, means for positively securing the anvil at any point to which it is adjustable, a wire feeding mechanism including a wire gripper adapted to alternately feed and release the wire, gripper reciprocating means comprising a cam, and a two-armed lever having arms of unequal length, the longer arm being connected with the wire gripper and the shorter arm being in the path of said cam, a wire-cutting mechanism including a reciprocating knife-carrier having a knife adapted to cut the wire fed by the feeding mechanism, the path of said knife-carrier being adjustable in a direction substantially at right angles wth the path in which the anvil is adjustable, and connections between the anvil, the knife-carrier and the gripper-reciprocating means, actuated by a given adjustment of the anvil to cause and maintain an equal adjustment of the path of the knife-carrier and to cause and maintain a proportional increase or decrease in the length of travel of the gripper, the said connections

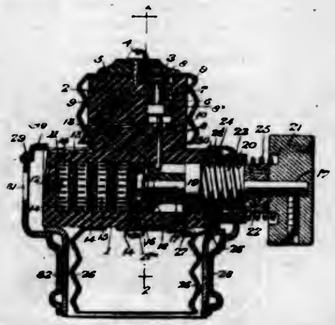
including an anvil carrier movable in fixed guides, and a slide movable in a path at right angles with the path of the anvil carrier, means being provided for causing the anvil, when moved, to adjust the slide an equal amount, and a stop also connected with and movable by the slide and arranged to limit the movement of the shorter lever arm toward said cam, the construction and arrangement being such that any adjustment of the anvil causes the formation of staple legs of equal length proportioned to the adjustment of the anvil.

1,346,416. VALVE-SPRING COMPRESSOR. CHARLES H. NEWTON, Plainville, Conn. Filed Nov. 1, 1919. Serial No. 335,038. 1 Claim. (Cl. 29—87.1.)



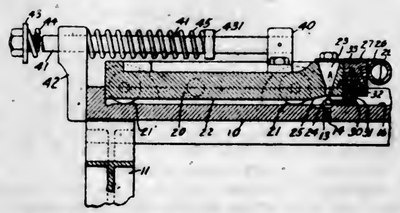
In a spring compressor for Buick valve units, the combination of a base provided with a circular, concaved seat adapted to coöperatively receive the lower end of a valve unit, a lever support integral with the base, a lever pivoted to the support at substantially the height of such valve unit, such lever being provided with an integral enlargement having a circular socket in the lower side thereof centered above the concave base and adapted to receive the spring washer of such valve unit, a circular opening through the top of said socket adapted to permit the passage therethrough of the valve stem and key, and an extended handle integral with said lever for applying downward pressure thereto.

1,346,417. COMBINED RADIAL AND THRUST BALL-BEARING. NILS ARVID PALMGREN, Gottenborg, Sweden, assignor to S K F Administrative Company, Inc., New York, N. Y. Filed June 26, 1919. Serial No. 306,918. 3 Claims. (Cl. 64—36.)



1. In a combined radial and thrust bearing, the combination of a casing, at least one thrust ball bearing in said

casing, at least one radial ball bearing in said casing, said radial ball bearing having one track cylindrical so as to

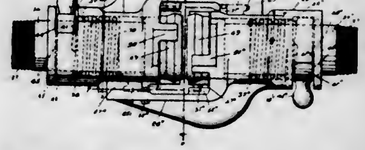


enable one of its races to move axially relatively to the other race, and elastic means between said thrust ball bearing and said radial ball bearing.

1,346,418. CURRENT-REGULATING PLUG AND SOCKET SWITCH. ANTONIO PAPINI, Philadelphia, Pa., assignor to A. Mecky Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 15, 1919. Serial No. 317,828. 6 Claims. (Cl. 219—49.)

1. A body, resistance material therein, a piston in said body adapted to adjust the degree of compression of said material, a stem carrying said piston, a screw on said stem, an engaging collar for said screw, a cam on said stem, a movable pin on said body adapted to be engaged by said cam, an electrode in said body, a member on said pin adapted to contact with and to be removed from said electrode, means for retaining said member in contact with said electrode, and an electric circuit leading from a source of energy to said electrode and from the latter to the object to receive the current.

1,346,419. METHOD OF AND MACHINE FOR HARDENING AND STRAIGHTENING RODS. ERNEST W. PITTMAN, Flushing, N. Y., assignor to New England Westinghouse Company, a Corporation of Massachusetts. Filed Jan. 5, 1918. Serial No. 210,524. 17 Claims. (Cl. 266—6.)

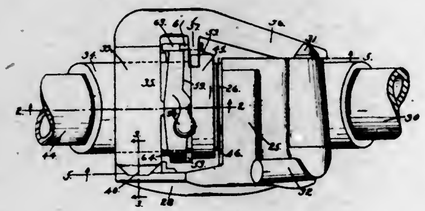


1. The method of hardening and straightening rods and the like which comprises rolling the rods under pressure between plane surfaced members and simultaneously treating them with a suitable cooling medium.

1,346,420. VALVE-GRINDER. JOHN RALSTON, Houston, Tex. Filed Oct. 24, 1919. Serial No. 332,865. 5 Claims. (Cl. 51—4.)

1. A valve grinder comprising a bearing member adapted to be fitted in an engine casing, a stem guided in said member and having a portion to engage a valve, and a handle attached to said stem by a universal joint for rotating the stem with the handle at an angle to the axis of the stem as well as axially therewith.

1,346,421. HOSE-COUPLING. EDWARD A. RUSSELL and SEELYE P. HARRIMAN, Chicago, Ill., assignors, by mesne assignments, to Roth Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 24, 1916. Serial No. 73,885. 59 Claims. (Cl. 285—68.)

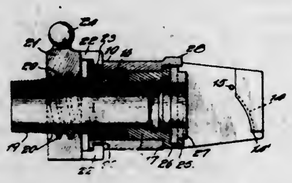


1. A railway train pipe hose coupler comprising a conduit member, a coupling member movable with respect to the conduit member and provided with means which may be preliminarily engaged with another coupler in an interlocked engagement by moving said couplers together laterally, which engagement centers and maintains in centered relation the ports of said couplers, and means for effecting a relative movement between said coupling and conduit members whereby the latter is brought into effective contact with said other coupler.

1,346,422. HOSE-COUPLING. EDWARD A. RUSSELL and SEELYE P. HARRIMAN, Chicago, Ill., assignors, by mesne assignments, to Roth Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Original application filed Jan. 24, 1916, Serial No. 73,885. Divided and this application filed July 24, 1916. Serial No. 110,873. 48 Claims. (Cl. 285—57.)

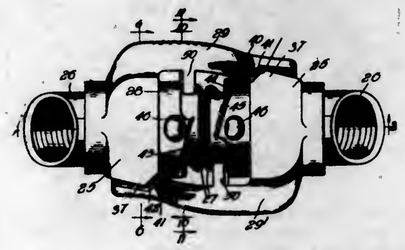
1. A hose coupler comprising a coupling member adapted to mate with a coupler of the Sewall type, a conduit member movable with respect to the coupling member, and a cam positioned adjacent the outer face of the coupling member surrounding the conduit member and engaging with said members so that its rotation in one direction produces relative movements between said members whereby the conduit member is seated against the corresponding part of the mating coupler while its rotation in the opposite direction withdraws said conduit member from operative contact with said mating coupler.

2. A hose coupler comprising a coupling member adapted to mate with a coupler of the Sewall type, a conduit member movable with respect to said coupling member, and a cam ring positioned adjacent the outer face of the coupling member surrounding said conduit member and bearing on opposite sides against parts thereof and against said coupling member so that its rotation produces relative longitudinal movements between said members in opposite directions.



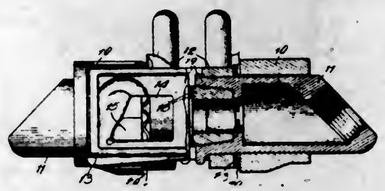
3. A hose coupler comprising a coupling member adapted to mate with a coupler of the Sewall type, a conduit member extending through said coupling member and formed with an enlargement at its outer end, and a cam ring surrounding said conduit member and interposed between the enlargement thereof and said coupling member.

4. A hose coupler comprising a coupling member adapted to mate with a coupler of the Sewall type, a conduit member which extends through said coupling member and is provided at its outer end with a pair of diametrically arranged lugs, a pair of diametrically arranged lugs on the coupling member at substantially right angles to the lugs of the conduit member, and a cam member interposed between said lugs.



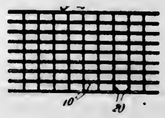
5. A hose coupler comprising a coupling member adapted to mate with a coupler of the Sewall type, a conduit member which extends through said coupling member and is provided at its outer end with a pair of diametrically arranged lugs, a pair of diametrically arranged lugs on the coupling member at substantially right angles to the lugs of the conduit member, and a cam ring surrounding said conduit member and interposed between said pairs of lugs.

1,346,423. HOSE-COUPLING. EDWARD A. RUSSELL and SEELYE P. HARRIMAN, Chicago, Ill., assignors, by mesne assignments, to Roth Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Original application filed Jan. 24, 1916, Serial No. 73,885. Divided and this application filed Apr. 10, 1919. Serial No. 288,903. 10 Claims. (Cl. 285—68.)



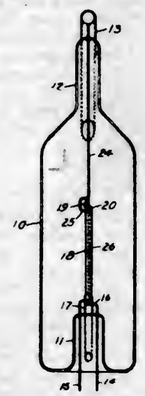
1. A hose coupler comprising in combination a coupling member and a conduit member movable longitudinally through the coupling member, the latter being provided with means whereby it may be preliminarily engaged with a mating coupler and held in substantially normal alinement therewith, and a device for producing relative longitudinal movements between said coupling and conduit members to seat the latter against the mating coupler comprising a rotatable element having a threaded connection with one of said members and provided with means engaging the other of said members.

1,346,424. HOSE-COUPLING. EDWARD N. ROTH, Chicago, Ill., assignor to Roth Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 25, 1919. Serial No. 284,958. 21 Claims. (Cl. 285—68.)



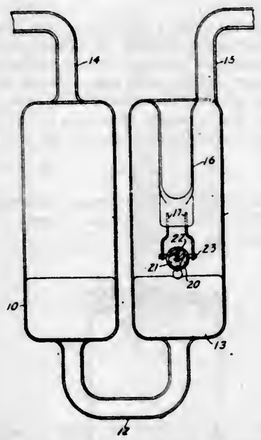
1. A hose coupler comprising, in combination, a coupling member provided with means for engaging a mating coupler, a conduit member extending through the coupling member, and a wedging member interposed between the coupling and the conduit member, the conduit and wedging member being formed with two pairs of coengaging wedging faces disposed substantially midway between vertical and horizontal lines through the conduit member.

1,346,425. HOSE-COUPLING. EDWARD N. ROTH, Chicago, Ill., assignor to Roth Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 24, 1919. Serial No. 284,769. 8 Claims. (Cl. 285—69.)



1. A hose coupler comprising, in combination, a coupling member adapted to engage a mating coupler, a conduit member movable in said coupling member, wedging means between said members, and a resilient element arranged to bear against said wedging means and to be stressed to cushion said parts and prevent a loosening of the wedging means.

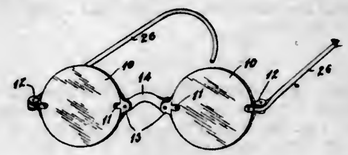
1,346,426. GRATING. PAUL H. E. SCHERBNER, New York, N. Y. Filed May 27, 1919. Serial No. 300,084. 4 Claims. (Cl. 189—82.)



1. Grating comprising a plurality of longitudinal members cut away at spaced intervals to form straight slots terminating short of their edges, a plurality of narrower flat transverse members passing through said slots, and each provided with spaced notches in its upper edge, and parts of the longitudinal members bent longitudinally under the under edges of the transverse members to maintain said transverse members in positions with the parts thereof adjacent the notches overlapping the longitudinal members at the upper ends of the slots therein.

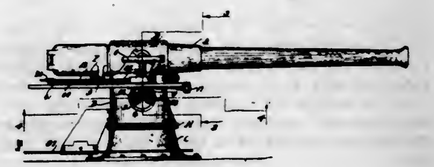
1,346,427. GAGE FOR LOW PRESSURES. JAMES E. SHRADER, Edgewood, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 27, 1917. Serial No. 209,195. 7 Claims. (Cl. 73—31.)

1. A gage for measuring low pressures of gases or vapors including a vessel providing a chamber, a conductor element fixed within the vessel, means for passing a current through the conductor element to heat it and an element freely supported for swinging movement and normally in parallel spaced relation to the conductor element.



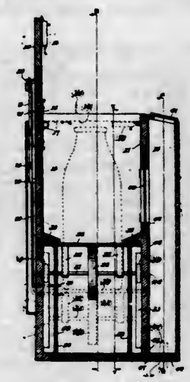
1,346,428. MERCURY-MANOMETER. JAMES E. SHRADER, Edgewood, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 27, 1917. Serial No. 209,196. 4 Claims. (Cl. 73—31.)

1. In a U-shaped mercury manometer, a light-reflecting member mounted for tilting movement and means, operable by changes in level of the mercury in the manometer, for causing proportionate tilting of the reflecting member.



1,346,429. SPECTACLES. JULIUS SILVERSTEIN and JACOB B. ROTHBERG, New York, N. Y. Filed Sept. 24, 1919. Serial No. 325,948. 1 Claim. (Cl. 88—42.)

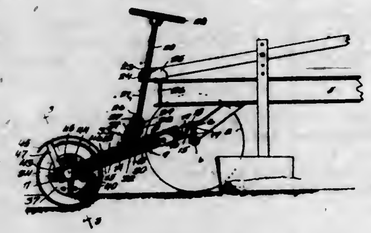
A pair of spectacles having an arched nose bridge, reduced tongues at opposite ends of the bridge, said tongues having square outer ends extending in substantially vertical planes, saddle members having flat outer surfaces for engaging the square ends of the nose bridge, parallel arms on the saddle members overlying the tongues of the



nose bridge and straps extending from the saddle member in the same planes with the arms and lens supported by the straps in proper position in the saddle member.

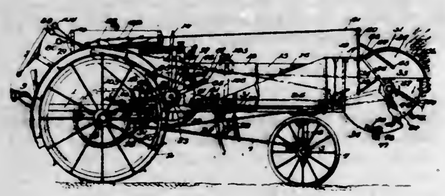
1,346,430. COMBINED RANGE-FINDING, PLOTTING, PREDICTING, AND GUN-ADJUSTING DEVICE. LEONARD A. SMITH, U. S. Army, assignor of one-half to Andrew H. Cannon, Washington, D. C. Filed Aug. 1, 1917. Serial No. 183,956. 43 Claims. (Cl. 33—48.)

1. In combination, a gun including a gun mount, and means mounted on the gun mount for constantly giving the range of a target and predicting a future range of the target, said means having connection with said gun for adjusting the latter in synchronism with the operation of said means, after the first cycle of operation whereby said gun is moved to proper position for delivering the projectile at the predicted range.



1,346,431. COMBINATION-RECEPTACLE. JOHN SOKAČ and ANDREW SEMKO, Kingston, Pa. Filed Feb. 27, 1920. Serial No. 361,822. 3 Claims. (Cl. 232—41.)

1. A receptacle of the type described comprising a casing, a hinged cover therefor, means for holding the cover in its open position extending into said casing, guide rods of said casing, a platform movable over said guide rods, a shaft journaled beneath said platform, a spring connected at one of its ends to said shaft and at its other



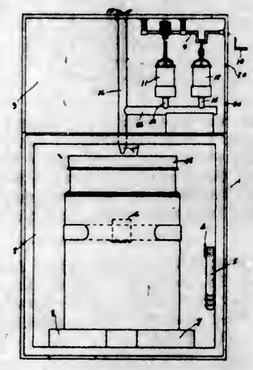
end to said platform and means for increasing the tension on the spring when the platform is lowered due to a weight placed thereon, said platform in its lowering movement attempting to engage the cover holding means to release the same from the cover and a lock controlled door for the casing.

1,346,432. ATTACHMENT FOR EARTHWORKING-MACHINES. LEMOY HILLER TOWNER, Muskogee, Okla. Filed Aug. 29, 1919. Serial No. 320,612. 4 Claims. (Cl. 37—5.)

1. The combination with an earth working machine, of an earth engaging disk, a vertically swinging frame carrying the disk and pivoted to said machine, a raising screw, a support nut engaging the raising screw and pivoted upon said machine, means positively connecting the raising screw and swinging frame, and means to turn the screw.

1,346,433. COMBINED MANURE LOADER AND SPREADER. HIRAM H. VARLAND, Clark, S. D. Filed June 5, 1918, Serial No. 238,351. Renewed Nov. 26, 1919. Serial No. 340,801. 26 Claims. (Cl. 275—5.)

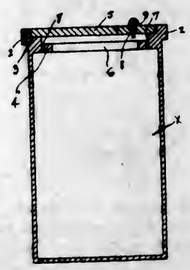
1. In a machine for handling manure, a load supporting bed including a drop section, and means operable in the raised position of the section to distribute the load and in the dropped position of the section to load material on to the bed.



8. In a machine for handling manure, a bed including a drop section, a rotary beater carried by the drop section and operating when actuated upon material upon the bed to distribute the said material and when acting upon a pile of material, when the drop section is in lowered position, to throw the said material on to the bed, and means for rotating the beater.

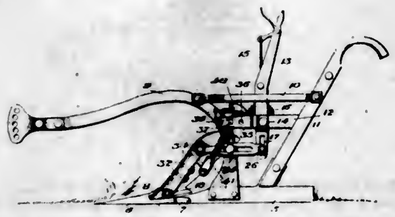
14. In a machine for handling manure, a bed including a fixed section and a drop section, a rotary beater carried by the drop section and including a beater shaft, conveyer shafts carried by the fixed and drop sections, an endless conveyer passing about the shafts, means for rotating the shaft upon the drop section to move the conveyer toward the beater, and means for rotating the shaft upon the fixed section for moving the conveyer in a direction away from the beater.

20. In a machine for handling manure, a bed including a fixed section and a drop section, a rotary beater carried by the drop section and including a beater shaft, conveyer, shafts carried by the fixed and drop sections of the bed, a conveyer actuated through rotation of either of said conveyer shafts, means for imparting motion to the conveyer shaft upon the drop section and actuated through rotation of the beater shaft, a rotary shaft, means for rotating the conveyer shaft upon the fixed section and actuated through rotation of the last-mentioned shaft, the machine including a traction wheel, and means actuated through rotation of the last mentioned shaft for imparting step by step rotary motion to the said traction wheel.



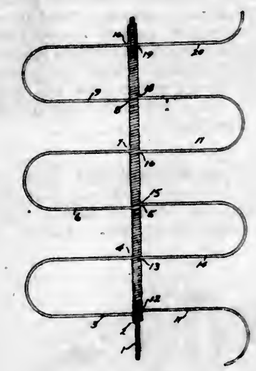
26. In a machine for handling manure, a load supporting bed, forward and rear wheels supporting the bed for travel, a motor at the rear part of the bed, gearing between the motor and the rear wheels for propelling the machine, distributer means at the forward part of the bed, and gearing between the said motor and the distributing means for driving the latter.

1,346,434. APPARATUS FOR SEALING PRESERVING-JARS. ARTHUR EGGLETON WORSTER, Vancouver, British Columbia, Canada. Filed July 24, 1919. Serial No. 313,037. 1 Claim. (Cl. 226—82.)



An apparatus for sealing preserving jars comprising an air tight compartment adapted to inclose a jar and its cap, a vertical air duct having its lower end extending into said compartment and its outer end closed by a valve, said air duct being provided intermediate its ends with a lateral extension and pumping mechanism for creating a vacuum in said extension to exhaust the air within the compartment.

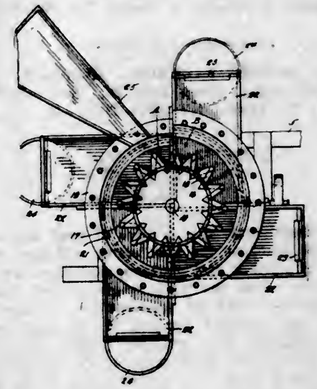
1,346,435. PRESERVING-JAR. ARTHUR EGGLETON WORSTER, Vancouver, British Columbia, Canada. Filed Aug. 9, 1919. Serial No. 316,349. 7 Claims. (Cl. 215—80.)



6. A preserving jar having an exterior lip and recessed at its upper end to form upper and lower seats, the lower one of which is apertured, a cover seated freely on the upper seat, said cover having an opening therethrough, and a valve mounted on the cover normally closing the said opening, provided with means whereby it may be lifted.

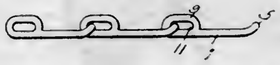
1,346,436. PLOW. JOSEPH ZBANEK, Hallettsville, Tex. Filed Aug. 6, 1919. Serial No. 315,644. 1 Claim. (Cl. 97—26.)

A plow comprising a runner, a plow beam carried by the runner, handle arms supported rearwardly of the plow beam, a plow point fixed to the forward end of the runner, an inverted U-shaped frame pivotally mounted at its lower end to the runner, links connected to the upper end of said frame and slidably supported intermediate the ends on the beam, a lever having a bolt and slot connection with the other ends of said links for shifting the links and frame to vary the inclination of the frame, a shoe slidably mounted between the bars of the frame, means for shifting the shoe in the frame, means for holding the shoe in adjusted positions, and a blade fixed to said shoe.



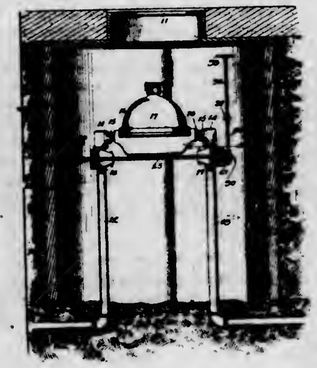
1,346,437. PLASTER GAGE AND REINFORCEMENT. ALVIN ALBINSON, Minneapolis, Minn. Filed Aug. 8, 1919. Serial No. 316,177. 3 Claims. (Cl. 72—121.)

2. In a plaster gage and reinforcement, the combination of a stiff wire, multiple loops positioned to the right and to the left of said stiff wire, said loops being attached to said stiff wire by convolutions of the wire from which said loop is formed, tightly encircling said stiff wire between the ends of the loops.



1,346,438. PRODUCT ASSORTING AND DISTRIBUTING MACHINE. FRANK H. BALLOU, Newark, Ohio. Filed Nov. 29, 1919. Serial No. 341,497. 1 Claim. (Cl. 130—32.)

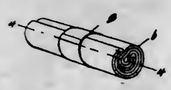
A product assorting device comprising a frame, a shaft rotatably mounted therein, a distributing wheel having notches in its periphery approximately V-shaped in plan and having padded surfaces, a rim encircling the wheel,



the said rim being eccentric to the periphery of the distributing wheel and having an inner beveled edge inclined toward the wheel and a cushion on said beveled surface.

1,346,439. HARNESS TRACE-CHAIN. EDWARD PAUL BELZ, Athens, Wis. Filed May 29, 1919. Serial No. 300,780. 2 Claims. (Cl. 59—90.)

1. A chain trace comprising interengaging links, each consisting of a metallic member, with a loop open at one end, and converging shanks, the said shanks having elongated eyes, and the closed end of said loop being shaped to lie out of the plane of the main portion thereof and terminating into alinement with said eyes.



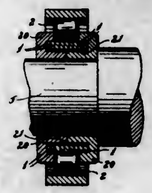
1,346,440. METER-SUPPORT. CLYDE CLINTON BRADFIELD, Harbor Springs, Mich. Filed July 1, 1919. Serial No. 308,001. 5 Claims. (Cl. 285—3.)

1. The combination of a pair of upright yieldingly supported pipes having elbows at their upper ends, a meter disposed between the pipes and having nipples extending into the horizontal portions of said elbows, clamping members engaged with the said pipes adjacent to the elbows for shifting the same toward and away from one an-

other, adjusting connections between the said clamping members and manually controlled means for actuating said connections including a controlling shaft, and a wrench having means to detachably engage the said controlling shaft.

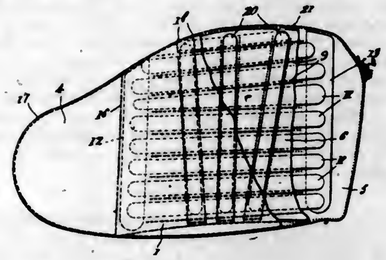
1,346,441. TOILET PACKAGE. MERVIN B. CANNON, Cincinnati, Ohio. Filed July 25, 1919. Serial No. 313,189. 3 Claims. (Cl. 206—47.)

2. A package comprising a piece of soap and a wrapper of crape paper or the like having sufficient inherent rigidity to produce a firm package, said paper being of a width greater than the soap length, rolled repeatedly around said soap with its convolutions overlapping the soap ends and suitably secured in its soap inclosing condition, whereby said wrapper retains the soap by virtue of the normal contraction of its convolutions at the soap ends incident to the firm rolling of the wrapper around the soap, and the nature of the paper.



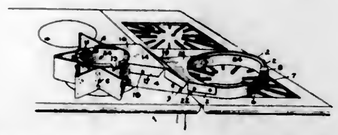
1,346,442. RADIATOR. LOUIS F. CLAUSING, Los Angeles, Calif. Filed Aug. 6, 1917. Serial No. 184,633. 4 Claims. (Cl. 257—130.)

1. In a radiator of the honeycomb type, a pair of corrugated sheets having their edges contracted forming fins on the apexes and at the ends of alternate corrugations on one side of each sheet whereby the ends of the corrugations are reduced relative to their intermediate cross section, the intermediate walls of the corrugations being bowed, said sheets arranged back to back with their edges connected forming a vertical zig zag water passage therebetween with outwardly and oppositely bowed side walls and disposing the fins in staggered relation to each other on opposite sides of the walls, and a corrugated spacing blank having depressions in the apexes of the corrugations adapted to receive the apexes of the finned corrugations on the sheets forming honeycomb air ducts, the fins abutting against the corrugated blank at the ends of the depressions and secured thereto.



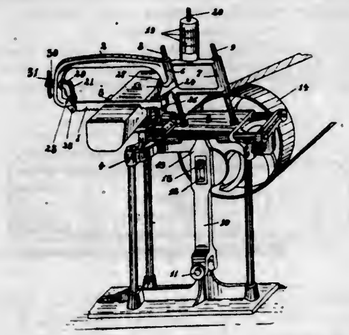
1,346,443. ROLLER OR BALL BEARING. ALBERT EDWARD DABBS, Manchester, STANLEY WHITBY SAVAGE, Chorlton-cum-Hardy, and ALFRED HAROLD HINDLE, Birmingham, England, assignors of one-eighth to Absalom Liddle, Manchester, England, and one-half to John George William Gruban, Kingsway, London, England. Original application filed Dec. 5, 1918, Serial No. 265,460. Divided and this application filed Sept. 5, 1919. Serial No. 321,965. 4 Claims. (Cl. 64—39.)

1. In a bearing, rotatable anti-friction members disposed between a pair of races, one of which is a ring of solid construction and the other of which is formed as a close helix having an interior surface and an exterior surface a portion of one of which forms a race for the anti-friction members, means for supporting said helix said means



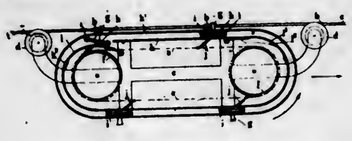
contacting that surface of the helix a portion of which constitutes a race, and a clearance between the whole of the opposite surface of the helix and said supporting means.

1,346,444. ARCH-SUPPORT. SAMUEL DARLING, Waupun, Wis. Filed July 15, 1919. Serial No. 310,896. 2 Claims. (Cl. 36—71.)



1. An improved arch support including a body portion composed of three layers of suitable material, the upper and intermediate layer having transverse pockets formed therebetween, flat springs removably fitted in said transverse pockets, longitudinal pockets formed between said lower and intermediate layers, flat springs removably fitted in said longitudinal pockets, means for supporting the ends of said longitudinal springs, and side flaps on said body portion into which the transverse springs extend, substantially as described.

1,346,445. FUEL-ECONOMIZER FOR COOKING-STOVES. JAMES DAWSON, Oakland, Calif., assignor to Charles G. Campbell, Alameda county, Calif. Filed Sept. 5, 1918. Serial No. 252,688. 1 Claim. (Cl. 126—215.)

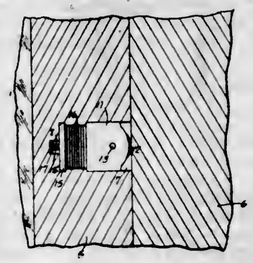


In a gas economizer, the combination of a wall adapted to surround a burner of a gas cooking stove and to support a cooking vessel thereon and prevent the escape of the products of combustion except on one side thereof, walls communicating with the first named wall and forming a conduit through which the products of combustion flow when escaping, a wall forming a heating chamber communicating with said conduit and into which said products of combustion escape, said latter wall being higher than said first mentioned wall, and also being adapted to support a cooking vessel, openings in the upper edge of said second wall for the escape of the products of combustion and a star shaped band attached to said last mentioned wall and adapted to deflect the products of combustion upwardly around the sides of an overlying vessel.

1,346,446. SAWING-MACHINE. LOUIS DENIS, Liege, Belgium. Filed May 27, 1919. Serial No. 300,154. 1 Claim. (Cl. 29—73.)

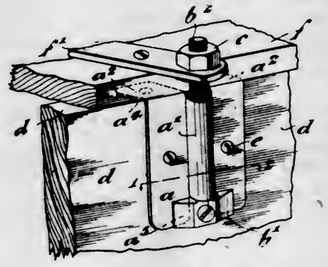
A sawing machine having a saw blade frame slidably supported on rods, means to give said rods an alternating rectilinear movement, said rods being inclined at an angle to the direction of the cutting movement of the saw blade.

1,346,447. SYSTEM OF HAULAGE. ERNEST ALPHONSE DERUNGS, Paris, France, assignor to Societe Anonyme Ateliers Otis Pifre, Paris, France. Filed July 25, 1919. Serial No. 313,398. 12 Claims. (Cl. 104—237.)



1. In a system of haulage, a fixed cable, stop balls on the cable, a tractor, an endless chain carried by the tractor, clips carried by the chain, adapted to strike the stop balls of the cable to produce propulsion.

1,346,448. WEARING-APPAREL. HENRY W. EWING, Columbus, Ohio. Filed Jan. 10, 1920. Serial No. 350,613. 2 Claims. (Cl. 2—95.)



1. A garment of the character specified, a substantially tubular body portion formed from a weatherproof material and of such fullness as to receive within the same articles of clothing situated substantially between the knees and feet of a wearer, and hooks carried by the upper marginal edge of said garment and capable of penetrating said clothing to effect a secure yet removable support of said garment in its applied position.

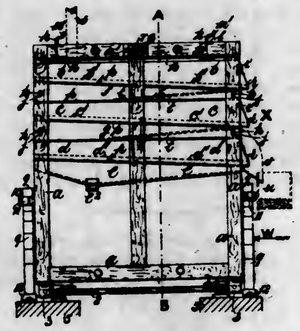
1,346,449. WINDOW-SASH HOLDER. JOHN H. GIBSON, Bruin, Pa. Filed July 24, 1919. Serial No. 313,027. 1 Claim. (Cl. 292—75.)

In a sash fastener, a vertically movable sash having a recess in one side thereof, a housing slidable in the recess, the rear wall and the bottom wall of the housing being formed with a thickened part, the surface of which being longitudinally curved, a roller journaled in the housing and movable over one rail of the window frame, rollers movable over the curved surface and adapted to bind against the first-mentioned roller to lock the same against rotation upon the lowering of the sash, and expansible means urging the housing toward the sash frame.

1,346,450. BOLT-FASTENING FOR THE LIDS OF BOXES, CASES, AND OTHER RECEPTACLES HAVING LIDS. CHARLES CLIFFORD GOSSAGE, Birmingham, England. Filed Aug. 22, 1916. Serial No. 116,382. 1 Claim. (Cl. 292—256.)

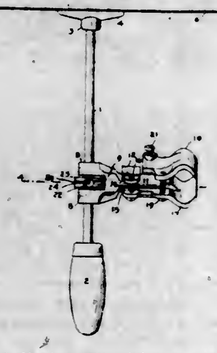
A fastener comprising a plate for attachment to a wall of a box or the like, said plate having a semi-tubular portion forming a socket and also having a flange at one end to fit over the edge of said wall and bear under a lid, a bolt in said socket and having a T-head bearing against one end of the socket and also bearing on said plate to prevent the bolt from turning, said T-head having an opening, fastening means extending through said opening and into said box wall and independently securing the bolt in place, the opposite end of said bolt projecting beyond the plate and adapted to extend through an opening in the box lid, and a nut screwed on said end of the bolt to bear on and secure the lid.

1,346,451. MILK-CAN HOLDER AND PROTECTOR. RICHARD D. GREEN, Seattle, Wash. Filed Aug. 21, 1919. Serial No. 318,880. 5 Claims. (Cl. 65—61.)



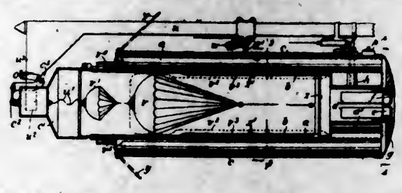
1. A milk can holder and protector comprising a handle, means secured thereto for gripping a can at its upper end, a guide secured to the lower end of said handle and curved to embrace the circumference of the can near its lower

end, said guide being less in circular extent than a semi-circumference, a protector for the top of the can hingedly



secured to said handle, and a spring acting to close said protector upon the top of the can.

1,346,452. SIFTER FOR TREATING POTTERS' SLIP, POWDERED SUBSTANCES, AND THE LIKE. ARTHUR CECIL HARRISON, Alsager, England. Filed Apr. 29, 1919, Serial No. 293,562. Renewed May 4, 1920. Serial No. 380,016. 2 Claims. (Cl. 83—56.)

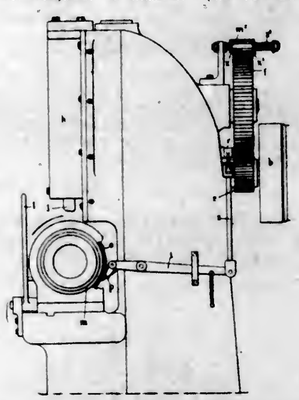


1. In sifting machines, the combination with a skeleton frame and a fixed base, sieving elements supported on the frame, a shaft arranged longitudinally of the frame and disposed intermediate the width thereof, of spring members connected to the frame and fixed base, and means for rocking the frame on the shaft.

1,346,453. DIRECTION-PREINDICATOR. EDWARD H. HEBERN, Oakland, Calif., assignor to H & H Patent Developing Company, Oakland, Calif. Filed Nov. 21, 1917. Serial No. 203,145. 1 Claim. (Cl. 116—46.)

A direction pre-indicator comprising a bearing having a bar extending at right angles thereto, a clamp member having a windshield clamping jaw at one extremity thereof and provided with a recess to receive said bar, apertured ears on the other end of said clamp member, a clamp member secured to said ears for rotatably clamping the bar upon said clamp member, a fastening element extending through said ears and the last-named clamp member, a jaw coöperating with the first-named jaw to secure the first-named clamp member to a wind shield and being independent of the second-named clamp member, a stem rotatably mounted in said bearing, a handle on one end of said stem and a pointer device secured to the other end of the stem and extending at right angles thereto.

1,346,454. PARACHUTE-FLARE. HAROLD EDWARD SHERWIN HOLT, Farnborough, England. Filed Feb. 4, 1919. Serial No. 274,912. 5 Claims. (Cl. 102—20.)

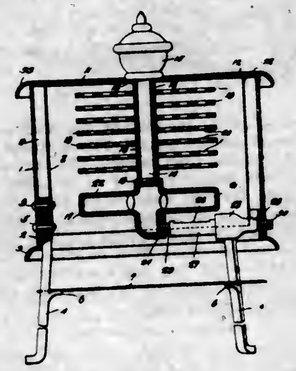


2. A flare bomb including a main parachute, an auxiliary parachute, means to initially hold said parachutes in folded condition, means to release the auxiliary parachute, and means controlled by the burning of the flare to release the main parachute.

4. A flare bomb for launching from air craft including a detachable closing cap at one end thereof and means for securing the same to the launching cradle.

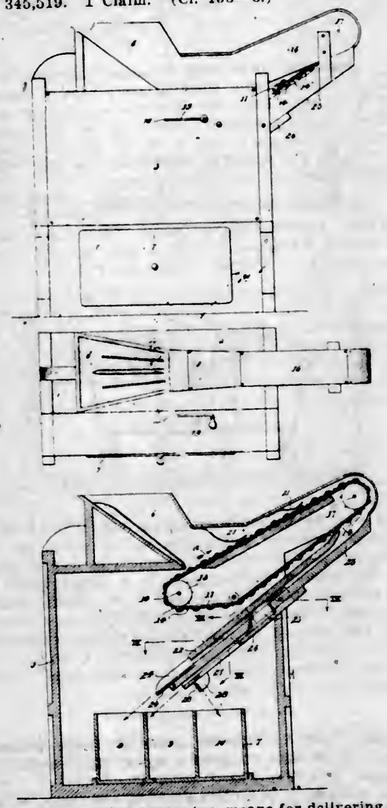
5. In a flare bomb for launching from air-craft a folding screen arranged to intercept upwardly directed light rays during the descent of the flare bomb substantially as described.

1,346,455. MACHINE FOR APPLYING DRIVING-BANDS ON HIGH-EXPLOSIVE SHELLS. EDOUARD LABITOTIÈRE, Bezons, France. Filed June 11, 1919. Serial No. 303,514. 6 Claims. (Cl. 78—26.)



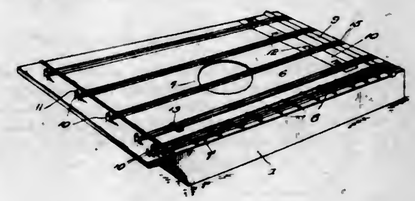
1. A machine for applying driving bands on high explosive shells, comprising a falling mass, a hammer placed under this mass and having a peen of special shape, means for effecting the raising of said mass, means for imparting to the shell, at each descent of the hammer, a rotary movement through a predetermined fraction of a revolution, means for maintaining the hammer in its uppermost position when the machine is thrown out of gear, and means, in case the shell is to receive a second driving band, to move said shell to the desired extent for that purpose, after the application of the first driving band.

1,346,456. GAS-HEATER. ALFRED LEISTMANN, Brooklyn, N. Y. Filed Mar. 2, 1920. Serial No. 362,695. 3 Claims. (Cl. 126—85.)



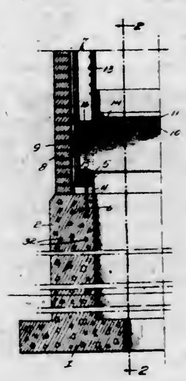
1. A heater including supporting legs, an outer cylindrical casing having connection with the supporting legs, an inner casing having connection with the supporting

legs and disposed in spaced relation with the outer casing, a cover, said cover having a plurality of openings formed therein, a supporting rod having one extremity disposed in one of the openings of the cover, a burner



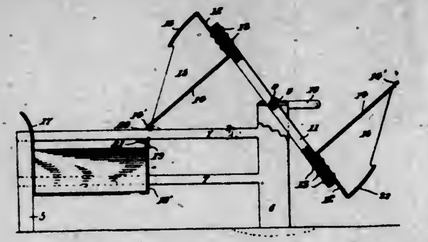
having threaded connection with one end of the supporting rod, a plurality of baffle plates supported on the supporting rod, and collars for securing the baffle plates in spaced relation with each other.

1,346,457. COIN-ASSORTING APPARATUS. JOZEF LEJA, Fallentimber, Pa. Filed Dec. 17, 1919. Serial No. 345,519. 1 Claim. (Cl. 133—3.)



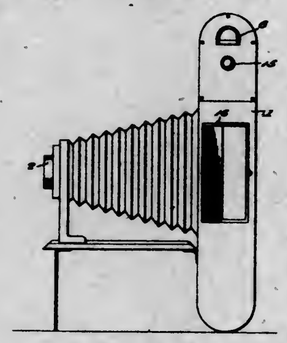
In a coin-assorting apparatus, means for delivering coins from a point of supply to a point of separation including an endless member having a plurality of resilient plates secured thereon, each adapted for the reception of a coin, abutments carried by said plates adapted to engage the coin for insuring movement of the latter with the endless member, means disposed above said endless member to prevent the passage of more than one coin at a time past the same, said last-named means including a spring arranged to bear upon said resilient plate.

1,346,458. MUSICAL STRINGED INSTRUMENT. JOHN L. LEWIS, Seattle, Wash. Filed May 6, 1919. Serial No. 295,138. 1 Claim. (Cl. 84—285.)



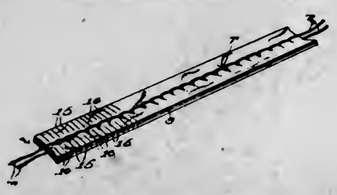
A musical instrument comprising a hollow body having a top formed with a central opening and constituting a sounding board, a bridge extending wholly across the sounding board adjacent one end thereof, a set of strings arranged adjacent one side edge of the body and coöperating with said bridge, frets arranged on the sounding board and underlying said set of strings, and a plurality of additional sets of strings, arranged in spaced groups and coöperating with said bridge, the strings of each group being tuned to produce a particular chord when sounded.

1,346,459. SILL CONSTRUCTION. FREDERICK N. MARVICK, Pine Bluff, Ark. Filed July 23, 1918. Serial No. 246,376. 1 Claim. (Cl. 20—4.)



In building construction, the combination with the foundation wall and the house wall rising therefrom, of blocks arranged transversely of the foundation wall and resting upon the top thereof with their inner ends flush with the inner face of the foundation wall and their outer ends spaced inwardly from the house wall, a sill laid upon said blocks and anchored to the foundation wall, said sill having a width less than the length of said blocks whereby its inner face will be flush with the inner ends of the blocks and its outer face disposed inwardly of the outer ends thereof, and a sheathing disposed upon the blocks against the outer face of the sill and spaced from the house wall.

1,346,460. SAND-LOADING DEVICE. GEORGE MICHNA, Albany, N. Y. Filed Oct. 1, 1919. Serial No. 327,621. 4 Claims. (Cl. 193—1.)

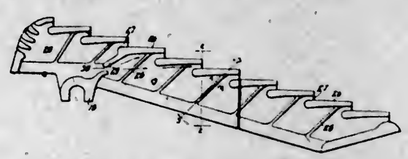


1. A sand loading device comprising a frame, a shaft journaled therein, arms radially extending from said shaft, scoops secured to the outer ends of said arms, a chute supported by said frame, a resiliently mounted side board carried by said chute positioned in the swinging path of movement of said scoops and means for operating said shaft.

1,346,461. CAMERA. HECTOR J. PERRIER, Edmonton, Alberta, Canada. Filed Aug. 16, 1918. Serial No. 250,245. 1 Claim. (Cl. 95—42.)

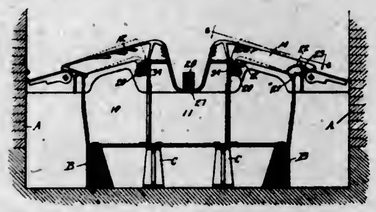
A camera comprising a body having an opening and means to normally close the same, a lens adjustably mounted with relation to the body, means to move a film in the body, a spring-actuated roller journaled in the body, a second roller journaled in the body, means to connect the second-named roller with the film-moving means, said connecting means being capable of ready disconnection from the film-moving means, and an opaque curtain attached to the spring-actuated roller and having an opening and also having a focusing surface visible through the opening in the body.

1,346,462. ORNAMENTAL ROPE. CHARLES A. REED, Williamsport, Pa. Filed Mar. 15, 1920. Serial No. 365,874. 1 Claim. (Cl. 41—10.)



A method of making ornamental rope which consists in securing a plurality of strips of flexible material together along their longitudinal axis, cutting the strips at corresponding points upon opposite sides of their longitudinal axis, and finally twisting the strips longitudinally.

1,346,463. SURGICAL SPLINT. JOHN J. RENOIS, Corsicana, Tex. Filed July 16, 1919. Serial No. 311,266. 1 Claim. (Cl. 128—79.)



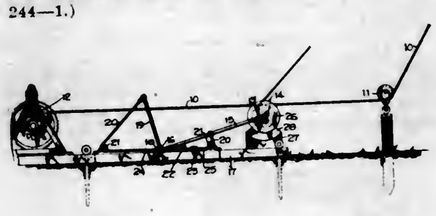
A surgical splint for the purpose described including a pair of elongated thin flat metallic bars arranged in spaced relation and diverging from substantially the central portions of the bars toward the rear of the same, a spring yoke connecting the rear ends of the bars and adapted to allow the same to spring apart, pairs of spiral braces connected between the intermediate portions of the bars and said ring and diverging from such intermediate portions of the bars to the ring, and a spring ring connected between the forward ends of the bars and adapted to allow the bars to spring apart.

1,346,464. FURNACE. JOSEPH H. ROACH, Philadelphia, Pa. Filed Nov. 27, 1917. Serial No. 204,245. 5 Claims. (Cl. 110—47.)

1. A grate for forced draft furnaces comprising a plurality of reciprocatably mounted grate bars, a partition dividing the supporting structure into separate air intake conduits, co-acting members carried by the bars forming a constricted passage by way of the bar structure between the conduits, and means to reciprocate the bars without interfering with the constricted passages.

1,346,465. UNDERFEED-STOKER FURNACE. JOSEPH H. ROACH, Brookline, Pa. Filed Mar. 22, 1919. Serial No. 284,284. 5 Claims. (Cl. 110—47.)

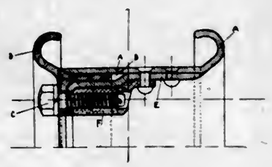
1. A grate for an underfeed stoker furnace composed of a series of juxtaposed grate bars, part of which are stationary and part of which are mounted to reciprocate, a slicer bar mounted for movement in a vertical plane between adjacent stationary bars and about a center located approximately at the lower end of said slicer bar, a reciprocating ram adapted to move the fuel into combustible relation to said grate, and means connecting the ram and slicer bar whereby the slicer bar is elevated twice for each completed cycle of operation of the ram.



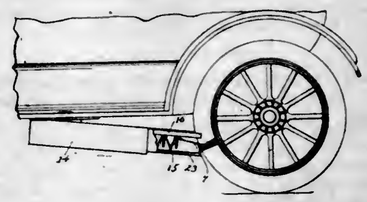
1,346,466. SWIVEL-TRUCK. JOHN H. ROSE, Holyoke, Mass. Filed Nov. 25, 1919. Serial No. 340,637. 4 Claims. (Cl. 280—46.)

1. In a truck, a main frame having side bars, wheels for supporting the same, a swivel connection between the wheels at the forward end of the truck and the main

frame, said swivel having a yoke that is connected to the forward ends of the side bars of the main frame, means for supporting the forward wheels comprising a truck member having parallel arranged and downwardly extending portions, a pin in said portions, a block pivotally supported on said pin and between said portions, said block having an extension thereof, an axle in the extension and at right angles to said pin for attaching and supporting the forward wheel, said truck having an upwardly extending portion for providing a swivel connection with the yoke, whereby the supporting means for the forward end of the truck can freely operate in both a horizontal and vertical plane, and whereby the truck as a whole is always maintained in a position that is substantially parallel with the supporting surface and independent of any great unevenness of said surface, and an operating handle connected to the upwardly extending portion of the swivel connection.

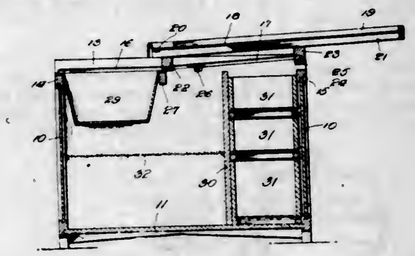


1,346,467. TELEPHONE-REEL. CHARLES H. ROTH, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 14, 1916. Serial No. 125,623. 15 Claims. (Cl. 244—1.)



1. The combination with a traveling cable, of a brake element mounted in juxtaposition to said cable, a reel having a brake and cable engaging portion, a swingable frame supporting the reel for movement into engagement with either the cable or the brake element whereby said reel is revolved or tendered inactive, and means connected to the frame for holding the reel in yielding engagement with either the cable or the brake element.

1,346,468. RIM FOR PNEUMATIC-TIRED WHEELS. GIUSEPPE RUBINO, Turin, Italy. Filed June 11, 1919. Serial No. 303,522. 1 Claim. (Cl. 152—21.)

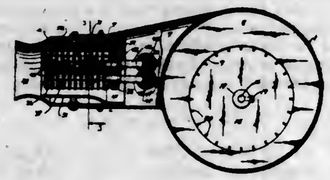


A sectional rim comprising two members one having a tire engaging flange on one side and also having an inner ring, the said inner ring being spaced from said member at the side opposite said flange and being provided at said side with an internal flange, and said member being further provided with lugs secured to said inner ring and arranged in the angle between said inner ring and its inturned flange, said lugs and inturned flange having screw-receiving openings; the other member being telescopically fitted between the first named member and the spaced portion of its inner ring and being also provided with a tire engaging flange and an inwardly extending flange, and screws extending through openings in said inwardly extending flange and having threaded engagement in the openings of the said lug.

1,346,469. AUTOMOBILE-TIRE CHAIN AND HOLDER. JOSEPH SCHNEIDER, Cincinnati, Ohio. Filed July 3, 1918. Serial No. 243,123. 2 Claims. (Cl. 152—14.)

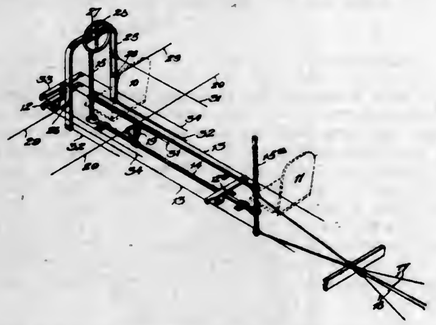
1. In an automobile tire chain and holder, a tire chain comprising cross links with longitudinal side links to which the cross links are secured, said side links made up in sections hinged to each other to fold longitudinally to gather the cross links into close proximity to each other, and a container to hold the chain when folded comprising a fixed section and a movable section, with slotted guideways in the movable section to receive and hold the chain when folded, with means for projecting the movable section from the fixed section to cause the chain to automatically grasp the tire to be drawn from the container.

1,346,470. KITCHEN-CABINET. FRANK H. SCHROEDER, Richmond, Ind., assignor of one-half to Richard E. Edwards, Richmond, Ind. Filed Apr. 18, 1919. Serial No. 290,943. 4 Claims. (Cl. 45—17.)



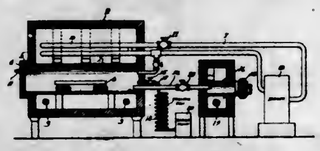
3. A cabinet including a cabinet body, a pan mounted therein, and a top normally overlying the cabinet body in closed position but movable to extended position tilted longitudinally to incline toward the pan, the top being formed adjacent one end with an opening whereby when the top is extended water upon the top will drain through said opening into the pan.

1,346,471. AIR-DIFFUSION MACHINE. VERN SLATER, Iowa City, Iowa, assignor to The Claxo Company, Iowa City, Iowa, a Corporation of Iowa. Filed Jan. 3, 1919. Serial No. 269,399. 6 Claims. (Cl. 219—39.)



1. An air diffusion machine embodying a portable casing having an enlarged air chamber at one end thereof, an air inlet therefor, an air outlet therefor, and an intermediate chamber provided with means therein operating to draw air through said enlarged air chamber and positively dis-

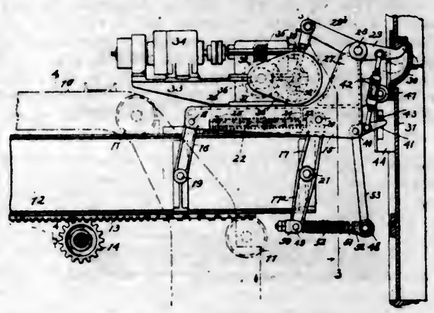
charge same through said air outlet, the said enlarged air chamber containing a suitably mounted humidifier unit,



and the said air outlet having a suitably controlled heater unit directly associated therewith, the several elements co-acting to function substantially as described.

1,346,472. AIRPLANE. ARTHUR R. SMITH, Fort Wayne, Ind. Filed Dec. 19, 1918. Serial No. 267,505. 5 Claims. (Cl. 244—29.)

3. In an airplane having places for two occupants, the combination of a set of ailerons, rudder, and elevation flap and dual control meaus therefor, and independently of and operable separately from said parts an extra rudder and control means connected therewith in front of the place of one occupant.

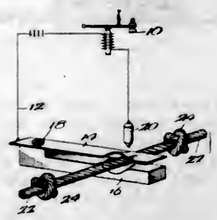


1,346,473. RUST-PREVENTING TREATMENT. WILLIAM R. SWAN, South Bend, Ind., assignor to John J. Woolverton, South Bend, Ind. Filed Jan. 8, 1920. Serial No. 350,137. 7 Claims. (Cl. 148—7.)

1. The process of treating iron and steel articles to form a rust resisting finish thereon, which involves the heating of the articles sufficiently to open the pores thereof while they are positioned in a sealed chamber, producing a partial vacuum within the sealed chamber, and drawing the vapor or gas of a non-corrosive substance into the sealed chamber by the action of the partial vacuum.

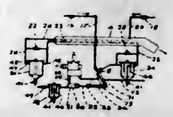
1,346,474. OVEN-DOOR-SHIFTING MECHANISM. IVOR D. THOMAS, Cleveland, Ohio, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 1, 1918. Serial No. 231,979. 12 Claims. (Cl. 254—84.)

1. In a door shifting mechanism, a door moving member, means for moving it toward and from the door, a second member carried by the door moving membed and movably mounted thereon so that it may yield relative thereto on



contact with and pressure against the door, and a lifter carried by said second member.

1,346,475. DECORATING METAL SURFACES. KALMAN WARGA, New York, N. Y., assignor to The Metallograph Corporation, New York, N. Y., a Corporation of New York. Filed May 27, 1919. Serial No. 300,134. 12 Claims. (Cl. 41—26.)



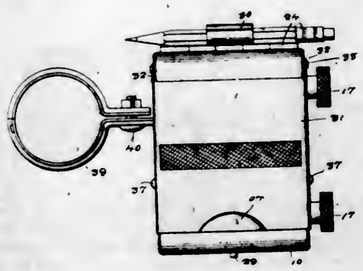
1. The method of producing multi-color decorations on metal articles containing aluminum, which consists in, first, applying to the metal surface a plurality of superimposed color films containing each a mineral pigment and a vitreous binding material, the binding materials melting at different temperatures and the melting point of the film in contact with the metal surface being the lowest, and, second, fixing said films by heat.

1,346,476. STRING MESSAGE-HOLDER FOR WIRELESS OR OTHER TELEGRAPH MECHANISM. MONTRAVILLE M. WOOD, Berwyn, Ill. Filed Apr. 4, 1919. Serial No. 287,547. 3 Claims. (Cl. 178—111.)

3. As a signal switch operator, a cord having knots tied along its length at intervals arranged in accordance with the signals to be given.

1,346,477. COMBINED MOTOR AND FUEL CONTROL. JOHN W. ANDERSON, Jr., Mishawaka, Ind., and ALBERT R. ANDERSON, Chicago, Ill., assignors, by direct and mesne assignments, to The Anderson Company, South Bend, Ind., a Corporation of Indiana. Filed Nov. 6, 1916. Serial No. 129,846. 13 Claims. (Cl. 123—127.)

2. In a combined fuel and motor control an oil fuel supply, a gasolene supply, connections from both to the point of distribution, a carbureter adapted to alternately utilize either kind of fuel, an internal combustion engine.



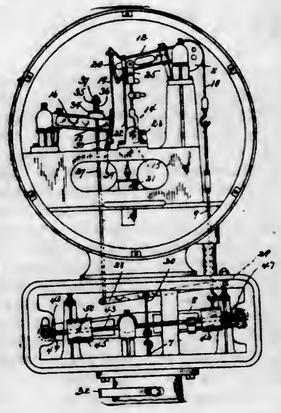
shafts driven thereby, a clutch interposed between the shafts, a lever to control the clutch so as to throw the same off and on, a three-way valve placed between the carbureter and the sources of fuel supply and a suitable link positively connecting the valve and clutch lever the same being so positioned with respect to the valve that when the clutch is off gasolene will be supplied to the carbureter and when the clutch is on oil will be supplied instead.

1,346,478. AUTOMOBILE-BUMPER. LEROY BAUMGARTL, Chicago, Ill. Filed May 6, 1920. Serial No. 379,240. 9 Claims. (Cl. 293—55.)

4. In combination with an automobile, a bumper formed of a cross-bar, arms pivotally supported on the automobile in spaced relation and pivotally connected at their outer ends with the ends of said cross-bar, and spring means operatively engaging said arms and exerting a yielding force thereon tending to swing them at their outer ends toward the center of the automobile.

1,346,479. MEMORANDUM DEVICE. ROBERT J. BELL, Richmond, Va., assignor to Bell's Auto Memo Co., Incorporated, Richmond, Va., a Corporation of Virginia. Filed Aug. 19, 1919. Serial No. 318,474. 6 Claims. (Cl. 282—4.)

1. A memorandum device comprising a casing, a pair of spaced rollers mounted therein for receiving a memorandum strip, a cover hingedly secured to said casing and having spaced slots therein for the passage of the memorandum strips, a protector plate pivotally secured to the cover and adapted to be positioned over the memorandum strip and yieldable means for holding the rollers against rotation.

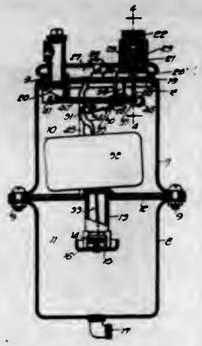


6. A memorandum device comprising a casing having a slot therein, a pair of spaced rollers mounted in said casing for receiving memorandum strips, a cover hingedly secured to said casing and having spaced slots therein for the passage of the memorandum strips, a carbon sheet positioned between said memorandum strips and extending beyond the side edges of the same, a clamping rod engageable with each end of the carbon sheet and having one end pivotally secured to the casing, means carried by the opposite free end of the clamping rod for detachable engagement in openings formed in the casing and yieldable means for holding the rollers against rotation.

1,346,480. FUEL-LINE LOCK. RICHARD E. BIRD, Wichita, Kans. Filed Oct. 16, 1918. Serial No. 258,448. 4 Claims. (Cl. 251—6.)

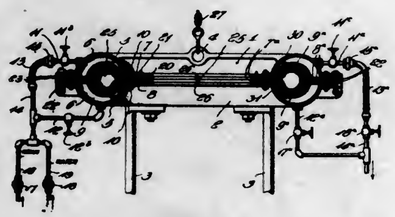
1. A device of the character described, comprising a casing having a bore extending therethrough, a valve for said bore, said valve having a flanged base, a locking cam designed for engagement with a portion of said base, and a detent adapted for engagement with another portion of said base.

1,346,481. SCALE. JOHN H. A. BOUSFIELD, St. Johnsbury, Vt., assignor to E. and T. Fairbanks and Company, St. Johnsbury, Vt., a Corporation of Vermont. Filed July 12, 1918. Serial No. 244,536. 8 Claims. (Cl. 265—62.)



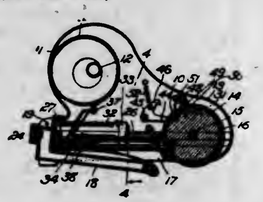
1. In a scale, the combination with a lever, of a pendulum arm, a connection therebetween including an eccentric directly connected to the pendulum arm, a tape extending around a portion of the circumference of the eccentric and connected to said lever, compensating means for maintaining the scale in balance when the scale is placed out of level, said compensating means comprising an oppositely extending auxiliary pendulum arm, and a tape connection between said pendulum arms.

1,346,482. VACUUM FEED MECHANISM. CLIFFORD C. BRADBURY, Oak Park, Ill. Filed Oct. 24, 1919. Serial No. 332,908. 10 Claims. (Cl. 158—36.)



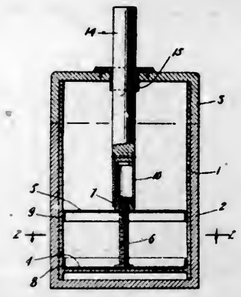
1. A snap action device for fuel feed tanks, comprising a plurality of inter-connected levers forming two snap ac-

tions, spring means for operating said actions, the operation of one of said actions being dependent upon the opera-



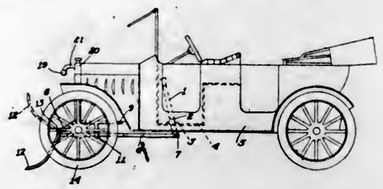
tion of the other of said actions, and occurring immediately after the operation of said other action.

1,346,483. TIRE-VULCANIZER. GEORGE B. COOPER, Cleveland, Ohio. Filed Apr. 3, 1919. Serial No. 287,134. 2 Claims. (Cl. 18—38.)



1. A tire vulcanizer comprising two sections each consisting of a jacket ring having projecting flanges on its inner and outer peripheries disposed in a common plane at right angles to the axis of the ring, said ring having a circumferential channel between said flanges opening on said plane, a plurality of mold rings for different sized tires, any one of said mold rings being receivable in said channel in spaced relation with the wall thereof, all of said mold rings having flanges on their inner and outer peripheries and of the same size as the jacket ring flanges; and quick-detachable means for tightly though detachably connecting the flanges of any jacket ring with those of said mold ring; together with means for detachably connecting the two sections, with the mold ring flanges of one section contacting with the corresponding flanges of the other section, and means for supplying a heating medium to the channels of the two jacket rings.

1,346,484. STAMP-AFFIXING MACHINE. HARRY H. DANIELS, Winthrop, Mass., assignor to The Service Machines Company, Boston, Mass., a Corporation of Massachusetts. Filed May 7, 1917. Serial No. 166,887. 18 Claims. (Cl. 216—33.)

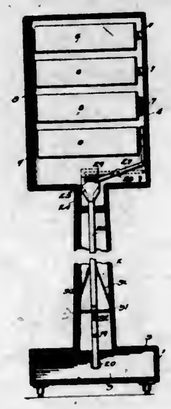


4. A stamp affixing machine, comprising a portable housing adapted to be held in the hand and pressed upon a stamp-receiving surface, a magazine stamp holder, an applying roll constructed and arranged to apply stamps by drawing the same over the receiving surface in frictional contact therewith, and a water tank equipped with an applying wick yieldingly mounted in advance of said roll in the direction of operative movement, the yielding of said wick permitting both it and said roll to engage simultaneously the stamp-receiving surface in varying angular positions of said housing.

1,346,485. DEVICE FOR THE PREPARATION OF COFFEE OR LIKE BEVERAGES. MANUEL DE ARRIGUNAGA, New York, N. Y. Filed May 13, 1918. Serial No. 234,073. 10 Claims. (Cl. 53—3.)

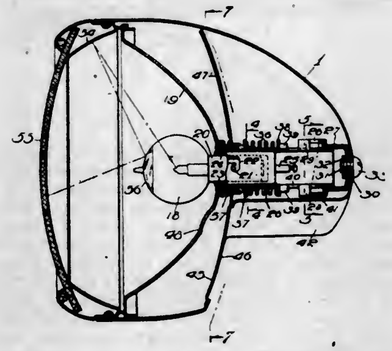
1. The combination of a container and a detachable heat insulating casing surrounding said container and comprising a body and a removable cover, said cover co-acting with said body to completely inclose said container.

1,346,486. LIFE-SAVER AUTOMOBILE ATTACHMENT. MARIA DOUJAK, New York, N. Y. Filed Jan. 2, 1920. Serial No. 348,829. 3 Claims. (Cl. 293—45.)



1. In combination with a motor vehicle, a frame attached to the under side of said vehicle, a fender hingedly supported by said frame, and means slidably supported by said frame for partly rotating said fender about its hinged edge.

1,346,487. CLOTHESLINE-COUPLING. HELEN F. DOYLE, Waterbury, Conn. Filed Mar. 29, 1920. Serial No. 369,457. 2 Claims. (Cl. 24—123.)

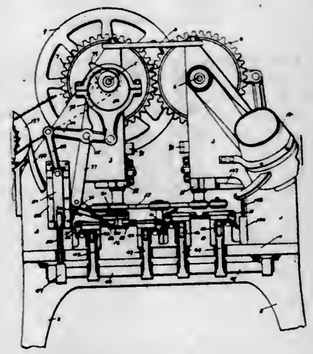


1. A clothes-line coupling comprising two members each formed with a socket, with which the ends of a clothesline may be connected—one member formed with a longitudinal slot and a transverse slot connected by an unalined slot, and the other member formed with a neck and a head adapted to enter the longitudinal slot and be moved into the transverse slot, whereby the two members are coupled together.

1,346,488. ADVERTISING ATTACHMENT FOR SCALES. ARTHUR NEAL FUNK, Fort Worth, Tex. Filed July 24, 1919. Serial No. 313,000. 4 Claims. (Cl. 40—39.)

1. In combination with a platform scale, of an auxiliary platform hinged at one end to the upper face of the scale platform; a series of similar display members of polygonal cross section, having display matter on their faces, and mounted to rotate on parallel axes, means for constraining them to rotate together, and a connection between the auxiliary platform and one of the members for rotating said members through a predetermined arc when the auxiliary platform is depressed, said connection being releasable, and means for releasing the same when the auxiliary platform is fully depressed.

1,346,489. VEHICLE-SEARCHLIGHT. JOHN E. GENN, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Sept. 9, 1918. Serial No. 253,135. 12 Claims. (Cl. 240—41.)

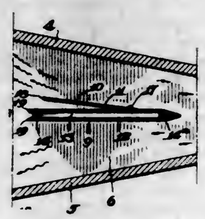


1. In combination with a lamp body having a supporting arm extending horizontally therefrom, a lamp-carrying member in which said supporting arm is journaled, comprising a continuous integral strip having its middle portion bent around said arm to embrace it, and having the end portions extended parallel to each other; a bracket member which is interposed between said parallel end portions, and a clamping bolt adapted to serve also as a pivot, which extends through said parallel arms and the intervening bracket member for clamping the said arms against the opposite sides of the bracket member, and simultaneously clamping the bent middle portion onto the supporting arm.

7. In a searchlight, the combination with a focusing reflector and a casing in which it is mounted having a back wall spaced back from the reflector; an electric lamp bulb and a carrying tube therefor; a guide bearing for the forward end of the tube secured at the center of the reflector; a guide bearing for the rear end of the tube mounted rotatively on the back wall; the forward end bearing and the tube having coöperating members for guiding the tube longitudinally and preventing its rotation, and the rear bearing in the tube having coöperative cam means for forcing the tube forward by the rotation of the rear bearing and a spring which resists such forward movement of the tube.

8. In a searchlight, in combination with a casing and a lamp mounted therein, the casing having a rear opening and a member mounted for turning on a fore-and-aft axis, having an opaque part which at one position closes the opening and another part consisting of a translucent colored screen which at another position within the range of turning of said member about said axis registers with said opening in the casing.

1,346,490. MACHINE AND METHOD FOR SHAPING AND ASSEMBLING BLANKS. ALEXANDER W. GEORGE, Brooklyn, N. Y., assignor of one-half to Samuel H. Baer, Brooklyn, N. Y. Filed Mar. 23, 1918. Serial No. 224,168. 57 Claims. (Cl. 113—1.)



1. In an apparatus of the character described, in combination, means adapted to dispose a tubular blank having a movement limiting element so that said movement limiting element occupies a predetermined position in space around the longitudinal axis of said blank, comprising guides between which the blank is adapted to move and a blank gripper adapted to translate the blank between said guides, and means adapted to assemble another tubular blank, having a movement limiting element, in telescopic relation to said first-mentioned blank with the movement limiting elements of said blanks in coöperative relation.

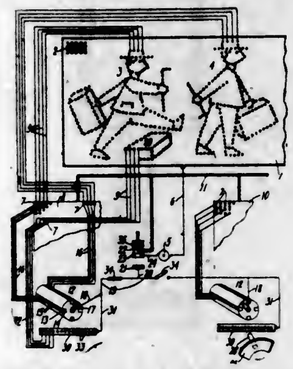
47. The method of assembling a cap blank and a neck blank and effecting registry between movement limiting elements of said blanks, comprising positioning one of each kind of blank so that the movement limiting element of one has a predetermined relation in space to the movement limiting element of the other, and thereafter assembling the two blanks and the movement limiting elements thereof in coöperative relation by a movement of one blank relative to the other, said movement including a rotary movement of only one blank relative to the other.

1,346,491. SOUND-AMPLIFYING DEVICE. THOMAS H. GRIGG, Philadelphia, Pa. Filed Dec. 11, 1919. Serial No. 344,091. 2 Claims. (Cl. 181—27.)

1. In a sound amplifying device, a wall forming a passage having an inlet and an outlet for sound waves, a

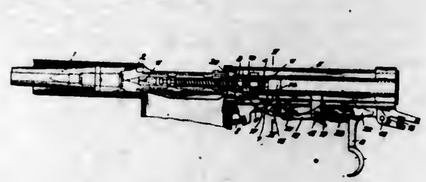
sound amplifying panel having one of its end portions fixed and the remaining portion thereof free to vibrate in said passage and having a face exposed to the path of

sound waves traversing said passage, and a sound amplifying wing having one end secured to the portion of the panel which is free to vibrate and having another end which is free to vibrate within said passage.



1,346,492. AUTOMOBILE-RADIATOR AND METHOD OF MAKING SAME. LAURENCE G. HANMER, Brooklyn, N. Y., assignor to The A-Z Company, New York, N. Y., a Corporation of New York. Filed Jan. 31, 1918, Serial No. 214,738. Renewed Dec. 16, 1919. Serial No. 345,302. 12 Claims. (Cl. 113—116.)

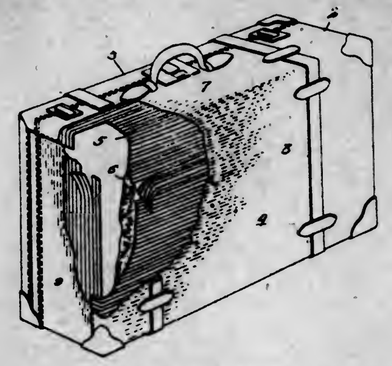
1. The method for making strip-units for radiators, consisting in folding a strip of flexible sheet material longitudinally so as to produce two thicknesses of material joined by a single rounded bend at one edge and with the opposite edges separated and devoid of bends, and then corrugating said double-thick material so that the corrugations will conform to each other both longitudinally and transversely of the strip-unit.



7. A strip-unit for automobile radiators consisting of a piece of double-thick, flexible sheet material having a folded or seamless longitudinal edge and an open edge, and having a plurality of plaits, ribs or corrugations extending transversely thereof in parallelism from the folded edge to the open edge of the double-thick strip, said thicknesses of the strip having at the open edge of the latter offsets or bulged portions extending from end to end of the strip.

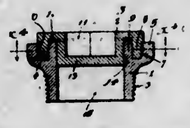
1,346,493. ILLUMINATED SIGN. WILLIAM P. HAMMOND, Passaic, N. J., and EDMUND QUINCY MORRS, New York, N. Y. Filed Apr. 30, 1915. Serial No. 25,085. 14 Claims. (Cl. 177—346.)

10. An illuminated display sign comprising the combination with a bank of lamps of a multiple contact switch, and means for interchangeably connecting any contact of said switch in circuit with any lamp or group of lamps.



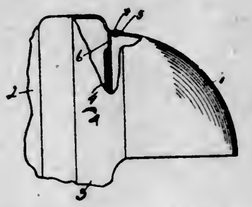
1,346,494. AUTOMATIC RIFLE. ERNST HÄNNI, Arbon, and HANS STAMM, St. Gallen, Switzerland, assignors to Firma Adolphe Saurer, Arbon, Switzerland, a Firm of Switzerland. Filed Feb. 27, 1918. Serial No. 219,512. 4 Claims. (Cl. 42—4.)

1. In an automatic rifle, a sliding barrel, a breech frame connected rigidly with the barrel, a breech action adapted to be rigidly connected to the breech frame, a striker mounted in the breech action, a casing into which the sliding barrel, together with the breech frame, is adapted to enter, means for retaining the striker in cocked position, means for locking the barrel when the striker is cocked, a trigger carried by the casing and means operatively connected to such trigger and operated thereby for releasing the striker and releasing the barrel immediately after a releasing of the striker and before the striker strikes against the cartridge.



1,346,495. BODY STRUCTURE FOR TRAVELING BAGS, CASES, AND THE LIKE. JOHN HEINEL, Rockford, Ill. Filed Jan. 27, 1919. Serial No. 273,317. 1 Claim. (Cl. 190—53.)

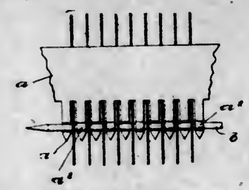
A traveling case formed of a three-ply body comprising a facing material, a lining and an interposed reinforcing body of narrow fibrous or cane strips laid side by side, said plies being united by an adhesive so as to constitute a composite body, the case having sides and ends formed of said composite body, the ends being arranged with the strips running vertically and the side portions with the strips running horizontally, the end edges of said side portions being turned inwardly over and crosswise of the



end sections forming angular corners integral with the sides, and stitching uniting the turned over edges and said end sections.

1,346,496. WASHOUT-PLUG. ROBERT B. HOUSLEY, Indianapolis, Ind. Filed Mar. 17, 1919. Serial No. 283,115. 6 Claims. (Cl. 220—39.)

1. A washout plug comprising a nipple having an annular groove in one end, the outer wall of the groove being provided with screw-threads and the inner wall of the groove projecting outward beyond the plane of the outer end of the outer wall of the groove, and a cap having a flange provided with screw-threads adapted to engage the screw-threads of the nipple.



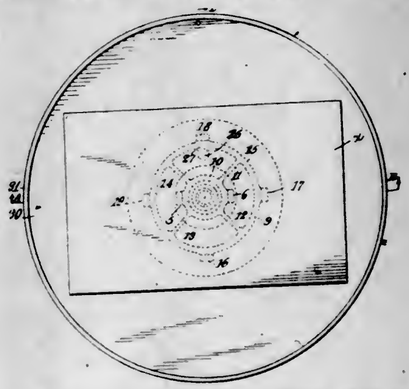
1,346,497. DIMMER-SHIELD FOR LAMPS. PARKER JENKINS, Philadelphia, Pa. Filed Aug. 21, 1917. Serial No. 187,338. 2 Claims. (Cl. 240—48.4.)

1. In a device of the character stated a lamp rim having an arcuate section of its metal partially cut therefrom and bent to produce a flange and a dimmer shield having one edge thereof attached to said flange.

1,346,498. SPACING-CLAMP FOR WARP-THREADS AND OTHER PURPOSES. CHARLES LEA, Boston, Mass., assignor to American Warp Drawing Machine Company, Boston, Mass., a Corporation of Maine. Filed Aug. 31, 1915, Serial No. 48,221. Renewed Oct. 11, 1919. Serial No. 330,140. 7 Claims. (Cl. 139—94.)

3. A spacing clamp embracing in its construction a comb having resilient teeth formed with open off-set portions, some facing to one side and others to the other side to form retaining eyes, a longitudinal retaining member capable of being passed through said eyes longitudinally to close the open ends of the space between the teeth, said retaining member being of a diameter to be pinched by the

resilient teeth to hold it frictionally against longitudinal slipping, substantially as described.



1,346,499. ILLUMINATED SIGN. ALEXANDER S. LIMPERT, Pittsburgh, Pa., assignor to Golden Glow Sign Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 30, 1918. Serial No. 268,909. 10 Claims. (Cl. 40—130.)

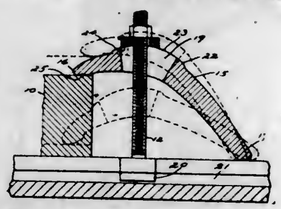
1. In a sign, the combination of a casing having a lens support, a series of lenses outlining a character in the outer face of said support, a lamp disposed within the casing and positioned substantially centrally of and behind the lenses composing the character thus outlined, and a set of reflecting mirrors individually cooperating with said lenses, members of said set inwardly inclined in different directions toward said lamp from co-planar points in said reflectors constructed and arranged whereby each of the latter directly reflects the image of the lamp filament through that character-outlining lens with which it cooperates.

1,346,500. [WITHDRAWN.]

1,346,501. GRAINER FOR PLANOGRAPHIC PLATES. WILLIAM H. LONG, New York, N. Y. Filed Aug. 18, 1916. Serial No. 115,729. 3 Claims. (Cl. 51—12.)

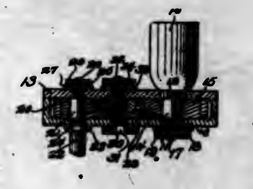
1. A grainer for planographic printing plates including in combination a plate box, and devices for simultaneously rotating and rocking the box.

1,346,502. MAILING DEVICE. SAMUEL A. MARKOFF, Providence, R. I. Filed May 9, 1918. Serial No. 233,584. 1 Claim. (Cl. 281—6.)



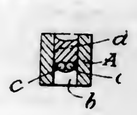
A mailing device comprising a light, rigid, flat, oblong platen having a substantially smooth surface and extensions at opposite sides of both ends extending in the direction of the longitudinal axis of said platen, a continuous web of writing paper wound upon said platen in the direction of said longitudinal axis and confined by said extensions, said platen having its opposite end edges rounded in the longitudinal direction to prevent rupture of said paper when wound thereon, the longitudinal edges of said platen being adapted to be grasped in the palm of the hand and thereby supported during the writing operation so that the end of the web is free from interference with the hand, said platen providing a rigid writing surface when so held, and means for securing the free end of said web to the adjacent surface thereof to prevent unwinding of said web.

1,346,503. TIRE. SHAVERKSHA D. MASTER, Broach, India. Filed July 11, 1919. Serial No. 310,035. 3 Claims. (Cl. 152—17.)



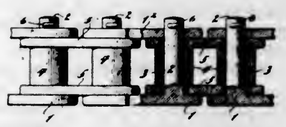
2. A tread member for tires comprising flexibly connected sections arranged end to end, in combination with a metallic backing plate; the said plate being straight and having transversely corrugated portions at intervals opposite the spaces between the flexibly connected sections.

1,346,504. WORK-HOLDING DEVICE. ALBERT OLAI MATHISON, New Britain, Conn. Filed Jan. 29, 1919. Serial No. 273,735. 1 Claim. (Cl. 90—59.)



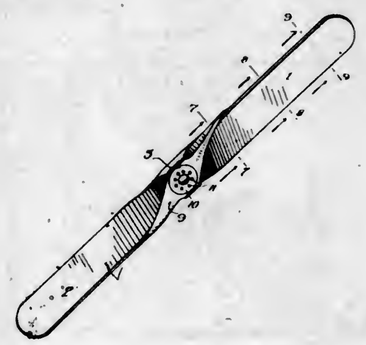
A work holding device operating as a lever of the third class in coöperation with a clamping device in the form of a bolt and nut, comprising a work engaging branch and a power arm branch that meet at an angle at an apex portion that is slotted and rounded for receiving the clamping means, and in all positions of use the said power arm branch being appreciably elongated relatively to the said work engaging branch and positioned relatively to the said work engaging branch so that the said angle is an obtuse angle.

1,346,505. SOCKET-WRENCH. ROY MITCHELL, Enid, Okla. Filed Oct. 8, 1917. Serial No. 195,405. 2 Claims. (Cl. 81—57.)



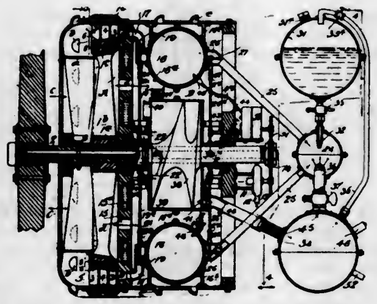
1. A socket wrench comprising a brace in the form of a crank having a non-circular shank portion, a driving gear fitted to said non-circular shank portion, a driven gear having a non-circular central opening, a nut-receiving socket having a shank provided with a non-circular portion arranged in and conforming to said non-circular opening, an intermediate gear meshing with said driving gear and driven gear, a gear case comprising an elongated wall member having a marginal flange surrounding all of said gears and an elongated cover plate seated on the edge of said marginal flange to form a wall member for the gear case, said edge of the marginal flange having lugs and the cover plate having notches in which said lugs are mounted to prevent edgewise displacement of the cover plate, the shanks of said brace and socket being rotatably mounted in the wall members of said gear case.

1,346,506. ARRANGEMENT AND CONNECTOR FOR THE JOINTING OF ELECTRICAL WIRES. JOHANNES SÖRENSEN MÖLLERHÖJ, Frederiksberg, near Copenhagen, Denmark. Filed Mar. 6, 1919. Serial No. 280,999. 5 Claims. (Cl. 287—79.)



1. A connecting device for electric wires comprising a body recessed to receive the wire and to expose a part of the wire laterally thereof, and a soft sealing plug fitting in said recessed portion to be engaged by the body independently of the wire and normally leaving the recess free to receive the wire and in operation engaging the wire from one side only, and adapted to be pressed into binding engagement against said laterally exposed part of the wire.

1,346,507. METHOD OF MAKING CHAINS. FRIEDERICH MÜLLER, Hartford, Conn., assignor to The Whitney Mfg. Co., Hartford, Conn., a Corporation of Connecticut. Filed June 10, 1916. Serial No. 102,819. 5 Claims. (Cl. 59—35.)



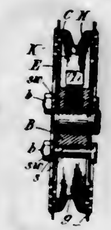
1. The method of making a link and pin chain unit which consists in forming a link and a pin separate therefrom, and providing the link with a socket having a cam face, and the end of the pin with a cam face adapted to cooperate with the cam face in the socket to center the pin in the socket, and welding the pin in place while centered in the socket.

1,346,508. PROPELLER. VLADIMIR OLHOVSKY, New York, N. Y., assignor to Ernst J. Ohnell, Brooklyn, N. Y. Filed May 31, 1918. Serial No. 237,619. 4 Claims. (Cl. 170—159.)

1. A propeller comprising hollow blades having corresponding edges secured together, plates secured to the inner edges of such blades, and reinforcing members secured upon adjacent ends of said blades and to said plates.

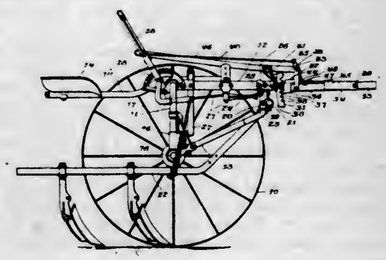
1,346,509. EXPLOSION GAS-TURBINE. VLADIMIR OLHOVSKY, New York, N. Y., assignor to Ernst J. Ohnell, Brooklyn, N. Y. Filed Sept. 14, 1918. Serial No. 254,028. 6 Claims. (Cl. 60—41.)

1. The combination of a motor having a rotor, an explosion chamber, means to deliver burning gases therefrom to the rotor, a carbureting chamber, a conduit providing communication between the carbureting chamber and explosion chamber, means to periodically open and close communication between said chambers, a tank for liquid fuel for communication with the carbureting chamber, means to supply air under pressure to the carbureting chamber and to the fuel tank for production of an inflammable mixture, and means to ignite such mixture in the explosion chamber periodically.



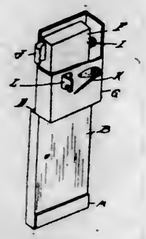
1,346,510. STOPPER FOR BOTTLES AND SIMILAR CONTAINERS. HENRY P. ROBERTS, Boston, Mass., assignor, by direct and mesne assignments, to Rodik Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 5, 1919. Serial No. 280,705. 6 Claims. (Cl. 215—88.)

5. A stopper comprising a layer of compressible material, a clasp having a plurality of prongs to engage the under side of the rim of the bottle, a cap the edge of which contacts with the upper surface of said prongs, and means acting on the said clasp and tending to move the center of the clasp about its points of engagement with the cap as fulcrums and thereby force the outer ends of the said prongs inwardly toward the neck of the bottle.



6. A bottle closure comprising a cap, a clasp on the under side of the cap having laterally extending arms which terminate in inwardly turned hooks, projections on the clasp which extend upwardly through the top of the cap, and a lever connected therewith whereby said clasp may be drawn up tightly within the cap and causing the said arms to be slightly bent over the rim of the cap as a fulcrum thereby drawing the ends of the hooks inwardly into closer relation with each other, and a layer of resilient material on the under side of the clasp.

1,346,511. WHEEL OR PULLEY. RICHARD HAWKE ROGERS, London, England. Filed Apr. 23, 1918. Serial No. 230,365. 8 Claims. (Cl. 64—17.)



1. A pulley comprising similar end-disks, each disk having waved annular corrugations on both faces of the plate and being provided with tab-receiving slots, and a strip of rigid sheet material with lateral tabs bent into tubular form with the opposite ends of the tube clamped between the faces of the disks and engaged by the corrugations thereof and with the lateral tabs engaged in the tab-receiving slots.

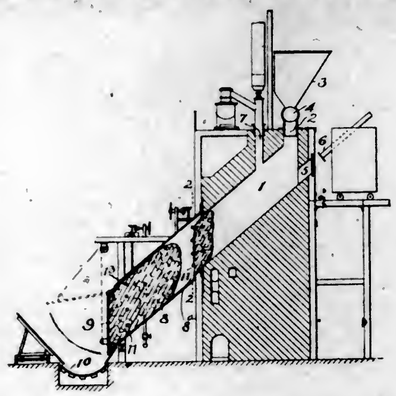
1,346,512. CULTIVATOR. CHARLES S. SHARP, Auburn, N. Y., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed Dec. 24, 1917. Serial No. 208,679. 4 Claims. (Cl. 97—35.)

1. In a cultivator, a frame, a tongue vertically hinged thereto, means for raising and lowering the tongue with respect to the frame, a segment carried by the frame and forming a guide for the end of the tongue.

1,346,513. SCALE-HOLDER. ALEX SIMONS, Detroit, Mich. Filed Feb. 27, 1919. Serial No. 279,632. 9 Claims. (Cl. 24—3.)

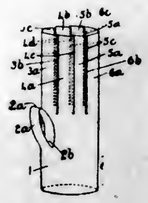
2. A scale holder comprising a pair of superposed plates respectively formed upon opposed lateral edges with a pair of coacting jaws for engaging a scale, spring means for closing said jaws upon the scale, a releasing lug projecting from one of said jaws, and means for attaching the holder to a garment.

1,346,514. VEHICLE-TIRE. WILLIAM SMALL and JOHN G. SMALL, Paterson, N. J. Filed Dec. 12, 1919. Serial No. 344,289. 2 Claims. (Cl. 152—8.)



2. In combination, with a fixed tire-supporting part of a wheel, arched spring members arranged at intervals around said part and having their end portions folded inwardly upon themselves and terminating in curves having their convex faces toward each other, the folds of said end portions being opposed to opposite surfaces of said part facing sidewise of the wheel, a hollow resilient tire shoe open continuously thereof at the inside and fitted over said springs and having its edge portions flanking the folds thereof, and means to clamp said spring-folds and the shoe edge-portions to said part.

1,346,515. APPARATUS FOR PRODUCING COKE. ARTHUR M. SMITH, Cleveland, Ohio. Filed June 2, 1917. Serial No. 172,374. 6 Claims. (Cl. 202—9.)



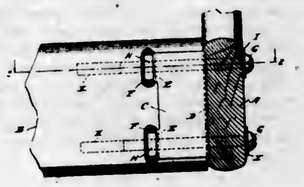
1. An apparatus for coking and quenching coal comprising a coking chamber having an inlet whereby coal may be fed to the same, also having an outlet, a quenching chamber permanently associated with the coking chamber and forming in effect an extension of the coking chamber, a gate adjacent the outlet of the coking chamber, said gate being adapted to be moved transversely of the coking chamber, a similar gate associated with the quenching chamber adjacent the lower portion thereof, and an airtight door closing the lower portion of the quenching chamber and excluding the air from said quenching chamber.

6. The process which consists in coking coal in a coking chamber provided with a quenching chamber permanently in alinement therewith, severing a portion of a previously coked mass and holding the same as a plug at the end of a coking chamber against which plug the new charge to be coked may rest, and permitting a previously

coked mass to pass into the quenching chamber and be separated from the said coke plug by an air space and maintaining this relationship until the mass in the quenching chamber is sufficiently cool.

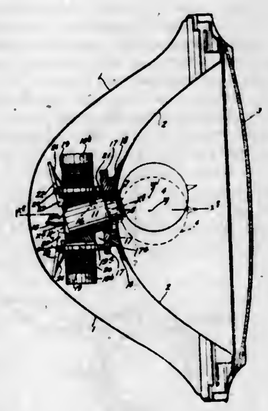
1,346,516. KNITTED GLOVE AND METHOD OF PRODUCING THE SAME. GODFREY STIBBE, Leicester, England. Filed Aug. 8, 1916. Serial No. 113,728. 6 Claims. (Cl. 66—4.)

4. As a new article of manufacture, a machine knitted glove, comprising a seamless tubular hand, an integral thumb, a series of fingers knitted in the flat and with selvaged edges as jointless continuations of the tubular hand, the aggregate loops in the courses of the combined fingers being greater than the number of loops in the courses of the hand, and the thumb being seamed upon two opposite sides and at the extremity.



1,346,517. KNITTED GLOVE AND METHOD OF PRODUCING THE SAME. GODFREY STIBBE, Leicester, England. Original application filed Aug. 8, 1916, Serial No. 113,728. Divided and this application filed Mar. 12, 1920. Serial No. 365,310. 12 Claims. (Cl. 66—4.)

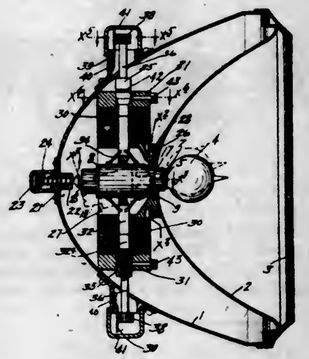
1. A knitted glove formed in one continuous piece and having a circularly knit seamless wrist and hand and



fingers integral with the hand, at least one of the finger strips being seamed on the hand at the base of one side only of such finger or fingers.

1,346,518. LADDER. CLAUDE M. WAGGONER, Riverside, Calif., assignor of one-half to Isaac B. Potter, Riverside, Calif. Filed Dec. 26, 1919. Serial No. 347,268. 6 Claims. (Cl. 228—58.)

1. In a ladder, the combination with a stile, a step, and a joint plate engaging the lower side of said step and having on one side a flange extending over the end face of the step and on the other side a projection extending into a recess in the lower side of the step, of a bolt extending through the stile, said flange, said projection and the intervening portion of the step to bind stile and step together.

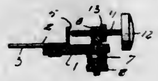


1,346,519. HEADLIGHT. OVERTON WINSTON, Minneapolis, Minn. Filed Mar. 27, 1916. Serial No. 86,851. Renewed Dec. 12, 1919. Serial No. 344,463. 10 Claims. (Cl. 240—44.)

1. A lamp holding socket comprising a relatively fixed sleeve and a lamp holding collar having threaded engagement therewith, in combination with a lamp rotatably adjustable in said collar and adapted to be set therein in different rotary adjustments in respect thereto.

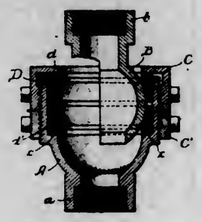
1,346,520. HEADLIGHT. OVERTON WINSTON, Minneapolis, Minn. Filed Dec. 2, 1915. Serial No. 64,661. Renewed Dec. 12, 1919. Serial No. 344,464. 13 Claims. (Cl. 240—44.)

1. In a headlight, the combination with a reflector and a lamp, one of said members being movable axially in respect to the other, one of said members being movable transversely of the axis of said reflector, and the said lamp being rotatably adjustable on its axis, independently



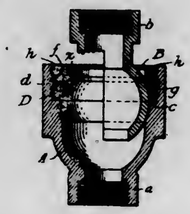
of said other adjustments and without changing its adjustment longitudinally of its axis.

1,346,521. GOVERNOR. WALTER H. YOUNG, Highland Park, Mich. Filed Mar. 28, 1918. Serial No. 225,168. 16 Claims. (Cl. 137—152.)



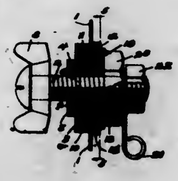
10. The combination with a gas engine having periodic suction operation, the rate of which is proportional to the engine speed, of a governor for such an engine comprising a vibrator member deriving alternating reversed periodic impulses from the suction of the engine.

1,346,522. AUXILIARY SPARK-GAP. HARVEY P. ALTMAN, Findlay, Ohio. Filed Mar. 30, 1918. Serial No. 225,814. 1 Claim. (Cl. 175—183.)



A spark plug gap comprising an insulated base, a plate secured to one end of the base and having one end projecting beyond said base and bifurcated to form a pair of spaced resilient gripping arms adapted to engage the electrode of a spark plug, said plate having its other end disposed at right angles to form an auxiliary stationary electrode, a member having a threaded shank extending through the base and receiving a nut for securing an electrical feed wire thereto, a threaded auxiliary movable electrode adjustably carried by the member, and a nut threaded on the movable electrode for locking the same in adjusted positions.

1,346,523. COMPOSITE NON-METALLIC GASKET. FRANCIS NORWOOD BARD, Highland Park, Ill. Filed Aug. 30, 1919. Serial No. 320,752. 15 Claims. (Cl. 285—91.)

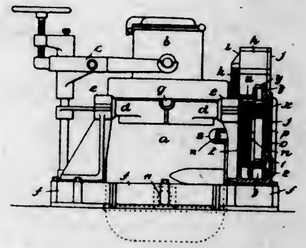


1. A composite non-metallic gasket comprising, in combination, a relatively softer wearing surface adapted to conform to a seat and a relatively harder and rigid non-metallic facing united thereto to prevent distortion thereof.

1,346,524. COMPOSITE NON-METALLIC GASKET. FRANCIS NORWOOD BARD, Highland Park, Ill. Filed Nov. 1, 1919. Serial No. 335,020. 17 Claims. (Cl. 285—91.)

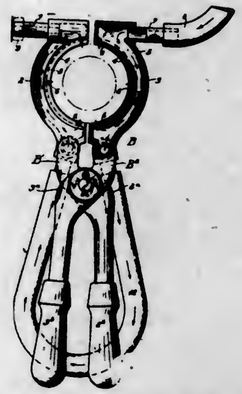
1. In a stuffing-box, the combination with an interiorly threaded casing, and a member movable therein, of an exteriorly threaded self accommodating packing for preventing the passage of fluid between said movable member and casing.

1,346,525. BINDING-POST. FRANK G. BEETEM, Washington, D. C. Filed Feb. 6, 1919. Serial No. 275,348. 1 Claim. (Cl. 173—259.)



A binding-post consisting of a centrally apertured insulating member having a reduced portion on one side thereof adapted to project through the opening in the binding-post support, notches in the periphery of said reduced portion adapted to engage projections in said support opening, a nut adjacent the other face of said insulating member, means connecting said nut and insulating member, an insulating washer adapted to fit on the reduced portion of said insulating member, a bolt extending through all of said members and the support, means connecting said nut to the bolt, said connecting means being held in place by said first mentioned insulating member, means on said bolt for drawing said insulating members into clamping engagement with the support, and conductor-engaging means on said bolt.

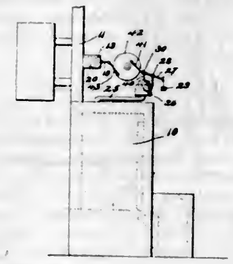
1,346,526. STOVE-LEG. LU ELLA BENNETT, Sutherland, Mont. Filed July 6, 1917. Serial No. 178,988. 1 Claim. (Cl. 126—304.)



A stove leg comprising an inclined body portion of arcuate form in cross section, a laterally projecting flange extending in one direction from the upper end of the body portion and adapted to be secured to the body of a stove, a hollow supporting base formed at the lower end of said body portion and offset from said flange, a bracket carried by said supporting base, a caster mounted in said bracket, an arm pivotally mounted on said supporting base, and a pin carried by said arm and adapted to engage said caster to prevent rotation thereof.

1,346,527. SMELTING-FURNACE. DOUGLAS BROOKFIELD, Holloway, London, England. Filed Mar. 21, 1919. Serial No. 284,195. 2 Claims. (Cl. 263—12.)

1. In a smelting furnace of the tip-axis type, the combination with the blowing mechanism of tilting mechanism comprising a set of gear wheels mounted at the axis on which the furnace is tilted, a second set of gear wheels driven thereby, a spindle on which said second set of gear wheels is mounted, said spindle being connected to the furnace at a distance from the tilting axis, a plurality of sectoral racks engaging with said second set of gear wheels, and means for driving the first set of gear wheels.



1,346,528. GLASS-SEVERING IMPLEMENT. HARRY M. BROWN, Brooklyn, N. Y., assignor to Spring Stopper Company, Brooklyn, N. Y., a Corporation of Delaware. Filed Aug. 20, 1919. Serial No. 318,670. 4 Claims. (Cl. 49—14.)

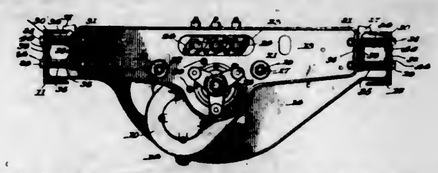
1. An implement of the character set forth, comprising a pair of pivotally-connected levers equipped with jaws

provided with channels and having perforations opening at their biting surfaces, and means for circulating cooling fluid through said channels.

1,346,529. AUTOMATIC GAS-PRESSURE REGULATOR. HERMAN BURGI, Springfield, Mass., assignor of one-half to Charles H. Tenney, Springfield, Mass. Filed Nov. 24, 1919. Serial No. 340,428. 7 Claims. (Cl. 236—15.)

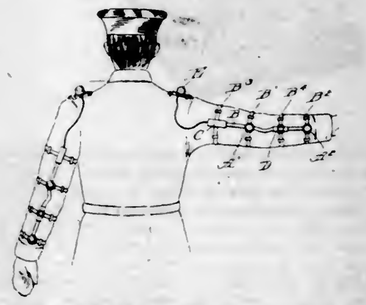
1. A valve structure comprising a conduit having a passageway therethrough and a valve chamber extending laterally therefrom, a rolling valve resting and rolling on the bottom of said valve chamber and having a projection adapted to extend across and close said passageway when the valve is rolled to one end of its path of travel and to open said passageway when rolled in the other direction.

2. A valve structure comprising a conduit having a passageway therethrough and a valve chamber extending laterally therefrom, a substantially balanced rolling valve resting and rolling on the bottom of said valve chamber and having a projection adapted to extend across and close said passageway when the valve is rolled to one end of its path of travel and to open said passageway when rolled in the other direction.



3. A valve structure comprising a conduit having a passageway therethrough with a valve chamber extending therefrom laterally of the same width as said passageway and having a bottom or floor, a valve extending across said valve chamber having a transversely curved portion adapted to roll on said floor and a projecting portion adapted to extend across said passageway in contact with the walls thereof to close the same when said valve is rolled to proper position.

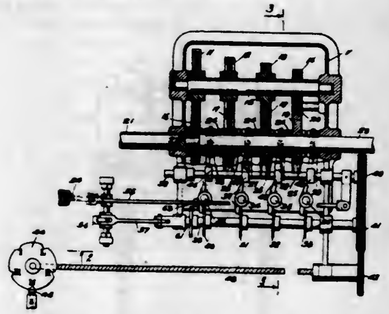
4. A valve comprising a semi-cylindrical portion and a tangential projecting portion, the material on the side including the projection being only such as will substantially balance that on the other side of the center of the semi-cylindrical portion whereby the valve will roll easily carrying the projection through a considerable arc and will unaided remain in adjusted position.



5. A pressure and vacuum control mechanism comprising a fluid conduit having a valve chamber extending laterally therefrom, a substantially balanced rolling valve resting and rolling on the bottom of said valve chamber and having a projection adapted to extend across and close said conduit when said valve is rolled to one end of its path of travel, means connected to said valve for rolling it and extending to the exterior of said valve chamber and automatic pressure or vacuum controlled means for operating said rolling means.

1,346,530. MOTOR-VEHICLE. HAROLD D. CHURCH, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 29, 1917. Serial No. 194,033. 15 Claims. (Cl. 180—70.)

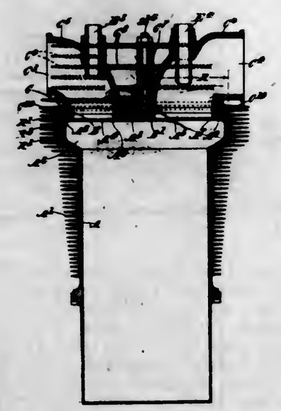
1. The combination with a motor vehicle frame of a gear set casing and means for supporting the same from the said frame comprising a beam member carried by the frame secured to one end of the casing and a beam of channel section swivelly supporting the other end of the casing, the flanges of said channel beam extending toward the casing, the top flange being adjacent the top of the casing, and the bottom flange the bottom of the casing.



1,346,531. PORTABLE SIGNAL SYSTEM. BENJAMIN W. DAVIS, Chicago, Ill. Filed Mar. 28, 1916. Serial No. 87,182. 3 Claims. (Cl. 177—329.)

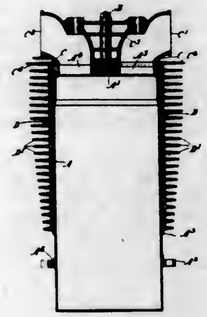
1. In a portable signal system, the combination with a battery, of a plurality of electric lamps, means for supporting said lamps in spaced relation upon the arm of an operator, an automatic switch secured to the arm of the operator for controlling said circuit upon predetermined movements of the operator's arm, another lamp mounted upon the operator, and a normally-closed circuit for said last-mentioned lamp.

1,346,532. GEAR-SHIFT. WILLIAM GEO. DRUMMOND, Los Angeles, Calif. Filed May 19, 1919. Serial No. 298,220. 9 Claims. (Cl. 74—59.)



1. In a device of the character described, the combination with a shaft clutch actuating member, and a constant mesh gear set including a series of gear clutches operating in connection with certain of the gears of said set, of a pair of shafts shiftable lengthwise by the said shaft clutch actuating member, means carried by one of said shafts to shift the several gear clutches in one direction, means carried by the other shaft to engage the clutch actuating member to shift the gear clutches in the opposite direction, and means for manually rotating said shafts to bring selected clutch actuating means into operative position.

1,346,533. METHOD OF AND MEANS FOR PRESERVING TOBACCO. CALEB C. DULA, New York, N. Y., assignor to Liggett & Myers Tobacco Company, New York, N. Y., a Corporation of New Jersey. Filed June 9, 1920. Serial No. 387,636. 2 Claims. (Cl. 131—11.)

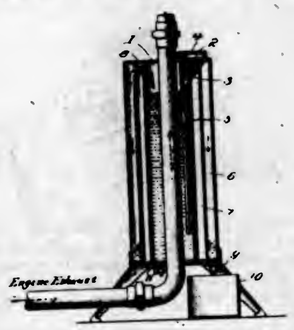


1. As a new product of merchandise, a hermetically-sealed package of manufactured tobacco comprising an original pocket package bearing on its outer surface suitable indicia designating the particular tobacco brand inclosed within the package, a readily removable wrapper of porous paper folded about and completely covering said package and having predetermined portions adhesively connected to maintain the wrapper in position about the package, and a coating of paraffin applied to the outer surface and closing the spaces between the folds of said removable wrapper to hermetically seal the same throughout, the construction and arrangement of the elements being such that the said brand designation will be visible through the paraffin coating and outer wrapper when the latter is in position upon the package in order that the brand may be readily distinguished, and which outer wrapper may be easily torn away leaving the original package with its brand indicia intact.

1,346,534. INTERNAL-COMBUSTION ENGINE. ALFRED HUBERT ROY FEDDEN, Bristol, England. Filed Nov. 21, 1918. Serial No. 263,590. 5 Claims. (Cl. 123—171.)

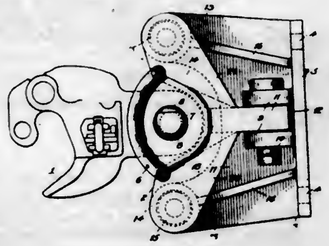
5. In an internal combustion engine the combination of a steel cylinder having the highest portion of its head formed integral with it as a flat plate devoid of upstanding projections, an aluminium cap stiffened against buckling by hoods for inlet and exhaust passages and a central pillar or pillars and parallel radiation fins connecting them all formed integral with the cap, said cap further having a flat bottom plate devoid of upstanding projections but with a radiation fin extending around its periphery, each of said flat plates being formed with ports and with annular recesses around two ports on the opposed faces of the plates, copper rings adapted to enter said annular recesses, and means securing the cap to the cylinder head both at the center and around the edge with the said flat plates in intimate contact with one another substantially as set forth.

1,346,535. CYLINDER FOR INTERNAL-COMBUSTION ENGINES. ALFRED HUBERT ROY FEDDEN and LEONARD FREDERICK GEORGE BUTLER, Bristol, England, assignors of one-third to The Cosmos Engineering Company Limited, Bristol, England. Filed July 3, 1919. Serial No. 308,639. 4 Claims. (Cl. 123—171.)



4. For an internal combustion engine, a cylinder comprising in combination, a cylindrical steel barrel having a smooth outer wall and a flat end, an aluminum cap stiffened against buckling by hoods and pillars all tied together by parallel radiation fins secured on the said flat end, and a sleeve formed of aluminum and shrunk onto said barrel, and provided with radiating fins machined on it after it is secured on the barrel.

1,346,536. TOOTHBRUSH. JOHN J. FITZ-GIBBON, Holyoke, Mass. Filed Apr. 12, 1919. Serial No. 289,562. 2 Claims. (Cl. 15—39.)



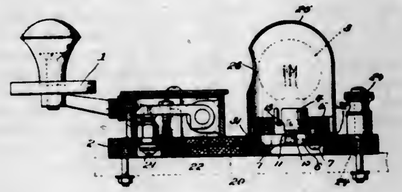
1. A tooth brush having a head formed with a longitudinal opening extending transversely thereof and provided on each side of said opening with a longitudinal row of brush tufts, each row being inclined toward the longitudinal median line of the brush head, the ends of the brush tufts being disposed adjacent to each other and of V-shaped formation.

1,346,537. SYSTEM OF WATER DISTILLATION. ALAN E. FLOWERS, Columbus, Ohio. Filed Apr. 11, 1919. Serial No. 289,456. 4 Claims. (Cl. 203—5.)

2. A still comprising in combination, a central boiler, heating means therefor, a condensing chamber surrounding said boiler and in open communication with the steam space thereof, and an air space between said boiler and the condensing chamber.

1,346,538. RAILWAY DRAFT APPLIANCE. ENOCH GEORGE, Jr., Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 16, 1920. Serial No. 374,342. 11 Claims. (Cl. 213—42.)

1. In a railway draft appliance, the combination with a bracket member which is adapted to be rigidly secured to a car, of a coupler supporting member, a horizontally extending pivot pin for pivotally connecting said members so as to permit said coupler supporting member to swing vertically with respect to said bracket, yielding means interposed between said coupler supporting member and said bracket for supporting said coupler supporting member, a car coupler extending forwardly from said coupler supporting member, and a vertically extending pivot pin connecting said coupler and said coupler supporting member in advance of the pivotal connection of said coupler supporting member and bracket.

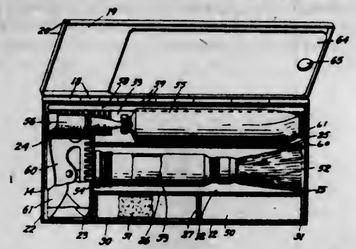


1,346,539. FAIR-LEAD. GEORGE FRANCIS GRAY, Pittsburgh, Pa. Filed Apr. 22, 1919. Serial No. 291,985. 1 Claim. (Cl. 173—324.)

A fairlead comprising in combination, a tubular, insulating member having an enlarged upper portion, a current-conducting tube fixedly mounted in said insulated member and having a threaded portion projecting above the enlarged portion of said insulating member, a second insulating member removably mounted on the lower portion of said first mentioned insulating member, and adapted to coöperate with the enlarged portion of the latter to clamp the fair-lead to its support, a nut mounted on the threaded portion of said current-conducting tube and partially embedded in said first mentioned insulating member, means for maintaining the exposed end of an electrical conductor in contact with said nut, a clamping ring provided with a groove adapted to coincide with a groove in the upper end of said first mentioned, insulating member, said grooves forming an opening through which

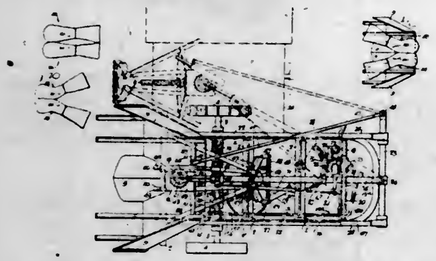
said electrical conductor passes, and a cap removably mounted on the threaded portion of said current-conducting tube above said clamping ring for forcing the latter in clamping position about the insulation of said electrical conductor.

1,346,540. SIGNALING APPARATUS. GEORGE FRANCIS GRAY, Pittsburgh, Pa. Filed May 20, 1919. Serial No. 298,510. 1 Claim. (Cl. 178—2.)



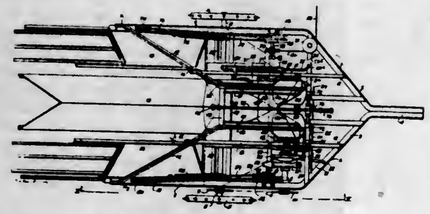
The combination of a telegraph-sending key, a base on which said key is mounted, said base being provided with a circular raised portion, an electric lamp mounted in said raised portion, a shield for said lamp having a restricted opening therein for observing said lamp, pins projecting horizontally from said raised portion, corresponding bayonet slots in the lower edge of said shield adapted to engage with said pins, springs in said base adapted to exert an upward pressure on the lower edge of said shield when the same is in place, electrical conductors connecting said lamp in parallel with the contacts of said sending-key, and binding-posts on said base to which said conductors are connected from said lamp.

1,346,541. TOILET-ACCESSORY CONTAINER. MARCELLE J. HARDING, New York, N. Y. Filed July 5, 1919. Serial No. 308,695. 1 Claim. (Cl. 206—15.6.)



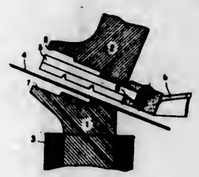
As a new article of manufacture, a box body having a plurality of partitions dividing it into compartments, the said partitions extending upwardly to the same level, and a cover adapted to engage the upper edges of said partitions when it is down, sundry of said compartments communicating with each other when the cover is down, through openings in the respective partitions, and the wall of the body having openings leading to two of said communicating compartments, whereby a circulation of out-

side air may be effected through said communicating compartments, the wall of the body being further provided



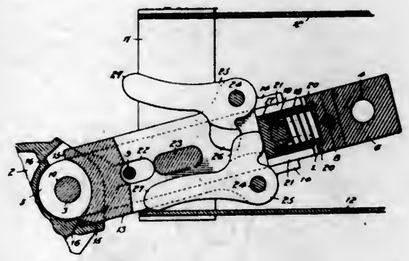
with an opening leading to one of the other compartments, and being imperforate where it bounds still another compartment.

1,346,542. GRAIN-SHOCKER. GEORGE INNES and JAMES H. PRALL, Philadelphia, Pa. Filed Apr. 4, 1917. Serial No. 159,614. Renewed Dec. 4, 1919. Serial No. 342,475. 34 Claims. (Cl. 56—417.)



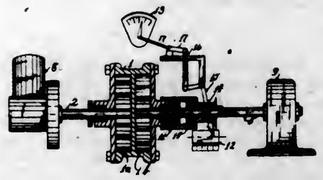
1. In a shocking machine, the combination of a frame, a shock-forming crib or basket flexibly connected to said frame, a shaft, a cam segment carried by the shaft, a member connected to the basket and passing over said shaft; said member being connected at its opposite end to the cam segment, and tension means carried by the shaft and operatively connected between said cam segment and the frame whereby said basket may be returned to its elevated position when relieved of the weight of the shock.

1,346,543. GRAIN-SHOCKER. GEORGE INNES and JAMES H. PRALL, Philadelphia, Pa. Filed Sept. 5, 1917. Serial No. 189,775. 15 Claims. (Cl. 56—410.)



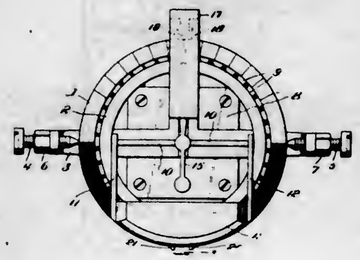
1. In a grain shocker, the combination of a frame, traction wheels therefor, a basket disposed at the rear of said frame, a tiltable receiving member at the side of said frame, means for delivering sheaves thereto, inclined supplemental means for receiving sheaves from said tiltable member, means for actuating the latter twice in succession to deliver one sheaf after another to said supplemental receiving means which holds two sheaves, and downwardly and rearwardly operating sweep plates for moving the sheaves in groups of two rearwardly from said supplemental means to the basket; said supplemental receiving means being yieldingly supported for the passage of said sweep plates.

1,346,544. MAGNETIC ORE-SEPARATOR. AUGUST F. JOBKE, Pittsburgh, Pa. Filed Apr. 24, 1918. Serial No. 230,604. 13 Claims. (Cl. 83—71.)



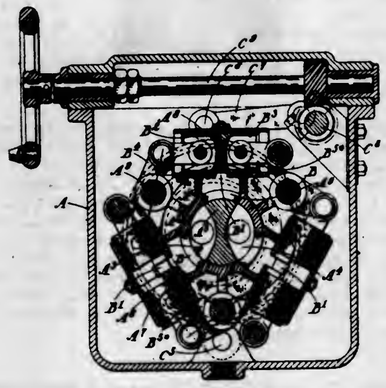
1. In a magnetic separator a separating member between upper and lower magnet-poles, having its largest dimension and a lower collecting-edge in the direction of the flow of ore and its smallest in the direction of its movement at right angle thereto and to the flow of flux.

1,346,545. DRAFT APPLIANCE FOR RAILWAY-VEHICLES. WILLIAM KELSO and JOSEPH KELSO, Pittsburgh, Pa., assignors to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 30, 1920. Serial No. 369,933. 10 Claims. (Cl. 213—42.)



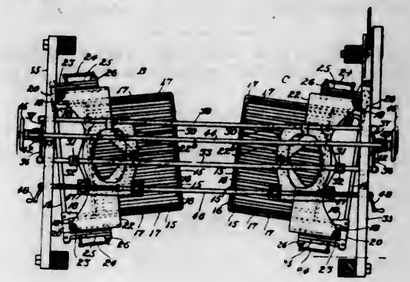
1. In a railway draft appliance, the combination with a coupler having a head and stem and which is adapted to be connected to a railway vehicle so as to swing laterally with respect thereto, of means mounted on said stem for normally maintaining the latter in centralized position, said means involving a spring mounted upon and extending in the direction of length of said stem, and a plurality of independently movable levers pivotally mounted upon opposite sides of the longitudinal axis of said stem and each adapted to energize said spring.

1,346,546. SHOCK-ABSORBER AND DYNAMOMETER FOR POWER TRANSMISSIONS. AUGUST J. KLONECK, New York, N. Y. Filed Dec. 29, 1915. Serial No. 69,227. 23 Claims. (Cl. 265—25.)



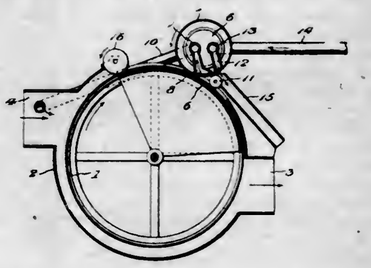
1. A device of the character described comprising a casing having circular chambers at each side thereof, a revoluble part in each chamber adapted to be operated by shafts, leading into each chamber and springs arranged operatively between said casing and said revoluble parts within said chambers.

1,346,547. AUTOMATIC ANGLE-INDICATOR. JAMES REGINALD LACKLAND, Creston, Iowa. Filed May 6, 1919. Serial No. 295,141. 3 Claims. (Cl. 33—215.)



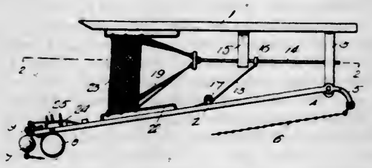
1. An automatic angle indicator comprising in combination, a ball-bearing, means for supporting said bearing at its horizontal axis for pivotal movement about one of the diameters, a weight eccentrically located on the inner ring of said ball-bearing, whereby to maintain the bearing in a vertical position, pointer means rigidly attached to the inner ring of said ball-bearing, the outer ring of the bearing having graduations with which said pointer means are adapted to coöperate, a graduated sector rigidly attached to said supporting means and lying in a plane perpendicular to that of said ball-bearing, and pointer means on the outer ring of said bearing adapted to coöperate with the graduations on said sector.

1,346,548. HYDRAULIC PUMP. FREDERICK LANPLOUGH, Feltham, England, assignor to Hydro-Dynamics Limited, London, England. Filed Apr. 28, 1919. Serial No. 293,371. 12 Claims. (Cl. 103—44.)



1. In a rotary hydraulic pump the combination of a driving shaft, a plurality of engine-cylinders mounted at different angular positions thereon with their longitudinal axes in a plane transverse to the axis of the shaft, a pair of opposed pistons in each cylinder, two circular guides surrounding the shaft and adapted to be moved into oppositely eccentric positions relatively thereto and means operatively connecting one piston in each cylinder to one guide and the other piston in each cylinder to the other guide, so that the pistons are reciprocated in opposite phase by the eccentric guides.

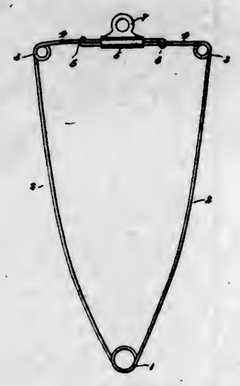
1,346,549. DEVICE FOR OPENING AND GUIDING WEBS OF CLOTH, &c. WILLARD I. LEWIS, Walpole, Mass. Filed Apr. 12, 1916. Serial No. 90,759. 18 Claims. (Cl. 26—8.)



1. Apparatus for opening and spreading a traveling web, comprising, in combination, web-contracting means by which the web is positively held narrowed widthwise within substantially less than its normal breadth, a roll or set of rolls to which a web-margin extends obliquely outward from said web-contracting means, said roll or set of rolls revolving upon a forwardly-inclined axis or axes and operating to open and spread the web from its abnormally narrow state to its full width and means for producing engagement between the roll or rolls and the web.

1,346,550. SCREEN PICKUP-ROLLER. GEORGE W. MARTIN, Fort Worth, Tex. Filed Nov. 17, 1919. Serial No. 338,557. 2 Claims. (Cl. 13—17.)

1. The combination with a condensing apparatus comprising a housing having inlet and outlet trunks, a screen cylinder rotatably mounted in said housing, and a cut-off for the cylinder, of a pickup roller having its circular wall made of screening and engaging the condensing cylinder, a suction nozzle within said roller having its mouth adjacent the inner wall thereof, means for connecting said nozzle with the inlet trunk of the housing, a blast nozzle within the roller and means for supplying a blast of air through said nozzle.

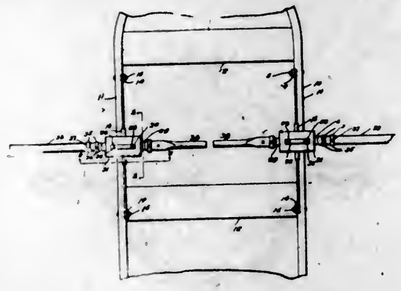


1,346,551. TORPEDO-TRAP. VERE HAMMOND MASTERS and MILO GLENN SHOOP, Sioux Falls, S. D. Filed Mar. 20, 1918. Serial No. 223,541. 4 Claims. (Cl. 114—240.)

4. A device of the character specified, comprising upper and lower sections hinged together at one end, a buoy for

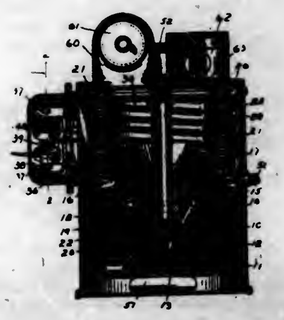
the free end of the lower section, a counterweight connected with the said end for normally submerging the same, a net suspended between the sections, and releasable means for the counterweight controlled by the movement of the net under the impact of a torpedo.

1,346,552. NECKTIE-STRETCHER. FRED F. METCALF, Chicago, Ill. Filed July 19, 1919. Serial No. 311,993. 2 Claims. (Cl. 223—19.)



1. A stretcher for the purpose described, the same being formed of a single length of spring-wire bent at an intermediate point to form a coiled eye and a reduced entering-end, upwardly disposed beyond said eye to form opposite diverging companion terminals, the latter at corresponding points being bent to form corresponding coils and beyond them inwardly laterally disposed overlapping portions terminating in oppositely disposed eyes, the eye of one of said portions receiving the laterally disposed portion of the companion terminal, whereby a freely slidable connection between said overlapping portions is formed, and a sleeve loosely receiving said overlapping portions of the terminals and in which the latter are freely slidable, said sleeve being provided with a suspension-eye and being positioned between the eyes of the overlapping portions of the terminals and forming abutments therefor.

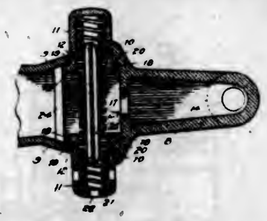
1,346,553. ELECTRIC SWITCH. (FLUSH, SURFACE, PUSH-BUTTON.) WILLIAM J. NEWTON, Bridgeport, Conn., assignor to Harvey Hubbell, Incorporated, Bridgeport, Conn., a Corporation of Connecticut. Filed Nov. 18, 1918. Serial No. 262,958. 15 Claims. (Cl. 200—67.)



1. In a switch, the combination of a swinging contact member, a swinging actuating member, an operating member, a toggle arm one end of which is pivoted to the operating member, the other end having operative connection with the actuating member, the operating member and the toggle arm comprising a toggle joint, coöperative engaging parts on the contact and actuating members spaced in inoperative positions, and means acting to cause the actuating member to be accelerated to strike the contact member when the toggle joint is swung past its dead center in either direction, the contact member remaining in either the open circuit or closed circuit position until it receives the blow of the actuating member.

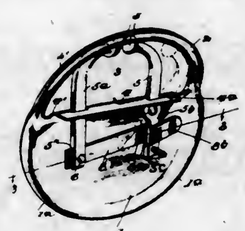
1,346,554. BOAT-OAR. DAVID D. PAICE, Norman, Okla. Filed Oct. 1, 1919. Serial No. 327,617. 7 Claims. (Cl. 9—24.)

1. An oar of the class described including a support, a carriage adjustably carried by the support, a plate horizontally pivoted to the carriage, a pair of toothed segments vertically pivoted to the plate, and handles and oars secured to the segments.



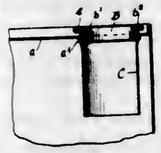
1,346,555. ELECTRICALLY-ACTUATED PUMP. DONALD H. REEVES, Dayton, Ohio. Filed Nov. 29, 1918. Serial No. 264,650. 3 Claims. (Cl. 103—67.)

1. In combination: a pump comprising an expansible cylinder, one end thereof being secured to a stationary head, the other end being free to move longitudinally and closed by a head; an electro-magnet, an armature connected to the free cylinder head, said armature being attracted and moved by the magnet when the latter is energized, thereby expanding the cylinder, a spring located within the head and constantly tending to contract the cylinder, a switch, and connecting means whereby when the cylinder has been expanded to a given point the switch is opened, and when the cylinder is contracted to a given point the switch is closed.



1,346,556. DRAFT-RIGGING. WILLIAM J. REGAN, Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 28, 1919. Serial No. 320,452. 8 Claims. (Cl. 213—42.)

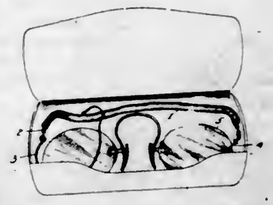
1. In mechanism of the character indicated, the combination with a coupler having a hollow integral shank provided upon opposite sides with apertures affording communication with the interior of said shank, of means for centralizing said shank with respect to the car, said means involving spring-boxes mounted on said shank and respectively projecting outwardly through said apertures, the hollow portion of said shank in advance of said spring-boxes constituting a passage which is open at the forward end of said shank and communicates with said apertures, and said passage being adapted to receive said



spring-boxes at its forward end and to permit said boxes to be moved rearwardly therein and respectively entered in said apertures.

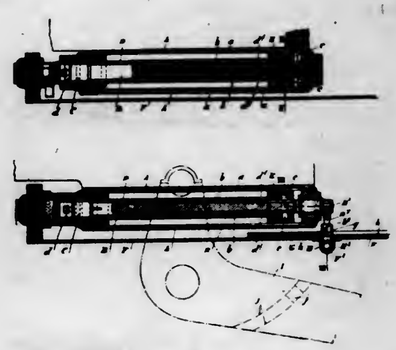
1,346,557. CALF AND COLT WEANER. JOHN REICHERT, Racine, Wis. Filed Oct. 2, 1919. Serial No. 327,855. 10 Claims. (Cl. 119—132.)

10. A weaner comprising a guard plate, suspending fingers rising therefrom and having shanks extending down along the surface of said plate and secured thereto, one of said fingers being swingable on an axis located between its opposite ends, one of said ends forming a locking bolt having a lateral shoulder, and a plate spring pressing against said plate and secured thereto with its free end extending transversely over said locking bolt and offset above said lateral shoulder, said lateral shoulder arranged to bear upwardly against the lower edge of said offset to lock the swingable finger in operative position, said bolt arranged to swing toward the secured end of the spring and between the spring and plate when released and swung toward opened position.



1,346,558. MEASURING ATTACHMENT FOR CANS. PAUL M. ROSENWASSER, Cleveland, Ohio, assignor to The Maurice Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 25, 1919. Serial No. 313,178. 2 Claims. (Cl. 220—24.)

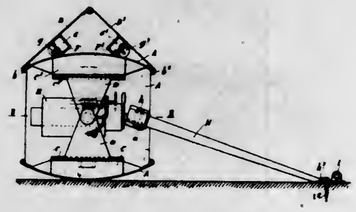
1. The combination of a can having an orifice, a cap having a depressed portion adapted to enter the orifice, and having an outward flange at its upper edge, and a tubular extension having an open end remote from said cap and having a flange at its upper edge rigidly secured to said cap, said cap and extension comprising a measuring device.



2. The combination of a can having an opening, a cap having a depressed central portion, a vertical wall and an outward flange, a tubular extension surrounding said vertical wall, and having an outward flange at its upper end, the flange of the cap being curled over and beneath the flange of the extension, the extension below the cap being adapted to loosely pass through the flange of the can and the portion of the extension surrounding the wall of the cap being adapted to make a frictional snug engagement with the flange of the can.

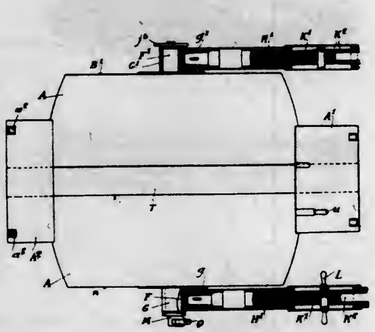
1,346,559. EYEGLASS-CHAIN. ARCHIE SCOTT, Ocala, Fla. Filed Mar. 31, 1920. Serial No. 370,318. 2 Claims. (Cl. 88—41.)

1. A guard for eye-glass chains comprising a continuous coil of metallic wire to form a flexible tubular casing having an internal diameter to loosely receive the chain longitudinally therethrough and adapted to maintain the same in distended position.



1,346,560. BRAKE FOR GUNS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Mar. 31, 1919. Serial No. 286,496. 2 Claims. (Cl. 89—43.)

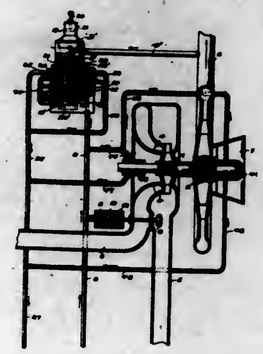
1. In brake apparatus for guns, the combination of a brake cylinder having in its wall tapering throttling grooves of comparatively short length, a valved counter-rod fast at one end of the brake cylinder and having tapering throttle grooves of greater length than the grooves in the brake cylinder wall, a piston cylinder entering the brake cylinder and open to the same and receiving the counter-rod, said piston cylinder and counter-rod being angularly movable in respect to each other, and a piston head on the piston cylinder to throttle the flow of fluid through the grooves of both the brake cylinder wall and the counter-rod, the latter extending through the piston head, the piston head having passages continuously open at one end to the brake cylinder space on one side of the piston head and the other end of said passages positioned to register more or less with the grooves of the counter-rod or closed altogether by relatively angular displacement of the counter-rod and the piston cylin-



der, the grooves of the counter-rod and the passages through the piston head constituting a conduit for the flow of fluid from one side of the piston head to the other side separate from the grooves in the brake cylinder wall, the controlled flow of the fluid through said conduit operating to regulate the recoil of the gun.

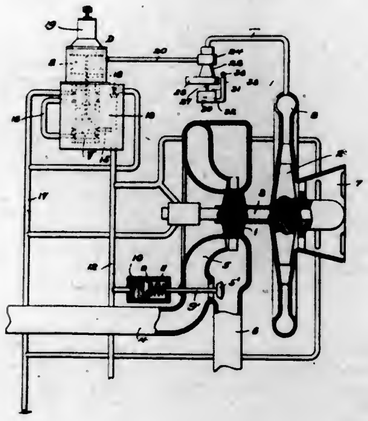
1,346,561. GUN FOR ACCOMPANYING ATTACKING TROOPS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Oct. 24, 1919. Serial No. 333,103. 8 Claims. (Cl. 89—40.)

1. In a gun mount, the combination of a barrel-shaped gun casing adapted to roll over the ground, trunnion bearings supported in axial alinement of said casing, trails adapted to engage said bearings to serve as shafts for traveling and to serve as anchoring trails for firing.



1,346,562. GUN FOR ACCOMPANYING ATTACKING TROOPS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Feb. 28, 1920 Serial No. 362,114. 15 Claims. (Cl. 89—40.)

1. In a gun mount, the combination of a barrel-shaped casing adapted to roll on the ground for transportation and having in its periphery diametrically opposite openings, a gun mounted in the casing in line with said openings, and flaps for closing said openings to complete the periphery of the casing for rolling on the ground during transportation.

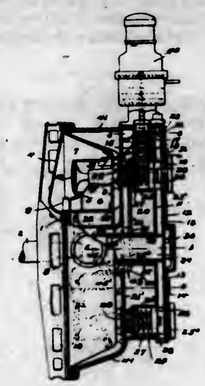


1,346,563. AUTOMATIC CONTROL FOR TURBO-COMPRESSORS. EARL H. SHERBONDY, Cleveland, Ohio. Filed Mar. 26, 1918. Serial No. 224,894. 22 Claims. (Cl. 103—91.)

3. In combination with an air compressor, means responsive to the atmospheric pressure and to the compressor pressure to control the compressor pressure, said means becoming operative when the compressor pressure exceeds the atmospheric pressure by a certain amount,

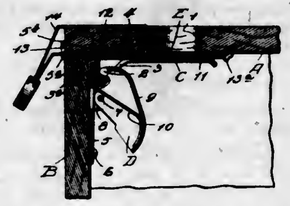
and means responsive to a standard pressure and to the compressor pressure to additionally control the compressor pressure.

1,346,564. SUPERCHARGING DEVICE FOR TURBO-COMPRESSORS. EARL H. SHERBONDY, Cleveland, Ohio. Filed Apr. 8, 1918. Serial No. 227,333. 10 Claims. (Cl. 103—91.)



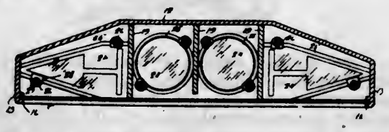
1. In combination, an air compressor, means responsive to the delivery pressure of said compressor to control the delivery pressure of said compressor and means responsive to the atmospheric pressure to influence said first-mentioned means to cause said compressor to deliver additional pressure.

1,346,565. TURBINE CONTROL-HOUSING. EARL H. SHERBONDY, Cleveland, Ohio. Filed May 14, 1918. Serial No. 234,557. 8 Claims. (Cl. 60—41.)



1. In a turbine control housing, means defining fluid pressure and fluid waste passages, mounting means for a turbine controlling element arranged to be actuated by variations of fluid pressure in said fluid pressure passage, means to vary the fluid pressure, a turbine controlling element mounted in said mounting means and mounting means for a turbine bearing carried by said housing, in combination with means, forming a part of said housing,

to carry a cooling medium on the side of the housing that faces toward the turbine, in order to prevent radia-



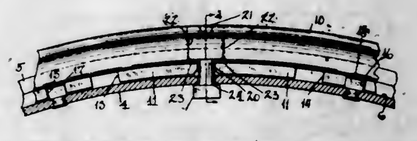
tion of heat from the turbine casing to the control housing.

1,346,566. BOX-FASTENER. ERNEST W. STAMM, St. Louis, Mo. Filed June 16, 1919. Serial No. 304,445. 6 Claims. (Cl. 292—128.)

1. A box or shipping case provided with a hinged lid that has a hole in same through which the user inserts his finger to release the lid, and a pivotally mounted catch for said lid arranged on the inner side of the front wall of the box and provided with a portion arranged below its pivot, on which the operator presses downwardly so as to render said catch inoperative.

1,346,567. AUTOMOBILE-SIGNAL. PAUL A. STOVER, Cleveland, Ohio. Filed Oct. 27, 1919. Serial No. 333,522. 9 Claims. (Cl. 40—132.)

1. In an automobile visual signaling device, a housing divided into a plurality of horizontal lamp compartments, signal lamps within said compartments adapted to be selectively illuminated, openings within the front and rear walls of each compartment, lenses within said openings, those in one compartment being of a different color from those in another, whereby signal lights may be visible from both front and rear, for indicating changes in speed.

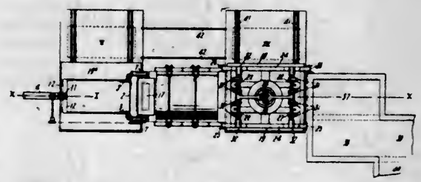


1,346,568. SKATE-SCABBARD ATTACHMENT. WILLIAM S. SWIFT, New York, N. Y. Filed Oct. 27, 1919. Serial No. 333,430. 1 Claim. (Cl. 46—53.)

In a skate scabbard a combination of two flexible rods each fastened respectively on the front and back of the scabbard; two loop-straps; a metal piece to which the back of each loop is firmly fastened, and which slides freely along the back rod; a stud; a metal piece which slides

freely along the front rod, and to which the stud is fastened; a clasp on the front of the strap which fits into the stud, substantially as set forth in the foregoing specification.

1,346,569. VEHICLE-WHEEL RIM. JOSEPH C. THEBERATH, Cleveland, Ohio, assignor, by mesne assignments, to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 2, 1916. Serial No. 118,229. 6 Claims. (Cl. 152—21.)

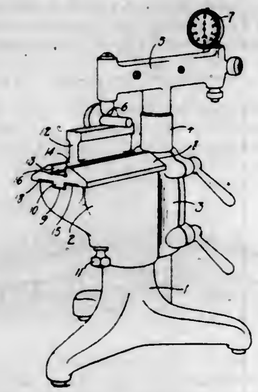


1. The combination with a wheel rim; of a split side-flange removably mounted on said rim; and means for locking the ends of said flange to said rim, comprising a member formed to interlock with the juxtaposed ends of said flange and adapted, upon rotation, to interlock with said rim.

1,346,570. AIRPLANE. HENRY P. VAN KEUREN, Lansing, Mich. Filed May 24, 1918. Serial No. 236,439. 6 Claims. (Cl. 244—14.)

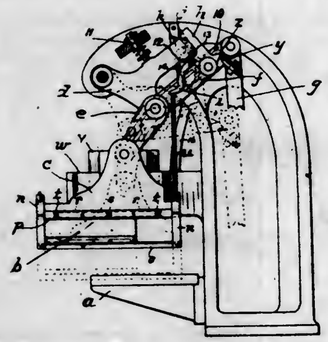
1. In an airplane, a hinged main supporting plane operatively controlled by the pilot, a fuselage inclosing an engine at the front portion thereof, a tractor airscrew, inclined side planes intersecting said hinged main supporting plane.

1,346,571. METHOD AND APPARATUS FOR THE MANUFACTURE OF PRESSED-SHEET-GLASS PRODUCTS. FRANK L. O. WADSWORTH, Pittsburgh, Pa. Filed Nov. 21, 1913. Serial No. 802,311. 31 Claims. (Cl. 49—3.)



1. The method of manufacturing pressed glass sheets or plates which comprises the preliminary spreading of the molten material to sheet form, the subsequent reheating of one side of the spread sheet to a substantially uniform temperature over the entire area to be subjected to pressing operations and the final pressing of the reheated surface.

14. Apparatus for the manufacture of pressed glass plates or sheets which comprises a glass receiving table,

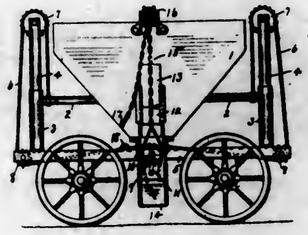


a spreading mechanism, a furnace, a press mechanism and means for moving the table relatively to the other element substantially as described and for the purposes specified.

1,346,572. GAGE. FRANK L. WALTER, Dayton, Ohio. Filed Aug. 15, 1918. Serial No. 249,926. 17 Claims. (Cl. 33—147.)

2. In a gage, a working engaging member, a supporting structure having a supporting surface arranged beneath and in a plane extending transversely to said working engaging member, a removable base formed separately from and rigidly secured to said supporting surface, a work supporting device mounted on said base for adjustment relatively thereto and transversely to said working engaging member, and means for securing said work supporting device to said base in adjusted positions.

1,346,573. BOX-STAYING MACHINE. CHARLES FREDERICK WALZ and FRANCIS DEVELIN MORRIS, Philadelphia, Pa., assignors, by mesne assignments, to Edwin Wolf, Benjamin Wolf, Clarence Wolf, Louis Wolf, and Albert Wolf, Philadelphia, Pa., Copartners trading as National Metal Edge Box Company, Philadelphia, Pa. Filed July 28, 1919. Serial No. 313,761. 10 Claims. (Cl. 74—46.)

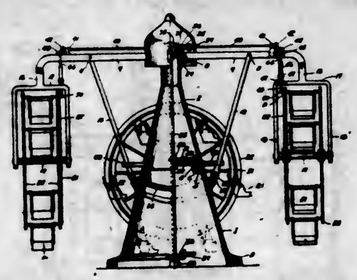


1. In safety stops for machinery, the combination with a reciprocable member, the positive operation of which it is desired to automatically arrest, a toggle joint connection between a fixed point and said member, and reciprocatory driving mechanism, of a displaceable device acting when in operative position to form an actuating connection between the driving mechanism and the toggle joint, a guard normally moving with said member but retractable relatively thereto upon meeting an obstruction, and means, actuable by said guard when so retracted, to move the displaceable device into inoperative position.

1,346,574. FUSE-PLUG. EDWIN C. WEISGERBER, U. S. Army. Filed Feb. 19, 1919. Serial No. 277,980. 5 Claims. (Cl. 200—130.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A refillable fuse plug, consisting of a hollow insulating body formed with an opening in one end and an opening in one wall in alined relation, a conducting shell carried by said insulating body and having a passage therein, a clamping member mounted in the conducting shell and body, and a fuse-strip or conductor having its terminals clamped in operative position by the conducting shell, and clamping member and by the clamping member mounted in the end of said body.

1,346,575. SIDE-DUMPING WAGON. HENRY C. WEITZEL, Baltimore, Md. Filed Nov. 13, 1919. Serial No. 337,795. 1 Claim. (Cl. 298—7.)

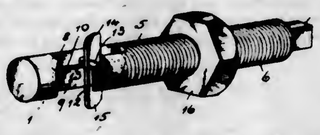


In a side dumping wagon the combination of a frame, a standard mounted at each end of said frame, a body, arms projecting from each end of the said body and having a sleeve at the outer end, fitted over the said standards, a wheel at the upper end of each standard, a crank-shaft mounted in said frame and chains connecting each of said arms with the said crank-shaft whereby when the crank is turned the body will be raised and lowered on said standard.

1,346,576. AMUSEMENT DEVICE. JESSE C. WELCH, Tacoma, Wash. Filed July 28, 1919. Serial No. 313,902. 4 Claims. (Cl. 46—27.)

1. An amusement device of the character described comprising a central standard, arms pivotally connected at their inner ends to the standard and extending radially therefrom, hangers pivotally suspended from the outer ends of said arms, and adapted to swing radially toward and from the standard, Ferris wheels revolubly mounted

in said hangers, an undulatory track encircling the standard and members having pivotal connection at their outer

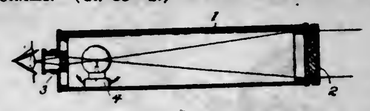


ends with said arms and movable at their inner ends along said track to actuate the outer ends of the arms vertically as the standard revolves.

1,346,577. RADIATOR. JOHN E. WHITBECK, Rochester, N. Y. Filed Mar. 3, 1919. Serial No. 280,359. 3 Claims. (Cl. 257—125.)

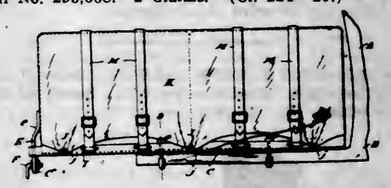
1. A radiator for a vehicle, comprising a core, upper and lower headers, and side walls, said headers and said side walls being shaped so as to direct air passing thereover toward and into the air stream leaving the radiator core, to form converging air streams to aid in drawing air through the radiator core.

1,346,578. BOLT-FASTENING. WALTER E. WINDSOR, Baltimore, Md. Filed Feb. 28, 1920. Serial No. 362,082. 3 Claims. (Cl. 85—3.)



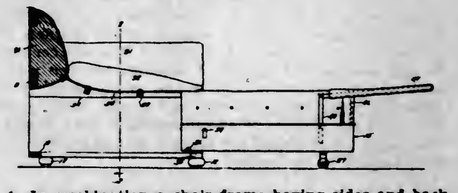
1. The combination with a bolt having a threaded circumferential portion at one end and provided with a slot in the other end that extends diametrically therethrough said bolt having a supporting ledge in said slot, of a pawl in said slot said pawl having means of less width than the slot to seat in the ledge therein and pivotally sustain it and a nut on the bolt.

1,346,579. MATTRESS-GUARD. MAX WINSTEIN, Montreal, Quebec, Canada. Filed Oct. 25, 1919. Serial No. 333,253. 4 Claims. (Cl. 5—39.)



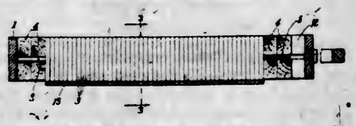
1. In mattress guards, a pair of links adjustably fulcrumed in opposing members of a frame and joined at one end by a spring and at the other by a connecting rod.

1,346,580. FLASH-TELESCOPE. ROBERT W. WOOD, Baltimore, Md. Filed Feb. 25, 1919. Serial No. 279,088. 3 Claims. (Cl. 88—1.)



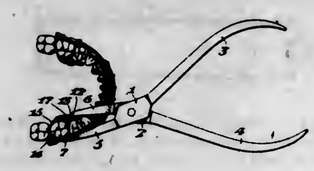
2. Signaling means comprising in combination, a telescope, the objective and eye piece of which have a common focus, and a flash lamp located at the said common focus.

1,346,581. LOAD-CARRIER FOR AUTOMOBILES. WILLIS K. YOST, Little Rock, Ark. Filed May 8, 1919. Serial No. 295,668. 2 Claims. (Cl. 224—29.)



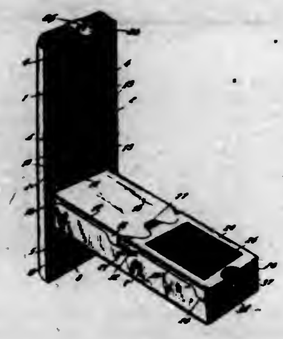
1. The device as herein characterised and comprising oppositely facing L side beams spaced apart, laterally adjustable, and detachably connected together, hook bolts adjustably mounted in said beams and adapted for engagement with the frame of an automobile, rigid brackets extending downwardly from said beams at the rear ends thereof, and stops pivotally mounted at their lower ends on said brackets below the plane of said side beams, said stops adapted to be swung upwardly and against the side walls of the L beams, and means for locking said stops in such position.

1,346,582. EXTENSIBLE CHAIR BED. ANTON ZWOLINSKI, Cleveland, Ohio. Filed Sept. 22, 1919. Serial No. 325,565. 11 Claims. (Cl. 5—46.)



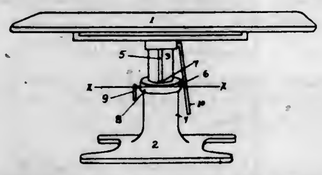
1. In combination a chair frame having sides and back, a seat frame slidably mounted within said chair frame and adapted to be extended forwardly of said chair frame, said seat frame having a spring supported pad resting thereon, a foldable member adapted to form a forward extension of the surface of said pad, and a downwardly collapsible member adapted to form a rear extension of the surface of said pad.

1,346,583. TYPOGRAPHIC PLATE. LEWIS M. ADAMS, Ridgefield Park, N. J. Filed Sept. 16, 1919. Serial No. 324,185. 10 Claims. (Cl. 101—401.2.)



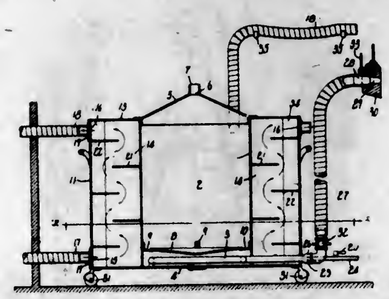
1. The process of forming an integral type unit which consists in assembling separate type elements and uniting them by cohesive junctures, the back surface of said integral type unit being completely integrated.

1,346,584. ORTHODONTIC IMPLEMENT. EDWARD H. ANGLE, Pasadena, Calif. Filed Apr. 15, 1920. Serial 374,100. 5 Claims. (Cl. 32—10.)



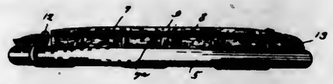
1. An implement of the class described, comprising pivoted members movable toward and from each other, and arranged to embrace a tooth-band, one member being arranged to engage the band and the other being arranged to engage the threaded shank thereof.

1,346,585. SHOE-SHINING CABINET. LEROY H. ARTER, Warren, Ohio. Filed Mar. 18, 1916. Serial No. 85,016. 7 Claims. (Cl. 15—58.)



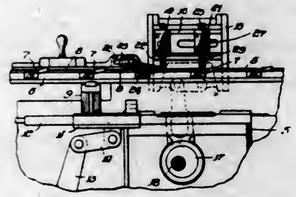
1. A device of the character set forth comprising a supporting plate having its lateral edges bent to produce a pair of opposed guides, a member having portions slidable within said guides, a foot support hingedly connected to said member and capable of swinging between a plane substantially parallel to said guides and a plane at substantially right angles thereto, and means which is effective when the support is at substantially right angles to the guides for retaining the support at various elevations with respect to the guides.

1,346,586. TABLE-SUPPORTING MECHANISM. GEORGE A. BARBEA, Chicago, Ill., assignor to John V. McManis, Kirksville, Mo. Filed Sept. 28, 1917. Serial No. 193,734. 4 Claims. (Cl. 45—50.)



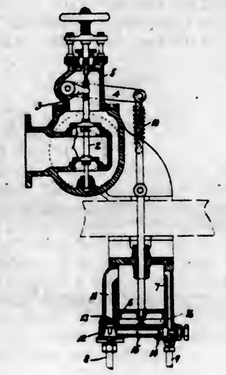
1. A supporting pedestal comprising a cylinder, a fluid actuated plunger movable endwise and rotatably relative to said cylinder, said plunger being provided with a key-way extending through a portion of the length of said plunger, a collar rotatably adjustable relative to said cylinder and having a key to engage the key-way of said plunger, and means to lock said collar rigidly to said cylinder.

1,346,587. PORTABLE GAS-HEATER. PETER BERNSTEIN, Boston, Mass. Filed June 5, 1918. Serial No. 238,270. 1 Claim. (Cl. 126—116.)



A portable gas heater having, in combination, a combustion chamber provided with a closed outer wall, a plurality of independent heating chambers surrounding said combustion chamber, a gas burner located within said combustion chamber, a plate located above said gas burner and adapted to deflect the heat therefrom against the closed wall of said combustion chamber, a plurality of horizontally disposed baffle plates located within each of said heating chambers, inlet and discharge openings for each of said heating chambers, and flexible air tubes connected respectively with said inlet and discharge openings and adapted to convey heated air from each of the heating chambers to a room to be heated and to carry air from said room back to the heating chamber.

1,346,588. PRACTICE-DRUM. HARRY A. BOWER, Boston, Mass. Filed Feb. 27, 1919. Serial No. 279,575. 6 Claims. (Cl. 84—10.)

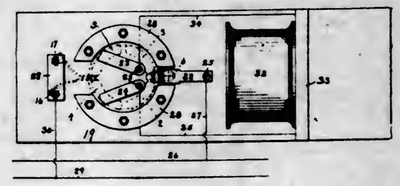


4. A device of the class described, comprising a base, a sounding-board spaced from said base, cushioning means between said base and sounding-board, said cushioning means entirely supporting the sounding-board, and means for securing the parts in assembled relation to one another.

1,346,589. BLANK-POSITIONING MECHANISM. WILLIAM CAMERON, Chicago, Ill., assignor to Torris Wold & Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 5, 1918. Serial No. 256,934. 8 Claims. (Cl. 164—21.)

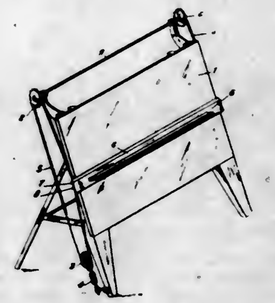
1. In a blank positioning mechanism, the combination of a back stop means for advancing a blank beyond said back stop, means in the path of said advancing blank for returning the blank to said back stop upon the completion of its advancing movement, and mechanism for withdrawing said means from said blank path to permit further advance of the blank.

1,346,590. ENGINE STOP-GEAR. DAVID COCKBURN and DONALD MACNICOLL, Cardonald, near Glasgow, Scotland. Filed Jan. 19, 1920. Serial No. 352,534. 1 Claim. (Cl. 137—139.)



In an engine stop gear, the combination with an emergency valve, a load tending to close said valve, a cylinder having a by-pass connection between its ends, said cylinder open to pressure fluid, a piston in said cylinder, an operative connection between said piston and said valve, an auxiliary cylinder interposed in said by-pass connection, and an auxiliary piston movable in said auxiliary cylinder and serving to control said by-pass connection.

1,346,591. DISPLAY-BOX FOR WATCHES. WILBUR C. COOK, Waltham, Mass., assignor to The Keystone Watch Case Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 26, 1915. Serial No. 30,560. 3 Claims. (Cl. 217—10.)

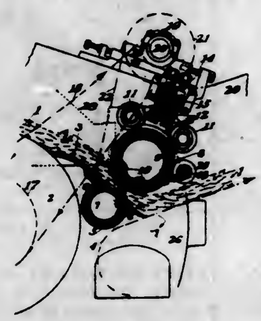


1. A box for watches comprising a substantially rectangular receptacle having back, top, bottom and side walls, and a front wall hinged to the free edge of one of said side walls and forming a closure for the receptacle; the upper portions of said back and side walls, and of said front wall, being reduced in thickness throughout their respective areas, to thereby provide a ledge extending about the receptacle; and a hollow holding cover rectangular in form adapted to fit over the reduced upper portion of said receptacle and having a top wall overlying the top wall and the free upper edge of the front wall thereof, and the lower edge of which cover rests upon said ledge; the thickness of the side walls of said cover being such that their outer surfaces are substantially continuous with and lie in the same planes as the corresponding surfaces of the lower portions of the back, side and front walls of said receptacle.

1,346,592. FIELD-COIL-TESTING DEVICE. JASPER F. CULLIN, Detroit, Mich., assignor to William J. Hartwig, Detroit, Mich. Filed Jan. 26, 1920. Serial No. 353,912. 5 Claims. (Cl. 175—183.)

1. A testing device for the field coils of electric machines comprising contacts and connections for passing a current through each of two groups of adjacent coils, a current indicator, and circuits and a pair of contacts to connect the indicator between the coils of each group.

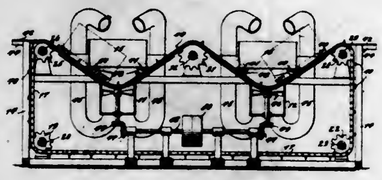
1,346,593. DRAWING-BOARD. HENDRIK DE CLERCQ, Amsterdam, Netherlands. Filed May 7, 1920. Serial No. 379,611. 1 Claim. (Cl. 33—80.)



In combination, a drawing board, guide wheels connected with said board at both sides thereof, endless chains led around said wheels, a ruler both ends of which are associated with said chains so as to be adapted to be moved over the board in parallel relation with itself, screws fixed in the ruler to connect each end thereof with two points of the corresponding chain in two points suitably spaced apart, and nuts on said screws by which the distances between the ruler and the points wherein said screws engage their chain may be so adjusted as to produce an angle in said chain, and consequently a couple tending to press the top edge of the ruler against the board.

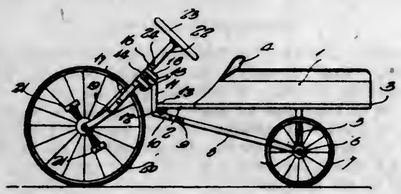
1,346,594. APPARATUS FOR MACERATING BAGASSE. NOEL DEERR, Brooklyn, N. Y. Filed Nov. 26, 1917. Serial No. 204,064. 37 Claims. (Cl. 100—47.)

1. In an apparatus for macerating bagasse, in combination, a perforated rotating element, means for rotating said element, means for supplying liquid to the interior of said rotating element and means for distributing the liquid to the bagasse.



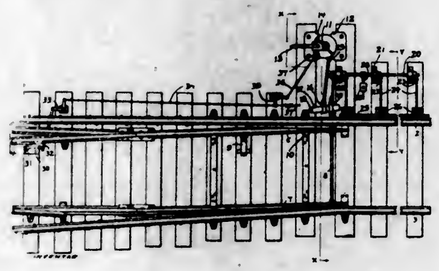
15. In an apparatus for supplying liquid to bagasse in transit from one unit of a train of sugar cane mills to the next unit in series in combination perforated rotating elements, means for rotating said elements, means for supplying liquid to the interior of said rotating elements, means for distributing the liquid to the bagasse and means for retaining the superior rotating element in position,

said means including rollers located near the ends of the perforated rotating element, in contact with said perforated rotating element and located so as to prevent any



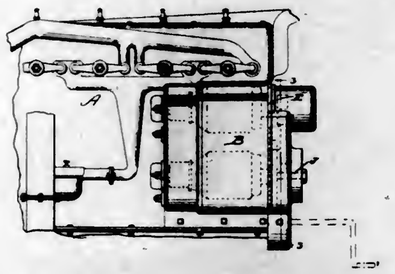
lateral movement of said perforated rotating element while permitting vertical movement of said perforated rotating element.

1,346,595. WASHING-MACHINE. CHARLES H. J. DILG, New York, N. Y. Original application filed Mar. 26, 1913, Serial No. 757,043. Divided and this application filed Dec. 12, 1918. Serial No. 266,404. 3 Claims. (Cl. 141—9.)



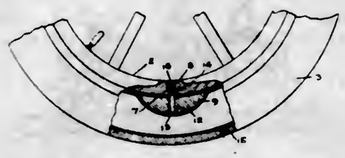
3. A dish washing machine comprising a carrier for the dishes, a plurality of tanks having inclined ways leading into and out of the tanks, a set of spouts for each tank arranged to direct streams of water eccentrically into the tank so as to produce a rotary motion therein, means for supplying water to each set of spouts, and means for conveying the carrier along the inclined ways and through the tanks in the range of the successive sets of spouts whereby it is subjected successively to the combined action of the streams from each set of spouts.

1,346,596. COMBINED VELOCIPEDE AND WAGON. ELMER JOB DOYLE, Detroit, Mich. Filed Aug. 18, 1919. Serial No. 318,240. 4 Claims. (Cl. 208—45.)



1. In a combined velocipede and wagon, a front wheel having pedals, a fork mounted on said wheel and having steering means at the upper end of its shank, a hanger depending from and pivoted to said shank, rearwardly diverging bars secured to the lower end of said hanger, an axle to which the rear ends of said bars are attached, wheels on said axle, a combined load carrier and driver's seat secured at its front end to said hanger, and means supporting the rear end of said combined carrier and seat from said axle.

1,346,597. SAFETY DEVICE FOR POINT-SWITCHES. LOUIS DUNN, St. Paul, Minn. Filed Aug. 7, 1918. Serial No. 248,733. 4 Claims. (Cl. 246—151.)

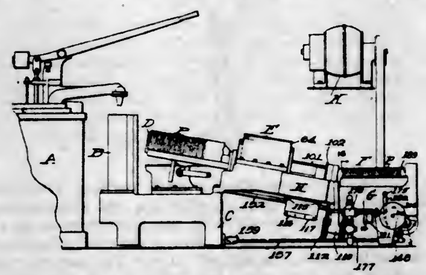


1. The combination, with the main track rails, of the movable switch points, a switch lever operatively connected with said switch points, mechanism for automatically throwing the switch points to a neutral position when the train passes onto the siding, and means for preventing the movement of the switch points until the last truck has passed from the main track rails to the siding, said means including a bar, rocking arms whereon said bar is mounted for moving it toward or from the path of the car wheels, a shaft, cranks mounted thereon, and links connecting said cranks with said arms.

1,346,598. STARTER FOR INTERNAL-COMBUSTION ENGINES. FRANK E. FISHER, Detroit, Mich. Filed Feb. 24, 1919. Serial No. 278,623. 2 Claims. (Cl. 290—47.)

1. In a device of the character described, the combination of an internal combustion engine, a time gear casing, a time gear mounted on the cam shaft of the engine, a gear mounted on the crank shaft of the engine and meshing with the time gear and an electric starter and generator unit comprising a casing secured to the time gear casing at one side thereof, a generator arranged within the latter casing, a pinion mounted on the generator shaft and meshing with the time gear, a motor mounted within the casing of said unit, a pinion mounted on the motor shaft and a train of gearing also arranged within the casing of the said unit and meshing with the pinion of the motor shaft and connecting the same with the generator shaft.

1,346,599. FLAT-TIRE SIGNAL. DAVID D. GETMAN, Minneapolis, Minn., and JOSEPH P. STERNHAGEN, Glasgow, Mont.; said Getman assignor to said Sternhagen. Filed Mar. 6, 1917, Serial No. 152,473. Renewed Dec. 6, 1919. Serial No. 343,109. 3 Claims. (Cl. 116—34.)



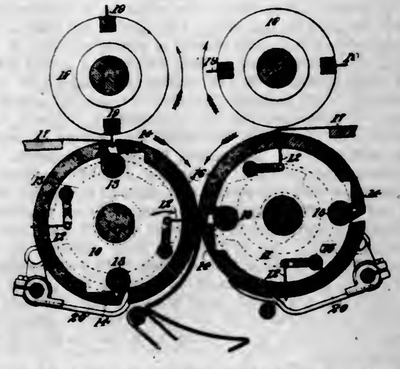
1. In combination, with a pneumatic tire, of a block interposed between the inner wall of the tire tube and the casing and having a convex surface for contact with the tube wall and provided with a comparatively broad bearing thereon to protect said tube from injury, said block being sufficiently rigid to obstruct the turning of the wheel and produce a jarring or bumping effect when the tire is deflated, a signal device comprising a cartridge mounted in the wheel rim, and means actuated through the pressure of the load on said block when the tire is deflated for exploding said cartridge.

1,346,600. MOLDBOARD FOR PLOWS. CARL GLEICHE, Berlin, Germany, assignor to Stock Motorpflug Gesellschaft mit Beschrankter Haftung, Berlin, Germany, a Corporation of Germany. Filed Oct. 6, 1914. Serial No. 865,315. 2 Claims. (Cl. 97—18.)

1. An attachment for plows, comprising, as a self-contained unit, a frog or standard having means for securing it detachably to a plow-beam, a share and a mold-board secured to said frog or standard, said mold-board including rearwardly-extending superposed spaced strips, and said frog or standard having an eye or sleeve at a level about half-way of its height, individual braces each having one end secured to a different strip of the mold-board detachably, and securing means, coöperating with said eye or sleeve, for effecting a connection of the other brace ends with said frog or standard.

1,346,601. MACHINE FOR FINISHING STEREOTYPE PRINTING-PLATES. CHARLES E. HOPKINS, New York, N. Y. Original application filed Feb. 25, 1911, Serial No. 610,834. Divided and this application filed Apr. 2, 1917. Serial No. 159,117. 58 Claims. (Cl. 29—21.)

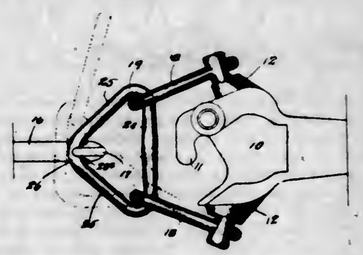
1. In a stereotype plate finishing machine, the combination of a shaft having finishing devices, with axially movable supports carried on transverse axes by said shaft for supporting a printing plate.



2. In a stereotype plate finishing machine, the combination with a shaft, finishing devices connected with said shaft, rollers carried by said shaft for supporting the edges of the plate when introduced into the finishing machine, and means for retracting said rollers inwardly.

3. In a stereotype plate finishing machine, the combination of an arch, a shaft having finishing devices located adjacent to the arch, rollers on the shaft for receiving the plate, means for clamping the plate in the arch, and means for retracting the rollers inwardly so that the shaft can rotate and the rollers can pass around inside the plate.

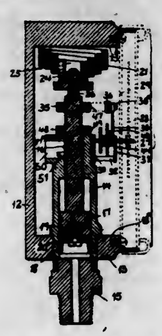
4. In a stereotype plate finishing machine, the combination of a shaft, finishing means carried thereby, and two series of rollers arranged along opposite sides of said shaft rotatable on axes transverse to the axis of said shaft, and means for withdrawing said rollers inwardly along their axes.



5. In a stereotype plate finishing machine, the combination of a shaft having finishing devices, a series of rollers mounted thereon, a reciprocable cam, and means connected with said cam for moving the rollers transversely to the axis of said shaft.

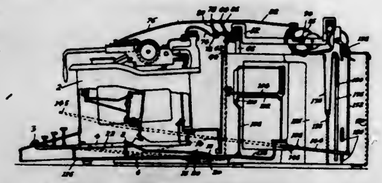
1,346,602. INTERFOLDING-MACHINE. CLARENCE LORAN JOHNSTON, Oakland, Calif., assignor of one-half to Horace P. Brown, Oakland, Calif. Filed Sept. 10, 1919. Serial No. 322,832. 7 Claims. (Cl. 270—39.)

1. In an apparatus of the character described, means for folding a pair of webs of paper and means for completely severing one of said webs at the time of folding without puncturing the other web.



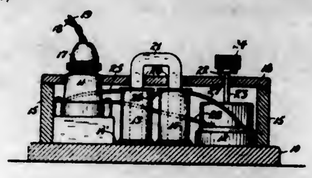
1,346,603. CAR-COUPLING. NICHOLAS PAVLOVITCH KEMMER, London, England. Filed Oct. 7, 1918. Serial No. 257,117. 2 Claims. (Cl. 213—65.)

1. In combination with an M. C. B. standard coupler head provided on its sides with projecting portions and



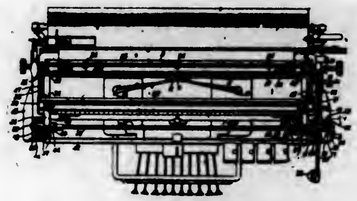
a draw bar provided with a hook, a coupling comprising a pair of closed links adapted to engage the projecting portions on the coupler head, a triangular link connected to said pair of links and adapted to engage the hook on the draw bar, and keys passing through the projections on the coupler head, one end of said keys being provided with a laterally projecting finger and the opposite end being provided with a movable detent.

1,346,604. PRESSURE-GAGE. COLEMAN J. MANNING, Medford, Mass. Filed May 8, 1919. Serial No. 295,674. 2 Claims. (Cl. 73—111.)



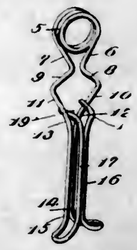
1. A pressure gage comprising a casing, a cylinder fixed to and inclosed in the casing and having an inlet at one end projecting from the casing, a piston movable in one direction in the cylinder by fluid pressure, a spring seated on a fixed abutment in the casing and adapted to move the piston in the opposite direction, registering means including a revoluble pointer, connections between said pointer and the piston whereby the pointer is moved by a movement of the piston in either direction, and an expansible frictional retarding member secured to and movable with the piston and exposed to contact with fluid entering the cylinder, said member being adapted to be expanded and held in frictional contact with the internal surface of the cylinder by fluid pressure at the inlet end of the cylinder, whereby lost motion of the piston, the pointer, and the connections between the piston and the pointer is prevented, stop means being provided for limiting the movement of the piston by the spring and causing the spring to normally hold the pointer at its starting point.

1,346,605. TYPEWRITING-MACHINE. GAILEN F. MAPES, Minneapolis, Minn. Filed Feb. 25, 1918. Serial No. 218,953. 12 Claims. (Cl. 197—5.)



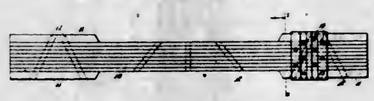
1. A typewriting machine comprising a main and an auxiliary printing device, two platen carriages associated respectively, with said printing devices, a manually operated lever adapted to be placed in two different positions, means operated by said lever which, in one of said positions connects said carriages for movement in unison and in the other of said positions disconnects them from each other, means tending to automatically move the auxiliary carriage in one direction, and an adjustable stop which, when said carriages are disconnected, limits the amount of movement of the auxiliary carriage in such direction.

1,346,606. ELECTRICAL APPARATUS. CHRISTIAN M. PETERSEN and OSCAR J. BODEN, San Francisco, Calif. Filed June 4, 1919. Serial No. 301,715. 5 Claims. (Cl. 175—21.)



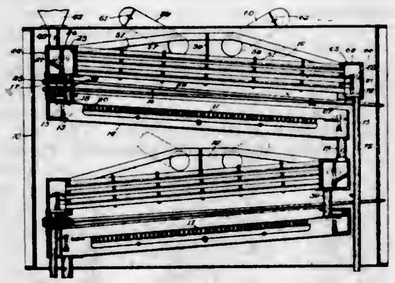
1. In combination with a pair of magnet energizing coils a switch, fixed contacts within said switch, movable contacts normally out of register with said fixed contacts, and means whereby a flying contact may be made between the movable and fixed contact members.

1,346,607. TYPEWRITING-MACHINE. JOSEPH PHELPS, Belleville, N. J., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed May 22, 1917. Serial No. 170,199. 28 Claims. (Cl. 197—153.)



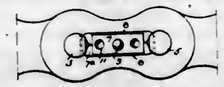
1. In a writing machine, the combination of ribbon mechanism comprising a ribbon carrier, a guide movable independently of said carrier, said guide being arranged so that a comparatively long strip of ribbon is exposed opposite the printing line, and means tending to prevent the displacement of the exposed portion of the ribbon widthwise of the printing line and for taking up slack resulting from the movement of the guide independently of said carrier to carry the exposed portion of the ribbon away from and back to its normal position opposite the printing line.

1,346,608. WIRE CLOTHESPIN. CHARLES S. PRATT, Eau Claire, Wis. Filed Oct. 4, 1918. Serial No. 256,853. 1 Claim. (Cl. 24—261.)



A clothes pin consisting of a single resilient wire bent upon itself with resultant parallel legs and a connecting bight portion, the legs adjacent the bight portion being bowed apart for receiving a clothes line and below the bowed portion being in mutual contact, the extreme end portions of the wire being bent upon the corresponding legs and continued in parallel relation past the bottoms of the bowed portions, the extremities of the wires passing between the bowed portions and hooked about the corresponding legs, with resultant close lying shoulders to receive and clamp clothing against the under side of a clothes line passing between the bowed portions.

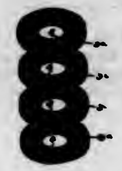
1,346,609. COMPOSITE RAILWAY-TIE. ALBERT REVERT, Oakland, Calif. Filed Feb. 9, 1920. Serial No. 357,487. 2 Claims. (Cl. 238—36.)



1. A composite railway tie consisting of a series of longitudinally extending comparatively narrow sections laid side by side and a plurality of dowels passing obliquely through said sections to retain them together, said dowels being oppositely inclined.

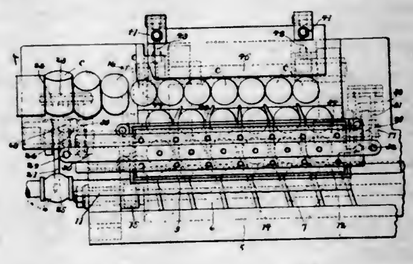
1,346,610. DRY SEPARATOR. FRANK M. SMITH, Chicago, Ill. Filed June 18, 1919. Serial No. 305,097. 20 Claims. (Cl. 83—38.)

1. In a separator of the character described, the combination of a foraminous support for the material to be treated, an air-trunk above said support, means to subject said air-trunk to suction, a receptacle in said air-trunk adapted to receive material deposited therein by the air, and means to vibrate said air-trunk and receptacle independently of said support, substantially as described.



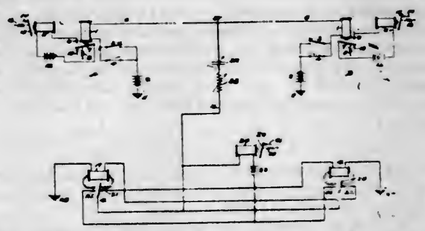
1,346,611. DETACHABLE CONNECTING-LINK. FENTON J. SPAULDING, Chicago, Ill., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 23, 1918. Serial No. 263,857. 4 Claims. (Cl. 74—49.)

2. The combination in a detachable connection for chains, of two links; two pivot pins attached to one of said links and extending through openings in the said link, each pin being notched; and a plate pivotally connected to the last mentioned link between the pins and having projecting portions arranged to enter the notches in the pins, said plate having a flange.



1,346,612. DISK FOR FLEXIBLE COUPLINGS AND PROCESS OF MAKING SAME. ROBERT J. STOKES, Trenton, N. J., assignor to Thermoid Rubber Company, Hamilton township, N. J., a Corporation of New Jersey. Filed May 26, 1919. Serial No. 299,957. 4 Claims. (Cl. 154—2.)

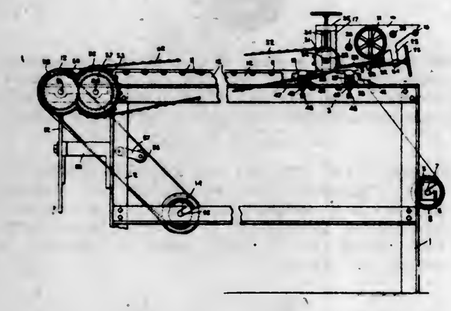
1. The process herein described of making transmission disks for flexible couplings, said process consisting in first making a rubberized, impregnated multiply fabric in which the several plies run in the same direction, then cutting the disk sections from the fabric and so assembling the sections that the warp threads of one section will be at an angle to the warp threads of another section, then



clamping the two sections in a mold and vulcanizing, or curing, the assembled disk sections so as to make a composite transmission disk in which some of the warp threads are arranged at an angle to other warp threads.

1,346,613. GANG FILLING AND CLOSING MACHINE. JOHN C. TALIAFERRO, Baltimore, Md., and IVAR F. WARME, Syracuse, N. Y., assignors to Continental Can Company, Incorporated, Syracuse, N. Y., a Corporation of New York. Filed July 18, 1916. Serial No. 109,972. 2 Claims. (Cl. 226—95.)

1. The combination of means for simultaneously filling a plurality of cans, means for receiving the empty cans from a runway, a reciprocating member for moving a plurality of empty cans from the runway to and beneath the filling means whereby they may be simultaneously filled, devices for separating the cans from each other as they are moved beneath the filling means, continuously moving means for feeding the cans one at a time and in spaced and timed relation to a closing machine, and means for simultaneously feeding the spaced cans beneath the filling means onto the feeding means for the closing machine and properly spaced and in timing for operation thereon by the closing machine as they are delivered thereto.



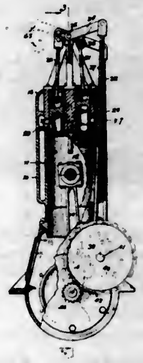
1,346,614. METHOD OF RECEIVING TELEGRAPH-SIGNALS. CHESTER H. TEEGARDEN, Washington, D. C. Filed Sept. 9, 1918. Serial No. 253,308. 14 Claims. (Cl. 178—2.)

3. A supplementary receiving set for a simplex telegraph line, comprising two relays, each relay being connected

across the line, two sets of contacts, one set controlled by each relay, each set of contacts being interposed in the circuit of the other relay, respectively, two further sets of contacts, one set being controlled by each relay, and a sounder circuit controlled by said two further sets of contacts.

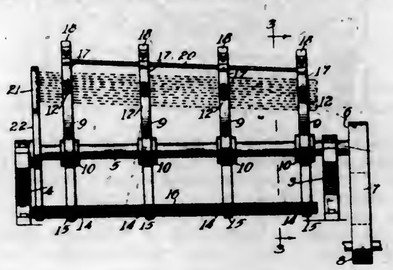
1,346,615. PROCESS FOR COATING FABRICS. ANDREW THOMA, Cambridge, Mass., assignor to Abraham Sydeman, Boston, Mass. Filed Sept. 12, 1916. Serial No. 119,751. 13 Claims. (Cl. 91—49.)

9. The process of coating fabrics which comprises supplying a rotating dope spreading cylinder with a film of plastic dope of predetermined thickness, and progressively moving a web of fabric across the dope spreading cylinder.



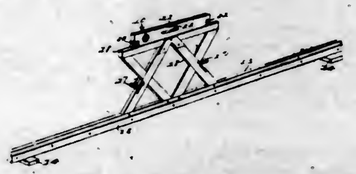
1,346,616. PACKING APPARATUS. ALBERT R. TREICHEL and EDWARD J. BAOCK, St. Louis, Mo. Filed Jan. 17, 1920. Serial No. 352,200. 6 Claims. (Cl. 286—22.)

1. In packing apparatus, the combination of a stuffing-box having a bore and forming an annular packing chamber around the member to be packed, oppositely disposed packing-members received in the packing chamber for engaging opposite sides of the member to be packed, means for resiliently pressing the packing-members toward each other, said packing-members having alining grooves coöperating to form a continuous annular groove passing around the exterior of the packing-members, and a split expansion ring fitting in the annular groove, exerting its pressure against the bore of the stuffing box and packing the space between the packing-members and the face of said bore.



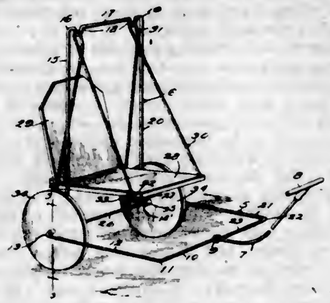
1,346,617. VALVE MECHANISM. INGLIS M. UPPERCU, New York, N. Y. Filed Feb. 3, 1917. Serial No. 146,466. 9 Claims. (Cl. 123—75.)

1. In a four cycle engine, an explosion cylinder, inlet and outlet passages opening thereto at one end of the cylinder, lateral ports opening to said passages, valves balanced against each other but working in said passages subject to the pressure in the explosion cylinder, together



with means to operate said valves simultaneously in opposite directions with balanced action, on the principle of a four cycle engine.

1,346,618. METHOD AND APPARATUS FOR COATING PIPES, BARS, ANGLES, AND THE LIKE. EDWARD L. WATROUS, El Paso, Tex.; Agnes B. Watrous executrix of said Edward L. Watrous, deceased. Filed Jan. 21, 1918. Serial No. 212,908. 19 Claims. (Cl. 91—59.1.)



1. In apparatus of the class described, a support, a shaft rotatably mounted in said support, means on said shaft for holding freshly coated elongated articles, and means for rotating said shaft to cause said articles to rapidly move in a path substantially transverse to their length, whereby to throw off excess coating material.

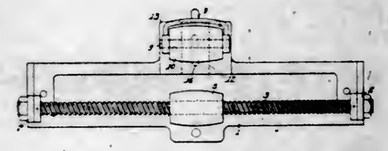
1,346,619. FARM-LEVEL. JOHN ROBBERT WEATHERSBY, Middlesex, N. C. Filed Jan. 15, 1920. Serial No. 351,654. 2 Claims. (Cl. 33—207.)

1. A device for the purpose described having a main base beam, a rest bar arranged in parallelism with the said beam, a spacing frame between the rest bar and beam and provided with grips or handles, and means carried by the rest bar for engaging a spirit level.

1,346,620. TOY SWINGING CHAIR. CHARLES L. WECHT, Logansport, Ind. Filed Jan. 23, 1920. Serial No. 353,507. 2 Claims. (Cl. 46—48.)

1. A toy of the character described, comprising a substantially horizontal frame section and a substantially vertical frame section, said frame sections being bent from a single piece of wire, the ends of the piece of wire being secured together at the forward end of the substantially horizontal frame section with one end extending forwardly to form a tongue, the wire at the union of the horizontal and vertical frame sections being bent to form axles, wheels mounted upon the axles, and a member suspended from the substantially vertical frame section.

1,346,621. BOTTLE-CLOSURE ATTACHMENT. SAMUEL T. WHITAKER, Columbus, Ga., assignor of fifty-one per cent. to Ralph B. Small, Columbus, Ga. Filed Dec. 18, 1915. Serial No. 67,657. 2 Claims. (Cl. 215—1.)



1. The combination with a cap removing tool having a flat body portion with a laterally turned projection at one end, and a crimped cap flange-engaging hook portion projecting from the body in the same direction as said end and in spaced relation thereto, said body portion being reduced in width adjacent said hook portion, of means for securing the cap removing tool to a bottle having a bead at the terminus of its neck, said means comprising a band adapted to surround said bottle neck and engaging the reduced portion of the tool at that side of the hook farthest removed from the bent end thereof, whereby that portion of the cap removing tool including the hook lying between the bead of the bottle neck and the band is held against movement in one direction by said bead and in the other direction by said band.

1,346,622. AWNING-ROLLER SUPPORT. JOHN C. WILLIAMS, Warwood, W. Va. Filed Dec. 1, 1919. Serial No. 341,751. 5 Claims. (Cl. 156—44.)

1. A center support for roller awnings, comprising parallel worm shafts, and supporting rollers mounted for travel on said shafts.

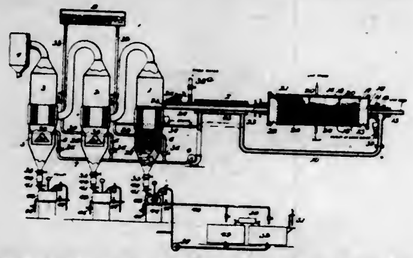
2. A center support for roller awnings, comprising parallel worm shafts of opposite pitch, and supporting rollers mounted for travel in reverse directions along said shafts.

3. A center support for roller awnings, comprising parallel shafts, supporting rollers mounted for travel on said shafts, said shafts having materially greater length than said rollers, and a retaining roller overhanging said shafts at a point substantially midway between the ends of the latter.

4. A center support for roller awnings, comprising parallel worm shafts having the threads thereof reversely disposed, supporting rollers mounted for travel in reverse directions on said shafts, and a retaining roller overhanging said shafts.

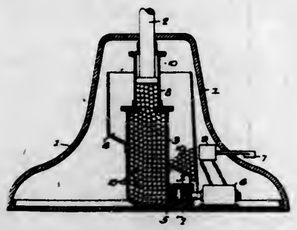
5. A center support for roller awnings, comprising parallel worm shafts having the threads thereof reversely disposed, supporting rollers mounted for travel in reverse directions on said shafts, and a retaining roller overhanging said shafts at a point substantially midway between the ends of the latter.

1,346,623. METHOD OF MAKING TIRE-CASINGS. WILLIAM ERASTUS WILLIAMS, Chicago, Ill., assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 21, 1917. Serial No. 150,265. 5 Claims. (Cl. 154—14.)



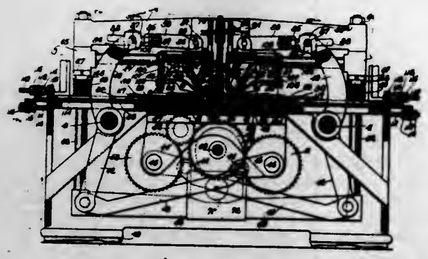
1. The method of making tire casings from fabric, comprising forming said fabric into a ring of smaller circumference than a core, exerting an expanding force on the ring, relaxing said force simultaneously at all points about the ring and allowing the center of the ring to shape itself to the centerd of the core and then shaping the skirts of the fabric to the core.

1,346,624. PROCESS OF PURIFYING SALT. FRANK J. WOOD, Brooklyn, N. Y., assignor to Worcester Salt Company, New York, N. Y., a Corporation of New York. Filed Dec. 30, 1916. Serial No. 139,761. 9 Claims. (Cl. 127—14.)



7. In a salt purifying process, withdrawing a flow of brine from the last vacuum pan in a series thereof in multiple effect, heating the flow and precipitating impurities

therefrom by the injection of a steam jet, filtering the flow, and returning the flow to the first vacuum pan of the

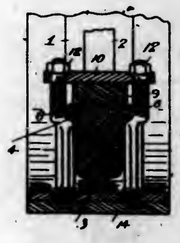


series and then to the succeeding pans, and precipitating salt in each of the pans.

1,346,625. POWER-TRANSMITTING APPARATUS. ROBERT S. WOODWARD, Jr., Philadelphia, Pa. Filed Sept. 4, 1919. Serial No. 321,524. 6 Claims. (Cl. 138—9.)

1. The combination of a cylinder; a plunger operative therein; a reservoir; a pump connecting the reservoir and the cylinder; a motor for driving the pump, means for controlling the motor; and a series of relatively hard balls movable by the pump from the reservoir to the cylinder to actuate the plunger.

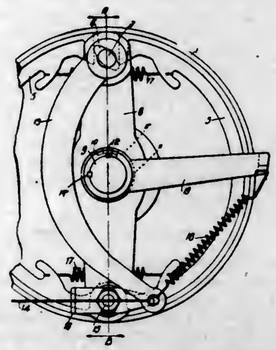
1,346,626. CUTTING-MACHINE. CHARLES W. BAILEY and JOHN HAMMOND STEWART, Lynn, Mass.; said Bailey assignor to said Stewart. Filed Mar. 25, 1915, Serial No. 17,009. Renewed Mar. 16, 1920. Serial No. 366,438. 47 Claims. (Cl. 12—62.)



1. A cutting machine including two knives mounted to move apart and toward one another, a work support, means for holding the end portions of the work at an inclination to and extending across the paths in which the edges of said knives travel, and means coöperating with the work support for holding the intermediate part of the work at one side of such paths, whereby the work is cut at both ends on a bevel.

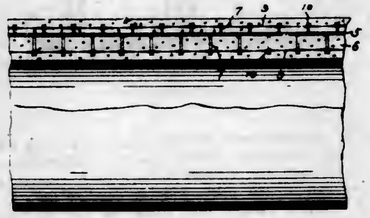
3. A machine for clipping the ends of a counter blank on a bevel comprising a work support and a presser arranged to grip the blank at a distance from its ends, two knives guided to travel from a point near the gripped part of the blank outwardly toward the ends thereof, said knives being arranged with their edges transverse to the direction in which they travel, and means for inclining the ends of the blank so as to cause such ends to cross the paths of the knife edges.

5. A machine for clipping the ends of counter blanks, comprising two knives guided to move in a definite path and each having its edge arranged transverse to its direction of travel, work holding means arranged to support said blank so that a portion thereof crosses the path of each knife edge at an inclination thereto and a yielding presser traveling with each knife in the path thereof arranged to press the work against the support.



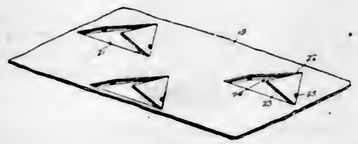
9. In a cutting machine, guiding means, a knife carrier arranged to travel on said guiding means, a knife block having flanges, said carrier being provided with recesses adapted to receive said flanges in a readily removable manner, clamps for securing said flanges in said recesses, the knife block having an inclined end wall, and a knife secured to said end wall with its cutting edge projecting beyond an adjacent side wall of the block.

1,346,627. TIRE-TREAD. WILLIAM BARBER, New York, N. Y., assignor to Ada S. Barber, Brooklyn, N. Y. Filed Oct. 20, 1915. Serial No. 56,995. 7 Claims. (Cl. 21—161.)



1. The combination with a vehicle rim and tire therefor, of an auxiliary detachable tire arranged radially beyond the tread surface of said first mentioned tire and extending across the lateral width thereof, means for mounting said auxiliary tire on said wheel, including means for supporting said auxiliary tire by the rim of said wheel on opposite sides and independently of said first mentioned tire.

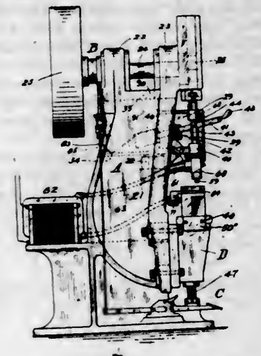
1,346,628. AUTOMATIC BRAKE. VINCENT BARNINGHAM, Reading, and SYDNEY GUY ASHBY, Edenbridge, England. Filed Mar. 24, 1920. Serial No. 368,440. 20 Claims. (Cl. 188—112.)



1. In an automatic brake, a non-revoluble axle, a road wheel revoluble on the axle, a brake drum revolving with the road wheel, an arm carried by the axle, brake shoes pivoted at one end to the said arm and engaging with the brake drum when forced apart, a lever pivoted to the other end of the said arm from the brake shoes and provided with means for forcing them apart, a spring for applying the brake connected to the free end portion of the said lever, and a draft attachment also connected to the free end portion of the said lever and while in operation preventing the said spring from actuating the lever and applying the brake.

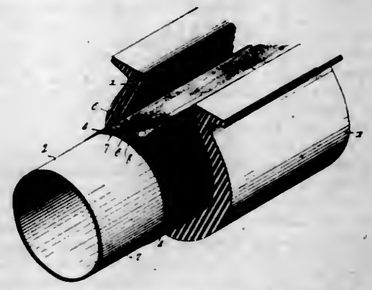
1,346,629. REINFORCED-CONCRETE PIPE. GEORGE CORRIE BARTRAM, Massapequa, N. Y., assignor to United Concrete Pipe Co., New York, N. Y., a Corporation of Delaware. Filed Oct. 25, 1919. Serial No. 333,201. 7 Claims. (Cl. 72—53.)

1. A reinforced concrete pipe having an imperforate metal pipe embedded therein, and tie means mechanically connected to the face of the metal pipe and extending into the concrete to tie the latter thereto.



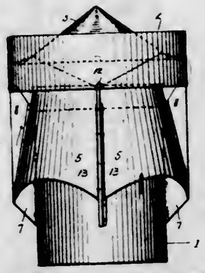
1,346,630. GRAIN-SEPARATOR. HUGO E. BEHRENS, Fargo, N. D. Filed Feb. 14, 1919. Serial No. 277,010. 1 Claim. (Cl. 130—19.)

In combination with a grain separator having a feed plate a sieve disposed below and spaced from said plate, said sieve comprising a body having converging ears upstruck therefrom and arranged in pairs thereon and providing V-shaped openings below the same, each of said ears having an aperture therein.



1,346,631. ELECTRIC RIVETING-MACHINE. PAUL M. BENEDICT, New Haven, Conn., assignor to The Barnes & Kobert Manufacturing Company, Millidale, Conn., a Corporation of Connecticut. Filed Mar. 6, 1916. Serial No. 82,495. 11 Claims. (Cl. 219—2.)

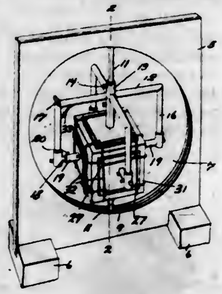
1. In a machine such as described, the combination of separate die plates adapted to clamp the work between them, conductor plates in contact with the respective die plates, electric conductors connected with said conductor plates, and a movable electrode having a different electric



conductor connected thereto and adapted to make contact with the work; substantially as described.

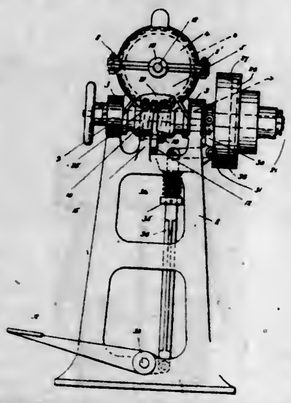
1,346,632. INNER-TUBE COVERING FOR TIRES. FRANK S. BENNETT, Philadelphia, Pa. Filed Oct. 11, 1919. Serial No. 330,070. 3 Claims. (Cl. 152—18.)

2. As a new article of manufacture, a strip of fabric adapted to be folded so as to detachably envelop an inner tube of an inflatable tire, said strip being composed of a close-mesh, knitted textile fabric having the property of embedding foreign particles which may enter between said tube and its carcass or shoe, and reducing friction between said tube and shoe, and co-acting fastenings along the meeting edges of said strip, said strip having a binder along its edges, one of said edges having a flap to underlie the other edge.



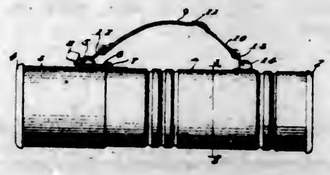
1,346,633. VENTILATOR. OSCAR E. CLOUD, Wichita, Kans. Filed Sept. 29, 1919. Serial No. 327,345. 1 Claim. (Cl. 98—4.)

A ventilator comprising a tubular eduction pipe, upwardly tapering fins integral therewith and vertically radiating around the outside thereof; a frusto-conical hood



surrounding said pipe and extending above the upper end thereof and having an upper outwardly flared rim portion, said hood being supported by outer inclined edge portions of said fins; downwardly tapering fins without said hood, radiating in the same vertical plane with said first mentioned fins; an annular wind guard horizontally supported from upper portions of said outer fins, the lower edge of said guard lying in a plane below the plane of the flared rim of said hood; a conical cap, supported from and within said windguard, covering said eduction pipe; a conical deflector, having its base within said cap and its apex depending therefrom downwardly to a point below the plane of the flared rim of said hood and within said hood orifice; the upper edges of said inner and outer fins extending obliquely from the upper edge of said eduction pipe to the base of said windguard; all substantially in the manner disclosed and for the purposes as specified.

1,346,634. AMUSEMENT DEVICE. PRESSLY JOSEPH COBURN, Wellsville, Ohio. Filed July 8, 1919. Serial No. 309,342. 2 Claims. (Cl. 46—41.)



1. A device of the character described comprising a support having a circular opening provided with a way in the edge thereof, a ring rotatably fitted within the way and having axle pintles at diametrically opposite points, tubular shafts fitted adjustably on the pintles, radially extending arms formed on one of the shafts and having right angular extensions, stems carried by said arms and disposed parallel with the same, coacting clamping plates adjustably connected with the stems and with the tubular shafts, and removable pins carried by the coacting clamping plates.

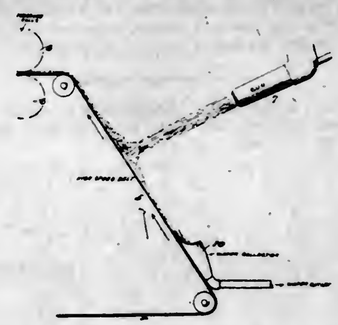
1,346,635. WINDING-MACHINE. JESSE F. COMSTOCK, Wilkes-Barre, Pa. Filed Oct. 13, 1919. Serial No. 330,239. 3 Claims. (Cl. 74—101.)

1. In a winding machine, a frame provided with bearings, a driving shaft journaled concentric with the said bearings, a casing pivoted concentric with the said shaft and provided with means for securing it to the frame at different angles, a worm secured on the said shaft, a winding shaft journaled in the casing to one side of the driving shaft, a worm wheel secured on the winding shaft and gearing into the said worm, and a face-plate secured on the winding shaft outside the casing.

1,346,636. CARRIER FOR EXPLOSIVES. CHARLES A. COTTLE, Edwardsville, Pa. Filed Nov. 18, 1919. Serial No. 338,873. 1 Claim. (Cl. 206—1.)

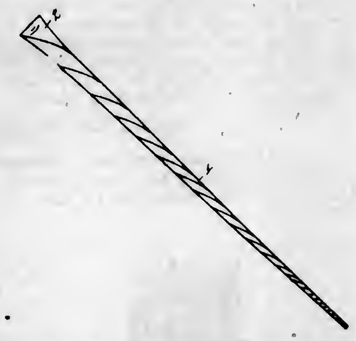
A device of the character described comprising a cylindrical casing including a body closed at one end and open at the other end, and a cover telescopically engaging over the open end of the body, staples carried by the body and the cover, a hasp pivoted upon the body and engageable over the staple on the cover, and a strap connected with said staples and serving as a handle, the connection of the strap with the staple on the cover also preventing disengagement of the hasp therefrom.

1,346,637. GARNET-CYLINDER. HERBERT V. COULSTON, Philadelphia, Pa., assignor to Smith and Furbush Machine Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 12, 1919. Serial No. 282,246. 3 Claims. (Cl. 19—22.)



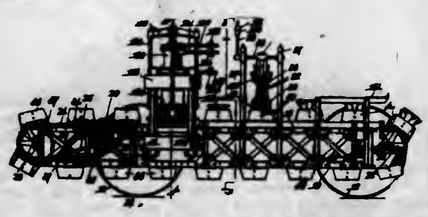
1. A cylinder of a garnet machine made of wire having teeth and having an offset portion at one side of the teeth, the wire being arranged in helical form with the convolutions close together, one convolution being attached to the other by spot welding, forming an integral structure.

1,346,638. METHOD AND MEANS FOR MAKING ARTIFICIAL-STONE PRODUCTS. ALFRED CROOK and RICHARD D. CHAPMAN, Philadelphia, Pa., assignors to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Apr. 11, 1919. Serial No. 289,346. 10 Claims. (Cl. 25—42.5.)



1. The method herein-described, which consists in subjecting a mixture of artificial stone material to the impelling force of a blast, completing the mixing of such material by impact, and thereafter compacting it under pressure.

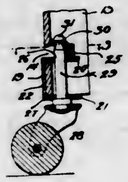
10. Apparatus for the purpose stated, comprising the combination of a rapidly driven upwardly traveling in-



clined belt or apron, means for supplying it with a continuous charge of plastic material, and pressure rolls operatively disposed with relation to the apron.

1,346,639. ARROW. IRVING L. DAVIS, Dayton, Ohio. Filed Nov. 25, 1919. Serial No. 340,556. 1 Claim. (Cl. 102—26.)

As a new article of manufacture, an arrow made of paper and having a tapered form throughout its length and made hollow, the larger end thereof being flattened and united by an adhesive to form a rudder to direct the flight of the arrow and to prevent the paper from unwinding



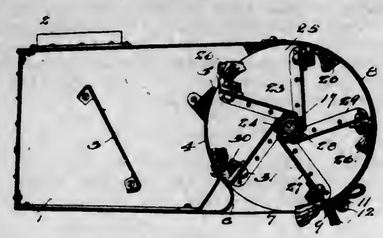
1,346,640. BLOCK-MAKING MACHINE. ELLSWORTH A. DEWEY, Tampa, Fla. Filed July 19, 1917. Serial No. 181,515. 87 Claims. (Cl. 25—100.)

5. In a device of the class described, a vehicle, a press on said vehicle, a carrier movable through said press, a power mechanism, a clutch in said mechanism, means for automatically disengaging said clutch when said carrier has moved a predetermined distance, and means for resetting said clutch.

23. In a device of the class described, a press, a mold capable of moving through said press, the said mold having relatively movable walls inclined on their outer faces, a movable centering frame on said press to receive said mold, rollers on said frame, the said rollers being arranged in pairs and the rollers of each pair being disposed at substantially the same angle as that of said inclined faces, whereby said walls will be forced inwardly when said frame is moved into operative position.

1,346,641. CASTER-CONNECTING DEVICE. ROSS J. ELLSWORTH, Philadelphia, Pa. Filed Nov. 8, 1919. Serial No. 336,642. 2 Claims. (Cl. 16—4.)

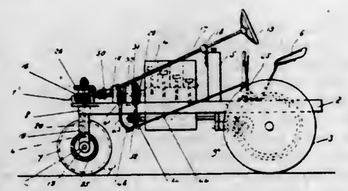
1. The combination of a supporting member having an aperture; a retaining clip having a portion projecting into said aperture and another part embracing a portion of said supporting member, said portion of the clip having a hole therein and a resilient part adjacent said hole; and a caster having a spindle projecting upwardly through said hole, said spindle having a part of reduced diameter providing a notch, said spindle having a portion adjacent said notch adapted to move said resilient part of the clip out of its normal position during the insertion of the spindle through said hole, said resilient part being operative to spring into said notch after said portion of the spindle has passed by it during said inserting movement thereof; substantially as described.



1,346,642. PROCESS FOR THE EXTRACTION OF LEAD AND ZINC FROM THEIR ORES. FRANK EDWARD ELMORE, Boxmoor, England. Filed Apr. 1, 1919. Serial No. 286,783. 2 Claims. (Cl. 75—18.)

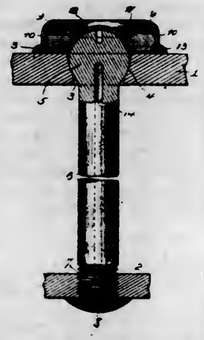
2. Process for separating lead compounds from zinc compounds in lead-zinc sulfid ores, concentrates or the like consisting in heating the pulverized ore with a sufficient quantity of strong hydrochloric acid until substantially the whole of the lead has been converted into lead chlorid while the zinc sulfid remains substantially unattacked, cooling the heated mixture, washing the mass with a limited quantity of cold water to remove excess of acid and soluble impurities, then separating the lead chlorid from the zinc sulfid by extraction of the former with a hot solution of lead chlorid in water or in strong brine, separating the solution from the undissolved matter and cooling it to crystallize lead chlorid, separating the mother liquid from the crystals and using it when re-heated to leach a further batch of lead chlorid from zinc sulfid, the process being repeated so that the same quantity of solvent serves repeatedly to convey purified lead chlorid to the crystallizing vessel, while leaving zinc sulfid in a condition suitable for metallurgical treatment, heating the crystallized lead chlorid with sulfuric acid, dissolving the evolved hydrochloric acid in water and using the solution for treating a further batch of the ore.

1,346,643. SCRUBBING-MACHINE. FRANKLIN A. ESPELAND, Oakes, N. D. Filed Oct. 29, 1918. Serial No. 260,136. 1 Claim. (Cl. 15—14.)



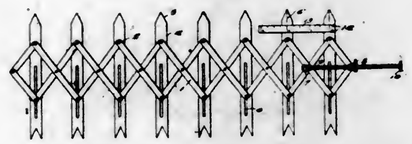
The combination with a casing formed with an open bottom cylindrical compartment having an upper opening communicating with a source of water supply, of a shaft journaled in the walls of the compartment, a hub and end

disks on the shaft, tangentially arranged plates carried by the hub and forming with the disks water receptacles, a wiper attached at the outer free edge of each plate



adapted to pass over said upper and lower openings, and a rubber extending across the casing adjacent to the bottom opening of the compartment.

1,346,644. TRACTOR. ED FLAIZ, Olathe, Colo. Filed Apr. 23, 1919. Serial No. 292,026. 1 Claim. (Cl. 180—26.)

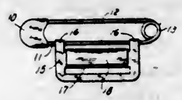


In a tractor, a frame, main ground wheels arranged at the sides of the rear part of the frame, a motor for driving the main ground wheels arranged at the middle part of the frame in front of their axis, a radiator for the motor arranged behind it and also in front of the axis of the main ground wheels, a steering and driving ground wheel pivoted on a vertical axis at the front part of the frame, a single countershaft arranged parallel to and in front of the crankshaft of the motor, and driving mechanisms operatively connecting the respective end portions of the said countershaft with the engine crankshaft and with the front ground wheel.

1,346,645. STAYBOLT STRUCTURE. JOHN ROGERS FLANNERY and ETHAN I. DODDS, Pittsburgh, Pa., assignors to Flannery Bolt Company, Pittsburgh, Pa. Filed Sept. 10, 1919. Serial No. 322,873. 3 Claims. (Cl. 85—1.5.)

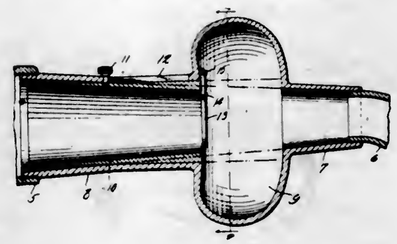
3. In a staybolt structure, the combination with a boiler sheet having an opening, of a staybolt having a head mounted in said opening said staybolt having a tell-tale hole extending from its inner end and terminating within the headed outer end of said bolt, a spring cap surrounding the opening in the boiler sheet and welded to the latter, said spring cap having a central depressed part provided with a portion bearing on the head of the staybolt.

1,346,646. MEASURING INSTRUMENT. HUGH F. GALLAGHER, Portland, Me. Filed June 29, 1918. Serial No. 242,520. 1 Claim. (Cl. 33—192.)



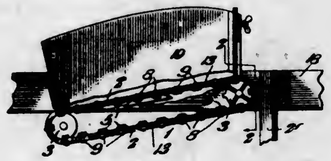
An instrument of the character described including crossed pivotally interconnected arms having marking members engaged therewith, a screw threaded adjusting rod rotatably engaged at one end with certain of the interconnected arms, an internally screw threaded block mounted on certain of the interconnecting arms and formed in two sections, one of said sections being pivotally connected with the other of the sections, and a spring catch for holding said block sections together to form substantially a micrometer adjustment with the screw threaded rod, and for releasing the pivoted block to permit of quick adjustment of the marking members.

1,346,647. WALL-PAPER-HANGING IMPLEMENT. PIOTER GERMASZEWSKI, South East Cleveland, Ohio. Filed Aug. 15, 1919. Serial No. 317,675. 1 Claim. (Cl. 216—6.)



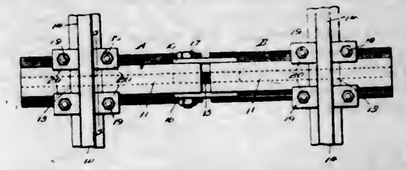
In a wall-paper hanging implement, the combination with a handle adapted for manual operation, a pair of side plates carried in spaced relation by said handle adapted to receive a roll of paper therebetween, and means for supporting a roll of paper, of a paste supplying tank, a brush rotatable therein, means for rotating said brush, a wiper adapted to remove surplus paste from said brush, rollers for pressing the paper upon the wall, a plate having an edge adapted to make contact with the paper, means for manipulating said plate whereby more or less pressure may be attained, and a pair of cutters adapted to sever the marginal edges of the paper when said implement is moved upward.

1,346,648. HOSE-SUPPORTER. THOMAS F. HANCOCK, Seymour, Conn., assignor to The Seymour Metal Goods Company, Seymour, Conn., a Corporation of Connecticut. Filed Dec. 9, 1919. Serial No. 343,552. 2 Claims. (Cl. 24—76.)



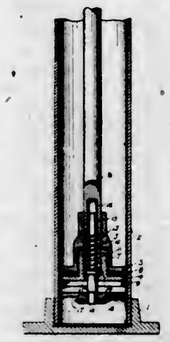
2. A hose supporter comprising a safety pin having a head carrying arm, and a frame pivotally secured to said arm, said frame comprising side pieces, a cross bar beneath which is a longitudinal slot, and an offset plate, the upper edge of said offset plate being attached to the upper edge of the cross bar for its approximate length, whereby a web may be inserted and clamped between said cross bar and offset plate, having its free end passed through said longitudinal slot, and around said cross bar so that it will suspend from the top thereof to exert additional pressure against the offset plate to hold it against the web.

1,346,649. SOUND-CONDUIT. EARLE H. HAND, Baltimore, Md. Filed Nov. 5, 1919. Serial No. 335,836. 2 Claims. (Cl. 181—0.5.)



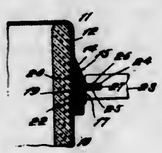
1. A sound conduit having a section provided intermediate its ends with a lateral expansion chamber in communication with the interior thereof, a sleeve slidably mounted in one end of the section, and adjustable to extend across the chamber for shutting off the same from the interior of the section, and a gate opposite that end of the sleeve into which the sound waves pass from the expansion chamber, said gate being dimensioned to partly close said end of the sleeve.

1,346,650. FERTILIZER-DISTRIBUTER. WILLIAM A. HENDRICKSON, Riverton, N. J., assignor to McWhorter Manufacturing Company, Riverton, N. J., a Corporation of New Jersey. Filed Apr. 28, 1919. Serail No. 293,253. 6 Claims. (Cl. 193—26.)



1. In a device of the character stated, an endless belt, means for actuating it, transverse bars secured to said belt and having terminal straight pins at each end thereof, inner links common to a pair of pins of a pair of adjacent bars, and outer oblong washers secured to a pair of pins of each bar for retaining said inner links in position.

1,346,651. RAILWAY-TIE. CHRIST HERMINGHUYSEN, Van Wert, Ohio. Filed May 13, 1920. Serial No. 380,997. 2 Claims. (Cl. 238—31.)



1. A railway tie of the character described, comprising a pair of sections, each formed with spaced vertical webs having integral top and bottom portions, said top portion being formed with a rail seat transversely thereof, extensions on the webs of one section and pivotally engaged with the webs of the other section for flexibly connecting the sections together, and means carrier by the top portions of the sections for the fastening of rails in the seats.

1,346,652. PUMP. CLAUD J. HINSHAW and HARRY B. CASTOR, Lapel, Ind. Filed Feb. 21, 1920. Serial No. 360,499. 6 Claims. (Cl. 103—63.)

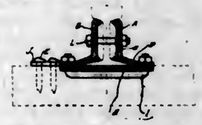
1. A pump comprising a cylinder member and a piston therein having an expansible packing element, and an expanding device for the packing element movably mounted on the piston and adapted to engage the cylinder at the end of the piston stroke and be thereby caused to engage the packing element.

1,346,653. CLOSURE FOR JARS, BOTTLES, AND OTHER RECEPTACLES. ALFRED INGRAM and HARRY INGRAM, Brooklyn, N. Y., assignors to Ingrams Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 5, 1917. Serial No. 194,838. 5 Claims. (Cl. 215—81.)

1. A closure for a receptacle comprising a cap having an annular depending flange or skirt portion to encompass the upper exterior walls of the receptacle, and a gasket within said flange or skirt portion, said skirt portion initially having a downwardly and outwardly

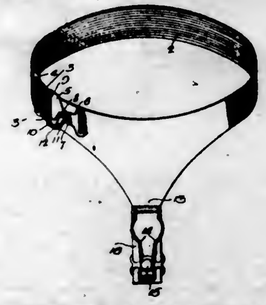
diverging annular wall, a wall converging downwardly and inwardly from the outer edges of said first mentioned wall and a flange extending downwardly from the inner edge of said second wall, and said gasket being adapted on one face to engage the exterior wall of the receptacle and, initially, at its outer face said walls at their adjacent angular portions and lower flange, and said walls being adapted to be squeezed toward each other for forcing said gasket therefrom and against the plain exterior wall of the receptacle.

1,346,654. CLOSURE FOR JARS, BOTTLES, AND OTHER RECEPTACLES. ALFRED INGRAM and HARRY INGRAM, Brooklyn, N. Y., assignors to Ingrams Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 12, 1917. Serial No. 196,169. 5 Claims. (Cl. 215—81.)



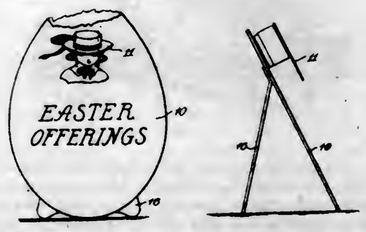
1. In combination with a receptacle having plain exterior surfaces, a side seal closure of the character described therefor comprising a cap adapted to seat on the top of the receptacle and having a depending flange or skirt portion adapted to encompass the exterior surfaces of the receptacle at the upper end thereof and formed with an upper plain section adapted to closely engage said exterior surfaces and a lower beaded section set outwardly from the surface of the receptacle and open at its lower end and comprising a lower vertical section and a top which extends outwardly in a lateral direction from the said upper plain section of the flange, and a gasket in said beaded section, said beaded section and gasket being adapted to be vertically elongated in a downwardly direction by pressure applied against the upper edge of said beaded section to press said section and said gasket downwardly and also inwardly toward the receptacle and bind said gasket against the outer plain walls of the receptacle.

1,346,655. FASTENING OR SECURING DEVICE. ALEXANDER HUGH JENKINS, Birmingham, England, assignor to J. B. Brooks and Company Limited, Birmingham, England. Filed Oct. 16, 1919. Serial No. 331,204 2 Claims. (Cl. 70—5.)



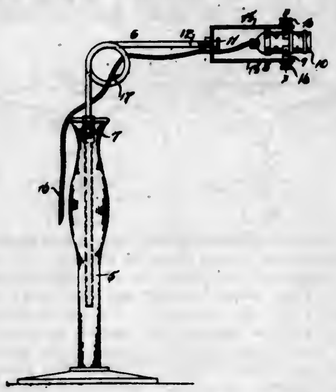
1. A fastening or securing device comprising a link member adapted to be attached at one end to one of the members to be secured; a staple secured to said link, means for adjusting the length of said link, a lever member eccentrically pivoted to the link member so as to turn in a plane parallel to that of the latter; and a lock combined with and forming an integral part of the lever member and adapted to coöperate with the staple carried by said link member to secure the latter to the link member after the parts have been drawn together.

1,346,656. RAIL-JOINT. SLONE A. JONES, Springville, Ala. Filed Feb. 16, 1920. Serial No. 359,194. 3 Claims. (Cl. 238—195.)



1. A joint for rails comprising two joint members, one joint member comprising a splice bar for one side of the rails having a transverse integral base extension adapted to underlie and support the joint between the rails, and the other joint member comprising a splice bar section having a base flange adapted to overlie the free end of said transverse joint support, and transverse U-bolts connecting the two joint members on each side of the rail joint and adapted to brace said joint support, substantially as described.

1,346,657. GARTER-FASTENING. JOHN I. KELLEY, Philadelphia, Pa. Filed Mar. 1, 1920. Serial No. 362,498. 2 Claims. (Cl. 24—224.)

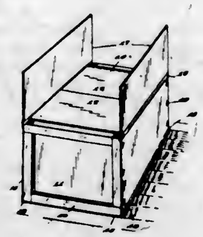


1. The combination in a fastener, of two sections, one section having a headed pin, the other section having a narrow longitudinal slot at the center; an enlarged slot for the passage of the head of the pin of the other section, said slot being at one side and back of the longitudinal slot; and a diagonal narrow slot connecting the large slot with the rear end of the narrow longitudinal central slot.

1,346,658. ADVERTISING SPECIALTY. CHARLES KOLIN, Rochelle, Ill. Filed Sept. 20, 1919. Serial No. 325,121 4 Claims. (Cl. 40—126.)

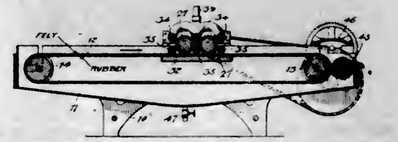
1. In a display medium, a representation of a broken egg shell and means attached thereto for supporting a representation of an article to be displayed wherein the impression will be created that the article has come out of the egg shell.

1,346,659. ADJUSTABLE LAMP-SUPPORT. MAX KOSSMANN, Brooklyn, N. Y. Filed Dec. 27, 1919. Serial No. 347,868. 1 Claim. (240—81.)



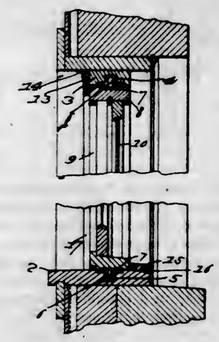
In combination, a standard, a rod rotatably supported by said standard, a set screw carried by the standard to contact with said rod to bind same in adjusted positions, said rod being bent to form a loop intermediate its ends, a bracket carried by the free end of the rod, a binding screw passing through one end of said bracket and engag- in gthe free end of said arm, whereby said bracket can be firmly secured in adjusted position, and a clamp pivotally supported by said bracket to engage an electric light bulb.

1,346,660. BUTTON. EDGAR C. LAKEY, Providence, R. I., assignor to B. A. Ballou & Co. Inc., Providence, R. I., a Corporation of Rhode Island. Filed Apr. 10, 1920. Serial No. 372,834. 3 Claims. (Cl. 24—97.)



1. In a button, a front-plate, a back-plate secured to said front-plate and provided with a central opening through it, a loop member formed of sheet stock and having its middle portion bent outwardly into loop form with said loop portion extending through said back-plate opening, the ends of said loop extending laterally beneath said plate providing anchors for said loop.

1,346,661. PACKING-BOX. ROBERT LLOYD LEMON, Indianapolis, Ind., assignor to The Van Camp Packing Co., Indianapolis, Ind., a Corporation of Indiana. Filed July 7, 1919. Serial No. 309,162. 2 Claims. Cl. 217—2.)

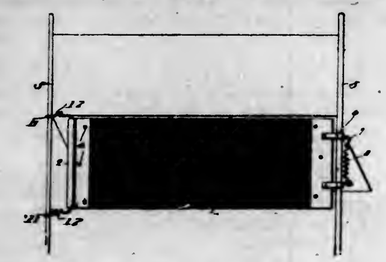


1. A package comprising two wooden end frames, a fiber-board sheet attached to the inner face of each frame and having a length sufficient to form a cover flap, and a main fiber-board sheet wrapped around and fastened to the two wooden frames to form the bottom, two sides, and cover flaps, substantially as described.

1,346,662. PHOTOGRAPH-CLEANING DEVICE. ALFA LOMAX, Atlanta, Ga. Filed Dec. 11, 1919. Serial No. 344,005. 5 Claims. (Cl. 95—89.)

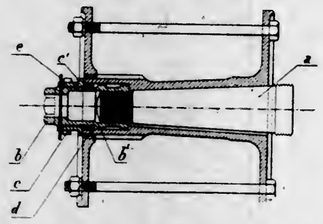
1. In apparatus of the class described, the combination with an approximately horizontal traveling belt adapted to advance photographic prints laid thereon, of a soft print mop arranged above the belt to press gently upon prints passing upon the latter, and means for discharging water continuously upon the prints being acted upon.

1,346,663. REVOLVING WINDOW-FRAME. ALICE P. MCCLAIR, Atlanta, Ga. Filed Mar. 14, 1919. Serial No. 282,606. 1 Claim. (Cl. 20—48.)



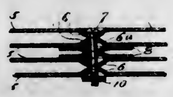
A revolving window frame comprising a main frame, a supplemental frame support on vertical pivots for turning movements in the main frame, a plate swingingly mounted at the top of the main frame and gravity actuated to lie against the window face of the supplemental frame at the upper end thereof whereby it may swing out of the way of the supplemental frame on the turning of the latter, a second plate hingedly attached to the main frame at the bottom thereof and lying normally horizontal to have its free edge engage the supplemental frame at the bottom thereof whereby turning movement of the supplemental frame is precluded except on raising the said plate to swing outwardly and upwardly from the main frame, and lateral movable plates mounted on the supplemental frame and engageable with side slots in the main frame, in the manner and for the purpose specified.

1,346,664. SCREEN FOR WINDSHIELDS. FRANK MCMAHON and ROGER A. HOUSTON, South Charleston, Ohio. Filed Aug. 22, 1919. Serial No. 319,264. 2 Claims. (Cl. 296—95.)



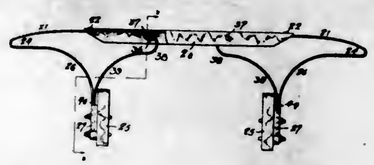
1. A device of the character specified comprising a strip of flexible material, a substantially U-shaped connector at one end of the strip and comprising a body portion connected with the end of the strip and arms extending laterally from the body and having hooks for engaging the windshield brackets, the arms having coils in-

terposed therein to provide resiliency, and hooks at the other end of the strip engaging the windshield bracket at



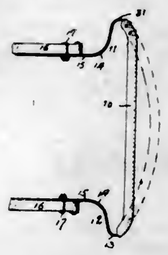
the other side, and resilient means for normally forcing said hooks toward each other to cause them to frictionally engage the bracket.

1,346,665. MEANS FOR FITTING UP SCREW-PROPELLER HUBS UPON THEIR SHAFTS. AUGUSTE MAIRE, Argenteuil, France, assignor to Societe Lorraine Des Anciens Etablissements De Dietrich & Cie. De Luneville, Paris, France. Filed Jan. 2, 1919. Serial No. 269,385. 2 Claims. (Cl. 29—85.)



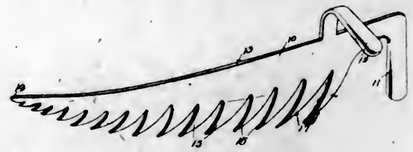
1. Means for fitting up screw propellers upon their shafts comprising in combination a conical shaft and terminated by a screw threaded cylindrical part, a hub with a conical bore slipped over the end of the conical shaft, a cylindrical bore formed in the hub following the small base of the conical bore and having a larger diameter than this base so as to form a shoulder between the two bores, a tapping in the cylindrical bore by the side of its outer opening, a nut capable of engaging freely the cylindrical bore of the hub and screwed upon the threaded end of the shaft so as to abut against the inner shoulder of the hub, a collar formed upon the front part of the nut, a lock nut having a bore of sufficient diameter to slip freely over the nut, an outer screw thread formed on the front end of this lock nut, this thread being arranged to enter the tapped bore of the hub and having a pitch reversed to that of the tapped nut, a flange or abutment formed on the lock nut in such a manner as to leave always a certain amount of play between the front end of the lock nut—even when screwed home—and the rear of the nut collar and means for pinning together the nut and the lock nut after they are screwed up, substantially as described and for the purpose set forth.

1,346,666. BAFFLE-PLATE DEVICE FOR ELECTRIC FIRELESS COOKERS. MORTON MURPHY, Marion, Ind. Filed Feb. 26, 1920. Serial No. 361,592. 3 Claims. (Cl. 126—275.)



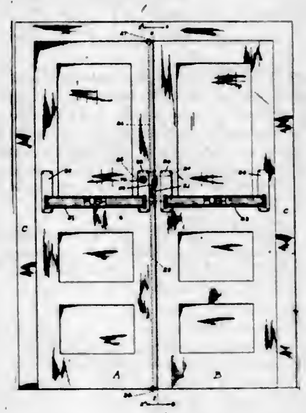
1. In a device of the class described, the combination of a series of disks arranged in pairs, and the disks in each pair provided with projections extending toward each other in engagement, spacing the disks of the pairs apart, means interposed between the inner disks of the pairs and spacing the pairs of disks apart, and means fastening all of the disks in an assembled position.

1,346,667. BUMPER. RICHARD T. NEWTON, New York, N. Y. Filed Oct. 26, 1918. Serial No. 259,802. 8 Claims. (Cl. 293—55.)



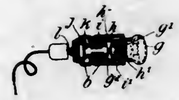
7. An automobile bumper comprising a mid-impact area, and opposite end impact areas in extension of the mid-impact area, said end impact areas comprising resilient flat metal strap means recurved and secured at their inner ends to the side members of the automobile chassis, said recurved area being bowed toward the impact area, together with a yielding mid-uppport for the impact area of the bumper, said mid-support comprising independent members engaging the impact element at points spaced between the end areas and the center of the mid-area, and means rigid with the automobile engaged by said mid-support and taking the thrust thereof, for the purpose described.

1,346,668. BUMPER. RICHARD T. NEWTON, New York, N. Y. Filed Feb. 24, 1919. Serial No. 278,817. 5 Claims. (Cl. 293—55.)



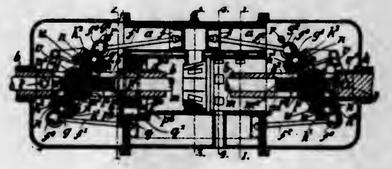
2. In an automobile bumper, an impact member of channel section with curved ends, and a spring supporting strap having a curved outer end fitting within said curved end of the channel and secured thereto.

1,346,669. KNIFE. HENRI OERTLI, Dale, Tex. Filed Oct. 10, 1916. Serial No. 124,883. 1 Claim. (Cl. 30—8.)



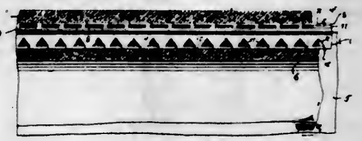
An improved food knife comprising a tapering blade-like body having a concaved upper edge and a convex lower edge, said upper edge at its widest portion being formed with an integral extension bent downwardly and laterally at right angles and having a reduced portion with a depending handle in alinement with the body, the convex edge of the body being provided with spaced teeth formed with concaved forward edges and convexed rear edges with corresponding intervening V-shaped notches having corresponding curved side portions, said teeth being pointed and graduating in length from the wider to the narrower portion thereof, the teeth at the wider portion adjacent to the laterally extending handle being longer than those at the tapered end and conforming at the said wide end to the rear extension of the body, said teeth providing cutting action in opposite directions.

1,346,670. PANIC-BOLT MECHANISM. ALBERT A. PAGE, East Haven, Conn., assignor to Sargent & Company, New Haven, Conn., a Corporation of Connecticut. Filed Apr. 8, 1916. Serial No. 89,980. 21 Claims. (Cl. 70—46.)



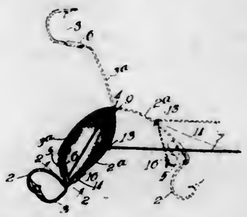
5. In a lock, a bolt member, means for retracting said bolt member, a dogging member for said bolt member, a spring urging said dogging member into a dogging position with respect to said bolt member, and key mechanism for moving said dogging member in the opposite direction and into another dogging position with respect to said bolt member; substantially as described.

1,346,671. ELECTRIC-INCANDESCENT-LIGHTING APPARATUS. MARC-ANTOINE PATTAY and EUGÈNE JAQUEMOT, Geneva, Switzerland, assignors to Charles von der Weid, Geneva, Switzerland. Filed Sept. 4, 1919. No. 321,605. 2 Claims. (Cl. 240—44.)



2. An electric lighting device comprising a holder having a lamp socket at one end and a lens at the other end, a lamp fitting consisting of a cap, a sleeve having a screw threaded body portion adapted to be turned into the said cap, and a flaring slotted portion adapted to receive a screw stud of a lamp bulb, and a collar adapted at one end to be received on a portion of the said cap and abut against a shoulder provided therefor on the said cap, the said collar being provided at its opposite end with an internal flange adapted to bear against the flaring portion of the sleeve so that when the sleeve is turned into the cap the flaring portions of the sleeve will be engaged by the internal flange on the collar to cause the flaring portions of the sleeve to engage the screw stud of a lamp bulb to hold the same in position, the said clamp fitting being adapted to be received within the socket member of the said holder.

1,346,672. INTERNAL-COMBUSTION ENGINE. ALEXANDER MARCUS PATTON, Belfast, Ireland, assignor to Charles Hurst Limited, Belfast, Ireland. Filed Apr. 18, 1918. Serial No. 229,409. 6 Claims. (Cl. 74—14.)

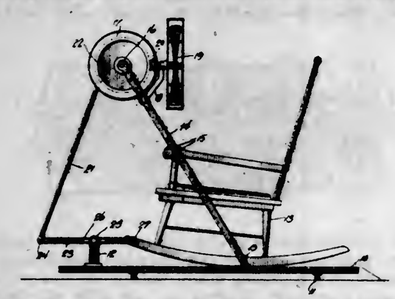


1. A multi-cylinder engine of the type described having a shaft, angularly movable and rotatable thrust rings, a carrier therefor, a driving sleeve slidably secured on the shaft, means pivotally securing the carrier to the sleeve, a non-rotatable stroke plate freely located between the thrust rings and means for oscillating the stroke plate.

1,346,673. REINFORCED CONCRETE CONSTRUCTION. EARL L. PETERSON, Corona, N. Y., assignor to United Concrete Pipe Company, New York, N. Y., a Corporation of New York. Filed Jan. 6, 1920. Serial No. 349,676. 7 Claims. (Cl. 72—53.)

1. A reinforced concrete conduit comprising an imperforate metal pipe embedded in concrete, and longitudinally extending ribs mechanically attached directly thereto and serving to anchor thereto the concrete in which the metal pipe is embedded.

1,346,674. FISH-BAIT. GEORGE E. PICKUP, Newark, Ohio, assignor of one-half to Fred Harlow and one-half to John Steinbaugh, Newark, Ohio. Filed Jan. 28, 1918. Serial No. 214,114. 10 Claims. (Cl. 43—37.)



1. In combination with a line, a fish bait including a body, a pair of hooks mounted on opposite sides of the body and normally tending to swing outwardly therefrom, a latch for releasably locking said hooks together operatively connected to said line and including a spring member fixed on one of said hooks and adapted to be released by the relative movement of the bait and line, and means for guiding the line in its movements with reference to the body whereby a direct pull is exerted on the latch in any position of the body.

1,346,675. ROCKING-CHAIR ATTACHMENT. PHILIP PIETROBONO, East Hartford, Conn. Filed Oct. 8, 1919. Serial No. 329,279. 1 Claim. (Cl. 230—7.)

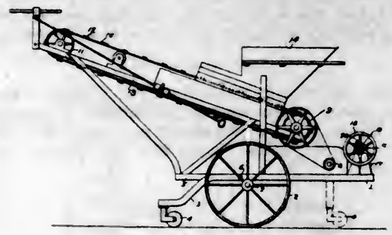
The combination with a support equipped with a standard and having a rocking chair mounted thereon, of a

supporting rod rigidly fixed to and projecting above the chair, a beveled gear mounted upon the rod, a bevel pinion meshing therewith, a bracket fixed to the rod and support-

ing said pinion, a fan operable with the pinion, and a lever mounted upon the standard and connected with said bevel gear and said chair whereby movement is imparted to the bevel gear when the chair is set in motion.

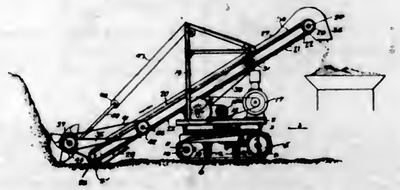
1,346,676. CASH-CARRIER BOX. MARTIN A. POND, Bristol, Conn., assignor to Standard Carrier Company, Southington, Conn., a Statute Corporation of Connecticut. Filed Dec. 1, 1919. Serial No. 341,743. 8 Claims. (Cl. 186—32.)

1. A cash carrier box comprising a receptacle, a supplemental bottom secured to the bottom of the receptacle and providing a track guide at its edges, a fixed cable gripping member projecting below said supplemental bottom, a stud fixed in said supplemental bottom, an oscillatory cable gripping member pivotally mounted on said stud and projecting below said supplemental bottom, and a spring in said supplemental bottom and engaging the oscillatory cable gripping member.



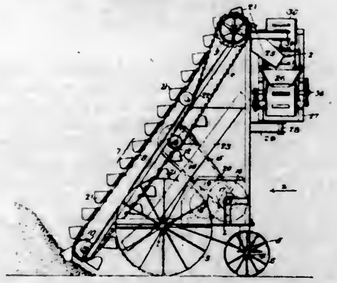
1,346,677. SASH-LOCK. HERMAN P. PORTER, Jacksonville, Fla. Filed Dec. 2, 1919. Serial No. 341,905. 5 Claims. (Cl. 292—251.)

1. The combination with meeting sash-rails, one of said sash rails having two sizes of openings formed therein, of a tubular casing fitted within the larger opening, a slotted casing fitted within the smaller opening, a locking bolt revolubly mounted in said openings, a slotted washer embracing said bolt, and a spring surrounding the bolt with one end in contact with the washer and its other end in contact with said slotted casing.



1,346,678. BOX-CAR LOADER. HOWELL D. PRATT, Philadelphia, Pa., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 10, 1918. Serial No. 227,705. 3 Claims. (Cl. 193—19.)

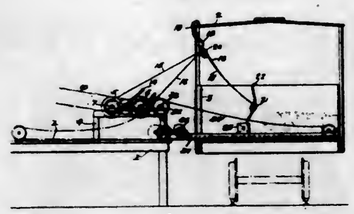
1. The combination in a box car loader, of a carriage; a tiltable frame of substantially triangular form mounted on the carriage and having its long side presented upwardly, and having a part extending rearwardly from the base of the triangle, said rear extension being pivotally connected to the carriage; an endless conveyer mounted on said frame substantially parallel with the long side



thereof; means on the frame for operating said conveyer; and a hopper carried by said frame above the receiving end of the conveyer, said loader adapted for operation in a car box with a portion of its hopper projecting through a door opening thereof so that material may be delivered directly into the hopper from outside the car.

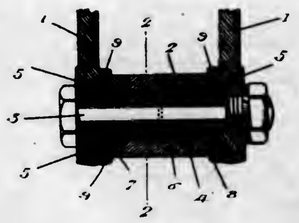
1,346,679. WAGON-LOADER. HOWELL D. PRATT, Philadelphia, Pa., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed June 12, 1918. Serial No. 239,521. 4 Claims. (Cl. 37—29.)

4. The combination of a platform pivotally mounted on a carriage; an endless belt conveyer supported by the platform and having flat spring plates at the lower end which are arranged to support the end of the elevator on the material; and means for feeding the elevator so that the material will be carried up the elevator and discharged from the upper end thereof.



1,346,680. BOX-CAR LOADER. HOWELL D. PRATT, Philadelphia, Pa., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed June 12, 1918. Serial No. 239,522. 2 Claims. (Cl. 193—6.)

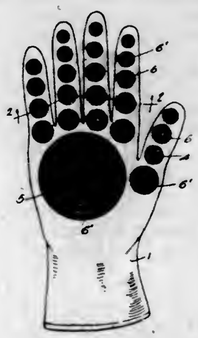
1. In a car loader, the combination of a readily portable frame having a horizontal relatively short wheel base and a vertical portion of substantial height; a bucket elevator mounted at an incline on one side of the frame, said frame



having a lateral extension from the opposite side at a point intermediate of its top and bottom; a motor for driving the elevator; a pivoted belt conveyer having a frame pivotally mounted at one end of said lateral extension so that the conveyer is capable of swinging about its pivot either to the right or left of the loader, said conveyer adapted to receive material from the bucket elevator; and an independent motor for driving the belt conveyer so that the speed thereof can be varied to cause material to be discharged at different distances from the loader.

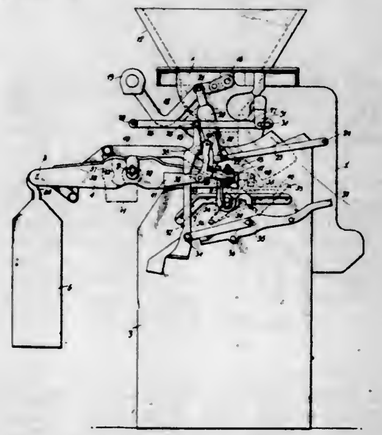
1,346,681. CAR-UNLOADER. HOWELL D. PRATT, Philadelphia, Pa., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed June 14, 1919. Serial No. 304,210. 3 Claims. (Cl. 214—44.)

1. The combination in a car unloader, of a cable; sheaves suspended in the upper portion of the car-door opening around which the opposite ends of the cable pass; a readily detachable sheave at each end of the car body around which the cable passes; oppositely operating scoops carried by the cable, the portion of said cable between said end sheaves being unsupported and resting on the material and serving as a drag conveyer therefor; mechanism for imparting positive movement alternately to opposite portions of the cable; and means for reversing the driving mechanism whereby material is advanced alternately from each end of the car toward the center thereof.



1,346,682. SPRING-EYE PROTECTOR FOR AUTOMOBILES. HARRY K. REINOEHL, Defiance, Ohio. Filed Dec. 10, 1919. Serial No. 343,729. 5 Claims. (Cl. 64—24.)

2. A lubrication protector element for spring-eye bearings comprising a cylindrical portion having a cupped end, said cylindrical portion being adapted to be slipped longitudinally into said spring-eye from one end, while the cupped end lies beyond the spring-eye.

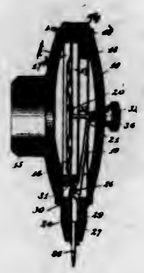


1,346,683. HAND-COVERING. JOSEPH N. REYNOLDS, Atlantic, Iowa. Filed Oct. 14, 1919. Serial No. 330,542. 1 Claim. (Cl. 2—79.)

A hand covering comprising a textile body, and a rubber membrane vulcanized upon the outer surface only of the body, said membrane having a plurality of closely-arranged definite projections forming a roughened gripping surface approximately coextensive with the palm and

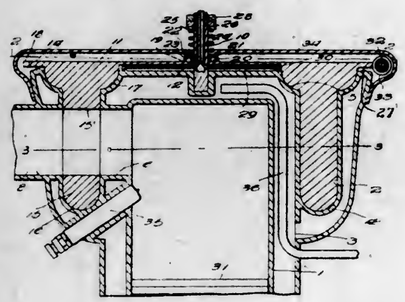
finger portions of the textile body, the area uncovered by the projections being slight relative to the area covered by them.

1,346,684. AUTOMATIC COMPENSATOR FOR WEIGHING-MACHINES. HENRY RICHARDSON, Passaic, N. J. Filed Dec. 15, 1917. Serial No. 207,314. 20 Claims. (Cl. 249—1.)



19. In a weighing machine of the type having a weigh hopper, a feed gate for controlling the flow of material to the weigh hopper, a mechanical means for controlling the closing of said gate during movement of the weigh hopper toward equipoise position, and a member operative by such movement of the weigh hopper to mechanically actuate said gate controlling means, said member being adjustable to vary the range of movement of the weigh hopper before said member causes actuation of said gate controlling means.

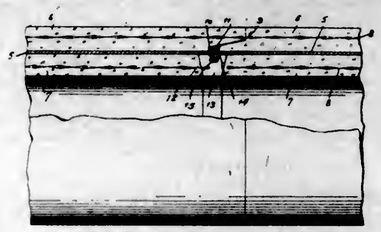
1,346,685. SOUND-BOX FOR PHONOGRAPHS. AGOSTINO ROGATI and LOUIS ARONNE, New York, N. Y. Filed Apr. 26, 1919. Serial No. 292,803. 1 Claim. (Cl. 274—35.)



The herein described sound box for talking machines comprising front and rear spaced walls, a rim embracing the peripheries of the disks and serving to hold them in fixed spaced relation to each other, a diaphragm within the space between the walls, cushioning devices gripping the periphery of the diaphragm to hold it in position, a

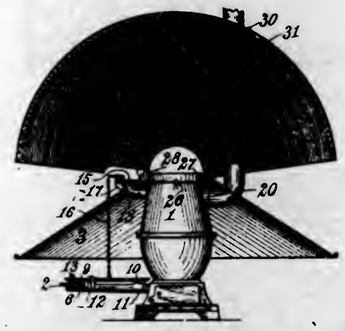
stylus bar connected with the diaphragm and pivoted within the space between the walls, and a supporting arch

between the diaphragm securing means and the stylus bar to prevent interference between the diaphragm supporting devices and the stylus bar.



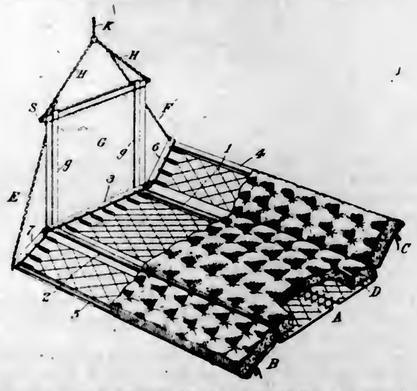
1,346,686. ROTARY VALVE FOR INTERNAL-COMBUSTION ENGINES. CONRAD L. SCHWANKE, Cornelius, Oreg. Filed Feb. 3, 1919. Serial No. 274,650. 1 Claim. (Cl. 123—80.)

In an engine, a cylinder formed with a closed top, a water jacket entirely about the sides and top of said cylinder, the cylinder being formed with intake and exhaust passages extending through said jacket contiguous to the top of the cylinder, an annular valve casing formed in the jacket concentrically of the cylinder, spaced from the walls of the latter and said jacket, intersected by the passages, and opening through the upper end of the jacket, an annular valve rotatably seated in the valve casing for controlling the passages, and removable therefrom, a gear toothed peripheral edge formed on said valve, a cover fitted over the upper open end of the valve casing, a driven worm gear journaled in said cover and meshing with the gear toothed peripheral edge of the valve, a pivot stem fixed centrally of the water jacket and having the valve revolubly connected therewith and means carried by the stem and co-acting with the connection for regulating the seating engagement of the valve in the valve casing.



1,346,687. REINFORCED-CONCRETE CONDUIT. GLENN MASON SCOFIELD, San Diego, Calif., assignor to United Concrete Pipe Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 10, 1919. Serial No. 343,727. 7 Claims. (Cl. 72—51.)

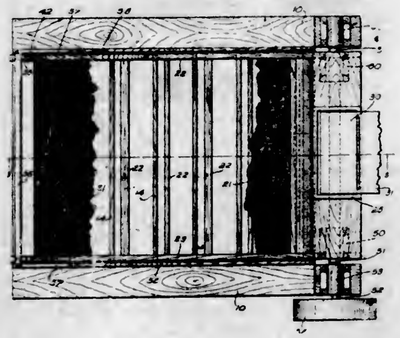
1. A reinforced concrete conduit comprising metal pipe lengths embedded in concrete sections, and welded expansion joints between adjacent pipe lengths to render the



latter continuous and free from leakage at the joint between adjacent conduit sections.

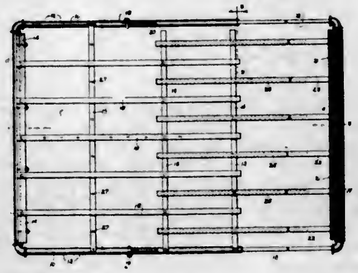
1,346,688. BROODER. ANDREW F. SHULER, Arcanum, Ohio. Filed Feb. 10, 1920. Serial No. 357,532. 4 Claims. (Cl. 237—3.)

3. A brooder heater comprising an upright stove, having a draft opening in the base thereof and a check draft opening in the top thereof, and an outlet in the top thereof for the outlet of the products of combustion, baffle walls arranged adjacent to the check draft opening and the opening for the outlet of the products of combustion to deflect the air entering the check draft opening, and a thermostat adapted to control both draft and check draft openings.



1,346,689. COUCH-HAMMOCK. GEORGE F. SISBOWER, East Orange, N. J., and LOUIS E. PITTONI, New York, N. Y., assignors to New York Couch Bed Company, New York, N. Y., a Corporation of New York. Filed Nov. 3, 1914. Serial No. 870,069. 2 Claims. (Cl. 5—61.)

1. A couch hammock frame comprising a pair of end angle-bars connected adjacent their ends by a pair of side

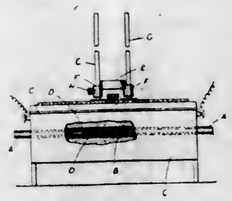


rods, a fabric stretched between the end bars, end walls for the frame each including a strip of flexible material substantially co-extensive with said end bars and having horizontal spreader-bars secured to the upper and lower edges thereof, reinforcing strips at the vertical edges of said walls and having their ends bent around the upper and lower edges of said walls and embracing said spreader bars, the lower edge portion of each wall being shaped to correspond to said end angle bars, securing elements extending through said side rods, end bars and lower spreader bars for connecting all of said parts together, and means connected to the upper spreader bars for suspending the frame.

1,346,690. SCREENING OR FILTERING APPARATUS. HAROLD DONALD WELLS, Glens Falls, N. Y. Filed Sept. 18, 1919. Serial No. 324,429. 3 Claims. (Cl. 92—33.)

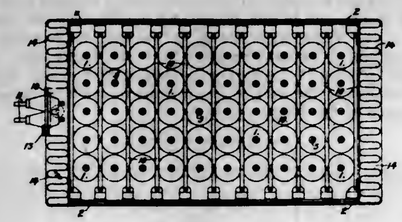
1. In an apparatus of the type described, a box provided with spaced transverse partitions, a screen extending into the said box and provided at the under side with spaced transverse partitions extending between the partitions of the said box, the said partitions on the box and screen forming suction and pressure compartments underneath the screen above the box partitions, and forming water sealing compartments in the box, and means imparting a rising and falling and a longitudinal oscillating motion to the said screen.

1,346,691. CHART-HOLDER. COURTLANDT W. BABCOCK, Stonington, Conn. Filed July 29, 1919. Serial No. 314,029. 4 Claims. (Cl. 40—155.)



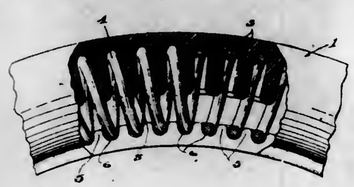
2. A chart and map supporting frame, comprising in combination; a frame unit comprising parallel frame bars fitted with tubular receivers, and another frame unit comprising parallel frame bars fitted with tubular inserts telescopically engaging within the tubular receivers of the first named frame unit, a compression spring inserted within the telescoping tube members to engage the inserted end of the tubular inserts, and adjusting pins provided within the tubular receivers of the first frame to engage the compression springs for facilitating the adjustment of the length of the frame, and a support curtain fixed to one end of the frame and passed over the other end of the frame, with means for hooking the free end of the curtain to the underneath side of one frame unit, and a chart applied to the support curtain with the ends thereof attached to the ends of the frame, and clamps engaging each end of the chart.

1,346,692. RESILIENT TIRE FOR VEHICLE-WHEELS. ANDRES BALAGUER, Marianao, Habana, Cuba. Filed May 6, 1919. Serial No. 295,231. 2 Claims. (Cl. 152—1.)



1. In a tire which in cross section presents a crescent tread, alternate layers of fabric and cushion material beneath said tread, a relatively heavy elliptical cushion beneath said layers, a crescent of fabric and cushion layers within the outer portion of said elliptic member, and a circular cushion within the inner portion of said elliptical member, the said crescent and circular cushion surrounded by circular layers of fabric.

1,346,693. MEANS FOR POSITIVELY INDICATING THE CONDITION OF STEEL DURING HEAT TREATMENT. CHARLES ORME BASTIAN, London, England. Filed May 10, 1920. Serial No. 380,382. 3 Claims. (Cl. 175—183.)

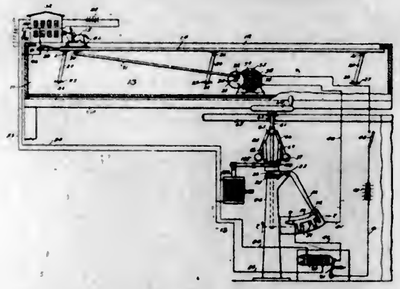


1. In apparatus for indicating the critical point of heated magnetic substances, the combination with a chamber for receiving magnetic material to be treated, a compass, and means for normally neutralizing the earth's magnetic effect on the compass, whereby magnetic material in the chamber is adapted to influence said compass until heated to the critical point and said compass is adapted to return to neutral position.

1,346,694. ELECTRICAL CONDENSER. ERNEST ARTHUR BAYLES and HAROLD HIGHAM, Helsby, England. Filed Feb. 23, 1915. Serial No. 10,074. 7 Claims. (Cl. 250—41.)

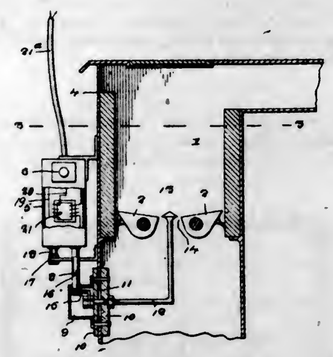
1. An electrical condenser consisting of a casing containing oil, a plurality of condenser bodies each composed of coiled or folded laminæ of paper and metal impregnated with oil and submerged in the oil in the casing substantially as set forth.

1,346,695. RESILIENT TIRE. EMORY J. BENEDICT and MOLLIE C. FROST, Memphis, Tenn. Filed June 3, 1919. Serial No. 301,383. 2 Claims. (Cl. 152—8.)



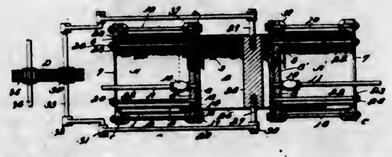
1. A resilient tire comprising a casing, a plurality of resilient ribs extending inwardly from the inner surface of the tread portion of said casing to substantially the center of the tire casing, said tire casing provided with beads along its free edges and having grooves arranged in radial alinement with the ribs formed inwardly of the beads, and an endless spiral spring formed from a cylindrical spring wire within said casing having its coils engaging between the adjacent ribs and within the adjacent grooves of the casing.

1,346,696. ROPE-LOCK FOR PULLEYS. ARTHUR J. BERGERON, New York, N. Y. Filed Oct. 2, 1919. Serial No. 328,000. 7 Claims. (Cl. 24—132.)



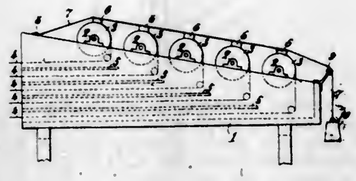
7. A rope lock comprising a supporting member, a pair of arms pivoted thereto in spaced relation, coöperating rope gripping jaws formed on said arms at their free extremities, means on one of said arms coöperating with the remaining arm to cause relative movement of the jaws toward and away from each other when the arms are raised or lowered, means for restricting the upward movement of the arms and a device pivotally mounted on the supporting member having a portion normally obstructing the operation of the restricting means, said device being adapted to be engaged by and lifted to an unobstructing position by the restricting means when the arms are lowered slowly.

1,346,697. RACE-GAME APPARATUS. RICHARD M. BRENNER, Palisade, N. J. Filed Dec. 10, 1919. Serial No. 343,759. 11 Claims. (Cl. 46—56.)



1. An amusement apparatus, comprising a racing table, a racing object adapted to travel on the said racing table, a motor connected with the said racing table to move the same forward and backward, and a motor controlling device adapted to be actuated by a player and connected with the said motor to govern the speed thereof and hence the forward and backward movement of the said racing table.

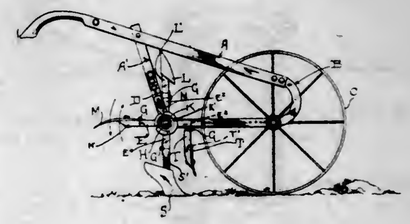
1,346,698. ELECTRICAL FIRE-LIGHTING ATTACHMENT FOR STOVES. TITO L. BRUNELLI, Clearfield, Pa. Filed Dec. 16, 1919. Serial No. 345,413. 3 Claims. (Cl. 175—115.)



1. The combination of a stove, having a conductive wall, a grate therein in electrical connection with said wall, an electrode having a portion arranged in close proximity to portions of the grate and also having an arm extending outwardly through an opening in the stove wall, insulating means connected to said wall and receiving the arm of the electrode to support the latter, a casing connected to the said insulating means and receiving the outer end of the electrode, a cabinet fastened to the stove wall exteriorly thereof and having conduits one of which extends into the casing, conductive means connecting the other conduit and the stove wall, wires in said conduit, one of said wires being connected with said conductive means, a conductive connection arranged in the casing, and electrically connecting the other wire and the electrode, house wires extending into the cabinet and adapted to be connected with a source of alternating current supply, and a step-down transformer and spark intensifying means arranged in the cabinet and electrically connected with the last-named wires and the first-named wires; one of the last-named wires being also provided with a switch carried by the cabinet.

1,346,699. AIR-COMPRESSOR PUMP. GEORGE BURD and CHARLES BURD, Detroit, Mich. Filed Oct. 27, 1919. Serial No. 333,631. 4 Claims. (Cl. 230—6.)

1. In an air compressor of the character described, a cylinder comprising separate parallel inner and outer cylindrical walls arranged in separated relation, a separate cylinder head closing one end of the inner cylindrical wall, a clamping ring surrounding the inner end of the outer cylindrical wall and abutting against its inner end, a clamping ring embracing and abutting against the outer ends of both cylindrical walls, bolts connecting both the rings outside of the outer cylindrical wall and connecting the outer ring and the cylinder head and clamping the walls in their operative positions, and a hollow piston operative between said walls, for the purpose described.

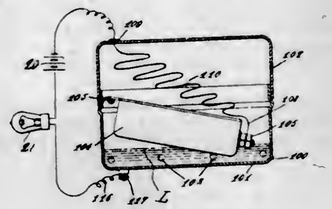


1,346,700. APPARATUS FOR PRODUCING DRIVING-BELTS. AXEL CARLSEN, Lyngby, near Copenhagen, Denmark. Filed Nov. 2, 1917. Serial No. 199,855. 2 Claims. (Cl. 242—75.)

1. In an apparatus of the character described, the combination with a trough, of a plurality of rollers mounted on the trough and upon each of which a material is adapted to be wound, and a brake common to all of the rollers, said brake comprising a flexible member extending above and over all of the rollers and having brake blocks on its inner face engaging the upper sides of the rollers, said flexible member having one end fixed and provided with a tension device at its other end.

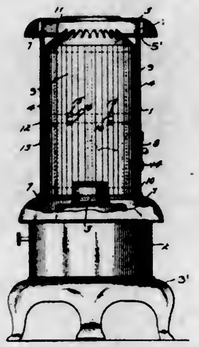
1,346,701. PLOW. WILLARD F. COCHRAN, Blue Ridge, Ga. Filed July 16, 1919. Serial No. 311,252. 1 Claim. (Cl. 97—42.)

A garden plow comprising a frame, a shaft journaled therein, a member journaled upon said shaft and having radial arms, plows with shank portions hinged to the ends of said arms, a notched disk fixed to said shaft, and a



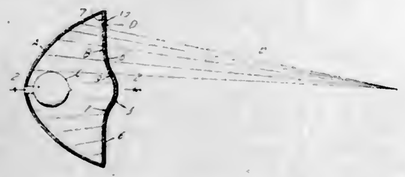
pawl mounted upon the frame adapted to engage one of said notches.

1,346,702. BRASSIÈRE-HOOK. GEORGE T. COLTER, New York, N. Y. Filed Oct. 10, 1919. Serial No. 329,715. 2 Claims. (Cl. 24—245.)



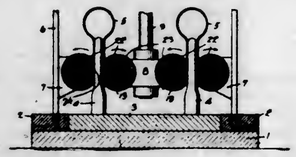
2. A brassière hook comprising a body formed with means for receiving a tape, an opening for receiving the stud of a corset clasp, and an extension projecting from said body in the same plane, said projection having on each side thereof a resilient arm spaced from the extension and substantially conforming to the shape of the edge of the extension so as to provide restricted slots for receiving corset lacing.

1,346,703. SIGNAL-OPERATING MEANS. JESSE TEMPLE CURTIS, Sebring, Ohio, assignor of one-third to Francis Lynn McClure and one-third to Franklin Fritt Le Fevre, Sebring, Ohio. Filed Mar. 16, 1918. Serial No. 222,900. 1 Claim. (Cl. 200—84.)



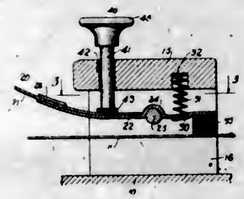
In a device of the class described, a float; means for hingedly mounting the float for vertical swinging movement about a fixed horizontal axis; a circuit closure embodying a contact member and a swinging arm, both located within the float; and means for pivotally connecting one end of the arm to the float to enable the arm to swing laterally in the same plane with the float and with said axis.

1,346,704. HEATER. HENRY FICKERSEN, Brooklyn, N. Y. Filed Nov. 18, 1919. Serial No. 338,848. 4 Claims. (Cl. 126—96.)



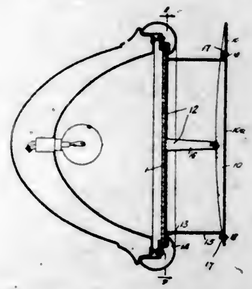
1. The combination with a heater, of a removable lining in the heater conforming in shape to the shape of the casing of the heater and composed of heat insulating material, a metal frame secured to the lining, and a conical deflecting ring forming the upper end of the frame.

1,346,705. HEADLIGHT-LENS. ADELBERT R. GIBSON, Chicago, Ill., assignor, by mesne assignments, to Essentials Mfg. Company, a Corporation of Illinois. Filed Jan. 4, 1919. Serial No. 269,638. 2 Claims. (Cl. 240—48.4.)



1. A lens, comprising a transparent body having a vertically fluted surface substantially entirely covering a face thereof, and a face thereof having clear and translucent parts, the translucent part surrounding the clear part and the clear part comprising that part of the face which is bounded below by a line substantially horizontal and chordal and near the center of the lens and bounded on opposite sides by lines which have a general convergency from near the outer ends of the chordal boundary to a point near the top center of the lens; the transparent body having a central dished part and said lower chordal boundary having a substantially central semi-circular upward projection into the dished part, so that the whole center portion of the dished part is translucent.

1,346,706. MACHINE FOR FORMING ROLLS ON TOY BALLOONS. HARRY R. GILL, Ashland, Ohio. Filed Aug. 26, 1919. Serial No. 320,018. 3 Claims. (Cl. 18—2.)



1. A machine of the character described, comprising a support, a form on the support adapted to receive a toy balloon thereon, a brush located at right angles to the form and adapted to be turned so that the bristles of the brush operate to roll a bead on the end of the toy balloon, and a flexible cover on the brush.

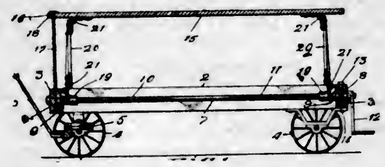
1,346,707. PLAYING DEVICE FOR STRINGED MUSICAL INSTRUMENTS. CHARLES HABERMAN, North Bergen, N. J., assignor to Oscar Schmidt, Inc., Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 21, 1919. Serial No. 318,920. 5 Claims. (Cl. 84—324.)

1. The combination with a stringed musical instrument of a support extending across a series of strings, a pivot rod held on the said support above the said strings, and strikers mounted to swing on the said rod and arranged in striking relation to the said strings, each striker having a flexible member and a pivot member on which the flexible member is secured, the pivot member having a struck up half round bearing seated on the pivot rod, the pivot members of the several strikers being wider than the flexible members and having abutting side edges to hold the strikers in striking relation with their strings.

1,346,708. HEADLIGHT-DIMMER. PAUL P. HEIN, New York, N. Y. Filed June 26, 1918. Serial No. 242,025. 1 Claim. (Cl. 240—48.4.)

In a dimmer for headlights, the combination of a translucent glare reducing shield in the form of a segment of a circular disk, and means extending forward from the lamp casing serving to hold the shield in front of and in spaced relation to the front portion of the casing, the rear surface of the shield being of a reflecting nature whereby a certain portion of the light will be dispersed laterally and therefrom between the shield and the lamp casing said shield lying essentially in a plane parallel to the front edge of the lamp casing but having a side portion curved rearward toward and yet spaced from the lamp casing.

1,346,709. SHOE-HEEL. ELLIS S. HELWITZ, Brooklyn, N. Y. Filed Aug. 20, 1917. Serial No. 187,110. Renewed Nov. 12, 1919. Serial No. 337,623. 4 Claims. (Cl. 36—36.)



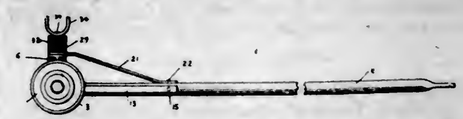
1. A rubber heel pad with a bottom portion and upstanding elastic walls for the purpose specified, and a fabric inset in said parts to increase the strength thereof, the fabric extending up with the elastic walls, and such upwardly extending part of the fabric being slitted to prevent interference with the elasticity of the walls.

4. The herein described resilient pad for shoe heels, the same comprising a resilient base adapted to be applied directly against and conform in size to the bottom surface of the shoe heel, means to secure the pad to the heel,

and a bead formed on the bottom surface of the pad in position to lie exactly below the periphery of the heel to which the pad is attached in practice, the base of the pad being extended laterally of said bead and the heel.

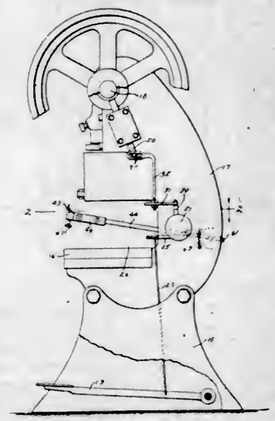
1,346,710. ELEVATING-TRUCK. CHAUNCEY M. HENDERSHOTT, Hornell, N. Y. Filed Sept. 15, 1919. Serial No. 323,771. 3 Claims. (Cl. 254—7.)

1. A truck of the character stated, comprising a wheeled frame, a rod supported longitudinally in the frame and having right and left screwthreads thereon, sleeves on the threaded portions of the rod, a platform, and risers hingedly connected to the platform and sleeves, and having their lower edges projecting across and supported on the frame when the platform is elevated.



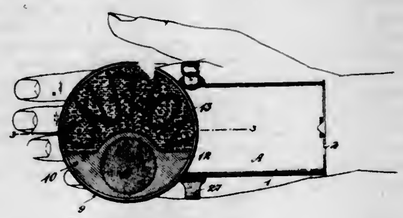
1,346,711. PENCIL. WILLIAM K. HOLMES, Brooklyn, N. Y. Filed May 7, 1919. Serial No. 295,416. 11 Claims. (Cl. 120—18.)

1. In a pencil, the combination with a barrel and a shell entirely contained and freely rotatable therein, of means operated by the relative rotation of the barrel and shell to project lead from the tip of the pencil, and a member slidably insertible within the shell but projecting without and engaging the other end of the barrel for rotating the shell with respect to the barrel.



1,346,712. TOWING-DOLLY FOR VEHICLES. LARNED T. KIMMERLE and DANIEL S. KIMMERLE, San Francisco, Calif. Filed Feb. 5, 1919. Serial No. 275,108. 3 Claims. (Cl. 280—61.)

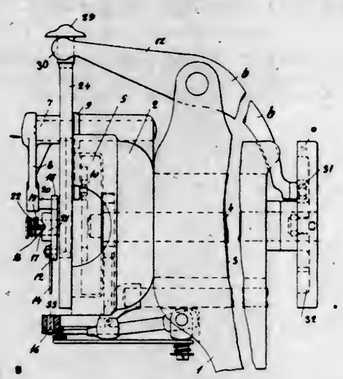
1. In a dolly for lifting and towing vehicles, two supporting wheels and an axle engaging one of said wheels on each end thereof, an I beam pivoted centrally to said axle, two yokes, one being swiveled on each end of said



I beam, the axis of the swivels and the pivot lying in the same plane, and a tongue rigid with said axle.

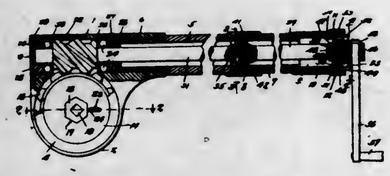
1,346,713. SAFETY-GUARD FOR PUNCH-PRESSES. AUGUST KOETTING, Brooklyn, N. Y. Filed Oct. 1, 1919. Serial No. 327,731. 3 Claims. (Cl. 74—46.)

1. In a safety appliance for punch presses or the like, the combination with a treadle and means set into action by the depression of the treadle to initiate the action of the press, of a fender movable from idle into guarding position, and connections between the treadle and the fender to cause movement of the latter into guarding position during the first portion of the movement of the treadle and prior to initiation of the movement of the press, said connections comprising a rock shaft, a pair of arms fixed to the rock shaft and extending forward parallel to each other and thence deflected laterally to each other, and clamping means between the forward ends of the arms and the fender.



1,346,714. AUTOMOBILIST'S CAUTION-SIGNAL. WESLEY W. KUHLMANN, Woodcliff-on-Hudson, N. J. Filed Oct. 26, 1917. Serial No. 198,662. 9 Claims. (Cl. 40—132.)

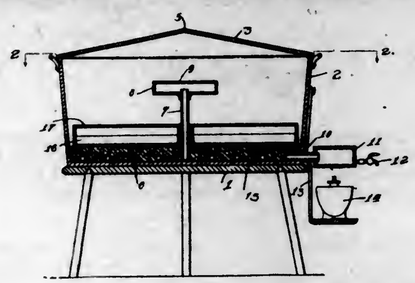
1. An automobilist's hand signal comprising a casing having an open portion of such size as to substantially cover the greater part of the fingers of the hand, a device adapted to be illuminated and reversibly mounted on the open portion of the casing, a source of current in the



casing, a lamp in circuit with the said source, a switch for closing the lamp circuit, and means for fastening the casing to the back of the hand, said reversible device including a translucent plate bearing signal words and colors which are illuminated simultaneously.

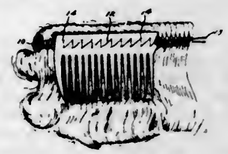
1,346,715. PEGGING-MACHINE. JULIUS LARSEN, Copenhagen, Denmark. Filed Feb. 9, 1917. Serial No. 147,585. 5 Claims. (Cl. 1—23.)

1. In a pegging machine, a reciprocating plunger, a head loosely pivoted to the plunger and carrying an awl and a hammer, power means for turning the head to bring the awl and hammer alternately into vertical position and automatic means for locking and releasing the head, said means being disengaged by the turning of the head and engaged when the turning of the head ceases.



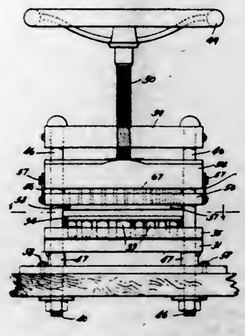
1,346,716. WRENCH. RALPH LEE, Medicine Bow, Wyo. Filed Jan. 30, 1920. Serial No. 355,019. 3 Claims. (Cl. 81—57.)

2. In a wrench, a shaft comprising sections, one of which is provided with a socket, the other of which is provided with a tip received in the socket; a dog slidable transversely in the socket and coöperating with the tip; a spring strip attached at one end to the socket and attached at the other end to the dog, the strip constituting means for retracting the dog; a ring slidable on the socket and inclosing the strip, the ring coacting with the strip to advance the dog for engagement with the tip; a support wherein the shaft is journaled, the support having a side extension; a worm wheel journaled in the extension and provided with means for engaging an object to be rotated; and a worm on one of the shaft sections, the worm coöperating with the worm wheel.



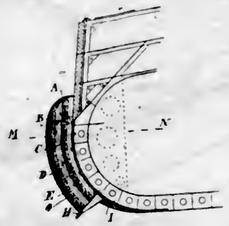
1,346,717. INCUBATOR. STEPHEN M. LEWIS, Sweet Home, Ark. Filed Apr. 19, 1920. Serial No. 375,013. 2 Claims. (Cl. 119—42.)

1. An incubator including a body, a layer of granular heat retaining material covering the bottom of the body, a coiled pipe embedded in said material and having an upstanding end portion in the body and an outwardly projecting portion beyond the body, and means outside of



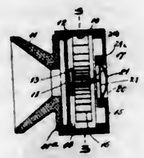
the body for heating the contents of the outwardly projecting end of the pipe, the upstanding inner end of said pipe opening into the body for the escape of vapor.

1,346,718. HAIR-FRINGE. MAX MULLER, New York, N. Y. Filed Oct. 25, 1919. Serial No. 333,240. 2 Claims. (Cl. 132—23.)



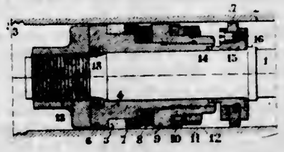
1. As an article of manufacture, a fringe of hair comprising strands of hair having doubled-up portions, a flexible carrier on which the said doubled-up portions of the strands are strung one alongside the other, and a segmental comb fitting the inner face of the said fringe and having its upper edge below the top of the double-up portion of the strands, the said comb being provided along its upper portion with openings and fastening means engaging the said comb openings and looped around the said carrier to fasten the strands to the comb.

1,346,719. DENTAL-CROWN-MAKING MACHINE. IGNACIO NAVARRO M., Caracas, Venezuela. Filed Dec. 4, 1917. Serial No. 205,380. 7 Claims. (Cl. 113—39.)



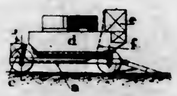
1. A machine as characterized comprising a press having a base plate provided with standards, and a reciprocating head mounted to slide on said standards; a die block for holding denture forming female dies; a plurality of operatively united denture forming male dies serially arranged; and means for predetermining the operating position of said denture forming dies with reference to the dies in said die-block, said means embodying a supporting plate for said striking dies having a detachable connection with the head and provided with a series of variously shaped passages for holding the shanks of said striking dies.

1,346,720. MEANS OF DEFENSE FOR SHIPS AGAINST THE ATTACKS OF SUBMARINES. PIO PERRONE, Rome, Italy, assignor to Societá Anonima Italiana Gio. Ansaldo & C., Rome and Genoa, Italy. Filed July 24, 1916. Serial No. 111,089. 4 Claims. (Cl. 114—13.)



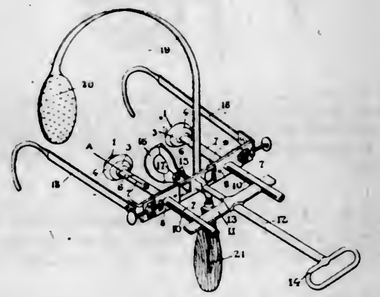
1. A defense for ships against the attacks of submarines comprising in combination a hull structure, a plurality of crossed steel plates applied to the exterior of the hull, vertical frames on the exterior of the said crossed steel plates, a thick layer of pitch held in place by the said carrying frames, longitudinal timber planking carried by the said vertical frames and a second vertical timber planking applied to the preceding longitudinal planking and well calked.

1,346,721. MECHANICAL BONE-CONDUCTIVE EAR. JOSEPH PRENN, Boston, Mass. Filed Apr. 11, 1919. Serial No. 289,191. 4 Claims. (Cl. 181—0.5.)



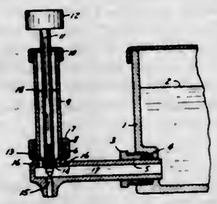
2. A device of the kind described, comprising a housing body having a mouth piece at one end thereof, a vibratory diaphragm associated with said mouth piece, and a spiral spring fixed at its outer end to said body, and having mounted for vibration therewith at its center a stylus with a button at one end thereof adapted to be impinged by said diaphragm, the pointed end of said stylus equipped with means to coöperate therewith to transmit vibrations to a bony surface of the cranium for the purpose stated.

1,346,722. HYDRAULIC-JOINT CARTRIDGE. EMILE RIMAILHO, Paris, France, assignor to Compagnie Des Forges Et Acieries De La Marine Et D'Homecourt, Paris, France. Filed July 27, 1917. Serial No. 183,203. 4 Claims. (Cl. 29—84.)



1. In combination, a piston rod having a collar, a washer on the piston rod in engagement with the collar thereof, a hydraulic joint on the piston rod and in engagement with the washer, said joint including a mounting having at one end a threaded recess for the connection of a tool therewith, and a nut on the piston rod and engaging the mounting to clamp the joint on the piston rod.

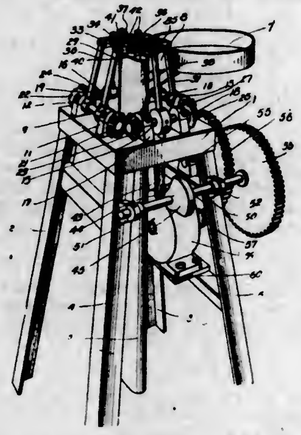
1,346,723. ROAD-TRAIN. EMILE RIMAILHO, Paris, France, assignor to Compagnie Des Forges Et Acieries De La Marine Et D'Homecourt, Paris, France. Filed July 27, 1917, Serial No. 183,202. Renewed Nov. 21, 1919. Serial No. 339,679. 4 Claims. (Cl. 180—1.)



1. In a road train a vehicle, a motor on said vehicle for the propulsion of the same, means for controlling the vehicle, a load carrier removable from the vehicle, and a generator on said load carrier for supplying energy to the motor on the vehicle.

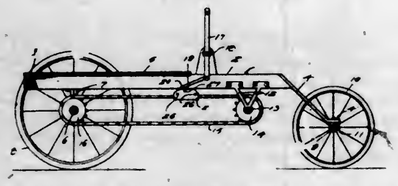
1,346,724. APPARATUS FOR MASSAGING THE EYES. JOSEPH ROGER, Paris, France. Filed Aug. 30, 1917. Serial No. 188,923. 3 Claims. (Cl. 128—44.)

3. In an apparatus for massaging the eyes, the combination of a transverse frame having its front face formed in the shape of a very wide or open dihedral angle, and relatively adjustable eye pad supports extending at right angles from the sides of said dihedral angular face, whereby said eye pad supports are caused to converge slightly upon the eyes of the patient.



1,346,725. COMBINED SIGHT-GAGE AND VALVE. MILTON H. SHOENBERG, San Francisco, Calif. Filed Dec. 27, 1919. Serial No. 347,733. 5 Claims. (Cl. 251—155.)

2. The combination of a liquid level indicator and valve means, comprising a glass tube, a base for said tube having tubular means adapted to communicate with the inte-

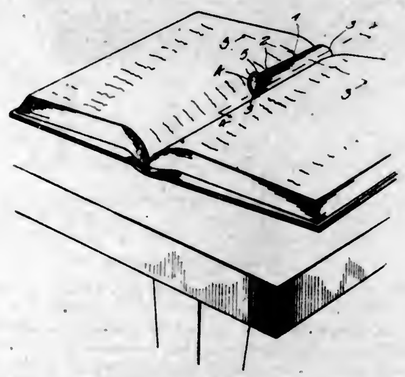


rior of a vessel and communicating with the glass tube; a valve rod disposed through the glass tube and having its end formed to coöperate with a passageway through the wall of the tubular communicating means, and means for raising and lowering said valve rod.

1,346,726. DEVICE FOR APPLYING LIQUID COATINGS TO ELONGATED BODIES. HUGH L. THOMPSON, Kansas City, Mo. Filed Jan. 19, 1920. Serial No. 352,325. 7 Claims. (Cl. 91—32.)

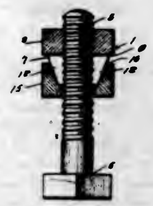
1. A device for coating elongated bodies, comprising a coating material-applying reservoir, an elastic web above the reservoir having a body-receiving opening, and means for intermittently stretching the web to enlarge the opening.

1,346,727. MANUALLY-PROPELLED VEHICLE. LEONARD M. TUCKER, Seattle, Wash. Filed July 23, 1919. Serial No. 312,701. 3 Claims. (Cl. 208—38.)



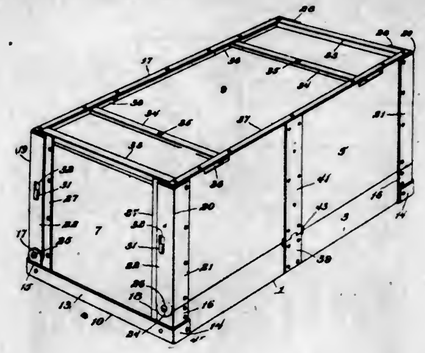
3. A manually propelled vehicle comprising a frame and propelling means including a driving chain, an actuating lever pivotally mounted, a housing slidably associated with the chain for movement longitudinally thereof, a dog pivotally mounted intermediate its end to said housing and adapted to engage the chain during movement of the housing in one direction to impart movement to the chain, and a link pivotally connected with the lower end of the lever and to the upper end of the dog whereby the dog may be moved out of engagement with the chain when the housing is moving in one direction and brought into engagement with the chain when the housing is moved in the opposite direction.

1,346,728. MANUFACTURE OF FERROCHROMIUM. WILLIAM LAWRENCE TURNER, Atherstone, England. Filed Jan. 7, 1918. Serial No. 210,697. 3 Claims. (Cl. 75—17.)



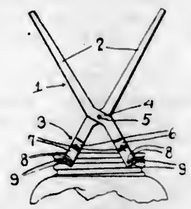
3. The herein described process, which consists in preheating a thermic mixture containing a bichromate of the alkali metals and a reducing metal to cause chemical reaction to be set up, and introducing into the mass a chromium iron ore in the presence of the heat and reaction and further heating the mass.

1,346,729. BOOKMARK. JEAN J. VANDERVEER, Brattleboro, Vt. Filed May 15, 1919. Serial No. 297,324. 1 Claim. (Cl. 116—119.)



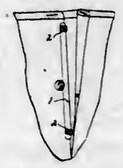
A book-mark comprising a narrow strip of sheet material adapted for reception between the upper portions of two book leaves, said strip having rounded ends of greater width than the remainder of said strip, the curvature of each end coinciding with an edge of the strip but being outwardly spaced from the other edge, forming a pair of lugs having straight inner ends joining opposite edges of the strip and disposed at right angles to the said edges, said lugs being adapted to hook temporarily against the page-connecting cord or staples of the book.

1,346,730. NUT-LOCK. CARL H. VIEBROCK and HENRY W. VIEBROCK, Douglas, Wash., assignors of one-tenth to Henry Planetz, Douglas, Wash. Filed Oct. 17, 1919. Serial No. 331,305. 1 Claim. (Cl. 151—19.)



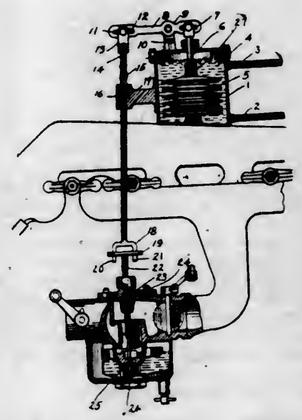
In a nut lock, the combination with a threaded bolt, an inner member having a conical shaped opening in its outer portion and slidably mounted on said threaded bolt, an outer locking member provided with a frusto-conical extension divided into sections by spaced inwardly directed V-shaped slots opening upon the small free end thereof to permit the small ends of the sections to be forced toward one another and clamped upon the threads of the bolt as the outer member is threaded upon the bolt toward the inner locking member and the frusto-conical extension thereby forced into the conical shaped opening of the inner locking member and brought into binding engagement with the walls of said conical shaped opening, said frusto-conical extension having a greater inclination than the said conical shaped opening of the inner locking member whereby the sections will be readily forced toward the threaded bolt and caused to bind upon the thread thereof as the frusto-conical extension moves into the said conical opening of said inner locking member.

1,346,731. COLLAPSIBLE CONTAINER. STOUGHTON L. WALKER and JOHN M. LAURENSON, Jersey Shore, Pa. Filed Jan. 24, 1920. Serial No. 353,673. 6 Claims. (Cl. 217—15.)



1. A collapsible container having a bottom wall, infolding end and side walls, and a removable cover wall, sliding hinge connections for the infolding end walls, reinforcing members for the several corners and edges of the container walls, and normally non-alining interlocking means formed with adjacent corner reinforcing strips of the end and side walls, said interlocking means being operatively engaged for securing the end and side walls in vertical position by a vertical reverse directional movement of the end walls.

1,346,732. JAR-HOLDER. JAMES H. WEAVER, Aberdeen, Wash. Filed Apr. 8, 1919. Serial No. 288,432. 1 Claim. (Cl. 294—28.)

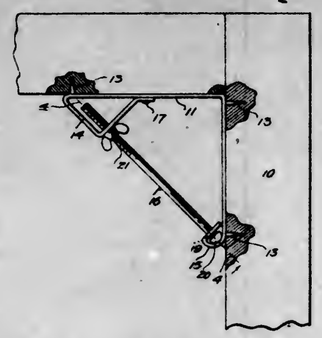


A device of the class described comprising a pair of members pivotally connected together and each consisting of a handle portion and a head portion, said head portion having a pair of laterally extending arms with their outer ends bent at right angles and a resilient element stretched between said ends, said element lying parallel with the arms.

1,346,733. SHIRT ATTACHMENT. EDWARD T. WHITER, Pittsburgh, Pa. Filed June 7, 1919. Serial No. 302,459. 1 Claim. (Cl. 2—90.)

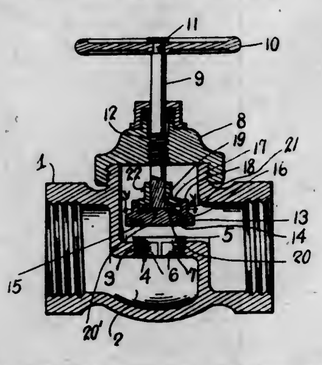
An attachment adapted for use with an open front shirt, including a stiffening strip, and substantially U-shaped clips having their outer arms secured to the outer face of the strip and their inner arms extending across the inner face of said strip, said clips co-acting with the strip for attaching the same to the edge portion of the inner lap of the shirt bosom, the bight portions of the clips being positioned closely adjacent to the inner edge of the strip and the strip being relatively narrow whereby projections are avoided and the strip and the clips concealed by the outer flap of the shirt bosom.

1,346,734. AUTOMATIC CARBURETER-REGULATOR. JAMES T. YOUNG, St. Louis, Mo. Filed July 14, 1919. Serial No. 310,731. 3 Claims. (Cl. 123—106.)



1. In a thermostatically-operated controlling device for valves, a casing, means for varying the temperature within the casing, a thermostatic element within the casing and having a part projecting therethrough, a rotatable shaft, connections between the shaft and the projecting part, said shaft having an externally threaded portion whereby a longitudinal movement thereof will impart a rotative movement thereto, and a threaded bracket engaging said threaded portion.

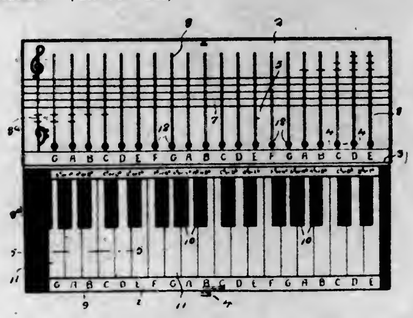
1,346,735. SEALING ATTACHMENT FOR FRUIT-JARS. WILLIAM H. F. YOUNG, Muncie, Ind. Filed Apr. 15, 1920. Serial No. 374,017. 10 Claims. (Cl. 215—89.)



10. A closure attachment for jars, comprising a ring, two loop members having their lower ends pivoted to the ring, and their converging ends extending inward, a screw-threaded bolt extending transverse the ring and having one end connected to the upper end of one of the loops, a coiled spring surrounding the bolt and having its inner end extending upward and its extremity formed into an inwardly extending hook detachably engaging the upper end of the other pivoted loop and nut on the bolt for compressing the spring.

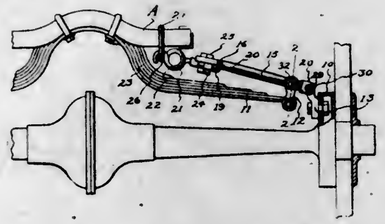
1,346,736. BRACE. WILLIAM LEROY ALLEN, Topeka, Kans. Filed Oct. 21, 1919. Serial No. 332,272. 1 Claim. (Cl. 20—38.)

A corner brace comprising a substantially right angular member formed from a single piece of material and bent at its free ends to provide substantially triangular loops, the opposite legs of each loop being substantially parallel, prongs projecting laterally from said member, an adjusting screw having its head positioned in one of said loops and its threaded end passing through an opening in the other loop and a nut mounted upon the adjusting screw and bearing against the outer face of the last mentioned loop, whereby the brace may be adjusted and secured in position.



1,346,737. VALVE. WILLIAM ALONZO ATTEBERRY, Coweta, Okla., assignor of one-fourth to O. A. Sewell and one-fourth to P. A. Fox, Coweta, Okla. Filed Apr. 5, 1919. Serial No. 287,713. 2 Claims. (251—46.)

1. In a valve, the combination of a stem, of circular form in cross-section, having a circular flanged head at its inner end; and a body comprising a main section having an outer portion interiorly threaded and exteriorly of angular form in cross-section for the application of a wrench and also having an interior central circular boss disposed in the head of the stem, and a coupling section having an outer portion revolubly mounted on the stem and exteriorly of angular form in cross-section for the application of a wrench and also having a portion surrounding the head on the stem and exteriorly threaded and disposed in and engaged with the interiorly threaded portion of the main section.

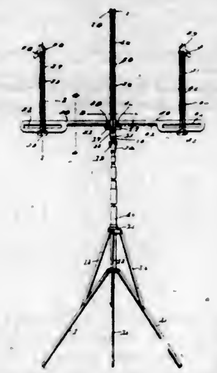


2. The combination of a valve casing having an interior portion in which is a threaded bore, a valve body movable in the casing and toward and from said interior portion and having a circular groove in its face adjacent to said portion and a gasket in said groove, and a circular exteriorly-threaded valve seat with an angular hole therein, disposed in the threaded bore of the interior body portion and having at its outer end an enlarged beveled shoulder tightly seated in said bore and projecting outwardly from the interior casing portion and adapted to be received in the groove of the valve body and engaged with the gasket in said groove.

1,346,738. GAME APPARATUS. ENID BEAUPRÉ, Albany, N. Y. Filed July 18, 1919. Serial No. 311,835. 2 Claims. (Cl. 35—12.)

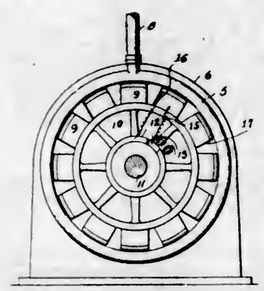
1. A game apparatus comprising a casing having two box-like sections hinged together, one of the said sections being provided with a wall in which are slots extending at right angles to the length of the wall and being also provided on its face with a musical scale the lines and spaces of which are intersected by said slots, and the other section being provided with end walls and with removable intermediate spaced portions blackened to simulate the half-tone keys of a piano key-board, and one of the sections being provided with the letters of the scale, in regular sequence, figures retained and movable in the said slots, and members removably arranged in the last-named section and having reduced portions adapted to be interposed between the half-tone key-representing members.

1,346,739. SHOCK-ABSORBER. WILLIAM D. BROWN, Somerset, Ky. Filed Sept. 20, 1919. Serial No. 325,057. 3 Claims. (Cl. 267—17.)



1. The combination with a vehicle, having a bracket secured to the axle housing, and a shackle carried by the terminal of the body supporting spring, of an arm having one end pivotally connected with said bracket, a coiled spring formed to provide an intermediate loop projecting at an angle from the convolutions of said spring, means for securing the loop to the opposite end of said arm, means for suspending said coiled spring from the chassis of the vehicle, and means for securing said shackle to the arm at a point intermediate its ends.

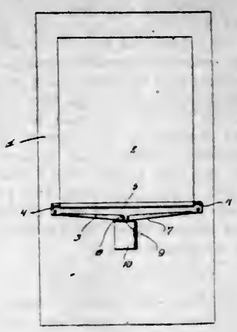
1,346,740. MUSIC-RACK. ROYAL W. CATHCART, Toledo, Ohio. Filed Dec. 10, 1918. Serial No. 266,110. 3 Claims. (Cl. 45—121.)



1. In combination with a support having an angle neck on the outer end thereof and a lateral stud on said neck,

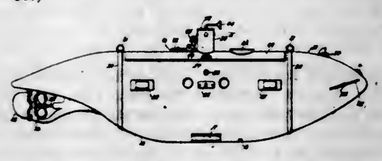
of a music rack including a sleeve removably journaled on said neck, said sleeve, from the outer end thereof having a slot therein describing a straight passage and a spiral passage communicating with said straight passage, the inner wall of the straight passage having a notch designed

to engage with the stud when the sleeve is in one position on the neck to hold the rack in such position and the said stud adapted to enter the spiral passage when the sleeve is turned to reverse the face of the rack with respect to the support.



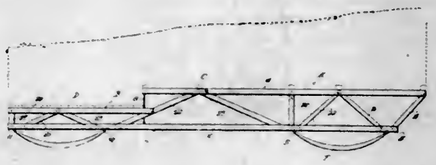
1,346,741. ELECTRICAL SUPERHEATER. SHADY DALE COLVIN, Myrtis, La., assignor of one-half to William H. Welch, Myrtis, La. Filed July 19, 1919. Serial No. 311,910. 3 Claims. (Cl. 219—38.)

1. In an electrical fluid-heater, the combination of annular headers spaced apart, a frame between the planes of the headers and to which they are connected, an annular stator housed in the frame and interposed between the headers, tubing of high resistance carried in the stator, and interposed and effecting communication between the headers, a rotor, field coils carried by the rotor and movable within the stator and said tubing, and means for supplying said coils with current.



1,346,742. MOISTURE-COLLECTOR. GEORGE F. EDMONDS, Leavenworth, Kans. Filed Mar. 8, 1920. Serial No. 364,337. 2 Claims. (Cl. 20—70.)

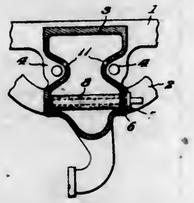
1. A device of the calss described comprising a tray having tabs adapted to be secured to the door, the inner edge of said tray being straight and bent upwardly at an angle, a rubber strip of triangular-shape having a slot in its inclined face for receiving sai dinclin d edge, said tray



having an opening in its center for the outlet of water and a cup removably connected with the tray and suspended under said opening.

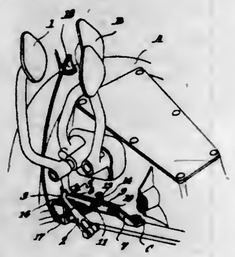
1,346,743. SUBMERSIBLE DESTROYING OR SALVAGING VESSEL. LOUIS FINK, Philadelphia, Pa. Filed Nov. 4, 1918. Serial No. 261,072. 1 Claim. (Cl. 61—69.)

In a self-contained electrically operable submersible for wrecking sunken vessels and having means for controlling the depth of submergence, the combination of an electromagnet mounted on a rotatable arm, means for hauling down a grappling implement into engagement by the said electromagnet, cutting tools projecting from the hull of the submersible and juxtaposed electromagnets rigidly mounted adjacent the said cutting tools for holding the submersible vessel against the sides of a sunken vessel.



1,346,744. MOTOR-TRUCK FRAME. CLARENCE E. FLINCHBAUGH, Lima, Ohio. Filed Apr. 24, 1920. Serial No. 376,321. 2 Claims. (Cl. 296—28.)

1. A motor truck frame comprising lower longitudinal angle bars arranged in spaced parallel relation and connected at their forward and rear ends by transverse angle bars, a cross member connecting said bars at a point spaced from the front extremities, rearwardly and upwardly inclined bars secured at the junctures of said longitudinal bars with the rear cross bar, vertical bars rising from said longitudinal bars between said rear cross bar and said intermediate cross bar, upper longitudinal bars secured to the upper ends of said inclined bars and the upper ends of said vertical bars, cross bars connecting the forward and rear ends of said last named



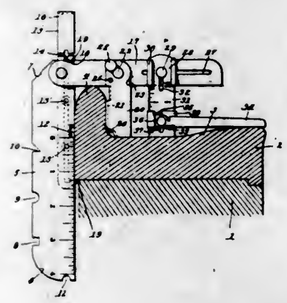
longitudinal bars, diagonal braces connecting said intermediate cross bar and the forward cross bar connecting the forward extremities of said last named longitudinal bars, diagonal braces connecting the end portions of said inclined bars, said plurality of oppositely inclined braces connected with said first and second named longitudinal bars and having their end portions arranged in abutting relation, longitudinal bars disposed above said first named longitudinal bars between the cross bars connecting the forward extremities thereof and said intermediate cross bar, a cross bar connecting the forward extremities of said last named bars, vertical bars secured to the forward corners of the first named bars at their junctures with the cross bar connecting them and also connected with the forward extremities of said last named longitudinal bars, and inclined brace bars secured to said first and last named longitudinal bars.

1,346,745. MANIFOLD-HEATER. FREDERICK DEENE GOODLAKE, Memphis, Tenn. Filed Dec. 22, 1919. Serial No. 346,488. 1 Claim. (Cl. 123—122.)

A manifold for internal combiustion engines having a heating chamber located on its outer face, said chamber having an enlarged lower part having an opening in one end, the side walls of the chamber curving inwardly above the enlargement and having upwardly extending openings therein forming air inlets and a torch member extending ing the enlarged lower part of the chamber and having screw threaded connection with the opening thereof.

1,346,746. ELECTRICALLY-CONTROLLED LEVER-LOCK. ROY MONROV GRUPE, Broadview, Mont., assignor of one-half to Leo A. Henter, Broadview, Mont. Filed Feb. 20, 1919. Serial No. 278,219. 9 Claims. (Cl. 74—81.)

1. The combination with a clutch operating lever, of means for locking the lever against movement, means normally maintaining said locking means in an unlocking position, and electrically operated means for operating said last-named means to permit movement of said locking means into a locking position.

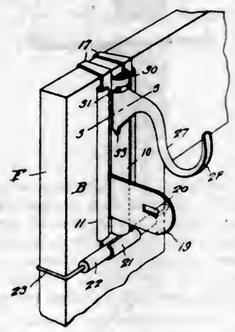


1,346,747. PULLEY-PLATE. EDDIE H. HAMILTON, Washington, D. C. Filed Nov. 25, 1919. Serial No. 340,590. 2 Claims. (Cl. 156—20.)

2. In combination with a two piece drapery carrying pole and support for the ends thereof, the latter including each a plate having openings for securing means, a threaded boss and a removably interiorly threaded sleeve designed to engage with the boss; of pulley carrying members, each including spaced plates having openings therethrough designed to receive therebetween the body plate of the support and to have passed through the said open-

ings the boss portions of the supports, said members having elongated slots therethrough registering with the lower openings in the body plates of the supports, offset feet on the lower portions of the members, pulley wheels carried thereby, and a flexible element trained around said wheels and connected to the confronting edges of the draperies, as and for the purpose set forth.

1,346,748. LOCOMOTIVE-TIRE LIMIT-OF-WEAR GAGE. ANTHONY B. HEDGES, Brunswick, Md. Filed Apr. 29, 1919. Serial No. 293,395. 7 Claims. (Cl. 33—203.)

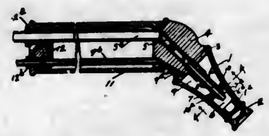


1. A gage of the class described comprising a straight edge supporting member, an arm extending at right angles to said member and a finger carried by said arm and having a flange-engaging projection thereon, said finger lying parallel with the supporting member and forming with said member a flange receiving space.

1,346,749. SHADE-BRACKET. JOHN C. HENSON, Zwolle, La. Filed Nov. 5, 1918. Serial No. 261,291. 4 Claims. (Cl. 156—24.)

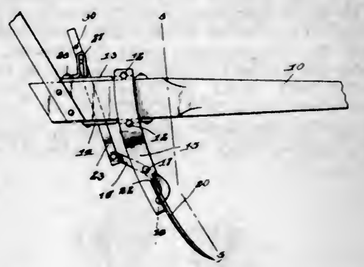
1. A shade bracket comprising upper and lower members slidably joined together and capable of relative longitudinal movement, a compressible spring disposed between opposite ends of each of said members to force them normally inward, a housing for said spring, shade and curtain brackets carried by one of said members, a bearing located at the lower end of the lower slidably joined member, a sleeve mounted for sliding movement in said bearing and oppositely extending yieldably mounted extensible hooks projecting from each end of said sleeve.

2. A shade bracket comprising upper and lower members slidably joined together and capable of relative longitudinal



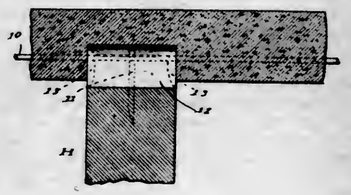
movement, a compressible spring disposed between opposite ends of each of said members to force them normally inward, a housing for said spring, a shade supporting bracket carried by one of said members, means carried by each of said members for removably securing them to a window frame, a curtain bracket and resilient means for removably securing the curtain bracket to one of the members.

3. A shade bracket comprising upper and lower members slidably joined together and capable of relative longitudinal movement, a compressible spring disposed between opposite ends of each of said members to force them normally inward, a housing for said spring, a shade supporting bracket carried by one of said members, means carried by each of said members for removably securing them to a window frame, a curtain bracket and means including inwardly projecting resilient fingers for removably securing the curtain bracket to one of the members.



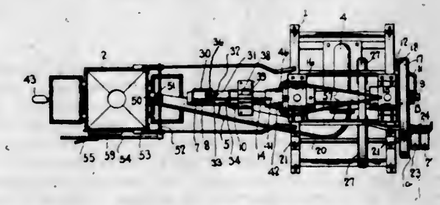
4. A shade bracket comprising upper and lower members slidably joined together and capable of relative longitudinal movement, a longitudinally disposed semi-circular offset portion formed in the upper member, which, together with the lower member defines a housing, a compressible spring disposed between opposite ends of each of said members to force them normally inward, shade and curtain brackets carried by one of said members and means carried by each of the members for detachably securing the brackets to a window frame.

1,346,750. SPRAY-NOZZLE. WILLIAM M. HERMAN, San Jose, Calif. Filed Mar. 31, 1919. Serial No. 286,377. 2 Claims. (Cl. 91—45.)



1. In a device of the class described, the combination of a thimble having one end reduced in size and screw threaded externally and the larger end screw threaded internally; a spray button having the desired outlet screwed onto said externally threaded portion of the thimble and a plug screwed into the larger internally threaded end of the thimble, said plug having a longitudinal bore internally screw threaded; a nozzle screwed into said bore and projecting into said thimble adapted to conduct liquid therethrough; a pointed tip on said nozzle, a flange on said nozzle, said flange having a plurality of apertures passing obliquely through said flange; an annular shoulder on the inner wall of the thimble against which the rim of said flange seats thus forming an air chamber between said flange and the plug and a mixing chamber between said flange and the spray button, said plug having a second bore for the admission of air under pressure to said air chamber; tubes connected one to each bore in the plug; a regulating valve on each tube and a casing inclosing said tubes substantially as described.

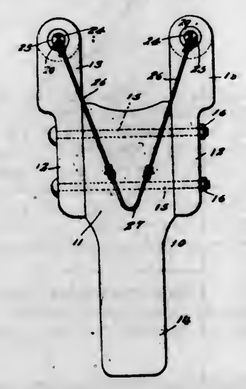
1,346,751. PLOW. SAMUEL R. HERRING, Delhi, La. Filed Mar. 15, 1920. Serial No. 365,848. 2 Claims. (Cl. 97—26.)



1. A plow having a standard provided at its lower end with a shovel or blade seat, a pivotal clamp member mounted upon the standard and provided with a downwardly and rearwardly directed jaw for engagement with an opening in a shovel or blade engaging said seat, an operating bar connected with said clamp member and extending slidably through suitable guides on the plow beam, and a latch for engaging and securing said operating bar with the clamp member in its shovel engaging position.

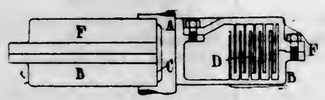
1,346,752. CONCRETE ROOF CONSTRUCTION. GEORGE ABSOLUM HURST, Louisville, Ky. Filed Mar. 9, 1920. Serial No. 364,434. 3 Claims. (Cl. 108—6.)

1. A roof structure comprising rafters, a wire screen stretched over said rafters in spaced relation thereto, staples engaging the screen and driven into the rafters, hollow metal shells disposed over the staples and engaging against the rafters, and a sheet of concrete poured onto and embedding the screen and the hollow shells.



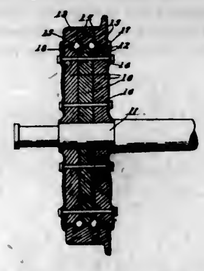
1,346,753. COMBINED FURNACE AND FLUE-WELDER. FIDELIS JOHNSON, Delphos, Ohio. Filed Apr. 16, 1919. Serial No. 290,483. 1 Claim. (Cl. 78—85.)

In a machine of the character specified, a supporting frame, a hollow cylindrical drive sleeve journaled thereon,



a stationary shaft extending through and beyond one end of the drive sleeve, a stationary mandrel, removably secured to the projecting end of said shaft, a coupling member keyed to the inner end of the drive sleeve and rotating therewith, a roller mounted to revolve around the mandrel and over the end of a flue to be welded, a horizontally disposed lever arm fulcrumed to the coupling member, said lever arm carrying said roller, and means under the control of the operator for swinging the roller in against the end of a flue to be welded, said means comprising a cone mounted for end-wise movement on the drive sleeve, resilient means normally holding the cone in retracted or inoperative position and a foot treadle for shifting the cone forwardly under the adjacent end of the lever arm against the action of said resilient means.

1,346,754. SLING-SHOT. RALPH L. JONES, Gordon, Tex. Filed Mar. 23, 1920. Serial No. 368,131. 3 Claims. (Cl. 124—1.)

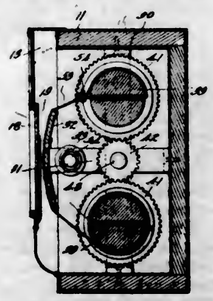


3. A device of the character described comprising a U-shaped frame having a handle, rods slidable through the arms of said frame, stop members on the ends of said rods, coil springs surrounding the rods and abutting against the stop members whereby to urge the rods in one direction, flexible members connected with the other ends of said rods, and a sling connected with said flexible members.

1,346,755. ELIMINATING TORSIONAL VIBRATIONS IN HIGH-SPEED ENGINES, &c. FREDERICK WILLIAM LANCHESTER, London, England. Filed Feb. 4, 1920. Serial No. 356,360. 1 Claim. (Cl. 74—6.)

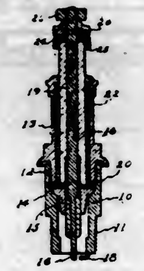
A torsional vibration damper for high speed engines and the like comprising a hollow drum containing a fluid of high viscosity and appropriate density, a plurality of annular ring-like elements arranged circumferentially within the drum and in proximity to the interior surface of the peripheral portion thereof, means for spacing the elements and means for clamping the elements in spaced relation so as to in consequence provide a series of circumferential grooves within the drum and thereby establish an adequate surface of contact with the fluid.

1,346,756. WHEEL. EDWARD H. LEWIS, Scranton, Pa. Filed Mar. 29, 1919. Serial No. 286,000. 2 Claims. (Cl. 295—44.)



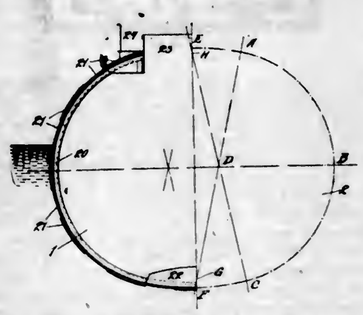
1. A wheel formed of separate disk sections adapted to be secured together upon an axle against independent rotation, said disk sections being grooved around the edge of their meeting faces, a tire surrounding the edges of the disk sections and having grooves therein coöperating with the before-mentioned grooves to provide race-ways and means for securing the disk sections together.

1,346,757. CAP FOR MILK-BOTTLES AND SIMILAR RECEPTACLES. JAMES A. LOYSTER, Cazenovia, N. Y. Filed Dec. 29, 1915. Serial No. 69,218. 1 Claim. (Cl. 215—14.)



A bottle stopper comprising a circular disk and a wire finger loop lying flatwise against the upper face of the disk and having its ends passed through spaced apertures in said disk and engaged with the underside of the disk at points between a straight line drawn through the apertures and the closed end of the loop and out of alinement with portions of the arms which engage the upper face of said loop, the main body of said loop at one side of the disk and the ends thereof at the opposite side of the disk being normally embedded flatwise in the corresponding sides of said disk substantially coincident with the surfaces of said sides whereby the disks may be stacked one upon the other with their adjacent faces in close contact throughout their area.

1,346,758. INDICATOR. WILLIAM C. MEADOR, Chattanooga, Tenn., assignor of one-half to Emmett H. Rolston, Chattanooga, Tenn. Filed Dec. 19, 1916. Serial No. 137,854. 2 Claims. (Cl. 40—31.)



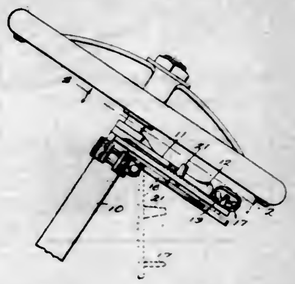
1. An indicator having spaced supports, rolls mounted in said supports, gearing connecting the rolls, a drive pinion for the gearing, a driven segment to engage the drive pinion, and means coöperating with the drive pinion and supports to prevent overrunning of the pinion in either direction after the pinion is disengaged by the segment and the said means being lifted into inoperative position by the pinion when the same is engaged by the segment.

1,346,759. SPARK-PLUG. ALBERT R. MEYER, Sacramento, Calif. Filed Oct. 6, 1919. Serial No. 328,681. 2 Claims. (Cl. 123—169.)

1. A spark plug comprising a body, an internal shoulder, an electrode passed through said body, a member seated upon said shoulder and receiving said electrode, insulating material surrounding the electrode for a portion of its length above said member, a glass tube surrounding the electrode and receiving said insulating material, said tube resting upon the said member, a cap fitted on the electrode and receiving the opposite end of said tube, means for holding the cap in position, and an electrode depending from said body.

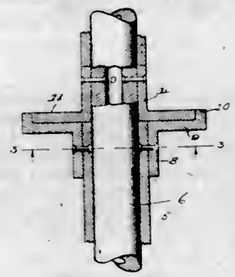
1,346,760. CONSTRUCTION OF SHIPS. GIUSEPPE VITULLI MONTARULI, Rome, Italy. Filed Oct 16, 1918. Serial No. 258,324. 1 Claim. (Cl. 114—56.)

A ship having a plurality of transverse frames, the frames for a determinate length of the ship being formed with side sections of constant curvature and top and bottom curved sections having radii approximately twice the length of the radii of said side sections, the remaining portion of the ship having similar frames with straight portons at the sides of gradually increasing length.



1,346,761. GAS-BURNER. MARTIN A. MOORE, Topeka, Kans. Filed Mar. 9, 1918. Serial No. 221,453. 1 Claim. (Cl. 158—113.)

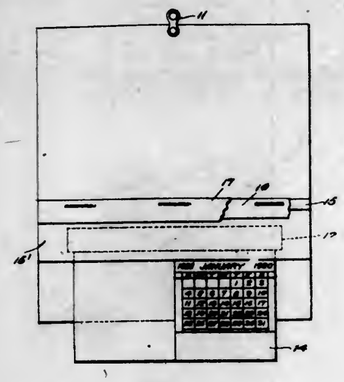
A burner of the class described comprising a lower cylindrical portion and an upper portion of frusto conical shape, said cylindrical portion having notches in its lower edge and the frusto conical portion having a circular opening in its top and four oblong openings midway its ends, the oblong openings being spaced a quarter of a



circle from each other, an arm concentrically arranged in relation to the central opening and said oblong openings and the central opening having inwardly flaring walls.

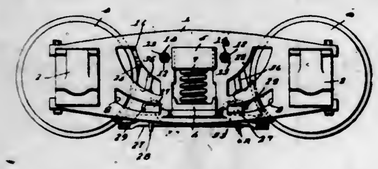
1,346,762. CONTROL-LEVER LOCK FOR AUTOMOBILES. DAVID MORRIS and WILLIAM LEVY, Paterson, N. J.; said Morris assignor to said Levy. Filed Feb. 26, 1920. Serial No. 361,490. 2 Claims. (Cl. 70—126.)

1. In an engine control lever lock for automobiles, the combination with the usual steering post casing bearing the control levers and a segment upon which said control levers may be adjusted to positions at which the engine of the automobile is operative and inoperative, said segment being provided with an opening, a plate pivotally secured to said steering post casing and adapted to be shifted to raised and lowered positions, an upstanding portion on said plate adapted to extend through the opening formed in said segment, said upstanding portion being provided with an opening adapted to receive the shackle of a lock, and means carried by said plate and adapted to engage the control levers when in said inoperative position and prevent the shifting thereof to the operative position.



1,346,763. LOCK. JOSEPH JOHN MORRIS, Stockton, Calif. Filed Nov. 8, 1918. Serial No. 261,636. 1 Claim. (Cl. 70—90.)

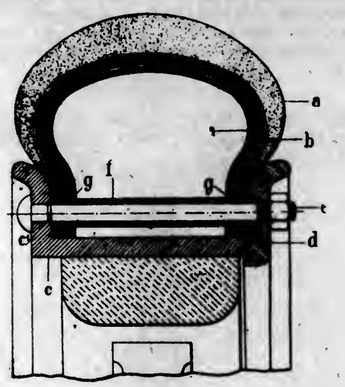
In combination with the column and the steering post of an automobile, of a collar secured to the upper end of the steering column, an outwardly extending flat round plate integrally formed on the upper edge of the collar, a peripheral flange on the plate, said plate having an



opening therethrough, a collar secured on the steering post, an outwardly extending flat round flange on the lower edge of said collar designed to rest on the mentioned plate and to be surrounded by the peripheral flange of the said plate, and said flange having an opening adapted to register with the opening in the plate, when the steering post is turned to one position, and to receive the shackle of a lock therethrough.

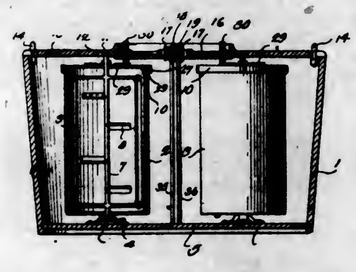
1,346,764. CALENDAR. EMORY G. PENNINGTON, Miami, Tex. Filed Jan. 6, 1920. Serial No. 349,703. 4 Claims. (Cl. 40—107.)

1. A calendar comprising a backing having a transverse slot, a reinforcing element embracing the edges of said slot, a plurality of pages secured to the back and immediately beneath the slot and adapted to be singly passed through the slot, and means normally covering said slot, concealing the slot from view.



1,346,765. TRUCK AND BRAKE FOR RAILWAY ROLLING-STOCK. FRANK S. PORTER, Cushing, Okla., assignor of one-third to Rufus M. Porter, Pawnee, Okla., and one-third to E. F. Herrin, Cushing, Okla. Filed Apr. 22, 1919. Serial No. 291,803. 4 Claims. (Cl. 188—213.)

4. The combination with the side members of a truck, said side members having longitudinal curvilinear slots, a brake beam movable laterally in the arc of a circle in said slots and capable of playing endwise in the slots and between the side members and having a fixed abutment opposed to the inner side of one side member, an abutment detachably connected to the brake beam and opposed to the inner side of the other frame member, and brake shoes carried by said beam.

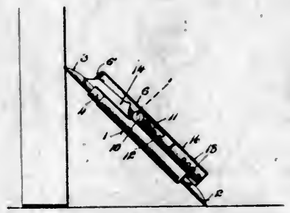


1,346,766. VEHICLE-TIRE. JEAN AUGUSTE PRINCE and ALBERT LOUIS GILLES, Nice, France. Filed Apr. 4, 1919. Serial No. 287,476. 1 Claim. (Cl. 152—8.)

A vehicle tire comprising, in combination, a tread, elastic members sunk in the material of said tread, bolts permanently fixed to the wheel and passing through the tread and the elastic members, sleeves on said bolts serv-

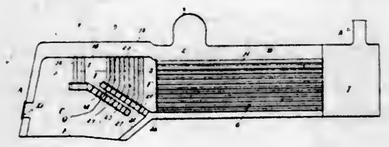
ing as stays between the edges of the elastic members and washers for holding said sleeves in position.

1,346,767. ICE-CREAM FREEZER. FANNIE D. REINHARDT, Billings, Okla. Filed Apr. 23, 1919. Serial No. 292,117. 2 Claims. (Cl. 259—49.)



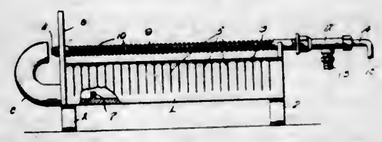
1. In a confection freezer, a substantially oval shaped freezing material container having flat parallel arranged side walls, a pair of confection containers rotatably mounted in the first mentioned container, a head bar arranged longitudinally of the first mentioned container, means carried by the first mentioned container for detachably engaging the head bar for holding the same against displacement, a spider carried by the hub bar, a longitudinally disposed shaft rotatably carried by the spider, gears keyed to the shaft, gears formed on the confection container and arranged to be engaged by the first mentioned gears, a right angularly disposed shaft carried by the spider, means operatively connecting the right angularly disposed shaft with the first mentioned shaft, and means for rotating said right angularly disposed shaft.

1,346,768. PORTABLE AUTOMATIC DOOR-LOCK AND BURGLAR-ALARM. SAMUEL RITCHIE, Ladysmith, Wis., assignor of one-third to Stanley L. Chicker, Ladysmith, Wis. Filed Jan. 3, 1920. Serial No. 349,171. 1 Claim. (Cl. 116—13.)



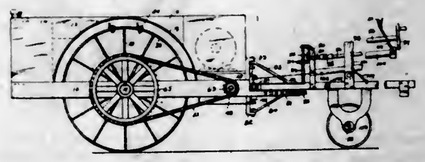
In an alarm clock comprising a hollow barrel closed at one end and having a claw extending therefrom, a grip claw having a shank in telescopic union with the open end of the barrel, means for holding the claw shank against rotary movement, a coil spring interposed between the claw shank and closed end of the hollow barrel structure, constituting a yieldable lock; the combination of a firing plug cylinder arranged parallel with the hollow barrel and

secured thereto, the cylinder being provided with a longitudinal slot having a firing pocket at one end and a safety pocket at the other, a spring-controlled firing plug reciprocatively mounted in the cylinder, a button extending from the firing plug through the cylinder slot and



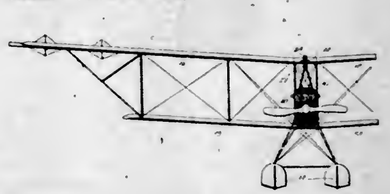
adapted to be selectively fitted in the firing pocket thereof or the safety pocket, a cam finger carried by the telescopic claw shank and extending in a line of travel for engagement with the button, when the same is in the firing pocket of the cylinder slot, and a cartridge magazine mounted in the lower end of the firing plug cylinder.

1,346,769. STEAM-BOILER FURNACE. ROBERT G. SEAMAN, Summerhill, Pa. Filed Dec. 8, 1917. Serial No. 206,337. 1 Claim. (Cl. 122—58.)



A boiler furnace having water legs at the sides thereof, a downwardly and forwardly inclined water arch extending between and communicating with the water legs and communicating at its lower forward end with the lower portion of the water space of the boiler, a second water arch communicating with the water legs and arranged below and to the rear of the first-named water arch in spaced relation thereto and also in spaced relation to the front wall and the rear wall of the furnace, upright tubes establishing communication between the first-named water arch and the crown of the boiler, and upright tubes communicating with the second-named arch and the crown of the boiler; the said arches forming between them a flue.

1,346,770. HYDROCARBON-GAS GENERATOR AND BURNER. HARRY C. SILLETT and ALBERT W. COWAN, Kansas City, Mo., assignors of one-third to William M. Myers, St. Joseph, Mo. Filed July 24, 1918. Serial No. 246,615. 1 Claim. (Cl. 158—65.)

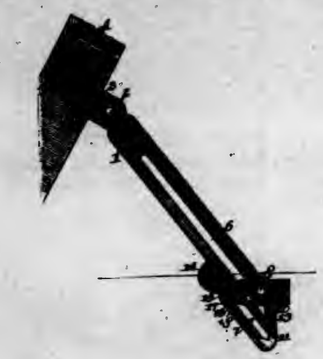


A device of the character described comprising a casing constituting a chamber, the top of said casing having its side portions formed as domes separated by a longitudinal valley, the top of said casing and domes being slit to provide burner openings, a plate at one end of said casing extending thereabove, a curved pipe communicating at its lower end with one end of said casing and having its upper end terminating adjacent said plate, a nozzle carried by said plate in alinement with the upper end of said pipe, a retort pipe supported above said valley and connected and communicating with said nozzle, a fuel supply pipe leading into said retort pipe, and a stem extending longitudinally through said retort pipe and movable to regulate the opening of said nozzle.

1,346,771. TRACTOR. JOHN H. SISSEL, Lamont, Iowa. Filed May 13, 1919. Serial No. 296,838. 5 Claims. (Cl. 180—12.)

1. In a device of the class described; a frame; an axle thereon; a wheel on said axle; an engine on said frame; means for imparting rotation to said wheel from said engine, including a variable speed gearing device and a clutch; a tongue pivoted to said frame; means supported on said tongue for controlling said variable speed gearing device, said means including a tubular member pivotally supported at its forward end; a plurality of levers mounted on said tubular member, cables operatively connected with said variable speed gearing device and extending through said tubular member and operatively connected with said levers.

1,346,772. HOISTING DEVICE FOR FLYING-MACHINES. MAX STUPAR, Buffalo, N. Y., assignor to Abraham J. Elias, Buffalo, N. Y. Original application filed June 25, 1919, Serial No. 306,613. Divided and this application filed Dec. 10, 1919. Serial No. 343,752. 1 Claim. (Cl. 244—31.)



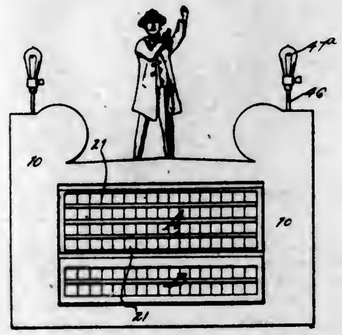
An airship including a fuselage having deck openings approximately at its center of gravity, upper and lower planes of which the former has an opening in the same vertical transverse plane as the fuselage openings, cables secured at their lower ends to the lower side portions of the fuselage and extending upwardly therein and through the said deck openings, a permanent hoisting connection engaging the upper ends of said cables and extending vertically through said upper plane opening, and a hoisting ring at the upper end of said connection held above the upper plane.

1,346,773. AUTOMATICALLY-OPERATED SUPPORT. SHERMAN E. SUDBURY, Salt Lake City, Utah. Filed Apr. 22, 1918. Serial No. 230,113. 8 Claims. (Cl. 217—60.)

1. A lid support, comprising a support bar with a recess for receiving a stud, and a switch bar, so mounted on the

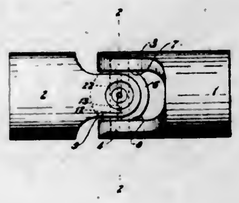
support bar and operatively associated with the recess, to cause the stud to travel in a relatively short local path

around the switch bar at the end of the support bar, by manipulating and without closing the lid which carries the support.



1,346,774. FUEL-PIPE LOCK DEVICE. FRANK VOGELZANG, Rock Valley, Iowa. Filed Jan. 17, 1919. Serial No. 271,745. 1 Claim. (Cl. 277—69.)

In a device of the class described, a fuel line pipe, a valve casing included in said fuel line pipe having opposite registering openings communicating with said pipe, a plurality of spaced sleeves fixed together at their lower ends, said sleeves having a plurality of registering openings adapted to register with said first described openings, a plurality of valves adapted to be received between said sleeves and capable of rotation around said sleeves, said valves having openings adapted when in one position to form a passageway between the two pieces of fuel pipe and when in another position to close the passageway, flanges fixed to the upper ends of said valves, said flanges being adapted to overlap each other, telescoping stems fixed to said flanges, whereby rotation of the stems will rotate said valves, said casing having an inwardly extending flange designed to cover said first described flanges, thereby preventing the removal of said valves without first removing said casing, said valve casing being held in position by said fuel line pipe.

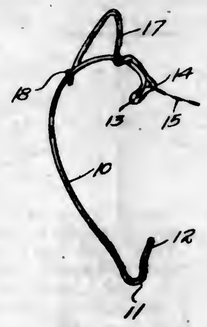


1,346,775. ADVERTISING DEVICE. FRANK VOGELZANG, Rock Valley, Iowa. Filed Oct. 24, 1919. Serial No. 333,082. 4 Claims. (Cl. 40—77.)

1. In a device of the class described, a frame, advertising devices adapted to have advertising signs placed thereon, said advertising devices being rectangular in cross section and being mounted on the frame for rotation upon spaced, parallel axes, means for rotating one of said devices to expose each face successively, and means for

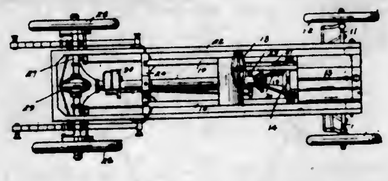
operatively connecting the remaining device with the first device to cause the former to be rotated to expose one of its faces at the same time that two or more of the faces of the first described device are exposed.

1,346,776. UNIVERSAL JOINT. HOWARD L. WASHBURN, Springfield, Mass., assignor to Charles S. Ballard, assignee of The American Telegraphone Company, Springfield, Mass., a Corporation of the District of Columbia. Filed May 28, 1919. Serial No. 300,439. 5 Claims. (Cl. 64—102.)



1. In a universal joint structure, the combination with the adjacent forked ends, of a block located between the ends and having openings each of which is of uniform bore therethrough, pins in the openings and having a running fit in the openings in the forked ends, and means for lubricating the bearing surfaces of the joint comprising communicating grooves in the block and one of the pins.

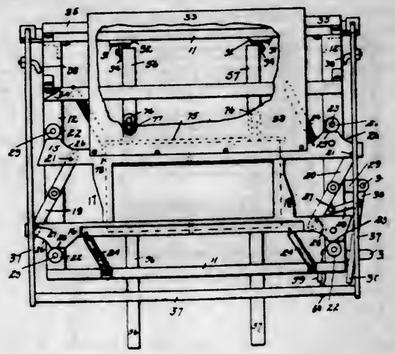
1,346,777. COMBINATION PENCIL-CLIP AND SPECTACLE-HOLDER. WILLIAM B. WHITE, Des Moines, Iowa. Filed Dec. 16, 1919. Serial No. 345,326. 1 Claim. (Cl. 24—81.)



A combination pencil clip and spectacle holder comprising a link of resilient wire curved at its lower portion to form an upwardly opening member for receiving the lower part of the ear and curved thence upwardly to fit the back of the ear, thence forwardly and downwardly for fitting over the upward portion of the ear, said wire being folded back over said downwardly extending portion with a short open loop to receive a chain or the like, said wire being extended from said loop along side the downwardly curved

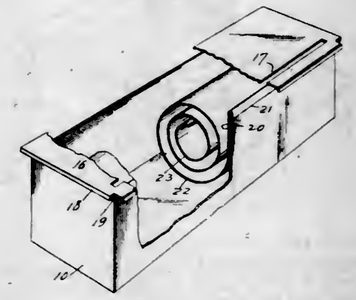
portion, then extended upwardly, thence downwardly and around the curved portion at the upper part of the device

for forming the pencil clip, said clip being inclined from the plane in which the rest of the device lies, so as to incline toward the head, when the device is installed.



1,346,778. COMBINATION MOTOR-VEHICLE. RICHARD A. WORNSTAFF, Weldon, Iowa. Filed July 8, 1919. Serial No. 309,403. 1 Claim. (Cl. 180—16.)

A combination motor vehicle comprising an inner and an outer longitudinal frame member, one of said frame members being adapted to extend in between the other and to be spaced therefrom, steerable wheels mounted on said inner frame member, an engine having a variable speed transmission operatively connected therewith, supported by said inner frame member, a steering wheel connected with said steering wheels, foot actuated pedals placed adjacent to said steering wheel, for operating said transmission, a transverse frame member mounted on the rear ends of said inner longitudinal frame, said transverse frame member being designed to have its ends extend out beyond said inner frame, whereby it may be secured to said outer frame, the outer frame member being provided with an axle having a differential member mounted intermediate of its ends, traction wheels mounted on said axle, a transmission gearing device operatively connected with said differential member, a drive shaft for connecting said first transmission with said second transmission gearing device, whereby power from the engine may be transmitted to the traction wheels, manually operable levers spaced adjacent to said steering wheel for operating said last described transmission gearing device, a spacing block mounted between said inner and outer frames at their forward ends, and means adapted to extend through said spacing block for securing said inner and outer frames together at their forward ends.

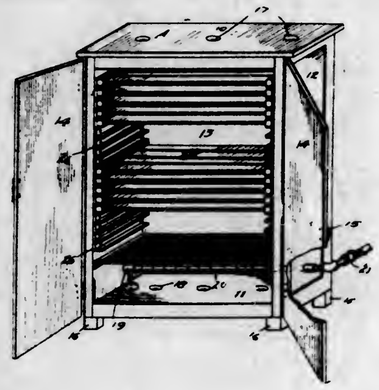


1,346,779. CEMENT-STAVE MACHINE. SIGURD E. ANDERSON, Des Moines, Iowa. Filed Sept. 15, 1919. Serial No. 323,982. 21 Claims. (Cl. 25—41.)

1. In a machine for making cement staves, a frame, mold members mounted thereon, adapted to form the sides and ends of the staves, means for moving the said mold members to position for forming the stave, and to position out of engagement with the formed stave, a pallet holding member, means for pivoting said member to the frame to permit said member to be moved selectively to horizontal position whereby a pallet thereon may coact with the mold members to form a stave, and to permit the ready re-

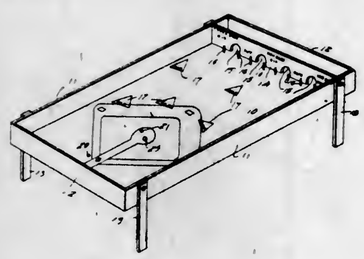
moval of the pallet and stave, and means for supporting said member in horizontal position, adapted to form a rigid connection between the foundation on which the frame may rest and a portion of said member below the mold members.

1,346,780. METHOD OF AND DEVICE FOR DEVELOPING FILMS. GEORGE C. BEIDLER, Rochester, N. Y. Filed Mar. 23, 1916. Serial No. 86,210. 9 Claims. (Cl. 95—90.5.)



1. The method of subjecting film to developer consisting in pushing film into a developer container having a coil therein and causing the film to coil in a spiral form with spaces between the adjacent volutions of the coil.

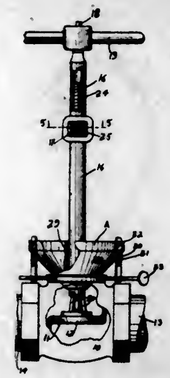
1,346,781. PRINTER'S DRYING-CABINET. ADRIAN J. CHAVANNES, Des Moines, Iowa. Filed Sept. 23, 1919. Serial No. 325,792. 1 Claim. (Cl. 34—39.)



A printer's drying cabinet, comprising a cabinet mounted on legs; hinged door members for permitting access into said cabinet; means whereby paper supporting racks may be selectively placed in said cabinet at various distances relative to each other, whereby bundles of paper of various thicknesses may be accommodated, said racks including slats held together by end members, whereby air may pass through said racks, a heating member near the bottom of said cabinet, means for regulating the amount of heat permitted to circulate through said cabinet, a screen partition placed in said cabinet above said heating member, and below said paper supporting racks, thereby pre-

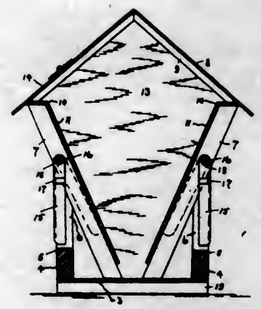
venting any paper from accidentally coming in contact with said heating member, said cabinet being provided with openings in its top and bottom for permitting air to

pass in and pass out thereby forming a circulation which, when heated, will quickly dry the paper stock on said racks.



1,346,782. BASEBALL GAME. WILLIAM G. GEHRING, Woodhaven, N. Y. Filed Nov. 15, 1919. Serial No. 338,274. 2 Claims. (Cl. 46—61.)

2. In a game apparatus, a game board, a plurality of figures arranged on the board at predetermined points, a partition disposed across the board rearwardly of the figures and provided with a plurality of spaced openings, a projectile to be projected over the game board for passage through any one of the openings, and a row of barriers mounted on the game board forwardly of the partition and in close proximity thereto and arranged at opposite sides of the openings to render the passage of the projectile through the openings more difficult.

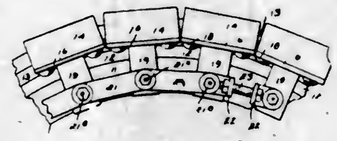


1,346,783. VALVE-GRINDING TOOL. CARL GIESER and GLENN SHAFFER, Des Moines, Iowa; said Shaffer assignor to said Gieser. Filed Feb. 4, 1920. Serial No. 356,340. 3 Claims. (Cl. 51—4.)

1. In a device of the character described, a casing having a plurality of pivoted fingers on its lower end, said fingers being designed to grip and engage a movable valve closure member, a centering device slidably mounted upon said casing, said centering device comprising a cone-shaped member adapted to extend partially into the valve stem opening of a valve casing, vertically adjusted bars fixed to said cone-shaped member, said bars being provided adjacent to their lower ends with a set screw, whereby the set screws may be tightened to engage the valve casing and hold said centering device in position, whereby it will

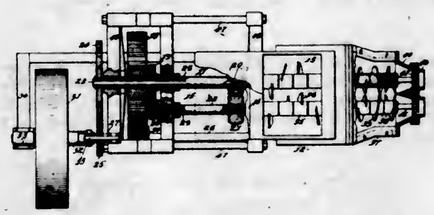
form a bearing for said casing when the casing is being rotated in order to grind the movable valve closure members in the valve seat.

1,346,784. SELF-FEEDER FOR SWINE. CLAYTON R. HAMILTON, Panora, Iowa. Filed Apr. 8, 1919. Serial No. 288,616. 1 Claim. (Cl. 119—52.)



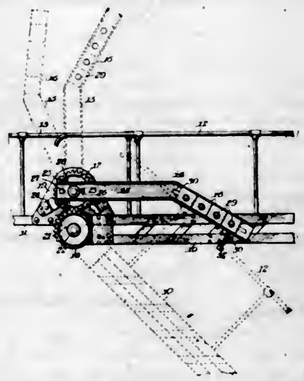
In a feeder receptacle for swine, the combination of an elongated container having downwardly convergent side walls including wall studding and having a floor substantially rectangular in plan projecting outwardly from said side walls, a pair of plates upon the floor outwardly of the side walls of the container, upright braces disposed upon and at longitudinal intervals of the side plates, said braces being connected with the studding of the side walls and providing a plurality of feed apertures in communication with the container, horizontal pivot-pins traversing the studding of the side walls above and in the vertical plane of said braces, a plurality of doors between said braces each being loosely mounted on a pivot-pin and provided with lugs between its top and bottom normally engaging the studding of the side walls, and a plurality of washers on the pivot-pins between the doors and studding of the side walls.

1,346,785. NON-SKID DEVICE. ELMER A. HENSAL, Panora, Iowa. Filed Aug. 11, 1919. Serial No. 316,899. 1 Claim. (Cl. 152—3.)



In a non-skid device, a series of tread members arranged successively circumferentially around the tread portion of a tire, said tread members each having a recess formed on their inner surface, the recess being designed to receive the tread portion of the tire and thus prevent lateral movement of the tread member relative to the tire,

each of said tread members being provided with spaced members arranged to extend radially inwardly on the opposite sides of a tire, said spaced members each having loops formed on their inner ends, links for pivotally and slidably connecting said members on each side of a tire

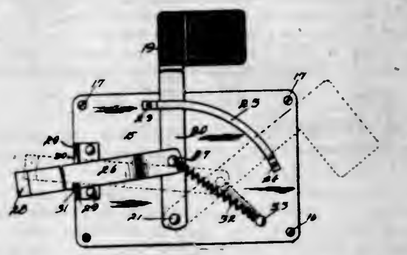


together, said links having elongated slots for allowing limited movement of the parts, a cable on each side of the wheel adapted to be received in said loops, whereby the tightening of said cable will draw the inner ends of said spaced members closer together and thus hold the tread device onto the tread portion of a tire.

1,346,786. MACHINE FOR FORMING CLAY TOWER-SPIRALS. BENJAMIN MIFFLIN HOOD, Atlanta, Ga. Filed Nov. 2, 1918. Serial No. 260,834. 3 Claims. (Cl. 25—14.)

3. A machine of the character described comprising a pair of hollow shafts mounted in bearings, a conveyer housing through which the same extends, conveyers mounted on the shafts and within the housing, a second hollow shaft mounted within the first hollow shaft and filled with oil, spirals connected thereon and operating at the end of the conveyer housing, a plurality of gears mounted on the inner and outer hollow shafts for rotating the same at different speeds, substantially as specified.

1,346,787. FIRE-ESCAPE. JOSEPH M. KAYL, Chicago Ill. Filed Sept. 4, 1917. Serial No. 189,527. 4 Claims. (Cl. 227—5.)

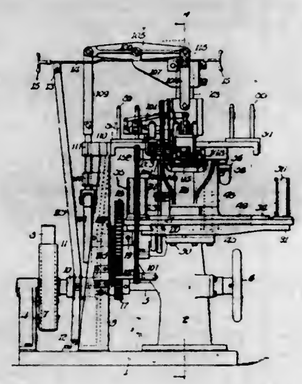


1. In a fire escape the combination of a ladder and a supporting structure therefor, said ladder being pivotally connected at an end to the supporting structure so as to permit it to swing to a raised or lowered position and being arranged with respect to the supporting structure so as to permit of a direct passage from the supporting structure to the pivoted end of the ladder for the application of weight to cause the lowering of the ladder when the ladder is raised, and means for raising the ladder from its lowered position after the removal of the weight, said means being pivoted at the pivoted end of the ladder and including a weighted arm which extends toward the free end of the ladder and which is arranged substantially parallel to the ladder when said ladder is in raised position.

1,346,788. PLUMBING CONNECTION. GEORGE MEIER, San Francisco, Calif. Filed Apr. 21, 1919. Serial No. 291,763. 7 Claims. (Cl. 277—69.)

1. In a plumbing connection, the combination with a plurality of wash trays of a hot water connection; a cold water connection; a third connection connecting the hot and cold water connections; and means mounted within the last mentioned connection for opening the same to permit the passage of hot and cold water therefrom into any one of the trays.

1,346,789. MAIL-BOX SIGNAL DEVICE. JOHN H. RUNKLE, Jr., Rossie, Iowa. Filed Feb. 10, 1920. Serial No. 357,680. 1 Claim. (Cl. 232—34.)



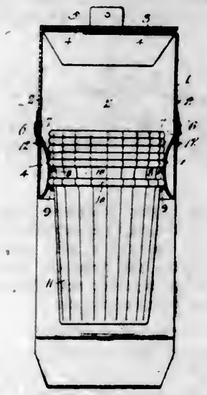
In a device of the character described, a support adapted to be fixed to a mail box having a signal member pivotally mounted thereon, a guide device for limiting the pivotal movement of said last described member in either direction, a spring having one end fixed to the signal member and its other end to the support for yieldingly holding the signal member in its inoperative position, a link having one end pivoted to the signal member intermediate of its ends and having the free end formed so that it provides a hand engaging portion, whereby it may be gripped for moving the signal member to the other limit of its movement, a guide device for said link including a flange having a slot therein, extended forwardly from said support, said link being provided with a notch in its lower side and adapted to be slidably received in said slot, whereby movement of the link to position where the notch and slot register with each other will cause the notch to engage the flange and lock the link against accidental movement in position where the signal member will be rendered operative.

1,346,790. LACE-MACHINE-CARRIAGE-THREADING MECHANISM. WALTER R. SCOTT, Philadelphia, Pa. Filed May 4, 1916. Serial No. 95,508. 22 Claims. (Cl. 66—6.)

22. In lace machine carriage threading mechanism, the combination with a frame; of a shaft supported by said

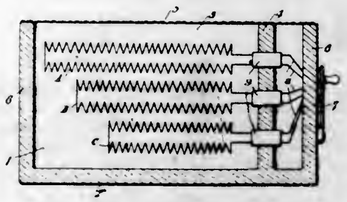
frame; a rotary carrier mounted to rotate coaxially about said shaft; a second rotary carrier, arranged to rotate eccentrically about said shaft; means on said first carrier arranged to hold carriages containing bobbins, singly; means on said second carrier, arranged to hold carriages and bobbins separately; the carriage holding means in said first carrier being adapted to coöperate with both the carriage and bobbin holding means in said second carrier in

one position of relative rotation of said carriers; coöperative means arranged to relatively turn said carriers, step by step, whereby, the carriage holding means in the first carrier is adapted to coöperate with the carriage and bobbin holding means in the second carrier; and means arranged to direct both carriages and bobbins from the holding means in said first carrier to the holding means in said second carrier, when in coöperative relation therewith.



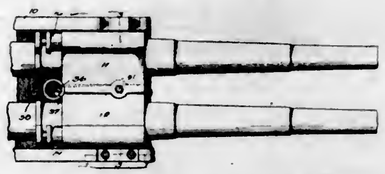
1,346,791. THERMO SAFETY-VALVE. KENNETH F. TRIGGS, Dayton, Ohio. Filed Sept. 24, 1919. Serial No. 326,108. 4 Claims. (Cl. 137—35.)

3. A safety valve, comprising a housing adapted to be set in a pipe line and to be in contact with the fluid in said line, said housing being provided with an escape passage, a valve controlling said passage, and thermally responsive means controlling said valve, whereby the valve is moved to open the escape passage when a desired minimum temperature is reached to drain the pipe line, said thermally responsive means further functioning to move said valve to open said escape passage when a certain maximum temperature is reached.



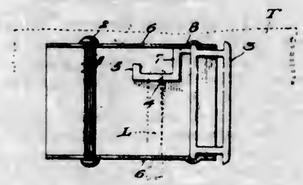
1,346,792. CARTON FOR CUPS AND SIMILAR ARTICLES. SIMON BERGMAN, New York, N. Y. Filed July 10, 1919. Serial No. 309,817. 4 Claims. (Cl. 206—56.)

2. A carton of the class described, provided with sides and end flaps, two of said end flaps being curved upwardly and inwardly, and then upwardly and outwardly, and brought into engagement with their adjacent sides and



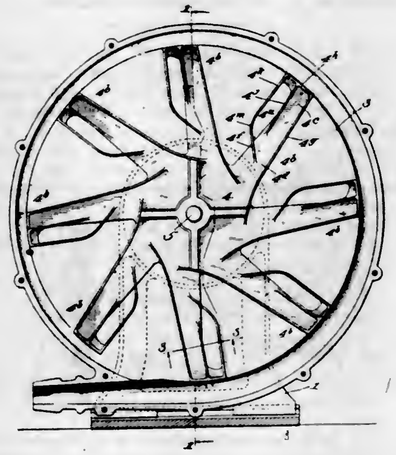
a tab in each of said inwardly disposed end flaps adapted to support a stack of paper cups or similar vessels.

1,346,793. ELECTRIC HEATER. WILLIAM O. BUNNELL and QUINCY A. GATES, Wilkes-Barre, Pa.; Rose P. Bunnell executrix of said William O. Bunnell, deceased. Filed Mar. 27, 1916. Serial No. 87,042. 1 Claim. (Cl. 219—20.)



A heater of the class described including a support for the articles to be heated, a medium capable of radiating heat to a relatively great degree located in relatively close proximity to the support, a medium capable of radiating heat to a less degree and located at a relatively greater distance from the support, and means for independently or collectively causing heat to be imparted to said radiating media.

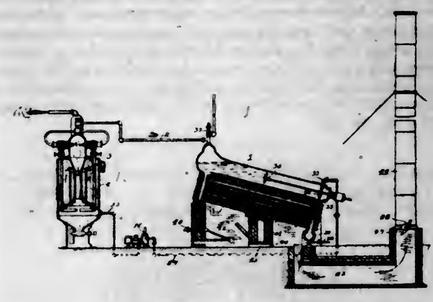
1,346,794. ORDNANCE. EDWARD A. MUIR, deceased, Washington, D. C., by Dora K. Muir, administratrix, Washington, D. C., assignor to the Government of the United States. Filed Feb. 1, 1919. Serial No. 274,830. 21 Claims. (Cl. 89—37.)



1. In a gun mount, a carriage having a two part gun slide, a pair of guns mounted in said gun slide, and means associated with the two parts of the slide permitting relative movement in elevation of said guns.

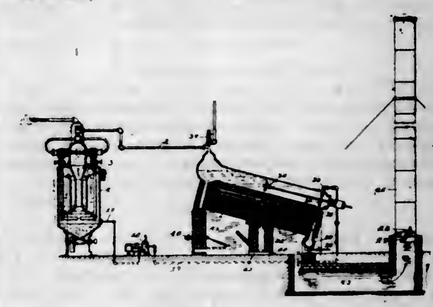
1,346,795. BELT-BUCKLE. CHARLES A. REULE, Cincinnati, Ohio. Filed Mar. 20, 1920. Serial No. 367,845. 2 Claims. (Cl. 24—73.)

1. In a belt buckle, a front plate having a top flange, and a hook rigidly secured to the flange and depending therefrom, said hook being spaced from the front plate and having one end spaced below the flange.



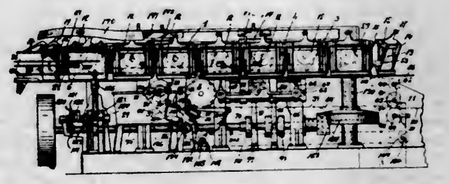
1,346,796. BLOWER. RUDOLF ROSNER, Chicago, Ill. Filed Jan. 23, 1920. Serial No. 353,467. 5 Claims. (Cl. 230—11.)

1. In a centrifugal blower, in combination with a case having a central air inlet, a rotor in the case comprising air driving arms whose width approximately spans the air cavity of the case, and which have on their opposite sides toward the opposing walls of the case air pockets open toward said walls and closed at their outer ends of the arms and open at the inner ends thereof.



1,346,797. APPARATUS FOR THE CONVERSION OF HYDROCARBON OILS. VICTOR LEE EMERSON, Philadelphia, Pa. Original application filed May 6, 1920, Serial No. 379,358. Divided and this application filed May 6, 1920. Serial No. 379,357. 14 Claims. (Cl. 196—25.)

1. In an apparatus for the conversion of hydrocarbon oils, the combination of a still operable under pressure, an oil receptacle, means for supplying fresh oil to said receptacle, means for subjecting the gaseous products of distillation from said still to impact, and means for



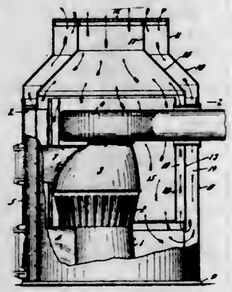
conducting the products of impact into the oil in said receptacle.

1,346,798. PROCESS FOR THE CONVERSION OF HYDROCARBON-OILS. VICTOR LEE EMERSON, Philadelphia, Pa. Original application filed May 6, 1920, Serial No. 379,358. Divided and this application filed May 6, 1920. Serial No. 379,359. 21 Claims. (Cl. 196—25.)

7. The process of conversion of hydrocarbon oils which consists in imparting kinetic energy to a mass of the same, subjecting the said energized mass to impact, repeatedly subjecting the resultant products to impact together with a portion of fresh hydrocarbon oil, subjecting the products of impact thus formed to intimate contact with fresh hydrocarbon oil and drawing off the gaseous products.

1,346,799. BOOK OR PAMPHLET COVERING MACHINE. CHARLES A. JUENGST, Croton Falls, N. Y., assignor to himself and George Juengst, Jr., Croton Falls, N. Y., doing business under the name of George Juengst & Sons. Filed Mar. 19, 1910. Serial No. 550,305. Renewed Nov. 17, 1919. Serial No. 338,527. 1 Claim. (Cl. 11—4.)

Book covering mechanism comprising: a signature gathering mechanism delivering signature groups succes-



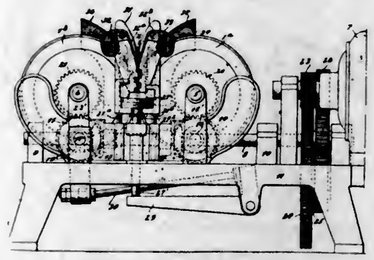
sively, a book covering machine including a plurality of clamps traveling continuously in one direction for receiving and clamping successive signature groups while on the run, means intermediate said signature gathering mechanism and said clamps for transferring each signature group from the gathering mechanism to a successive clamp while on the run, means for registering the signature groups in the clamps, and means for automatically closing said clamps successively on said signature groups while on the run.

1,346,800. COMBINED VENTILATOR AND SHADE. VICTOR M. ALLEN, Shinglehouse, Pa. Filed Sept. 11, 1917. Serial No. 190,843. 2 Claims. (Cl. 20—56.)

1. A window sash including a sliding unbroken pane, a plurality of pivotally mounted transparent panels wholly disposed at one side of the pane, and when closed forming therewith a double window, and means for adjusting said panels to either open or closed position.

1,346,801. FURNACE. WILLIAM J. DOYLE and JUSTUS J. WOLLENHAUPT, Cincinnati, Ohio, assignors to The Monitor Stove & Range Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 23, 1915. Serial No. 16,482. 2 Claims. (Cl. 126—99.)

1. The combination of a furnace body comprising an ash-pit, combustion chamber and radiator, having laterally extending ash and feed snouts and products of combustion conduit, respectively, three separated casings surrounding said heater body, a single superposed floor register with which the upper ends of said casings communicate, to constitute an outer, downward, cold-air intake and passage and an inner, upward hot-air passage and outlet, the outer casing extending to the furnace base to inclose the heater, the two inner casings providing at the bottom communication between the outer cold-air passage and the heating spaces between the two inner casings and between the inner casing and the heater body, a terminal plate for the ash and feed snouts connected to the outer casing, the two inner casings having cut-out portions constituting a feed snout pocket, the cold-air passage formed by the two outer casings, being separated from said pocket to throw the heat radiated from the feed snout into an ascending hot-air passage.



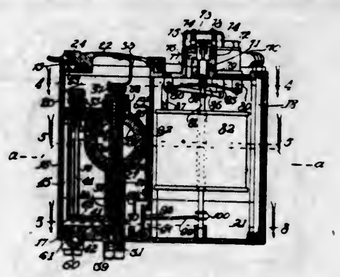
1,346,802. MERCERIZATION. SAMUEL MANSFIELD JONES, North Adams, Mass., assignor to Arnold Print Works, North Adams, Mass., a Corporation of Massachusetts. Filed May 12, 1920. Serial No. 380,889. 4 Claims. (Cl. 8—20.)

1. The method of treating textile fabrics composed of mercerizable cellulosic fibers intermixed with artificial silk filaments of viscose, for the purpose of mercerizing such cellulosic fibers without injury to the viscose silk, by subjecting the composite fabric thus constituted to a process of mercerization wherein the solution of caustic alkali is modified by the addition thereto of glycerin.

1,346,803. MERCERIZATION. SAMUEL MANSFIELD JONES, North Adams, Mass., assignor to Arnold Print Works, North Adams, Mass., a Corporation of Massachusetts. Filed May 12, 1920. Serial No. 380,890. 4 Claims. (Cl. 8—20.)

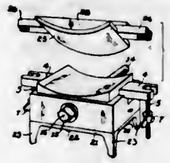
1. The method of treating textile fabrics composed of mercerizable cellulosic fibers intermixed with artificial silk filaments of viscose, for the purpose of mercerizing such cellulosic fibers without injury to the viscose silk, by subjecting the composite fabric thus constituted to a process of mercerization wherein the solution of caustic alkali is modified by the addition thereto of monacetin.

1,346,804. KNIFE-CONTROLLING MECHANISM FOR CUTLERY-RENOVATING MACHINES. CHARLES H. J. DILG, New York, N. Y. Filed Oct. 30, 1915, Serial No. 58,901. Renewed Dec. 24, 1919. Serial No. 347,197. 20 Claims. (Cl. 51—6.)



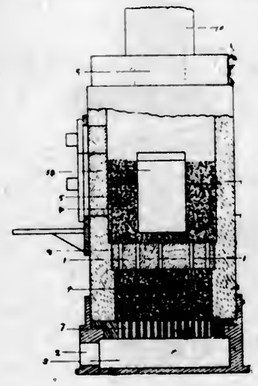
2. In a knife polishing machine, in combination with the polishing members, a gate controlling the admission of a knife to the polishing members and comprising a support disposed in front of the polishing members, and a movable closure carried by the support having a bias to a position opposite the median line of the polishing members and movable therefrom by the knife as it is inserted between the polishing members.

REISSUES.



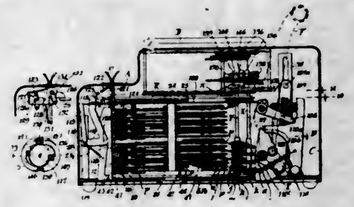
14,912. VACUUM-FEED CARBURETER. PIERRE P. GILLES, Chicago, Ill., assignor, by mesne assignments, to Gilles Fuel Feeding Company, Holyoke, Mass., a Corporation of Massachusetts. Filed Sept. 16, 1919. Serial No. 324,241. Original No. 1,240,842, dated Sept. 25, 1917, Serial No. 124,521, filed Oct. 9, 1916. 23 Claims. (Cl. 158—36.)

1. A vacuum feed carbureter, comprising a carbureter fuel chamber, atomizing devices in said chamber, adapted to be fed therefrom, a fuel supply chamber communicating with the carbureter chamber to feed the latter by gravity, a valve controlling the communication between said chambers, a float in the supply chamber, means controlled by



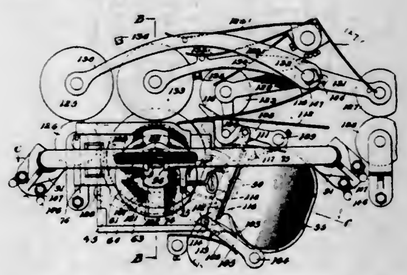
the float to draw fuel into the supply chamber, and means operable by the rise and fall of the float to open and close said valve, all constructed and arranged so that the level in both of said chambers is controlled by a single float.

14,913. VULCANIZER. JAMES C. HEINTZ and GEORGE RUF, Cleveland, Ohio; said Ruf assignor to said Heintz. Filed Mar. 18, 1920. Serial No. 366,983. Original No. 1,262,598, dated Apr. 9, 1918, Serial No. 95,558, filed May 5, 1916. 5 Claims. (Cl. 18—18.)



1. A vulcanizer comprising a hollow fluid-tight casing having a vent opening and provided with a working surface, the side of the casing opposite said surface having a recess, an electric heating element within said recess, a plate for closing said recess, said plate being provided with legs, means for clamping an object in operative relation to the working surface, and a plug fitted into said vent, said plug being formed with a bore closed on its inner side by a fracturable membrane.

14,914. METALLURGICAL FURNACE. SAMUEL M. HOWELL, Zanesville, Ohio. Filed June 5, 1920. Serial No. 387,790. Original No. 1,337,703, dated Apr. 20, 1920, Serial No. 308,026, filed July 1, 1919. 2 Claims. (Cl. 158—7.)



1. In a metallurgical furnace using air and gas or a hydrocarbon vapor as fuel, the combination of a mixing chamber containing a body of metallic chips with a refractory upper retaining plate substantially as set forth and described.

14,915. RECORDING MECHANISM. JOHN ROYDEN PEIRCE, New York, N. Y. Filed Mar. 24, 1920. Serial No. 368,413. Original No. 1,260,705, dated Mar. 26, 1918, Serial No. 489,440, filed Apr. 12, 1909. 55 Claims. (Cl. 234—43.)

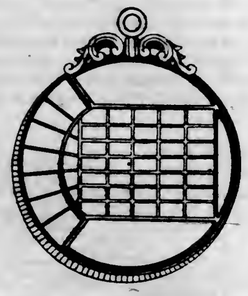
14. In a machine of the class described a type carrier and a punching means arranged to advance together to operative positions, corresponding to successive types on said carrier, and means for operating one of said types and said punching means to print a single character and to punch the same character in the form of a plurality of perforations occupying a space the length of which in the direction of the advance of the punching means is greater than the extent of such advance between positions corresponding to two successive types.

14,916. MAIL-MARKING MACHINE AND POSTAGE-METER. ARTHUR H. PITNEY, Wilmette, Ill., assignor to Pitney-Bowes Postage Meter Company, Stamford, Conn, a Corporation of Delaware. Filed Mar. 26, 1920. Serial No. 369,121. Original No. 1,273,793, dated July 23, 1918, Serial No. 721,183, filed Sept. 19, 1912. 73 Claims. (Cl. 101—77.)

1. In a mail marking machine, the combination of means arranged to feed mail matter along a certain path, a rotary printing drum located adjacent to said path in position to mark said mail matter, said printing drum being adapted to be removed from said position, and a casing mounted adjacent to said drum and adapted to inclose said drum through the act of removing it from said machine.

2. In a mail marking machine, the combination of means arranged to feed mail matter along a certain path, a rotary printing drum located adjacent to said path in position to mark said mail matter, said printing drum being adapted to be removed from said position, a casing mounted adjacent to said drum and adapted to inclose said drum through the act of removing it from said machine, and means for locking said drum against displacement from said first mentioned position.

3. In a mail marking machine, the combination of means arranged to feed mail matter along a certain path, a rotary printing drum located adjacent to said path in position to mark said mail matter, said printing drum be-



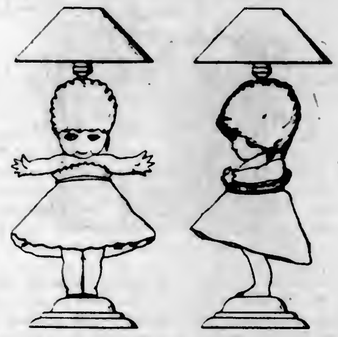
ing adapted to be removed from said position, a casing mounted adjacent to said drum and adapted to inclose said drum through the act of removing it from said machine, and means adapted to lock said drum in said casing.

4. In a mail marking machine, the combination of means arranged to feed mail matter along a certain path, a rotary printing drum located adjacent to said path in position to mark said mail matter, said printing drum being adapted to be removed from said position, a casing mounted adjacent to said drum and adapted to inclose said drum through the act of removing it from said machine, and means adapted to automatically lock said drum in said casing when said head is shifted from said position into said casing.

5. In a mail marking machine, the combination of means arranged to feed mail matter along a certain path, a rotary printing drum located adjacent to said path in position to mark said mail matter, said printing drum being adapted to be removed from said position, a casing mounted adjacent to said drum and adapted to inclose said drum through the act of removing it from said machine, means adapted to lock said drum in said casing, and mechanism for retracting said locking means to permit said drum to be removed from said casing.

DESIGNS.

55,735. WATCH-FOB, LOCKET, OR PENDANT. HENRY ALLEN, Springfield Gardens, N. Y. Filed Jan. 18, 1919. Serial No. 271,925. Term of patent 7 years.

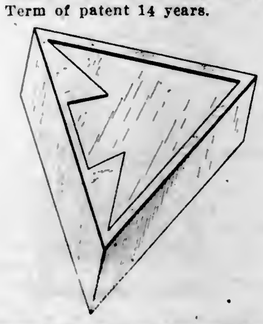


The ornamental design for a watch-fob, locket, or a pendant as shown.

55,736. BADGE. JOHN ARCHER, San Jose, Calif. Filed Mar. 29, 1920. Serial No. 369,757. Term of patent 3½ years.

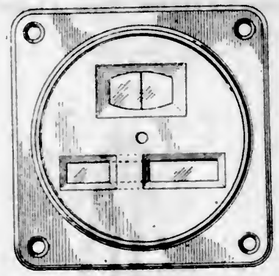
The ornamental design for a badge as shown.

55,737. LAMP-STAND. HARRY C. ATHERLY, San Francisco, Calif. Filed Apr. 5, 1920. Serial No. 371,492. Term of patent 14 years.



The ornamental design for a lamp stand subtsantially as shown.

55,738. TEAPOT OR SIMILAR ARTICLE OF HOLLOW WARE. GEORGE E. BALL, Bridgeport, Conn., assignor to Whiting Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Mar. 11, 1920. Serial No. 365,073. Term of patent 7 years.

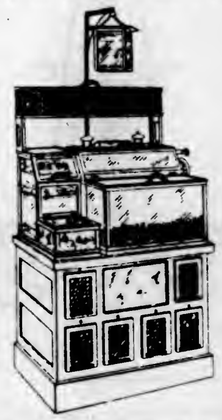


The ornamental design for a teapot or similar article of hollow-ware, as shown.

55,739. AUTO SIGNAL-LIGHT. JOHANNES P. BECKER, Berkeley, Calif. Filed July 22, 1919. Serial No. 312,584. Term of patent 14 years.

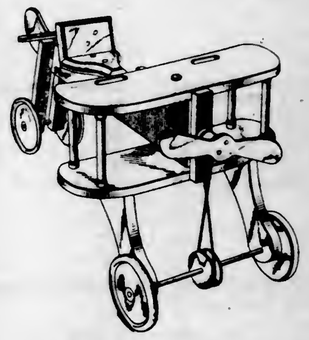
The ornamental design for an auto signal light, as shown.

55,740. SPEEDOMETER FACE-PLATE. JOSEPH BERGE, Flint, Mich., assignor to Champion Ignition Company, Flint, Mich., a Corporation of Michigan. Filed Jan. 6, 1919. Serial No. 269,951. Term of patent 14 years.



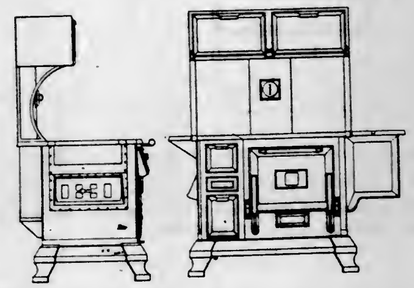
The ornamental design for a speedometer face plate as shown.

55,741. SPEEDOMETER FACE-PLATE. JOSEPH BERGE, Flint, Mich., assignor to Champion Ignition Company, Flint, Mich., a Corporation of Michigan. Filed Jan. 6, 1919. Serial No. 269,953. Term of patent 14 years.



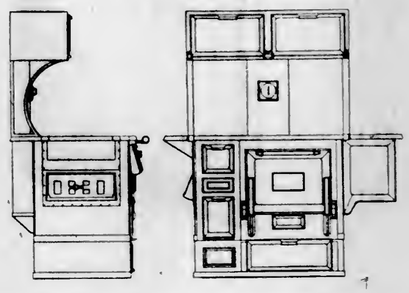
The ornamental design for a speedometer face plate, as shown.

55,742. VENDING-CABINET. EARL C. BOOTH, Indianapolis, Ind., assignor to Holcomb & Hoke Manufacturing Company, Indianapolis, Ind., a Corporation. Filed Nov. 10, 1919. Serial No. 337,028. Term of patent 14 years.



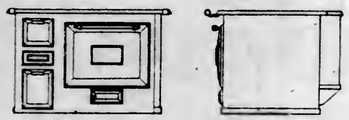
The ornamental design for a vending cabinet, as shown.

55,743. CHILD'S CART. MARCUS J. CARLS and HENRY F. PAUCHA, Los Angeles, Calif. Filed Aug. 23, 1917. Serial No. 187,894. Term of patent 14 years.



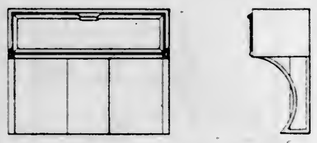
The ornamental design for a child's cart as shown and described.

55,744. RANGE. EDWARD P. COLE, Chicago, Ill., assignor to Cole Manufacturing Company, Chicago, Ill., a Corporation. Filed Dec. 22, 1919. Serial No. 346,805. Term of patent 14 years.



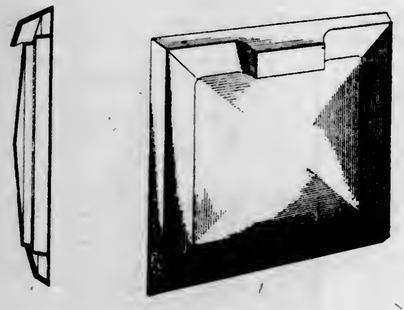
The ornamental design for a range, substantially as shown and described.

55,745. RANGE. EDWARD P. COLE, Chicago, Ill., assignor to Cole Manufacturing Company, Chicago, Ill., a Corporation. Filed Dec. 22, 1919. Serial No. 346,806. Term of patent 14 years.



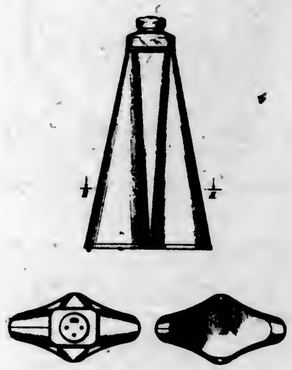
The ornamental design for a range, substantially as shown and described.

55,746. RANGE-BODY. EDWARD P. COLE, Chicago, Ill., assignor to Cole Manufacturing Company, Chicago, Ill., a Corporation. Filed Dec. 22, 1919. Serial No. 346,807. Term of patent 14 years.



The ornamental design for a range body, substantially as shown and described.

55,747. WARMING-OVEN FOR A RANGE. EDWARD P. COLE, Chicago, Ill., assignor to Cole Manufacturing Company, Chicago, Ill., a Corporation. Filed Dec. 22, 1919. Serial No. 346,808. Term of patent 14 years.

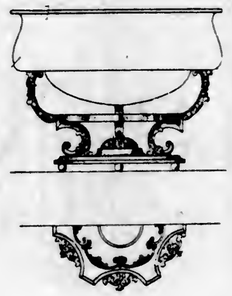


The ornamental design for a warming oven for a range, substantially as shown and described.

55,748. STOVE-DOOR OR SIMILAR ARTICLE. EDWARD P. COLE, Chicago, Ill., assignor to Cole Manufacturing Company, Chicago, Ill., a Corporation. Filed Dec. 22, 1919. Serial No. 346,809. Term of patent 14 years.

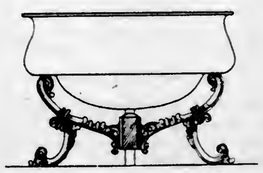
The ornamental design for a stove door or similar article, substantially as shown and described.

55,749. SIFTER-TOP CAN OR SIMILAR RECEPTACLE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Dec. 30, 1919. Serial No. 348,496. Term of patent 7 years.



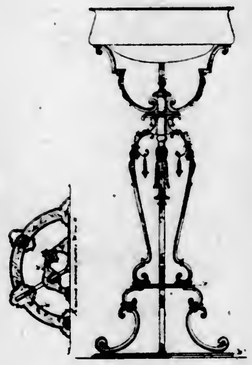
The ornamental design for a sifter top can or similar receptacle, as shown.

55,750. SIFTER-TOP CAN OR SIMILAR RECEPTACLE. MARTHA HALOWELL CONNOR, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Dec. 30, 1919. Serial No. 348,497. Term of patent 7 years.



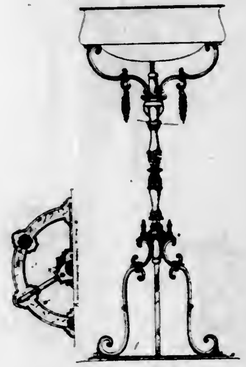
The ornamental design for a sifter top can or similar receptacle, as shown.

55,751. AQUARIUM-STAND. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Jan. 29, 1920. Serial No. 354,931. Term of patent 7 years.



The ornamental design for an aquarium stand, as shown.

55,752. AQUARIUM-STAND. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Jan. 29, 1920. Serial No. 354,932. Term of patent 7 years.



The ornamental design for an aquarium stand, as shown.

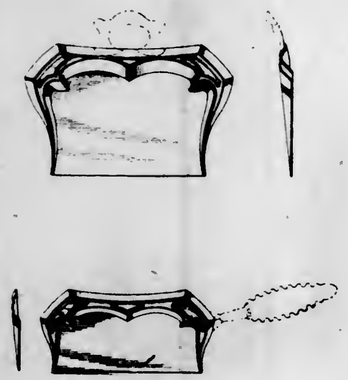
55,753. AQUARIUM-STAND. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Jan. 29, 1920. Serial No. 354,934. Term of patent 7 years.

The ornamental design for an aquarium stand, as shown.

55,754. AQUARIUM-STAND. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Jan. 29, 1920. Serial No. 354,935. Term of patent 7 years.

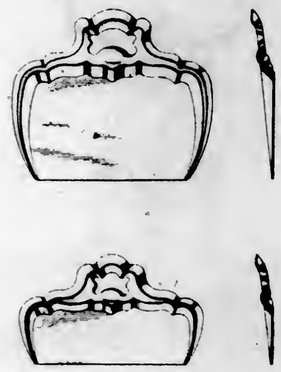
The ornamental design for an aquarium stand, as shown.

55,755. COMBINED HATPIN AND POINT-PROTECTOR. THOMAS DELIKAT, Newark, N. J. Filed Sept. 25, 1919. Serial No. 326,400. Term of patent 3½ years.



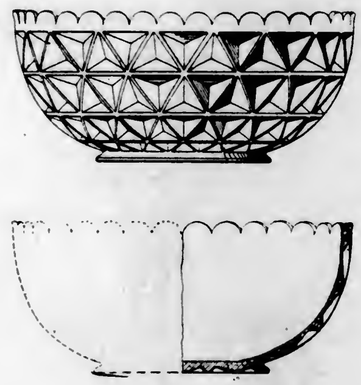
The ornamental design for a combined hatpin and point protector, as shown.

55,756. INDIVIDUAL ARTICLE-HOLDER. PATRICK F. DENNING, Cleveland, Ohio. Filed Aug. 26, 1919. Serial No. 320,076. Term of patent 14 years.



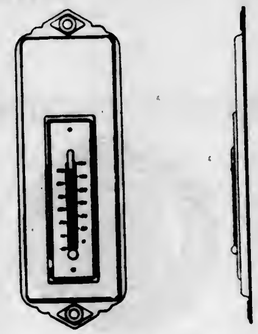
The ornamental design for an individual article holder substantially as shown.

55,757. CRUMB SET. THOMAS BARTON EASBY, Brooklyn, N. Y., assignor to New York Stamping Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 27, 1918. Serial No. 264,458. Term of patent 14 years.



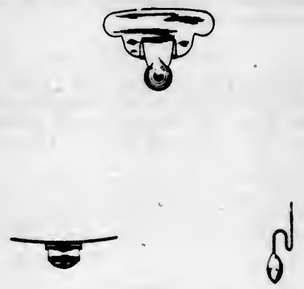
The ornamental design for a crumb set, as shown.

55,758. CRUMB SET. THOMAS BARTON EASBY, Brooklyn, N. Y., assignor to New York Stamping Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 27, 1918. Serial No. 264,459. Term of patent 14 years.



The ornamental design for a crumb set, as shown.

55,759. ARTICLE OF GLASSWARE. PHILLIP EBELING, Washington, Pa., assignor to Imperial Glass Company, Bellaire, Ohio, a Corporation of Ohio. Filed May 19, 1920. Serial No. 382,604. Term of patent 14 years.



The ornamental design for an article of glassware, as shown.

55,760. THERMOMETER. CLAUS E. ERICKSON, Des Moines, Iowa. Filed Dec. 16, 1919. Serial No. 345,404. Term of patent 7 years.

The ornamental design for a thermometer, as shown.

55,761. COMBINED COLLAR-BUTTON AND TIE-SLIDE OR SIMILAR ARTICLE. HENRY ESCH, Jr., Manitowoc, Wis. Filed Apr. 19, 1920. Serial No. 375,176. Term of patent 14 years.

The ornamental design for a combined collar button and tie slide or similar article as shown.

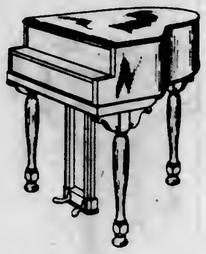
55,762. CASING FOR A COMBINED AIR AND WATER DISPENSER. ARNO A. EWALD, Oakfield, Wis. Filed Nov. 7, 1919. Serial No. 336,480. Term of patent 14 years.

The ornamental design for a casing for a combined air and water dispenser, as shown.

55,763. TALKING-MACHINE. JOHN A. FERN, Cincinnati, Ohio, assignor to E. H. McConnell, trustee, Memphis, Tenn. Filed May 14, 1920. Serial No. 381,471. Term of patent 14 years.

The ornamental design for a talking machine, as shown.

55,764. TALKING-MACHINE. JOHN A. FERN, Cincinnati, Ohio, assignor to E. H. McConnell, trustee, Memphis, Tenn. Filed May 14, 1920. Serial No. 381,472. Term of patent 14 years.

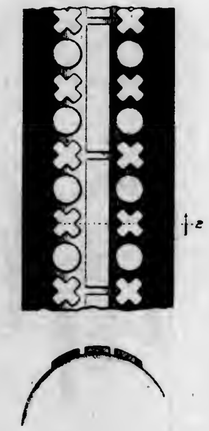


The ornamental design for a talking machine, as shown.

55,765. TALKING-MACHINE. JOHN A. FERN, Cincinnati, Ohio, assignor to E. H. McConnell, trustee, Memphis, Tenn. Filed May 14, 1920. Serial No. 381,473. Term of patent 14 years.

The ornamental design for a talking machine, as shown.

55,766. TALKING-MACHINE. JOHN A. FERN, Cincinnati, Ohio, assignor to E. H. McConnell, trustee, Memphis, Tenn. Filed May 14, 1920. Serial No. 381,474. Term of patent 14 years.

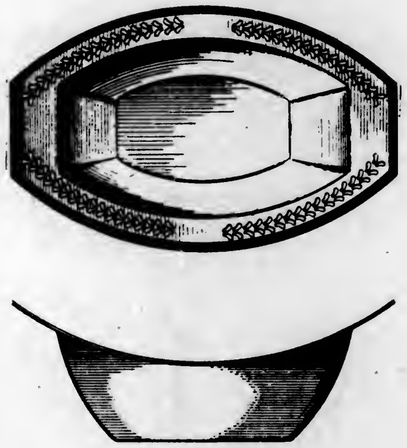


The ornamental design for a talking machine, as shown.

55,767. TALKING-MACHINE. JOHN A. FERN, Cincinnati, Ohio, assignor to E. H. McConnell, trustee, Memphis, Tenn. Filed May 14, 1920. Serial No. 381,475. Term of patent 14 years.

The ornamental design for a talking machine, as shown.

55,768. AUTOMOBILE-TIRE. ALBERT S. FOX, Chicago, Ill. Filed Dec. 3, 1919. Serial No. 342,279. Term of patent 7 years.

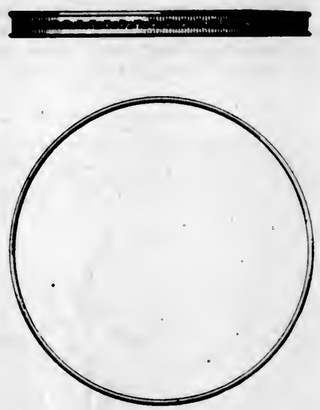


The ornamental design for an automobile tire, as shown.

55,769. PIN, EMBLEM, OR ARTICLE OF SIMILAR NATURE. ALICE M. FRENCH, Indianapolis, Ind. Filed Apr. 21, 1919. Serial No. 291,765. Term of patent 3½ years.

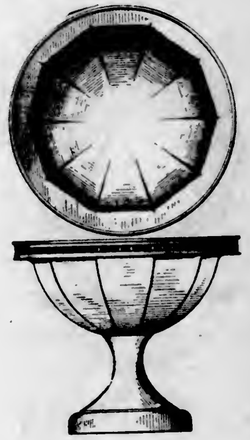
The ornamental design for a pin, emblem, or article of similar nature as shown.

55,770. BREAD-TRAY OR SIMILAR ARTICLE. VICTOR GAERTNER, New York, N. Y., assignor to Continental Sheffield Silver Co., Brooklyn, N. Y., a Firm. Filed Feb. 20, 1920. Serial No. 360,166. Term of patent 14 years.



The ornamental design for a bread tray or similar article, as shown.

55,771. GALLERY-MOUNT FOR HOLLOW TABLEWARE. VICTOR GAERTNER, New York, N. Y., assignor to Continental Sheffield Silver Co., Brooklyn, N. Y., a Firm. Filed Feb. 20, 1920. Serial No. 360,169. Term of patent 14 years.

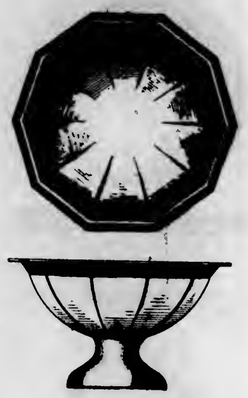


The ornamental design for a gallery mount for hollow tableware, as shown.

55,772. GALLERY-MOUNT FOR HOLLOW TABLEWARE. VICTOR GAERTNER, New York, N. Y., assignor to Continental Sheffield Silver Co., Brooklyn, N. Y., a Firm. Filed Feb. 20, 1920. Serial No. 360,170. Term of patent 14 years.

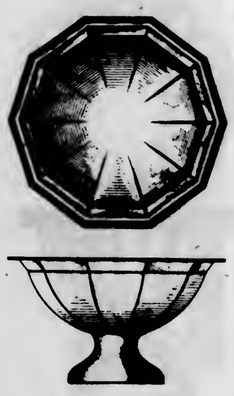
The ornamental design for a gallery mount for hollow tableware, as shown.

55,773. ARTICLE OF HOLLOW TABLEWARE. VICTOR GAERTNER, New York, N. Y., assignor to Continental Sheffield Silver Co., Brooklyn, N. Y., a Firm. Filed Feb. 20, 1920. Serial No. 360,171. Term of patent 14 years.



The ornamental design for an article of hollow tableware, as shown.

55,774. ARTICLE OF HOLLOW TABLEWARE. VICTOR GAERTNER, New York, N. Y., assignor to Continental Sheffield Silver Co., Brooklyn, N. Y., a Firm. Filed Feb. 20, 1920. Serial No. 360,172. Term of patent 14 years.

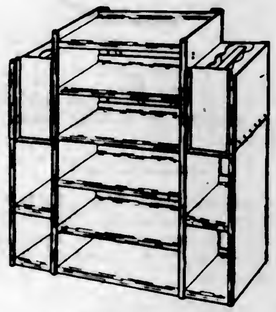


The ornamental design for an article of hollow tableware, as shown.

55,775. ARTICLE OF HOLLOW TABLEWARE. VICTOR GAERTNER, New York, N. Y., assignor to Continental Sheffield Silver Co., Brooklyn, N. Y., a Firm. Filed Feb. 20, 1920. Serial No. 360,173. Term of patent 14 years.

The ornamental design for an article of hollow tableware, as shown.

55,776. ARTICLE OF HOLLOW TABLEWARE. VICTOR GAERTNER, New York, N. Y., assignor to Continental Sheffield Silver Co., Brooklyn, N. N. Y., a Firm. Filed Feb. 20, 1920. Serial No. 360,174. Term of patent 14 years.



The ornamental design for an article of hollow tableware, as shown.

55,777. LIGHT COVER GLASS. HENRY PHELPS GAGE and EMILIO PASCUCCI, Corning, N. Y. Filed Apr. 19, 1920. Serial No. 375,180. Term of patent 14 years.

The ornamental design for a light cover glass, as shown.

55,778. DISPLAY-RACK. FRANCIS W. GIBSON, West Roxbury, Mass. Filed Apr. 23, 1920. Serial No. 376,148. Term of patent 7 years.

The ornamental design for a display rack, as shown.

55,779. LIGHTING-GLOBE. EDWIN B. GILLINDER, Port Jervis, N. Y., assignor to Gillinder Brothers, Port Jervis, N. Y., a Corporation of New York. Filed Apr. 29, 1919. Serial No. 293,573. Term of patent 7 years.

The ornamental design for a lighting globe substantially as shown.

55,780. LIGHTING-GLOBE. EDWIN B. GILLINDER, Port Jervis, N. Y., assignor to Gillinder Brothers, Port Jervis, N. Y., a Corporaton of New York. Filed Apr. 29, 1919. Ser. No. 293,574. Term of patent 7 years.

The ornamental design for a lighting globe substantially as shown.

55,781. HANDS OF A TIMEPIECE. FRANCIS A. GOODROW, Elgin, Ill., assignor to Elgin National Watch Company, Elgin, Ill., a Corporation of Illinois. Filed Nov. 6, 1919. Serial No. 336,179. Term of patent 14 years.

Claims use since Dec. 19, 1918.

Ser. No. 117,077. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) WATERPROOF OIL PRODUCTS CO., Seattle, Wash. Filed Mar. 31, 1919.

BAINOIL

Particular description of goods.—Leather-Shoe Dressing.

Claims use since Mar. 1, 1919.

Ser. No. 117,487. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LAFAYETTE FULTS, Jr., E. LLOYD MCKENZIE, and F. W. KORSMEYER, Colorado Springs, Colo. Filed Apr. 15, 1919.

Maltoago

Particular description of goods.—Food-Drink.

Claims use since Mar. 1, 1918.

Ser. No. 118,022. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) WILLIAM SILVERBERG, Chicago, Ill. Filed Apr. 30, 1919.

TEL→TAX

Applicant disclaims the word "Tax" apart from the mark as shown by the drawing.

Particular description of goods.—Tax-Registers.

Claims use since Apr. 18, 1919.

Ser. No. 118,058. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE NATIONAL SUPPLY COMPANY, Toledo, Ohio. Filed May 1, 1919.

NSCO

Particular description of goods.—Well-Drilling Rigs and Parts Thereof, Well-Derricks, Bull-Wheels, Calf-Wheels, Band-Wheels, Friction-Drums, Brake-Wheels, Well-Drilling Machines and Parts Thereof, Walking-Beams, Crown-Blocks for Well-Derricks, Well-Drilling Rig-Irons, Machine Brakes and Clutches, Sprocket-Wheels, Bearings for Shafts, Machine-Shafting, Temper-Screws, Temper-Screw Clamps, Rope-Sockets for Well-Drilling Tools, Drilling-Jars, Drilling-Stems, Drilling Bits and Shoes, Metal Reamers, Underreamers, Swivel-Boxes, Well-Bailers and Sand-Pumps, Drilling-Tool Swabs, Derrick-Cranes, Spudding-Shoes for Well-Drilling Machines, Steam-Hammers, Rotary Well-Drilling Machines and Parts Thereof, Slush-Pumps and Parts Thereof, Water-Swivels for Drilling-Machines, Mud-Mixers for Wells, Drive-Heads and Drive-Points for Well-Casings, Well-Casing Spears, Elevators for Well Casing and Tubing, Casing-Cutters for Wells, Sucker-Rods, Pipe Rings and Spiders and Wedges, Slips for Rotary Well-Drilling Machines and Liners for Pumps Therefor, Wire-Rope-Splicing Tools, Oil-Savers for Oil-Wells; Air, Oil, Water, and Gas Pumps and Parts Thereof; Machines Constructed to Transmit Power to Operate a Plurality of Pumps and Parts Thereof, Pumping Jacks and Parts Thereof, Fence-Jacks for Tightening Wires and Rods; Hoisting-Machines and Parts Thereof for Raising and Lowering Well Tubing, Casing, and Sucker-Rods; Boiler-Tube-Cleaning Tools and Steam-Engines, Gas and Gasolene Engines, and Parts Thereof; Gas-Compressors and Parts Thereof, Fishing-Tools for Wells, Jacks, Snatch-Blocks, Tackle-Blocks, Hoisting-Hooks, Chain-Hoists, Sheaves, Pulleys, Casing-Heads for Wells, Stuffing-Boxes, Well-Packers, Reels, Load-Binders, Tongs, Wrenches, Vises, Sledges, Hammers, Forge-Tools, Chisels, Calking-Irons, Tube-Beaders, Files, Rasps, Pinch-Bars, Crowbars, Picks, Shovels, Hoes, Axes, Adzes, Hatchets, Pliers, Soldering-Irons, Bit-Braces, Boring-Bits, Augers, Drawing-Knives, Planes, Screw-Drivers, Saws, Saw-Sets, Tool-Handles, Cant-Hooks, Belt-Punches, Metal-Punches, Tube Cutters and Expanders, Metal-Drilling Machines and Parts Thereof, Ratchet-Drills, Drill-Bits, Metal-Presses, Pipe-Threading Machines and Parts Thereof, Tapping-Machines, Threading Taps and Dies, Pipe-Benders, Pipe-Cutting Machines and Parts Thereof, Reamers, Rotary Fans and Blowers, Oil-Cups, and Grease-Cups.

Claims use since the year 1900.

Ser. No. 118,123. (CLASS 4. ABRASIVE, DÉTERGENT, AND POLISHING MATERIALS.) SCHUSTER BROS. INC., El Paso, Tex. Filed May 3, 1919.

JABON BORREGO

No claim is made to the use of the words "Jabon Borrego" aside from the mark shown.

Particular description of goods.—Soap.

Claims use since January, 1919.

Ser. No. 118,461. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) BRANFORD ELECTRIC COMPANY, New York, N. Y. Filed May 14, 1919.

Cupronic

Particular description of goods.—Cupronickel Alloys in the Form Either of Wire, Ribbon, Rods, Sheets, Billets, or Castings.

Claims use since February, 1917.

Ser. No. 118,462. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) BRANFORD ELECTRIC COMPANY, New York, N. Y. Filed May 14, 1919.

Feronic

Particular description of goods.—Ferronickel Alloys in the Form Either of Wire, Ribbon, Rods, Sheets, Billets, or Castings.

Claims use since February, 1917.

Ser. No. 118,800. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SEHON, STEVENSON AND COMPANY, Huntington, W. Va. Filed May 22, 1919.

Breakfast King

Particular description of goods.—Coffee.

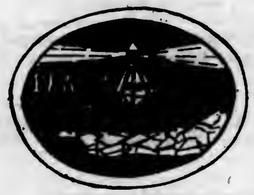
Claims use since Apr. 16, 1915.

Ser. No. 118,957. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) THE CONTINUOUS REACTION COMP'Y., LTD., Battersea, London, England. Filed May 27, 1919.

CONREACTO

Particular description of goods.—Ferrotungsten Alloy.

Claims use since Nov. 24, 1916.



Ser. No. 118,970. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PRICE SPECIALTY COMPANY, Indianapolis, Ind. Filed May 27, 1919.

MOTHER'S

Particular description of goods.—Food Products, Specifically Prepared Pie-Filling Products—That is, a Combination or Mixture of Ingredients Suitable for Making Pies.

Claims use since about July 1, 1918.

Ser. No. 119,626. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE BEACON FEED COMPANY, New York, N. Y. Filed June 16, 1919.

Particular description of goods.—Dairy Rations, Horse Feed, and Scratch-Grains.

Claims use since Apr. 7, 1919.

Ser. No. 121,077. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) WALDES & CO., Prague, Bohemia. Filed July 29, 1919.

Jndepedence

Particular description of goods.—Hand Sewing-Needles, Knitting-Needles, Crochet-Needles, Hairpins, Hatpins Not Made of Precious Metal, Buttons Not Made of Precious Metal, Buckles for Personal Wear Not Made of Precious Metal, Thimbles, Coat-Hangers Adapted to be Attached to Garments, Clasps for Personal Wear Not Made of Precious Metal, Button-Tapes, and Collar-Buttons and Cuff-Buttons Not Made of Precious Metal.

Claims use since Jan. 1, 1915.

Ser. No. 121,081. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) WALDES & CO., Prague, Bohemia. Filed July 29, 1919.

TRIUMPH

Particular description of goods.—Placket-Fasteners, Glove-Fasteners, Hand Sewing-Needles, Knitting-Needles, Crochet-Needles, Hairpins, Hatpins Not Made of Precious Metal, Buttons Not Made of Precious Metal, Buckles for Personal Wear Not Made of Precious Metal, Thimbles, Coat-Hangers Adapted to be Attached to Garments, Clasps for Personal Wear Not Made of Precious Metal, Button-Tapes, and Collar-Buttons and Cuff-Buttons Not Made of Precious Metal.

Claims use since April, 1908.

Ser. No. 122,743. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE WILLIAMS FOUNDRY & MACHINE CO., Akron, Ohio. Filed Sept. 15, 1919.

A-W

Particular description of goods.—Vulcanizing Outfits of the Stationary Type for Rubber Tires, Comprising Vulcanizing-Molds and Mold-Presses, Steam-Generators for Vulcanizers, Mold-Platforms Having Assembled Thereon Tire-Vulcanizers and Tube-Vulcanizers, and Individual Tire and Tube Vulcanizers, Bead-Molds, Reducing-Shells, Blocks and Cores, Retreading-Rims, Repair Side Flanges, Bench-Brackets and Tire-Lasts, Vulcanizing-Kettles, Rebuilding-Stands, Force-Feed Gasolene Systems for Vulcanizers, Tube-Deflators, Retreading-Coils, Repair Rolling-Machines, Rag-Rollers, Tire-Rasps, and, Wrapping-Machines for Inner Tubes.

Claims use since August, 1917.

Ser. No. 123,075. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NOOTKA PACKING COMPANY LIMITED, Everett, Wash. Filed Sept. 24, 1919.

SNOWSTORM

Particular description of goods.—Fish—Namely, Pilchards, Canned.

FRUITARS

Particular description of goods.—Fruit-Juice Candy Tablets.
Claims use since Mar. 1, 1920.

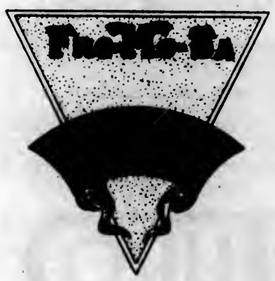
Ser. No. 130,355. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) SAMUEL BERNSTEIN, New York, N. Y. Filed Mar. 30, 1920.

NOXAL

Particular description of goods.—Washing Compound in Solid and Powder Form, Used for the Same General Purposes as Soap, but Not Used as a Polish for Metals.
Claims use since January, 1920.

Ser. No. 130,361. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) BLUMAUER-FRANK DRUG COMPANY, Portland, Oreg. Filed Mar. 30, 1920.

Purola



Disclaims the words "Trade-Mark Reg." which are shown in the official drawing filed herewith.
Particular description of goods.—Shaving-Cream, (a Soft Free-Lathering Non-Alkaline Perfumed Soap,) Shampoo-Soap, and Antiseptic Soap.
Claims use since November, 1911.

Ser. No. 130,367. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) THE HOLT MANUFACTURING COMPANY, Stockton, Calif. Filed Mar. 30, 1920. Under ten-year proviso.

HOLT

Particular description of goods.—Wagons, Trailers, Radiators for Use on Motor-Vehicles.
Claims use since 1883.

Ser. No. 130,457. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) JACOB WEXLER, St. Louis, Mo. Filed Mar. 31, 1920.

Particular description of goods.—Furniture and Automobile Polish or Gloss for Any Woodwork.
Claims use since on or about Jan. 1, 1919.

Ser. No. 130,481. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LISTERATED GUM CORPORATION, New York, N. Y. Filed Apr. 1, 1920.

Lister-Mint

No claim being made to the word "Mint" alone.
Particular description of goods.—Chewing-Gum and Candy.
Claims use since Mar. 1, 1915.

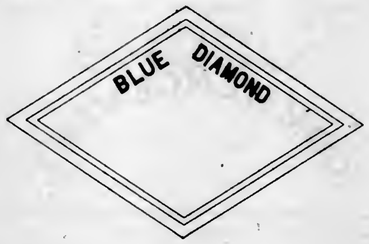
Ser. No. 130,494. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) RACINE RUBBER COMPANY, Racine, Wis. Filed Apr. 1, 1920.

COUNTRY ROAD

Particular description of goods.—Rubber or Rubber and Fabric Tires and Tubes for Vehicles.
Claims use since June 1, 1913.

Ser. No. 130,550. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) OSHKOSH MOTOR TRUCK MFG. CO., Oshkosh, Wis. Filed Apr. 2, 1920.

OSHKOSH 4-WHEEL-DRIVE



No claim is made to the term "4-Wheel-Drive" apart from the arrangement as shown in the drawing.
Particular description of goods.—Motor-Vehicles, Automobiles, and Motor-Trucks.
Claims use since on or about Jan. 1, 1919.

Ser. No. 130,600. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) HARRIET W. KNIGHT, New York, N. Y. Filed Apr. 3, 1920.

LUCKY CALL ME

Particular description of goods.—Concealing Device for Telephones.
Claims use since Aug. 1, 1919.

Ser. No. 130,633. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WOLTER BROS., Peoria, Ill. Filed Apr. 3, 1920.

Particular description of goods.—Potatoes in Their Natural State.
Claims use since Feb. 1, 1920.

Ser. No. 130,638. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) ARROW-GRIP MANUFACTURING CO., INC., Glens Falls, N. Y. Filed Apr. 5, 1920.

ARROW-GRIP

Particular description of goods.—Lifting-Jacks.
Claims use since Jan. 20, 1919.

Ser. No. 130,701. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) G. C. THOMSEN & A. A. ADAMS, Waco, Tex. Filed Apr. 5, 1920.

DYO

Particular description of goods.—A Polish for Incidentally Dyeing Leather.
Claims use since Mar. 12, 1920.

Ser. No. 130,727. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) MEEK OVEN MANUFACTURING COMPANY, INC., New York, N. Y. Filed Apr. 6, 1920.

No claim being made to "Original Meek Reel Oven" apart from the mark shown.
Particular description of goods.—Ovens for Baking Bread.
Claims use since 1906.

Ser. No. 130,768. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) THE NATIONAL PRESSED STEEL COMPANY, Massillon, Ohio. Filed Apr. 7, 1920.

No claim is made for the word "Steels" apart from the mark shown on the drawing.

The words "Keep Your Business to Yourself and Grow" are disclaimed.
Particular description of goods.—Machinery-Patterns.
Claims use since Dec. 1, 1919.

Ser. No. 131,238. (CLASS 12. CONSTRUCTION MATERIALS.) THE UNION METAL MANUFACTURING COMPANY, Canton, Ohio. Filed Apr. 16, 1920.

UNION

Particular description of goods.—Metal Columns for Building Purposes.
Claims use since July 5, 1907.

Ser. No. 131,259. (CLASS 43. THREAD AND YARN.) DE LUXE THREAD CORP., New York, N. Y. Filed Apr. 17, 1920.

SOWELL

Consisting of the word "Sowell."
Particular description of goods.—Sewing-Cotton.
Claims use since Mar. 19, 1920.

Ser. No. 131,337. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) I. B. KLEINERT RUBBER COMPANY, New York, N. Y. Filed Apr. 19, 1920.

"SHIRLASTIC"

Particular description of goods.—Dress-Shields and Garters.
Claims use since Mar. 12, 1920.

Ser. No. 131,353. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MAX C. PELTASON, Chicago, Ill. Filed Apr. 19, 1920.

Exclusive use of the word "Brand" is disclaimed apart from the mark shown in the drawing, the portrait shown being fanciful.

Particular description of goods.—Powdered Milk.

Claims use since Nov. 5, 1919.

Ser. No. 131,424. (CLASS 33. GLASSWARE.) HIRSCH-MALGOOD CO. INC., New York, N. Y. Filed Apr. 21, 1920.

The mark is never shown in red or in white on a red background.

Particular description of goods.—Combined Glass Spoons and Sippers.

Claims use since about June, 1916.

Ser. No. 131,447. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) NATIONAL PICTURE THEATRES INC., New York, N. Y. Filed Apr. 21, 1920.

No claim is made to the exclusive use of the word "Pictures" apart from the mark shown in the drawing.

Particular description of goods.—Motion-Picture Films.

Claims use since Feb. 17, 1920.

Ser. No. 131,458. (CLASS 12. CONSTRUCTION MATERIALS.) ANDERSEN LUMBER COMPANY, Hudson, Wis., and South Stillwater, Minn. Filed Apr. 22, 1920.

The exclusive use of the surname "Andersen" apart from the mark shown is expressly disclaimed. The field of the mark is blue, the ring and bar are red, while the letters are white.

Particular description of goods.—Wooden Window and Door Frames.

Claims use since July 1, 1917.

Ser. No. 131,480. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) VANCE JOSEPH HOYT, Los Angeles, Calif. Filed Apr. 22, 1920.

Particular description of goods.—Baby Food, Said Baby Food Being Composed of Certain California Cereals and other Ingredients.

Claims use since June 1, 1918.

Ser. No. 131,532. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) MILWAUKEE STEEL FOUNDRY COMPANY, Milwaukee, Wis. Filed Apr. 23, 1920.

MILWASTEEL

Particular description of goods.—Metal Castings, and Specifically Castings Made of Steel and Iron, and Alloys of Steel and Iron.

Claims use since Apr. 9, 1920.

Ser. No. 131,533. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) MILWAUKEE STEEL FOUNDRY COMPANY, Milwaukee, Wis. Filed Apr. 23, 1920.

MILWALOY

Particular description of goods.—Metal Castings, and Specifically Castings Made of Steel and Iron, and Alloys of Steel and Iron.

Claims use since Apr. 9, 1920.

Ser. No. 131,562. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BUGLER & GOEBEL COMPANY, Chicago, Ill. Filed Apr. 24, 1920.

No claim is made to the exclusive right to the use of the word "Nut" apart from the mark shown.

Particular description of goods.—An Edible Composition for Use as an Ingredient of Candies.

Claims use since Mar. 10, 1919.

Ser. No. 131,594. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PAUL ROSEN, Orange, N. J. Filed Apr. 24, 1920.

LE ROI

Particular description of goods.—Candy.

Claims use since November, 1919.

Ser. No. 131,706. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) HARRY A. KNAPP, Brooklyn, N. Y. Filed Apr. 27, 1920.

The lining thereon merely representing shading and no claim being made to the wording on the drawing except to the words "Globe Specialties Co." and the word "Rosanativo."

Particular description of goods.—Soap.

Claims use since Apr. 16, 1920.

Ser. No. 131,766. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) AMERICAN METALS CORPORATION, Indianapolis, Ind. Filed Apr. 29, 1920.

AMCO

Particular description of goods.—Automobile-Radiator Shutters.

Claims use since December, 1919.

Ser. No. 131,789. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FREEPORT CONDENSED MILK CO., Chicago, Ill. Filed Apr. 29, 1920.

GOLDEN GLOW

Particular description of goods.—Evaporated Milk.

Claims use since Mar. 5, 1920.

Ser. No. 131,841. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) VAUGHN M. MCVEY, Lincoln, Nebr. Filed Apr. 29, 1920.

LUSTERINE

Particular description of goods.—Liquid Preparations for Cleaning and Polishing Enameled Surfaces.

Claims use since Aug. 1, 1919.

Ser. No. 131,865. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) HERSCHELL-SPILLMAN MOTOR COMPANY, North Tonawanda, N. Y. Filed Apr. 30, 1920.

"The Pick of the Field"

No claim being made to the word "Motors" apart from the mark as shown.

Particular description of goods.—Gasolene-Motors.

Claims use since about Feb. 1, 1920.

Ser. No. 131,923. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) SHUGERS MFG. CO., Los Angeles, Calif. Filed May 1, 1920.

Particular description of goods.—Automobile Tops and Curtains and Top and Curtain Windows.

Claims use since Apr. 1, 1920.

Ser. No. 131,927. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) TYLER CHEMICAL COMPANY, Pawtucket, R. I. Filed May 1, 1920.

The word "Trade Mark" appearing on the drawing does not form a part of the mark and is expressly disclaimed.

Particular description of goods.—A Preparation for Cleansing Purposes for Textile Fabrics of All Kinds and Also Kid Shoes, Kid Gloves, Leather, and Feathers.

Claims use since Oct. 1, 1919.

Ser. No. 132,004. (CLASS 12. CONSTRUCTION MATERIALS.) THE BEAVER COMPANY, Buffalo, N. Y. Filed May 4, 1920.

BIVER BORD

No claim being made to the word "Bord" apart from the mark shown in the drawing.

Particular description of goods.—Wall-Board and Building-Paper.

Claims use since Apr. 20, 1920.

Ser. No. 132,059. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PATRICK-YOUNG COMPANY, Richmond, Va. Filed May 5, 1920.

HERMITAGE

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

MAREMONT *v.* OLSON.

Decided November 7, 1918.

PATENTS—PRIORITY—DELAY AFTER ALLEGED REDUCTION TO PRACTICE.

Delay to file an application or practice an invention for more than two years after a doubtful reduction to practice, while not a deliberate abandonment under *Mason v. Hepburn*, (1898, C. D., 10,) indicates such laches as to avoid any advantage flowing from an earlier conception.

[Affirmed by the Court of Appeals of the District of Columbia, 276 O. G., 406.]

APPEAL from Examiners-in-Chief.

MOTOR-VEHICLE.

Messrs. Brown & Phelps for Maremont.

Messrs. Barthel & Barthel for Olson.

CLAY, *Assistant Commissioner:*

The junior party, Maremont, appeals from the affirmance of an award of priority to Olson in an invention defined as follows:

1. A spring structure for attachment to a vehicle having axle flanges, comprising a spring supporting yoke having a face portion arranged for attachment to an axle flange, a spring parallel to the yoke face portion, and means securing the spring to the yoke.

2. A spring structure for attachment to a vehicle having axle flanges, comprising a spring supporting yoke having a face portion for attachment to an axle flange and an upstanding portion carrying an extension outstanding at right angles thereto, a spring parallel to the yoke face portion, and means securing the spring to the outstanding portion of the spring supporting yoke.

The Examiners-in-Chief have well and correctly discussed the proofs, and I find no error in any of their rulings.

I doubt whether Maremont fully conceived the invention in 1913; but, whether he did or no, I am satisfied that if he did he was not diligent thereafter before his rival Olson entered the field and proceeded diligently to give the public the benefit of his invention. Maremont could have known of Olson's activities in 1915, and ought to have known of them if he was interested. He presents no good excuse for omitting to at least file an application for patent sooner.

While, as Maremont's brief contends, this case is not exactly parallel to *Mason* v. *Hepburn* (1898, C. D., p. 10) in the matter of signs of deliberate abandonment, yet Maremont's two attempts at reduction to practice, one of which was a mere experiment and the other of which probably proved nothing, because there was no load used on Wolfson's car, were not pursued or followed by any practice for more than two years and indicate such laches as to avoid any advantage Maremont had, even if his was the earlier conception. He "waited for an opportune time to place it on the market" at his peril, and he lost.

The decision of the Examiners-in-Chief is affirmed.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

BROWN *v.* MCINTOSH.

Decided May 3, 1920.

PATENTS—PRIORITY OF INVENTION.

In an interference between Brown and McIntosh priority awarded to McIntosh as being the first to conceive and constructively reduce to practice.

Mr. E. N. Pagelsen for the appellant.

Mr. B. M. Kent, Mr. C. T. Milans, Mr. J. D. Milans, and *Mr. S. C. Barnes* for the appellee.

ROBB, *J.:*

Appeal from concurrent decisions of the Patent Office tribunals in an interference proceeding in which priority was awarded the senior party McIntosh. The interference originally involved three parties, Brown, Kritz and McIntosh. Kritz, however, did not appeal from the decision of the Assistant Commissioner.

The invention is a lock-seam channel-tubing especially adaptable to the making of automobile-windshield frames. The second of the two claims of the issue is sufficiently illustrative:

2. A channel tubing comprising a fashioned sheet metal blank having an integral inner channel and uninterrupted outer surrounding portions, the opposite edge portions of said blank meeting in the bottom portion of the channel and being bent to form a lock seam with the thickness of the seam in the space between said channel portion and the outer surrounding portion, and the depth of said channel being materially less than the depth of the outer surrounding portion so as to form a comparatively rigid brace between the said walls thereof.

In the final paragraph of the Assistant Commissioner's decision, he says:

McIntosh was the first to conceive the invention and his application was filed before Brown reduced the invention to practice, either actually or constructively. Being, therefore, the first to conceive the invention and the first to reduce it to practice, he is, under a long line of decisions of this Office and of the Court of Appeals of the District of Columbia, entitled to the award of priority.

We agree with the Patent Office tribunals and therefore affirm the decision of the Assistant Commissioner.

Affirmed.

Court of Appeals of the District of Columbia.

MAREMONT *v.* OLSON.

Decided May 3, 1920.

MEMORANDUM OPINION.

PATENTS—PRIORITY.

Decision of the Assistant Commissioner of Patents awarding priority of invention to Olson affirmed.

Mr. F. M. Phelps for the appellant.

Mr. O. F. Bartel for the appellee.

This is an appeal from a decision of the Patent Office (276 O. G., 405) awarding priority in an interference to Nels L. Olson. The matter involved is an auxiliary spring attachable at the opposite ends of the axle-housing of a Ford automobile, for the purpose of converting a light car into a truck. The invention is set forth in two counts as follows:

1. A spring structure for attachment to a vehicle having axle flanges, comprising a spring supporting yoke having a face portion arranged for attachment to an axle flange, a spring parallel to the yoke face portion, and means securing the spring to the yoke.
2. A spring structure for attachment to a vehicle having axle flanges, comprising a spring supporting yoke having a face portion for attachment to an axle flange and an upstanding portion carrying an extension outstanding at right angles thereto, a spring parallel to the yoke face portion, and means securing the spring to the outstanding portion of the spring supporting yoke.

Maremont filed June 8, 1916; Holland and Wilson filed April 24, 1916, and Olson April 14, same year. Holland and Wilson having taken no testimony cannot prevail, since they filed after Olson. Maremont being junior to Olson, the burden is on him to establish his claim. The three tribunals of the Patent Office unite in holding against him and in awarding priority to Olson. Where this is so, we will not disturb their decision, unless it is clearly wrong, and we find no basis for saying that it is in this case. (*Kennicott* v. *Caps*, 262 Fed., 641; *Jobski* v. *Johnson*, 47 App. D. C., 230; *Bourn* v. *Hill*, 27 App. D. C., 291; *Flora* v. *Powrie*, 23 App. D. C., 195; *Gammeter* v. *Thropp*, 42 App. D. C., 564.) On the contrary, we believe that it is in harmony with right, and hence the decision of the Assistant Commissioner of Patents is affirmed.

Affirmed.

U. S. District Court—Northern District of Ohio, Eastern Division.

VAN KANNEL REVOLVING DOOR CO. *v.* WINTON HOTEL CO.

Decided March 8, 1920.

263 Fed. Rep., 988.

1. PATENTS—REVOLVING DOOR—ANTICIPATED BY EARLIER PATENT TO SAME INVENTOR.

Claims 1, 2, 3, 13, 22, 23, and 24 of the Van Kannel Reissue Patent No. 14,255, for an automatically-collapsible revolving door, *Held* invalid, as anticipated by Patent No. 656,062, issued to the same inventor and now expired.

2. SAME—PIONEER PATENTEE CANNOT PROLONG MONOPOLY BY PATENTING ONE FEATURE OF THE DEVICE.

Where an inventor of an automatically-collapsible revolving door was granted a pioneer patent and insisted upon and obtained a construction so broad that any form of double-acting hinge or of a releasing device was an infringement, he could not prolong his patent monopoly by subsequently obtaining a patent for some one form of double-acting hinge or self-releasing or collapsible device.

3. SAME—CONSTRUCTION INFRINGING PATENT MAY BE MADE AND SOLD AFTER EXPIRATION OF PATENT.

A construction which was anticipated by a patent and condemned as an infringement of it may be freely made and sold after such patent has expired.

4. JUDGMENT—PATENTS—PARTY CONDUCTING DEFENSE IS BOUND BY AND ENTITLED TO BENEFIT OF JUDGMENT, BUT NOT REQUIRED TO BECOME PARTY.

A corporation, employing counsel appearing for defendant in a patent infringement suit and conducting the defense at its own cost and expense is a privy to any judgment rendered and bound thereby, but was not required to become a party to the record.

IN EQUITY. Suit by the Van Kannel Revolving Door Company against the Winton Hotel Company. Bill dismissed.

Mr. Titian W. Johnson and *Messrs. Hull, Smith, Brock, & West* for the plaintiff.

Messrs. Trabue, Doolan, Helm & Helm and *Messrs. Christopher & Robblee* for the defendant.

WESTENHAVER, *Dist. J.*:

Plaintiff's bill is based upon Reissue Patent No. 14,255, reissued February 6, 1917, being a reissue of original United States Letters Patent No. 836,843, issued to T. Van Kannel November 27, 1906. The invention claimed therein relates to an automatically-collapsible revolving door, such as is commonly used at the street-entrance to public buildings. The defendant has purchased, installed, and is using a collapsible revolving door manufactured and sold by the Atchison Revolving Door Company, which has assumed and undertaken the burden and expense of defending this suit. The defenses are (*a*) that the claims in issue of this reissue patent are void for lack of novelty and lack of invention; (*b*) that it is void because no inadvertence, accident, or mistake is shown whereby the original patent is inoperative or invalid; and, even if so, the reissue was not applied for with due diligence; and (*c*) that, if valid at all, these claims must, in view of the prior art, as declared by numerous decisions, be so limited that defendant's door does not infringe.

(1) The claims in issue of this reissue patent are Nos. 1, 2, 3, 13, 22, 23, and 24. Of these the first four are rewritten and rephrased claims of the original patent, and the remaining three are new or added claims. Claims 1, 2, 3, and 22 cover in various forms, as the predominating element, a flexible tie connecting together and holding in position the radial wings of the door, automatically releasable, whereby, upon the release of any one, all the wings will fold or collapse. Claims 3 and 23 cover in various forms as a predominating element a hanger disk or plate, with grooves therein located in the spindle or center post, serving as hinges for the radial wings, whereby a series of wings may be collapsed to a folded position. Claim 24 embodies both elements of hanger-plates with grooves and flexible ties. Upon the issue of invalidity for lack of novelty and lack of invention defendant contends that all these claims are in substance and legal effect the same as claims 1, 2, 3, 13, and 14 of original Patent No. 836,843, all of which have, in one case or another, been held to be invalid. The differences, if any, between the reissue and the original

claims can be most conveniently stated after a brief review of this prior litigation and of the results reached therein.

The inventor, Van Kannel, was in 1888 granted a patent, being No. 387,571, for a revolving door, having a series of radiating wings, rotating in a casing. It did not have any automatic or collapsible features, although the desirability of providing for the egress of an excited or panic-stricken crowd was foreseen and disclosed therein. On August 14, 1900, he was granted Patent No. 656,062 for an automatically-collapsible revolving door, designed to provide for rapid exit by automatic collapse in the event of panic or other necessity therefor. Later, on November 27, 1906, he was granted an additional patent for an automatically-collapsible revolving door, being No. 836,843, of which the one now involved is a reissue. The 1900 and the 1906 patents have been extensively litigated, and defendant contends that all questions touching the validity of the claims now in dispute of the reissued patent have been fully considered and adjudged adversely to plaintiff's present contentions. These decisions are as follows: *Van Kannel* v. *Revolving Door & Fixture Co.*, (2 C. C. A., 219 Fed., 741; 135 C. C. A., 439;) *Louisville Trust Co.* v. *Van Kannel* (6 C. C. A., 231 Fed., 166; 145 C. C. A., 354;) *Van Kannel Revolving Door Co.* v. *Nathan Straus*, (2 C. C. A., 235 Fed., 135; 148 C. C. A., 629;) *Van Kannel Revolving Door Co.* v. *Lyon & Healy*, (7 C. C. A., 247 Fed., 329; 159 C. C. A., 423;) *Van Kannel Revolving Door Co.* v. *Uhrich*, (decision and opinion by Pollock, district judge, 247 Fed., 344.)

The nature and elements of plaintiff's invention and of the state of the art respecting revolving doors are so fully stated and described in these several decisions that it is unnecessary to go over the same ground. The conclusions reached in these cases are in accord; indeed, there is an unusual uniformity, not only in the result, but in the reasoning by which the results have been reached. Briefly, my understanding of these decisions is that the Van Kannel 1900 patent, No. 656,062, was held to be the pioneer patent for an automatically-collapsible or panic-proof revolving door, and that the inventor was entitled to a wide range of mechanical equivalents, and his patent claims to a reasonably broad construction. More specifically, as regards devices for hinging the radial wings to the spindle or center posts, and devices for connecting or tying the radial wings in an automatically-detachable manner, it was held that any device which would produce substantially the same result was an infringement. Accordingly the 1900 patent was in all these cases uniformly sustained, and its claims protected against infringement, as against any construction having any form of hinge or tying device which permitted these results to be realized. On the other hand, and in view of this broad construction, the more specific and detailed combinations embodied in the litigated claims of the 1906 patent, No. 836,843, were held to be invalid for lack of invention, as double patenting to the same inventor. Nor do I understand that this invalidity resulted from the particular phraseology used in the later patent in describing the connecting device.

Thus, in *Van Kannel Revolving Door Co.* v. *Revolving Door & Fixture Co.* (219 Fed., 741; 135 C. C. A., 439) Mayer, district judge, had sustained the validity of claims 1, 2, 3, and 8 of the earlier patent, and of claims 13 and 14 of the later patent, and had held that claims 1 and 2 of the later patent were invalid. This holding as to claims 1 and 2 of the later patent is based upon the disclosures of the earlier patent, but as to claims 13 and 14 he held that they stated a combination of elements from which—

> we have apparently, a new structure in commerce, a new result for operative panic-proof doors, and all described with words of limitation sufficiently definite and limited to save the combination from all the prior art.

The circuit court of appeals, second circuit, sustained this decision, except so far as it found claims 13 and 14 to be valid, and reversed as to these, holding that they also were anticipated by the disclosures of the earlier patent. Judge Mayer had stressed particularly this feature of the flexible tie, and the great merit thereof in permitting all the doors to collapse upon the release of any one fastening, and the easy restoration of all the wings to their normal position; but Circuit Judge Lacombe, who delivered the opinion, said as to these claims that they were merely an attempt to extend the monopoly of the earlier patent by changing the names of the various elements or the location of the folding device, or by merely combining old elements which would be evident to an ordinary mechanic. The construction held to infringe was not defendant's present construction, but the tying devices for holding together the wings, it was held, did not avoid infringement, even though they were made of such fragile construction as to be breakable rather than automatically releasable.

In *Louisville Trust Co.* v. *Van Kannel Revolving Door Co.* (231 Fed., 166; 145 C. C. A., 354) the decision of the lower court, which held claims 1, 2, and 13 of the 1906 patent valid and infringed, was reversed by the sixth circuit court of appeals. As to claim 13, this reversal was on the ground that the device for connecting the radial wings together was a bar, instead of a cord or strap or other flexible device, and it was not, therefore, the flexible tie which was supposed to give novelty and patentability to this claim. I do not understand Judge Knappen's opinion as expressing any dissent from the decision of the second circuit court of appeals, nor any intimation that the claim would be upheld, if it were so narrowed as to be limited to a flexible tying device, but merely that, inasmuch as infringement was not shown, no expression of opinion in that respect was called for. The reasoning of the opinion seems to me to lead to the conclusion that claim 13 was anticipated by the 1900 patent, as claims 1 and 2 were held to be anticipated.

In *Van Kannel Revolving Door Co.* v. *Straus* (235 Fed., 135; 148 C. C. A., 629) the claims of the 1906 patent were not put in issue, but only those of

the 1900 patent. These claims were not only sustained, but were given a construction so broad that the phrases "automatically unlocked" and "self-releasing locking devices," used therein, should cover any device which has been deliberately planned, whether by mechanical adjustment or by the proper proportioning of the parts, to effect the release of the wings at the proper moment without the interposition of any human agency, and that the phrases used therein of "a series of wings mounted so as to swing independently" and "swing forwardly to project side by side" should cover any mounting device which substantially accomplishes that purpose, even though all of the wings are not so mounted. It was accordingly held that a construction embodying a series of wings, three only of which were mounted to swing independently of their joint rotating movement, and in which the so-called "self-releasing locking device" consisted of chains constructed so weakly as to break under the normal pressure of a panic-stricken crowd, was an infringement.

However, in *Van Kannel Revolving Door Co.* v. *Lyon & Healy* (247 Fed., 329; 159 C. C. A., 423) and in *Van Kannel Revolving Door Co.* v. *Uhrich* (D. C., 247 Fed., 344) the construction held to infringe the 1900 patent was precisely the same as that involved in this case. It had the same form of hinge, called by defendant a "trammel hinge," and the same flexible automatically-releasing tie for holding the adjacent faces of the wings together. In the first case the district court had held claims 1, 2, and 8 of Patent 656,062 and claim 3 of Patent 836,843 invalid. The appeal as to claim 3 of the latter patent seems either to have been dismissed, or the assignment of error with respect thereto not insisted upon, so that no discussion of it is found in the opinion of the seventh circuit court of appeals, but claims 1, 2, and 8 of the earlier patent were sustained and given the same broad construction as had been previously given thereto by the earlier decisions already reviewed. Defendant's plate, called a "trammel hinge," was held to be a mechanical equivalent of the hinge or wings whereby in the 1900 patent the radial wings were folded together, and the tie or device for connecting the adjacent wings and permitting all to fold upon the release of any one was held to be a mechanical equivalent of the self-releasing locking device called for by the 1900 patent. Judge Pollock's holding in the other case is precisely the same as to the 1900 patent, and as to claim 3 his holding is that it also was invalid in view of the disclosures of the earlier patent.

Thus it appears that the earlier or 1900 patent has been uniformly upheld, and that no claim ever put in issue of the later or 1906 patent has been upheld, but, on the contrary, has been uniformly held to be invalid. The plaintiff has thus obtained from numerous courts a construction of the 1900 patent that is infringed by any form of double-acting hinges applied to all or any part of the wings, and by any form of self-releasing devices, wherever located and of whatever construction. In other words, the 1900 patent has been held to be a pioneer patent entitled to a broad construction, and to a wide range of mechanical equivalents, and is infringed by any form of automatically-collapsible panic-proof doors containing any form of double-acting hinge, or any form of device designed to release the wings automatically, whether by breaking or otherwise. The consequence of these holdings has been that the later or 1906 patent has been held to be invalid for the same reasons that other constructions have been held to be infringements. Certainly it is now too late for any district court to do more than accept fully and apply consistently these several decisions.

The claims now in issue of the reissue patent must be held invalid, unless there is a new patentable element embodied therein, not anticipated in the litigated claims of the 1900 or the 1906 patents. The differences between the claims of the reissue patent and of these earlier patents can be clearly shown only by examining them side by side. It would expand this opinion unduly to quote these claims in parallel columns and point out in detail the points of resemblances and differences. This, however, I have done with care, and as a result am convinced that the changes are in phraseology only, and not in substance. The claims have been merely rewritten and rephrased as respects claims 1, 2, 13, and 23 therein, with a more specific description of the connecting device, so as to limit it to a flexible tie, and to this extent only may these claims be said to be narrowed. As to claims 3, 23, and 24 a hanger plate is substituted for a hanger-disk of the earlier claims, and this defendant contends, not without reason, is broadening intentionally these claims, so as to cover its trammel-hinge, already held to be an infringement of the 1900 patent; but, as already said, an examination side by side forces the conclusion that these claims have been merely rewritten and rephrased, with the view and in the hope of escaping the adverse decisions of numerous Federal courts. No new or patentable combination is disclosed thereby, which would not be an infringement of the earlier or 1900 patent.

(2, 3) Certainly, under the construction already given the 1900 patent, a revolving door, constructed in accordance therewith, would be condemned as an infringement. An inventor who has been granted a pioneer patent, and who has insisted upon and obtained a construction therefor so broad that any form of double-acting hinge or of a releasing device is an infringement, can not prolong his patent monopoly by subsequently obtaining a patent for some one form of double-acting hinge or self-releasing or collapsible device. Plaintiff's contention merely comes to this: Defendant's present construction has been held to be an infringement of the 1900 patent, because its hinging and its releasing devices are equivalents of the hinging and releasing devices of that patent. It would be an absurd distortion of the patent law now to hold that a construction which was anticipated by a patent, and condemned

as an infringement of it, may not be freely made and sold after that patent had expired. This, it seems to me, is what plaintiff is seeking to accomplish.

This conclusion renders unnecessary an examination of the second defense relied on, namely, that no inadvertence, accident, or mistake is shown in the original patent as a basis for the reissue, and that, even if it were, due diligence was not exercised in applying for the reissue. The validity of the 1906 patent was at an issue many years before the reissue was applied for, it was held invalid by the second circuit court of appeals December 15, 1914, and its validity was insisted upon thereafter in this circuit, resulting in an adverse decision March 17, 1916. The application for a reissue, it is urged, was induced by these failures, and not as a result of any inadvertence, accident, or mistake. It would be difficult, it seems to me, either on the facts or in principle, to distinguish this case from *Milloy Electric Co.* v. *Thompson-Houston Electric Co.* (6 C. C. A., 148 Fed., 843; 78 C. C. A., 533;) but I deem it unnecessary to consider or express an opinion thereon. Likewise it becomes unnecessary to consider or express an opinion as to whether or not, even if any claims of the reissue patent should be held valid, they must be given a construction so narrow as not to include present form of hinging and releasing devices.

(4) Plaintiff, after this cause was heard and submitted for decision, filed a motion to make the Atchison Revolving Door Company a defendant. This motion is based upon admissions made at the hearing that this company had employed the counsel appearing for defendant, and was conducting the defense at its own cost and expense. Undoubtedly, upon these admissions, the Atchison Revolving Door Company is privy to any judgment as may be rendered herein, and is bound thereby. (See *Elliott Co.* v. *Roto Co.*, 2 C. C. A., 242 Fed., 941; 155 C. C. A., 529; *David Bradley Mfg. Co.* v. *Eagle Manufacturing Co.*, 7 C. C. A., 57 Fed., 980; 6 C. C. A., 661.) But I do not understand that one thus assuming the burden of a defense is required to become a party to the record, especially as, under the law, no such action is necessary to make the decree binding upon him.

This motion will be denied. Plaintiff's bill will be dismissed, at its costs.

ADJUDICATED PATENTS.

(U. S. C. C. A. Minn.) The Beckwith patent, No. 931,374, for improvements in base-burner heating-stoves, *Held* not to disclose invention and not infringed. *Estate of P. D. Beckwith, Inc.*, v. *Minnesota Stove Co.*, 264 Fed. Rep., 337.

(U. S. D. C. Ohio.) The Eccard and Smith patent, No. 1,117,944, claims 1, 2, and 11, for steering apparatus for truck-trailers, when limited to the particular construction shown, as they must be to avoid invalidity, *Held* not infringed. *Troy Wagon Works Co.* v. *Ohio Trailer Co.*, 264 Fed. Rep., 347.

Adverse Decisions in Interference.

PATENT No. 1,227,816.

On May 12, 1920, a decision was rendered that Frank S. Miller was not the first inventor of the subject-matter covered by claims 1, 2, 3, 4, and 6 of his Patent No. 1,227,816, subject "Air-lift-pump booster," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,296,497.

On June 11, 1920, a decision was rendered that Louis Ellman was not the first inventor of the subject-matter covered by claims 1, 2, and 3 of his Patent No. 1,296,497, subject "Conveying apparatus for disintegrated material," and no appeal having been taken within the time allowed such decision has become final.

Disclaimers.

1,275,468.—*Albert Pruessman*, East Orange, N. J. CONDENSER AND METHOD OF MAKING THE SAME. Patent dated August 13, 1918. Disclaimer filed June 15, 1920, by the patentee—the assignee, *Western Electric Company, Incorporated*, consenting.

Enters this disclaimer—

"To claims 1, 2, and 3 of said Letters Patent, which are in the following words, to wit:

"1. The method of treating a condenser comprising an impregnated unit, which consists in heating said impregnated unit to a temperature greater than the melting point of the impregnating compound, and maintaining the unit at such temperature for a period of time sufficient to allow the unit to assume its natural shape.

"2. The method of treating a condenser comprising a unit impregnated with a paraffin compound, which consists in heating the impregnated unit to a temperature of not less than 120° F., and maintaining said unit at this temperature for a period of not less than three hours.

"3. The method of treating a condenser comprising a unit impregnated with a paraffin compound, which consists in placing the impregnated unit in an upright position in an oven heated to a temperature of 140° F., and maintaining it at this temperature for a period of substantially four hours."

1,151,554. *Talbot G. Martin*, Chicago, Ill. NON-INTERFERING EXTENSION OR PARTY-LINE TELEPHONE SYSTEM. Patent dated August 24, 1915. Disclaimer filed June 28, 1920, by the patentee, the assignee, *Automatic Electric Company*, consenting.

Enters this disclaimer—

To claim 77 in said specification which is in the following words, to-wit:

"77. In a telephone system, a subscriber's line, a trunk line, means for extending a talking connection from said subscriber's line over said trunk line, a ground connection for preventing a connection being made with said subscriber's line, and a relay for controlling said ground connection."

14,665, (Reissue.) *Talbot G. Martin*, Chicago, Ill. AUTOMATIC TELEPHONE SWITCHING APPARATUS. Patent dated June 10, 1919. Disclaimer filed June 30, 1920, by the patentee, the assignee, *Automatic Electric Company*, consenting.

Enters this disclaimer—

To claims 38, 40, 45, 46, 47, 51, 52, 53, 64, 65, and 66, in said specification which are in the following words:

38. In a telephone system, a switch, means including a release magnet and a release magnet circuit for releasing the same, a slow-acting relay controlling the release magnet circuit during the operation of the switch, and a quick-acting relay controlling the release magnet circuit independently of said slow-acting relay after the switch has operated.

40. In a telephone system, a pair of lines, a pair of automatic progressively movable switches operable successively for trunking from one line to another for setting up a connection between said lines, release means for breaking the connection at each switch, quick relays and slow relays in the system for controlling said release means, and means controlled solely through the medium

of said quick-acting relays for operating said release means to break the connection.

45. In a telephone system, a switch, means for releasing the same including a relay slow to release controlling a release magnet during the operation of the switch, and a quick-acting relay controlling the release independently of said slow relay after the switch has operated, and means for controlling the two sides of a calling line in series to operate said switch.

46. In a telephone system, a trunk, a switch for extending connection thereto, releasing means for said switch including a slow-acting relay controlling the release before connection is extended to the trunk, and a quick acting relay controlled over the trunk for controlling the release after the switch has established the connection, and means for controlling the two sides of a calling line in series to operate said switch.

47. In a telephone system, a trunk, a switch for extending connection therefrom, releasing means for said switch including a release magnet and a relay slow to release its armature, said relay controlling the release magnet while the switch is operating, a quick-acting relay controlling the release magnet independently of said slow relay after connection has been established from the trunk, and means for controlling the two sides of a calling line in series to operate said switch.

51. In a telephone system, a switch, means for releasing the same including a release magnet and a relay slow to release its armature, said relay controlling the release magnet during the operation of the switch, a quick-acting relay controlling the release magnet after the switch has operated independently of said slow relay, and a central source of talking and operating current for said system.

52. In a telephone system, a trunk, a switch for extending connection thereto, releasing means for said switch including a relay slow to release its armature, said relay controlling the release before connection is extended to the trunk, a quick-acting relay controlled over said trunk for controlling the release after the switch has established the connection, and a central source of talking and operating current for said system.

53. In a telephone system, a trunk, a switch for extending connection therefrom, releasing means for said switch including a release magnet and a relay slow to release its armature, said relay controlling the release magnet while the switch is operating, a quick-acting relay controlling the release magnet after connection has been established from the trunk independently of said slow relay, and a central source of talking and operating current for said system.

64. In a telephone system, a trunk, a switch for extending connection thereto, releasing means for said switch including a relay slow to release its armature, said relay controlling the release while the switch is operating, and a quick acting relay controlled over said trunk for controlling the release of said switch after connection has been established with said trunk.

65. In a telephone system, means including switches having selecting motions in two intersecting planes for establishing a calling connection, means for releasing the connection including release magnets, circuits for energizing said magnets, slow acting relays controlling the release circuits during the establishment of the call, and quick acting relays for controlling the release circuits during conversation independently of said slow acting relays.

66. In a telephone system, means for establishing a call, means for releasing the call including a release magnet and relays slow to release their armatures, said relays controlling the release magnet during the establishment of the call, quick acting relays for controlling the release magnet during conversation independently of said slow acting relays, and a central source of talking and operating current for said system.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 25, 1920.

The Stampede Company, Limited, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Eugene A. Tuchschmidt, of 113 and 115 Locust street, St. Louis, Mo., for registration of a trade-mark and trade-mark registered November 18, 1910, No. 127,689, to The Stampede Company, Limited, of St. Paul, Minn., and a notice of such declaration sent by registered mail to The Stampede Company, Limited, at the said address having been returned by the post-office undeliverable, notice is hereby given that unless The Stampede Company, Limited, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

R. F. WHITEHEAD,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 25, 1920.

Louis Robinson, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Brownstein-Louis Company, of 716–722 South Los Angeles street, Los Angeles, Calif., for registration of a trade-mark and trade-mark registered November 27, 1906, No. 57,799, to Louis Robinson, of New York, N. Y., and a notice of such declaration sent by registered mail to said Louis Robinson at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Louis Robinson, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

R. F. WHITEHEAD,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 30, 1920.

Harris Wolf, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Wolfinger Knitting Mills, Walnut and Rose streets, Reading, Pa., for registration of a trade-mark and trade-mark registered March 10, 1891, No. 19,153, to Harris Wolf, Chicago, Ill., and a notice of such declaration sent by registered mail to said Harris Wolf at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Harris Wolf, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

R. F. WHITEHEAD,
First Assistant Commissioner.

Patents Nos. 1,346,805 to 1,347,484.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 276—No. 3. TUESDAY, JULY 20, 1920. Price—$5 per year.

[PUBLISHED JULY 21, 1920.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Adverse Decisions in Interference.

PATENT No. 1,301,078.

On April 30, 1920, a decision was rendered that Franklin Rightmire was not the first inventor of the subject-matter covered by claims 1, 2, 3, 4, and 5 of his Patent No. 1,301,078, subject, "Traction attachment for vehicle driving-wheels," and no appeal having been taken within the time allowed such decision has become final.

Rule 72, as Amended April 17, 1919.

RULE 72. After the completion of the application the Office will not return the specification for any purpose whatever. If applicants have not preserved copies of the papers which they wish to amend, the Office will furnish them on the usual terms.

The drawing may be withdrawn only for such corrections as cannot be made by the Office; but a drawing cannot be withdrawn unless a photographic copy has been filed and accepted by the Examiner as a part of the application. Permissible changes in the construction shown in any drawing may be made only by the Office and after an approved photographic copy has been filed. Sketches filed to show proposed changes in construction must be in permanent ink. (See Rule 30.) Substitute drawings will not be admitted in any case unless required by the Office.

The Official Gazette.

THE OFFICIAL GAZETTE is published every Tuesday simultaneously with the weekly issue of patents. From January 1, 1872, (the commencement of its publication,) to June 30, 1883, it was published and bound in semi-annual volumes; from July 1, 1883, to December 31, 1902, in quarterly volumes; from January 1, 1903, to December 31, 1908, in bimonthly volumes; since January 1, 1909, in monthly volumes. Terms: Annual subscriptions, $5; monthly, 50 cents. For postage upon foreign subscriptions, except those from Canada and Mexico, $5 or more, as required. Moneys received from foreign subscribers in excess of the subscription price of $5 will be deposited to the credit of the subscriber and applied to postage upon the subscription as incurred. Single copies, 10 cents; if mailed to foreign countries, excepting Canada and Mexico, 10 cents additional for postage. *Payment in advance required. No club rates. No discount to newsdealers. No sample copies.* All subscriptions must commence with the beginning of a volume. None taken for less than an entire volume. All orders should be addressed to "The Superintendent of Documents, Government Printing Office, Washington, D. C."

NOTICE.

PAYMENT OF PATENT FEES—ACT OF MARCH 6, 1920.

Department of the Interior,
United States Patent Office,
Washington, D. C., June 25, 1920.

This Office has been advised by the Assistant Secretary of the Treasury that a circular letter is being forwarded to the Treasurer and Assistant Treasurers of the United States, Federal Reserve Banks, and National Bank depositaries calling attention to the act of Congress approved March 6, 1920, which requires that patent fees be paid directly to the Commissioner of Patents. (See 272 O. G., 379.)

J. T. NEWTON,
Commissioner.

APPLICATIONS UNDER EXAMINATION.

Condition at Close of Business July 10, 1920.

Room No.	Divisions and subjects of invention.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
314	1. Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders; Trees, Plants, and Flowers.	Feb. 24	Mar. 1	505
128	2. Bee Culture; Curtains, Shades, and Screens; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco.	Nov. 4	Feb. 11	978
175	3. Electric Heating and Rheostats; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Oct. 24	Jan. 6	630
234	4. Conveyers; Elevators; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pneumatic Despatch; Pushing and Pulling Implements; Railway Mail Delivery; Store-Service; Traversing Hoists.	Oct. 29	Apr. 26	1,895
167	5. Book-Making; Books, Strips and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Mar. 31	Apr. 2	374
318	6. Bleaching and Dyeing; Chemicals; Explosives; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Feb. 19	Jan. 26	543
312	7. Games and Toys; Optics; Photography; Velocipedes	Mar. 12	Apr. 20	873
131	8. Beds; Chairs and Seats; Flexible-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	May 3	June 5	366
221	9. Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Jan. 27	Jan. 27	589
285	10. Carriages and Wagons; Land-Vehicles; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping; Motor Vehicles.	Jan. 29	May 5	925
154	11. Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Spring Devices; Whips and Whip Apparatus.	Mar. 1	Mar. 24	786
222	12. Machine Elements	Nov. 10	Apr. 16	1,078
329	13. Bolt, Nail, Nut, Rivet, and Screw Making; Button Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	Nov. 6	Apr. 29	1,201
323	14. Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire-Working.	Jan. 12	Mar. 26	679
308	15. Bread, Pastry, and Confection Making; Coating; Fuel; Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	Nov. 3	Apr. 1	1,142
111	16. Radiant Energy; Telegraphy; Telephony	Nov. 11	Dec. 11	868
307	17. Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	Apr. 16	May 8	208
229	18. Fluid-Pressure Regulators; Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	Jan. 15	Jan. 22	1,031
236	19. Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	Nov. 21	Jan. 24	588
179	20. Artificial Body Members; Builders' Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	Apr. 2	Apr. 20	690
212	21. Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Dec. 19	May 22	464
219	22. Aeronautics; Firearms; Ordnance	Apr. 7	May 21	285
217	23. Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Dec. 30	Apr. 26	683
144	24. Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines	Jan. 6	Apr. 23	635
315	25. Agitating; Butchering; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	June 24	June 1	227
105	26. Electricity, Generation; Motive Power; Prime Mover Dynamo Plants	Nov. 5	Dec. 15	720
214	27. Brushing and Scrubbing; Grinding and Polishing; Laundry; Washing Apparatus	Mar. 13	Apr. 5	634
238	28. Internal-Combustion Engines	Feb. 9	Apr. 15	626
147	29. Boring and Drilling; Chucks or Sockets; Coopering; Rod Joints or Couplings; Wheelwright-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking Tools.	Dec. 1	May 14	694
152	30. Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines	Jan. 10	June 1	1,142
172	31. Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	Nov. 5	Jan. 26	1,139

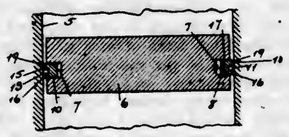
PATENTS

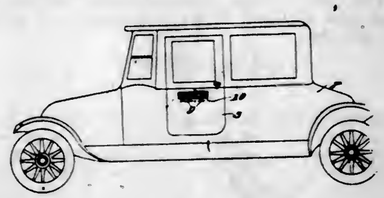


GRANTED JULY 20, 1920.

1,346,805. EXPLOSIVE-ENGINE. WILLIAM BARBER, New York, N. Y. Filed June 3, 1915, Serial No. 31,862. Renewed June 5, 1920. Serial No. 386,919. 10 Claims. (Cl. 123—18.)

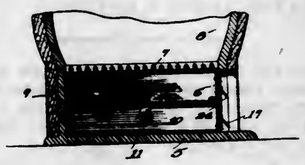
1. An internal combustion engine comprising a cylinder, an oscillating piston operating in said cylinder about the center thereof, means associated with said cylinder and said piston to divide said cylinder into at least 4 compartments whereby each of said compartments becomes successively a suction, compression, explosion and expansion compartment and a single valve to admit fuel into all of said compartments when each compartment in turn becomes a suction compartment.

1,346,806. PISTON-PACKING. MILLARD P. BLOOM, Mount Washington, Md. Filed June 3, 1919. Serial No. 301,522. 1 Claim. (Cl. 74—109.)



A packing-ring comprising a split spring ring having an upper portion of one diameter bounded by a downwardly and outwardly-sloping annular ledge wholly on the exterior of the ring and around the upper circumference thereof, and below said downwardly and outwardly-sloping ledge the said ring having a diameter greater than the diameter of said upper portion, said ring around said greater diameter being provided with an annular oil-trap groove which groove has a down-scraping edge at its upper side and between the down-scraping edge of the groove and the said outwardly-sloping exterior ledge above it said ring having a circumferential bearing face whereby the upper edge of said face at the base of the exterior ledge will form an oil-packing point on the compression stroke of the piston and the lower edge of said face at the upper side of the oil-trap groove will form a packing point on the suction stroke of the piston.

1,346,807. PROCESS OF MANUFACTURING REPRODUCTIONS OF PAINTINGS, MAPS, WALL-PAPERS WITH RELIEVO-PATTERNS AND THE LIKE. HUBERT BOGAERTS, Berlin-Halensee, Germany. Filed Jan. 24, 1917. Serial No. 144,190. 5 Claims. (Cl. 41—25.)

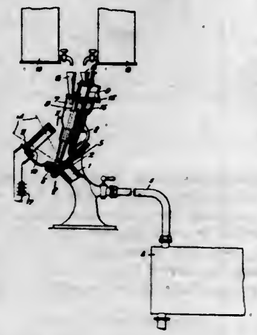


5. The process of making reproductions of paintings or other articles having uneven surfaces, which consists in making a patrix with a surface reproducing such uneven surface; then preparing a matrix by molding a suitable material against such surface of the patrix; applying to a suitable fabric a coat of kaolin (chalk), white gelatin, and glycerin, printing on said coat, and giving the resulting printed article the desired uneven surface by pressure in contact with said matrix.

1,346,808. SYSTEM FOR NUMBERING MOTOR-CARS. JASPER LUCIUS CATLETT, Vincennes, Ind. Filed July 22, 1919. Serial No. 312,507. 10 Claims. (Cl. 40—10.)

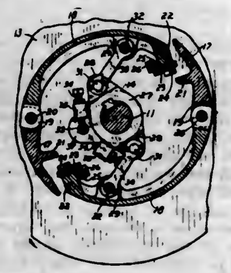
10. In combination with an article of manufacture, of identifying data permanently made a part of such article and plates carrying the same identifying data connected with the article in such manner that they may be easily and quickly removed therefrom or attached thereto to permit them to be carried in the pocket of the owner when the article is out of his immediate possession.

1,346,809. ASH RECEIVER AND SIFTER. PATRICK HENRY CHILDRESS, Waynesboro, Va., assignor of one-half to Thomas W. Quesenbery, Waynesboro, Va. Filed Feb. 21, 1920. Serial No. 360,274. 2 Claims. (Cl. 83—60.)



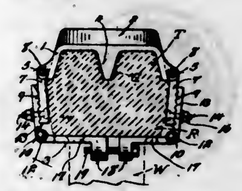
1. In a device of the character described, an ash pan having an imperforate bottom and imperforate side and end walls, adapted to be disposed in the ash pit of a furnace, a transverse bar extending entirely between the side walls of said ash pan intermediate the end walls thereof and having its upper surface disposed slightly above the top of the ash pan and a sifting pan comprising imperforate side and end walls and a reticulated bottom having its marginal edges secured to the sifting pan and superposed on said ash pan to partake of rocking motion about said transverse bar as a fulcrum, the intermediate unsupported portion of the reticulated bottom being arranged to rest upon the transverse bar which underlies and supports it throughout its entire width to thereby prevent sagging of said reticulated bottom, all as and for the purposes set forth.

1,346,810. NAME-PIECE FOR UMBRELLAS. WALTER W. DECKER, Minneapolis, Minn. Filed Sept. 19, 1919. Serial No. 324,939. 3 Claims. (Cl. 40—16.)



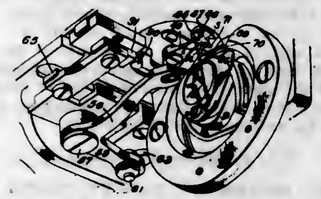
2. A name piece for umbrellas comprising a channel-shaped member having inturned flanges, and longitudinal grooves inward thereof, and a slide having reduced edge flanges slidable into the grooves of said channel-shaped member, and having a raised portion above its edge flanges, said internal flanges and the raised portion of said slide having interlocking lugs and notches.

1,346,811. PROCESS AND APPARATUS FOR ATOMIZING LIQUID SUBSTANCES INTO VERY SMALL PARTICLES. FRITZ DIEBOLD, Zürich, Switzerland. Filed June 8, 1918. Serial No. 238,836. 10 Claims. (Cl. 299—86.)



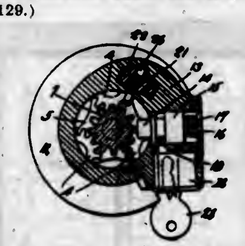
1. The method of atomizing liquid substances into very small particles, which comprises producing a spray having in a cross-sectional plane at right angles to its longitudinal axis the shape of an oblong and positively feeding the substances to be atomized from opposite sides to the two wider surfaces of the spray.

1,346,812. COLLAPSIBLE SPOOL. ERNEST W. DUSTON, Waterbury, Conn., assignor to The Blake & Johnson Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 30, 1920. Serial No. 355,137. 10 Claims. (Cl. 242—72.)



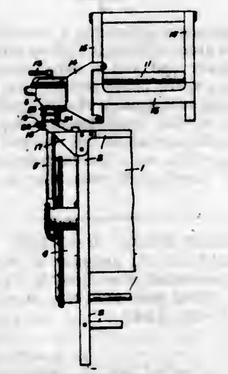
4. A spool of the character described comprising a flange and an end plate each having a hub, a shaft on which said hubs are loosely mounted, a hub adapted to be fixed to the shaft and having arms, carrying plates integral with the flange, other carrying plates hinged to said fixed plates, and links pivoted to the arms and to said hinged plates, said arms and links comprising toggles and the hinged carrying plates and the contiguous fixed carrying plates comprising gripping jaws, the toggles causing gripping action of the jaws when the hub is rotated and releasing action when the hub ceases to rotate.

1,346,813. TRACTION DEVICE FOR AUTOMOBILES AND THE LIKE. WALTER HENRY FRECH, Milwaukee, Wis. Filed Apr. 17, 1919. Serial No. 290,790. 1 Claim. (Cl. 152—2.)



A detachable traction device for vehicle wheels comprising in combination, an extensible and retractile traction member adjustable for different widths of tires, a retaining element adjustable for various felly widths, and an extensible and retractile connecting element pivotally connected to each corresponding end of the traction member and retaining element, said traction member including a pair of tread plates movable upon each other transversely of the tire to position their outer ends beyond the planes of the sides of the latter, the contacting faces of said plates having coöperative alternate ridges and grooves, and a bolt for securing the tread plates in adjusted positions, each of said connecting elements including a pair of engaging links having coöperative alternate ridges and grooves on their engaging faces, the outer end of one link of one pair being pivoted to the outer end of one of said tread plates, the outer end of the corresponding link of the other pair being pivoted to the outer end of the other tread plate, the other links of each pair being pivoted to the respective ends of the retaining element, and a bolt for securing the links of each pair together in adjusted relation, the retaining element including a pair of felly plates movable toward each other to draw the connecting elements into engagement with the sides of a tire after the same have been adjusted for radial length and the traction member adjusted for transverse length, whereby to securely clamp the traction device on a vehicle wheel.

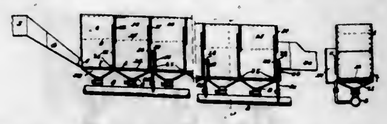
1,346,814. THREAD-SEVERING MECHANISM FOR SEWING-MACHINES. ALBERT F. FIFIELD, Newark, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Sept. 23, 1916. Serial No. 121,705. 24 Claims. (Cl. 112—252.)



1. In a sewing machine, in combination, stitch-forming mechanism including a reciprocating needle a bobbin and a take-up, a needle-loop detaining implement, means whereby said implement is caused to pull thread from the bobbin, and means for severing the needle- and bobbin-threads.

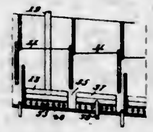
1,346,815. LOCK. NORMAN P. FRASER, Detroit, Mich. Filed Feb. 20, 1919. Serial No. 278,157. 2 Claims. (Cl. 70—129.)

1. The combination with the steering head of an automobile provided with pinions for operating the steering mechanism, of a removable cap member adapted to be attached to said head, a shaft slidable within said member and carrying a pinion adapted to be slid into and out of engagement with said operating pinions, a collar carried by said shaft, a spring-actuated plunger within the cap member and adapted to be projected into the path of said collar for locking said shaft against sliding movement, a lug pivoted within the cap member and having a cam surface projecting into the path of said collar, and a spring pressed pin slidable within the cap member and adapted to be projected into the path of said operating pinions when said collar has passed out of engagement with the cam surface of said lug.



1,346,816. SAFETY-LOCK FOR SWING-WRINGERS. GEORGE F. FAEED, Ben Avon, and JOHN R. SPENCER, Pittsburgh, Pa., assignors to Pittsburgh Gage & Supply Company, Pittsburgh, Pa. Filed Apr. 12, 1919. Serial No. 289,621. 4 Claims. (Cl. 68—32.)

1. In combination with a frame, a vertical driven shaft mounted thereon, a wringer frame mounted on said vertical shaft to swing in a horizontal plane therearound, cooperating gears connecting the vertical shaft and wringer rolls, and locking means arranged to automatically lock the wringer frame to the main frame against swinging movement in the direction of the torque imparted to the wringer frame by the driving gear but allowing a swinging movement in the opposite direction.

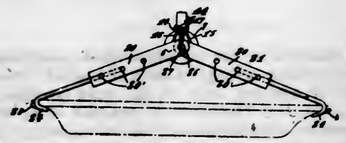


1,346,817. FLOTATION ORE-SEPARATOR AND PROCESS. RUDOLF GAHL, Miami, Ariz., assignor, by mesne assignments, to Pneumatic Process Flotation Company, New York, N. Y., a Corporation of Delaware. Filed June 26, 1915. Serial No. 36,480. 25 Claims. (Cl. 83—85.)

1. A flotation ore separator comprising a flotation tank divided into frothing compartments by partitions not reaching completely down to the bottom of the tank, a concentrates delivery, and a whole flow tailings discharge

extending upwardly from the bottom of the tank beyond a frothing compartment.

1,346,818. FLOTATION ORE-SEPARATOR. RUDOLF GAHL, Miami, Ariz., assignor, by mesne assignments, to Pneumatic Process Flotation Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 31, 1916. Serial No. 75,343. 6 Claims. (Cl. 83—85.)

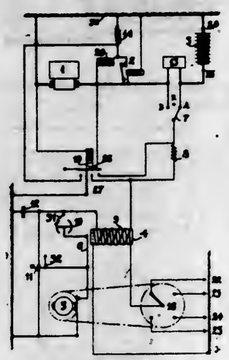


1. A flotation ore separator comprising a receptacle having an impervious bottom, means for supplying ore to be treated to said receptacle, and means for removing concentrates therefrom, said receptacle having located near the bottoms thereof a series of independently removable foraminous air chambers having longitudinally extending upper surfaces, said air chambers being arranged for travel of substantially the whole of the pulp over the series.

1,346,819. FLOTATION PROCESS. RUDOLF GAHL, Denver, Colo., assignor, by mesne assignments, to Pneumatic Process Flotation Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 10, 1918. Serial No. 266,024. 1 Claim. (Cl. 83—85.)

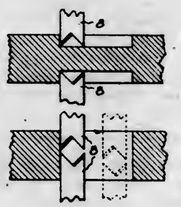
A process of concentrating ores by flotation which consists in introducing additional sand substantially free from slimes into the normal pulp and subjecting the mixture to froth flotation.

1,346,820. PAN-LIFTER. ROBERT JACKSON GARISON, Hastings, Okla. Filed Nov. 3, 1919. Serial No. 335,398. 5 Claims. (Cl. 294—30.)



1. In a pan lifter, an elongated body portion, opposed clamping sections pivotally supported on the body, each of the clamping sections having a series of openings formed therein, plate engaging portions having their ends disposed in predetermined openings of the apertured members, and means for operating the clamping sections to cause the same to move toward and away from each other.

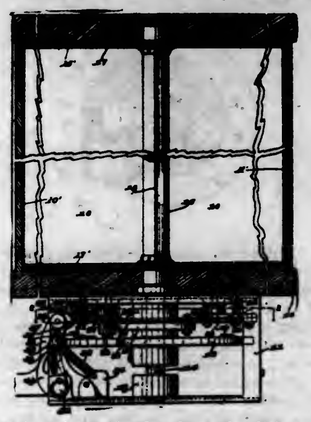
1,346,821. DYNAMO FOR LIGHTING AND MOTOR IGNITION. EMILE FERNAND GIRARDEAU, Paris, France. Filed Oct. 15, 1915. Serial No. 56,103. 1 Claim. Cl. 123—148.)



In ignition apparatus for explosion motors, the combination of an induction coil, means to supply said coil with

current when the motor is running and including an ohmic resistance arranged in series with the primary of said coil, to diminish the time constant of the coil, and

means to automatically short-circuit such ohmic resistance when the motor is stopped, to provide at the moment of starting, an increase of current in the coil.

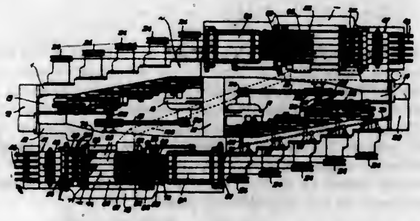


1,346,822. METAL-WORKING MACHINE. BENGT M. W. HANSON, Hartford, Conn. Filed Nov. 1, 1918. Serial No. 260,730. 33 Claims. (Cl. 90—14.)

1. A machine of the class described comprising a reciprocatory work-carriage, a pair of coaxial tool-carrying spindles at opposite sides of the work-carriage and rotative about axes transverse to the line of movement of the carriage, main slides carrying said spindles and movable transversely to said line of movement, and auxiliary slides to which the main slides are respectively connected for movement therewith, and means for adjusting the auxiliary slides transverse to said line of movement.

1,346,823. ROTATABLE WICKET. JOSEPH HECHT, Brooklyn, N. Y. Filed Sept. 11, 1915, Serial No. 50,181. Renewed May 31, 1919. Serial No. 301,123. 9 Claims. (Cl. 133—13.)

1. The combination with a window, of a rotatable wicket to close and transport articles through the window including a shaft to rotatably support said wicket; a disk fixed to the shaft; a pivoted dog to coöperate with a recess in the disk to lock the wicket against movement; an operating arm mounted loosely on the shaft provided with means for engaging said disk to impart rotation thereto when the arm is moved in one direction; and lever oper-

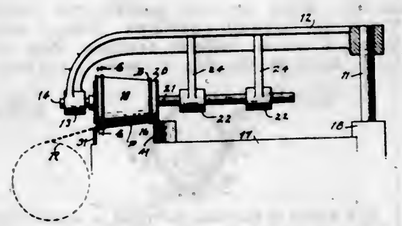


ated means to release the dog from the disk and actuate the disk rotating arm for the purpose specified.

1,346,824. ORE-SEPARATOR. JOHN HICKS, Calgary, Alberta, Canada. Filed May 29, 1918. Serial No. 237,300. 1 Claim. (Cl. 83—67.)

In an ore separating apparatus, a mercury cup adapted to receive sands from a conduit and having a detachable pocket at its lower end and a valve above said pocket and also having a flared upper portion, said upper portion including an outer wall doubled inwardly and downwardly and forming an annular expansion chamber in the uppermost and outermost portion of the cup and also including an apertured partition wall spaced from the outer wall and the inner downwardly-extending portion of said outer wall.

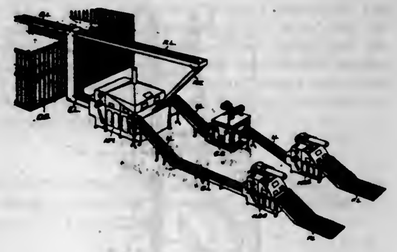
1,346,825. WIRE-TINNING MACHINE. WILLIAM F. HOSFORD, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 25, 1918. Serial No. 224,508. 9 Claims. (Cl. 91—12.6.)



1. In a machine for tinning a plurality of separate wire strands simultaneously, a main supporting frame, a set of supply spools mounted on one side of said frame at one end thereof, a second set of supply spools mounted upon the opposite side and end of said frame from the first-mentioned supply spools, a set of take-up reels for each set of said supply spools mounted upon opposite sides of said frame, and a pair of tinning apparatuses mounted upon opposite sides of said frame.

1,346,826. GAME. ULYSSES S. HUGGINS, Chicago, Ill. Filed Nov. 14, 1919. Serial No. 338,092. 2 Claims. (Cl. 46—21.)

2. In a game, the combination of a map containing geographical indicia and also indicia representing stations for the supply of motor fluid, a plurality of representations of motor-driven vehicles, one for each player, and a plurality of direction cards adapted to be intermixed and drawn in sequence by chance by each player, and movement controlling directions on said cards, certain of said directions requiring mental effort and geographical knowledge, and others of said directions requiring travel to designated stations for the supply of motor fluid, substantially as described.



1,346,827. DEVICE FOR MAKING PAPER RECEPTACLES. DAVID J. JENNINGS, Cleveland, Ohio. Filed June 11, 1917. Serial No. 173,920. 8 Claims. (Cl. 93—39.)

1. In a device for forming paper receptacles, the combination of a conoidal mandrel adapted to revolve about a center and rotate on its own axis and having cutting instrumentalities, the shearing edges thereof facing away from the center of revolution of said mandrel, with arcuate cutting instrumentalities at each side of the path of travel of said mandrel, the shearing edges of which face the said center of revolution of said mandrel and coacting with the cutting instrumentalities on the mandrel.

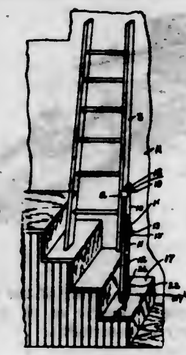
1,346,828. APPARATUS FOR MIXING COTTON. SUEKICHI KIDO, Nishisuma, Hyogo-Ken, Japan, assignor to Kanegafuchi Boseki Kabuskiki Kwaisha, Minamikatsushika-Gun, Tokyo-Fu, Japan. Filed Aug. 2, 1918. Serial No. 247,971. 1 Claim. (Cl. 19—9.)

In an apparatus for mixing cotton, in combination, a relatively large hopper mixer, conveyers leading to and from the mixer, coacting elevating conveyers associated with the conveyer which leads from the mixer, a delivering conveyer leading from the elevating conveyers, a return conveyer associated with the elevating conveyers and extending over the mixer in a direction opposite to the direction assumed by the delivering conveyer, a return trough between the return conveyer and the inlet of the mixer, and a reversible roller above the upper ends of th

elevating conveyers for insuring of the passage of cotton on to the delivering conveyer or on to the return conveyer, substantially as described.

1,346,829. METAL WHEEL. MAURICE LACHMAN, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Nov. 17, 1919. Serial No. 338,422. 3 Claims. (Cl. 21—69.)

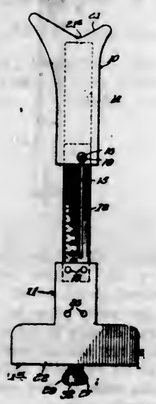
3. In a sheet metal wheel, the combination with a rim, spokes and center all integral with one another and formed from a sheet metal blank, of an annular angle member at the rim underlying by one angle the outer edge of said rim and closing by its other angle a groove to complete the hollow rim and an annular hub member having two flanges at its opposite ends respectively against which the diverging ends of two sets of spokes cut from said blank respectively engage.



1,346,830. COMPOSITION FOR HARDENING AND PRESERVING IMPREGNABLE SOFT WOODS. ALPHONSE LAMBERT, Rome, Italy. Filed Jan. 4, 1919. Serial No. 269,672. 3 Claims. (Cl. 99—12.)

1. A composition for hardening impregnable soft woods for preserving, water-proofing and fire-proofing them and for preventing their destruction by the action of the termes or teredos, said compositions comprising an alkaline solution of copper and zinc salts, borax, and a soluble chromate in diluted ammonia water, said solution containing an insoluble cement in suspension.

1,346,831. LADDER ATTACHMENT. FERDINAND A. LEHMANN, Omaha, Nebr. Filed Nov. 16, 1918. Serial No. 262,900. 2 Claims. (Cl. 228—63.)



1. In combination with a ladder, an extensible ladder foot, means whereby said foot may be adjusted longitudinally on said ladder, a bracket carried by the upper end of said foot and having a right angularly bent wing

adapted to engage the ladder to prevent the rotation of the foot thereabout, said bracket being rotatable through

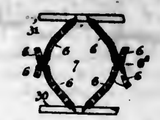
180 degrees to permit the wing to engage the opposite edge of the ladder, and means to hold the bracket in either position of adjustment.

1,346,832. TAILOR'S IMPLEMENT. ABE LIPNER, Indiana Harbor, Ind. Filed Feb. 17, 1919. Serial No. 277,557. 6 Claims. (Cl. 33—2.)

1. A device of the character described, comprising two end members, an intermediate member in the form of a rule connected at one end with one of said end members and having endwise sliding engagement with the other of said end members, means for clamping said rule to said last named end member, and a second rule adjustably connected with the first mentioned end member and adapted to be extended endwise beyond that end thereof opposite to the end to which said intermediate rule is connected.

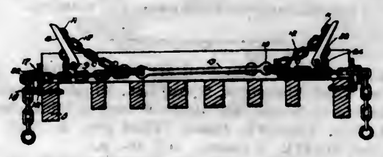
1,346,833. MACHINE FOR TREATING YARN IN HANK FORM. JOSEPH SPENCER LOAD and SAM SPENCER LORD, Manchester, England. Original application filed Apr. 11, 1919, Serial No. 289,459. Divided and this application filed Dec. 15, 1919. Serial No. 345,000. 4 Claims. (Cl. 8—19.)

1. A machine for dyeing, washing, scouring, sizing, bleaching and mercerizing yarn in hank form, comprising a driving shaft, a set of radial arms intermittently rotatable on said shaft, a pair of horizontally projecting rotary yarn carrying members on each of said arms, a trough secured to each of said radial arms and an auxiliary roller mounted therein running in frictional con-



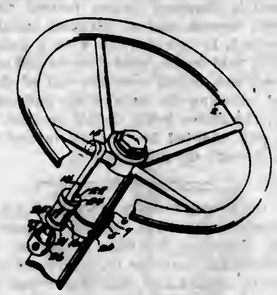
tact with said inner rotating member, for the purpose specified.

1,346,834. RESILIENT ROD. CHARLES E. MCMANUS, New York, N. Y. Filed Aug. 17, 1918. Serial No. 250,305. 6 Claims. (Cl. 154—43.)



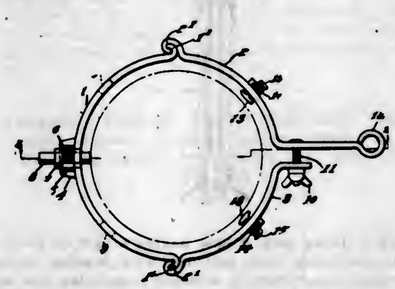
5. A resilient rod embodying therein a core formed of cork granules, suitably bonded together, and an envelop therefor composed of soft, vulcanized rubber, said rubber being normally under stretch, whereby it will exert compression stresses upon said core and will conform to any irrgularities in the surface thereof.

1,346,835. MODE OF AND MEANS FOR GRADING FRUIT AND OTHER ARTICLES. NORMAN SINCLAIR MCNAB, Melbourne, Victoria, Australia. Filed Oct. 7, 1919. Serial No. 329,053. 7 Claims. (Cl. 130—82.)



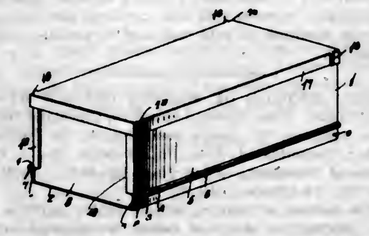
1. In a device of the class described, a carrier comprising a pair of lengthwise extending flexible members, and a plurality of seat-forming elements carried by each of said members, the elements carried by one of the flexible members being connected to those of the other flexible member along the longitudinal center line of the carrier.

1,346,836. STAKE FOR CARS. MATT MARKKULA, Fort Bragg, Calif. Filed Apr. 7, 1920. Serial No. 371,967. 5 Claims. (Cl. 105—388.)



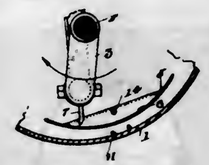
1. In apparatus of the type described, a pair of vertically swinging stakes arranged upon opposite sides of the car and pivotally connected thereto, a pair of oppositely extending connecting elements, flexible members connecting the inner and outer sides of each of said swinging stakes with the adjacent end of the corresponding connecting element, and means for adjustably positioning said connecting elements.

1,346,837. LOCKING DEVICE FOR STEERING-WHEELS. HIRAM C. MILLER, Parkesburg, Pa. Filed Jan. 31, 1920. Serial No. 355,483. 5 Claims. (Cl. 70—129.)



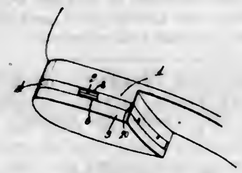
1. The combination with a steering column having a steering wheel on its upper end, of opposed clamps engaging the steering column and having certain of their ends bolted together, one of the bolted ends having an eye, a locking element having a hook at its upper end engaging one of the spokes of the steering wheel and passing downwardly through the eye, a housing inclosing the eye and the bolted ends of the clamps, and through which the locking element passes, and a padlock carried by the lower end of the locking element, thereby preventing upward movement of the locking element.

1,346,838. PISTON-GROOVING TOOL. CHRISTIAN MULLER, Fall River, Mass. Filed Apr. 9, 1919. Serial No. 288,764. 1 Claim. (Cl. 82—4.)



A regrooving tool for pistons, comprising a piston encircling guide member, a tool radially and rotatably adjustable therein and opposed groove engaging guide members also rotatably adjustable therein.

1,346,839. FOLDING BOX. WILLIAM NESS, Carryville, Wis. Filed Aug. 9, 1918. Serial No. 249,069. 1 Claim. (Cl. 220—7.)



A folding box comprising a bottom wall, side and end walls hinged to the bottom wall, flanges on the ends of the side walls and overlying portions of the outer faces of the end walls, apertured lugs formed on the end walls adjacent their upper edges, rods extending through the lugs and having their ends bent to form hooks to engage the upper edges of the side walls, a cover resting on the side and end walls, flanges formed on the cover and engaging the outer faces of the side and end walls, and offset portions formed on some of said last named flanges and receiving the hooks for preventing lateral movement of the rods and adapted to aid in holding the cover on the side and end walls.

1,346,840. OIL-FEEDER. ALBERT E. NICHOLLS, Wilson Creek, Wash. Filed June 26, 1919. Serial No. 306,972. 1 Claim. (Cl. 184—13.)

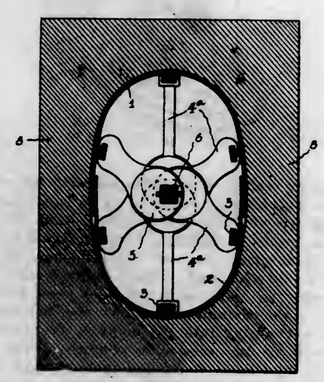
In a motor vehicle, the combination with the crank case, the crank shaft having cranks; of an oil pan located within the crank case and spaced above the bottom thereof, said pan being formed at intervals with depressed portions extending transversely thereof beneath said cranks, the bottoms of said depressed portions being arcuate and concentric with the crank shaft, oil feed pipes having their discharge ends extending over the end portions of the pan and discharging into the endmost channels, the adjacent walls of the successive channels being provided with holes, and tubes extending through said holes and establishing communication between the successive channels, the channels permitting the passage of the oil supply tubes of the crank bearings.

1,346,841. SHOE-HEEL. ROBERT W. PADDEN, Kansas City, Mo. Filed May 7, 1919. Serial No. 295,258. 4 Claims. (Cl. 36—42.)

1. A shoe heel comprising independent heel portions having their corresponding faces in contact, each of the said portions being provided with a groove, the said grooves forming a recess extending around the heel at the adjacent edges of the said heel portions, a retaining band lodged in the said depression and provided with flanges embedded in the heel portions, and locking means to maintain the ends of said band in operative position on the said heel portions.

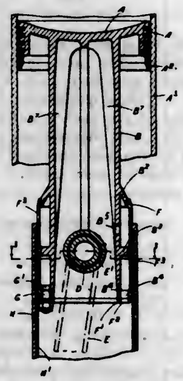
1,346,842. [WITHDRAWN.]

1,346,843. MOVABLE IRRIGATING APPARATUS. ARTHUR RAMÉN, Helsingborg, Sweden. Filed Dec. 22, 1919. Serial No. 346,676. 2 Claims. (Cl. 299—47.)



1. An irrigating apparatus, comprising a distributing pipe formed of a plurality of rigid sections, a truck between each pair of sections supporting the adjacent ends

of said sections, and flexible means carried by the trucks for connecting the ends of adjacent sections to each other and to the trucks so that each of said sections is movable



in the direction of its length transversely of the trucks and also in a circumferential direction with relation to the trucks.

1,346,844. CORE FOR MOLDING HOLLOW CONCRETE COLUMNS. HARVEY W. REMINGTON, New York, N. Y. Filed Feb. 17, 1919. Serial No. 277,516. 1 Claim. (Cl. 25—128.)

A core for molding hollow, concrete columns, comprising longitudinal, curved segments of sheet material arranged in interfitting slidable relation, longitudinal rails extending inwardly from said segments, a central shaft, rigid internal members slidably engaging said rails respectively at their outer ends, and revoluble hubs for the inner ends of said members, said hubs respectively having eccentric engagement with said shaft, whereby movement of said shaft in one direction of rotation will draw said segments inwardly, and movement of said shaft in the other direction will expand said segments.

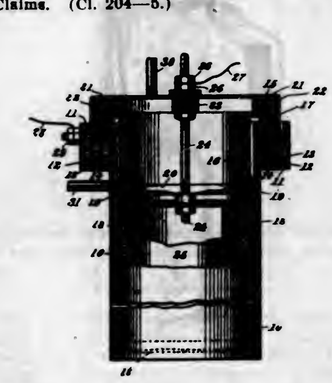
1,346,845. PISTON FOR INTERNAL-COMBUSTION ENGINES. HARRY RALPH RICARDO, London, England. Filed Oct. 16, 1917. Serial No. 196,902. 12 Claims. (Cl. 74—108.)

1. A piston for internal combustion engines comprising a flanged disk with a solid face constituting a piston head constructed and designed to perform its piston functions without thrust on the wall of the cylinder in which it reciprocates, said head having an integral, hollow, open ended projection of less diameter than the piston head with oppositely disposed bosses formed therein toward the open end thereof, and an external annular thickening at its open end, in combination with a gudgeon pin carried freely in said bosses, and a sleeve having an internal flange at one end, fitting over the end of the hollow projection and inclosing the ends of the gudgeon pin to keep it in place, the sleeve being rigidly secured to the hollow projection and adapted to take all lateral stresses communicated through the gudgeon pin.

1,346,846. COMPOSITION PAINT FOR LEATHER. JOSEPH RICHARD, Montreal, Quebec, Canada. Filed Aug. 30, 1919. Serial No. 320,934. 2 Claims. (Cl. 134—7.)

2. A composition paint of the character described comprising, crude linseed oil, raw umber and dry sugar of lead mixed with benzin and prepared paint substantially as described.

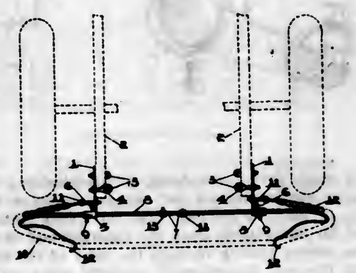
1,346,847. FLEXIBLE-BASE JACK. CHARLES W. RIPSCH and JAMES C. DAWLEY, Dayton, Ohio, assignors to The Joyce-Cridland Company, Dayton, Ohio, a Corporation of Ohio. Filed June 9, 1919. Serial No. 302,860. 3 Claims. (Cl. 254—115.)



1. In a lifting jack, a base having a pair of short upwardly extending lugs provided with bearing surfaces along their upper edges, a standard comprising side members having a guideway between them, each of said side members terminating at its lower end in a lug, the lugs of said standard being arranged between the lugs of said base, pivot pins to connect the lugs of said standard to the lugs of said base, each of said side members having on its outer side a shoulder forming a bearing surface to coöperate with the bearing surface of the corresponding lug on said base to support the load on said standard, said bearing surfaces being curved about the axis of said pivot pins to permit said standard to have pivotal movement relatively to said base, a lifting member mounted in said guideway between said side members and an operating device mounted on said standard to actuate said lifting member.

1,346,848. METHOD OF MAKING HOLLOW RUBBER ARTICLES. FRED THOMAS ROBERTS, Cleveland Heights, Ohio, assignor, by mesne assignments, to Paramount Rubber Consolidated, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed Mar. 12, 1917. Serial No. 154,072. 24 Claims. (Cl. 18—56.)

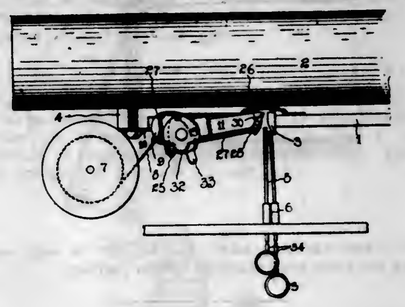
1. The method of making hollow rubber articles, comprising placing two sheets of rubber across mold cavities, drawing the sheets into the cavities by vacuum, bringing the mold members together and trimming off the sheets at the edges of the mold cavities, then removing the article



formed by such cavities, placing the same in a vulcanizing mold complementary to its exterior, introducing pressure fluid within the article while in such mold, and subjecting the same in this condition to a vulcanizing heat.

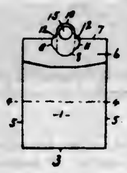
1,346,849. ELECTROLYTIC CELL. ROBERT M. SHAW, St. Louis, Mo. Filed July 29, 1918. Serial No. 247,096. 9 Claims. (Cl. 204—5.)

2. An apparatus of the character described comprising a receptacle constituting an electrode, a member removably supported upon said receptacle, a diaphragm carried by said member, a second member removably supported upon said receptacle, an electrode carried by said second member and insulated from said receptacle and extending within said diaphragm, and means for separately conducting the gases from said receptacle, substantially as specified.



1,346,850. FENDER FOR MOTOR-CARS. BERTON H. SILLS, Toronto, Ontario, Canada. Filed Mar. 4, 1920. Serial No. 363,231. 10 Claims. (Cl. 293—55.)

4. A vehicle fender comprising a pair of attaching arms; an impact receiving portion; and hinge connections between the forward ends of the arms and the impact receiving portions, the pivots of said hinges being substantially vertical.

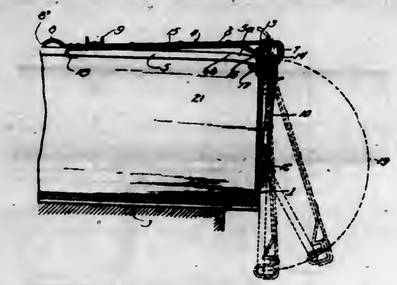


1,346,851. TYPEWRITING-MACHINE. JAMES E. SIMPSON, Brooklyn, N. Y., assignor to Typewriter Accessories Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 7, 1919. Serial No. 315,895. 7 Claims. (Cl. 197—171.)

1. In a typewriting machine having a ribbon movable across the printing point and a guide for the types, the combination of a revoluble inking pad, means for supporting said pad in proximity to said ribbon, and means pivoted

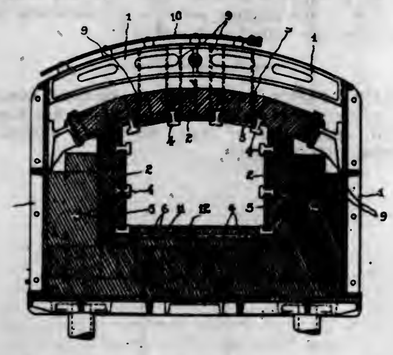
near said guide, to be actuated by the type bars in moving the types to the printing point, to intermittently move said ribbon into contact with said pad.

1,346,852. PAPER BAG. FRED R. SKINNER, Syracuse, N. Y., assignor of one-half to Ernest Ripley, Los Angeles, Calif. Filed Aug. 2, 1919. Serial No. 314,863. 1 Claim. (Cl. 229—62.)



A paper bag of the character described comprising a back portion and a front portion united along one end and also along their opposite longitudinal edges, the upper end of the front portion being provided with a finger loop having laterally projecting wings on opposite edges thereof, the back portion being provided with a flap foldable over and upon the front face of the front portion, said flap having an opening for permitting the finger loop to pass therethrough when the flap is folded, said opening being of less width than the transverse width of the finger loop across the wings thereof to permit the latter to interlock with the front face of the flap at opposite sides of the opening when the flap is folded, portions of the wings being formed from portions of the front of the bag below the upper edge of said front and other portions extended above the upper edge of the front and also above the lower edge of the opening in the flap when the latter is unfolded.

1,346,853. RECEPTACLE-CLOSURE. WILLIAM W. SLOANE, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 4, 1919. Serial No. 342,389. 24 Claims. (Cl. 105—51.)



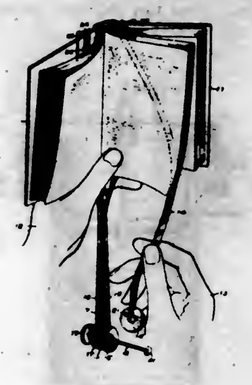
24. In combination with a receptacle, a cover therefor, and means connecting said cover to said receptacle, said means permitting continuous sliding and supporting en-

gagement between said cover and an upper edge of said receptacle during the removal and replacement of the

cover, and affording additional support to said cover, when the cover is in partially opened position.

1,346,854. ELECTRIC FURNACE. EDWIN LEONARD SMALLEY, East Orange, N. J. Filed Oct. 21, 1919. Serial No. 332,261. 6 Claims. (Cl. 204—64.)

1. The combination, with an electrical furnace having a series of heating units, of horizontally shiftable supporting elements within said furnace for said heating units whereby the latter are rendered both adjustable and renewable.

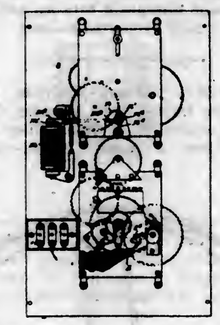


1,346,855. RAZOR-GUARD. WILLIAM A. SNYDER, Masonanie, Wis. Filed Oct. 31, 1919. Serial No. 334,811. 6 Claims. (Cl. 30—12.)

2. A razor blade guard comprising a plate, the lower edge of which is offset, depending tongues formed on the offset portion, a U-shaped spring having one arm secured to the plate and the other arm adapted to engage the blade, and guard means attached to said plate.

1,346,856. BOOKMARKER. ABBIE C. SPRAGUE, Boston, Mass. Filed Feb. 14, 1920. Serial No. 358,588. 8 Claims. (Cl. 116—119.)

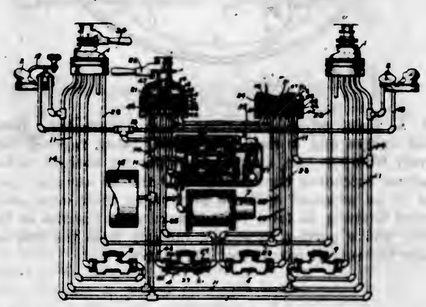
1. A book marker comprising a plurality of ribbons adapted to be inserted between the pages of a book, said ribbons provided with means secured thereto, and a pin constructed to have said means removably arranged thereon in such a manner that they may be disengaged from said pin in the order in which the pages marked by said



ribbons are to be referred to, said means upon the ribbons arranged to permit a portion of one ribbon between the same and the book to be crossed over another ribbon in arranging the means in the desired order upon said pin.

1,346,857. REPAIR-HUB AND WHEEL-PULLER. CHARLES NOAH SRADER, Canton, Okla. Filed Sept. 16, 1919. Serial No. 324,074. 1 Claim. (Cl. 301—111.)

A hub repair device comprising a cylindrical cap having an angular portion formed for engagement by a wrench whereby it may be turned, the cap being internally threaded for engagement upon the threaded end of a hub, clamping screws passing through the sides of the cap and engaging the hub, diametrically opposite arms extending from said cap and terminating in laterally offset portions, and detachable clips carried by said offset portions and engageable about spokes of a wheel.

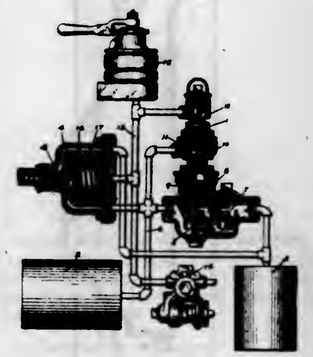


1,346,858. TIME-CONTROLLED MECHANISM. NATHAN H. SUREN, Needham, Mass., assignor to The Gamewell Fire-Alarm Telegraph Company, New York, N. Y., a Corporation of New York. Original application filed July 22, 1910. Serial No. 573,291. Divided and this application filed May 8, 1916. Serial No. 96,003. 1 Claim. (Cl. 200—40.)

In a time-controlled mechanism, an element adapted to be controlled, an actuator for controlling said element adapted to be set in different positions by hand away from a normal controlling position, spring-actuated means to return said actuator to its controlling position, and

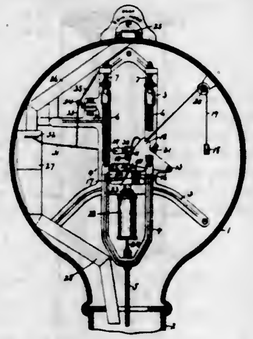
time-controlled releasing-means for said spring-actuated means and independent of but associated with actuated means.

1,346,859. CAR-DOOR AND BRAKE CONTROL DEVICE. THOMAS H. THOMAS, Edgewood, Pa., assignor to Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 4, 1919. Serial No. 301,778. 12 Claims. (Cl. 303—51.)



2. In a car door and brake controlling apparatus, the combination with a brake valve operated by the motorman for controlling the end car doors and the brakes, of an additional brake valve operated by the conductor for controlling the center car doors and the brakes.

1,346,860. ELECTRICAL PLUG-CONNECTOR. WILLIAM C. TREGONING, Cleveland, Ohio, assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 24, 1917. Serial No. 157,218. 14 Claims. (Cl. 173—359.)



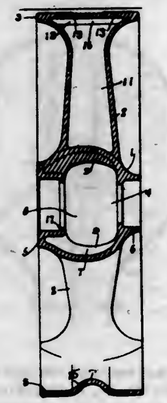
1. An electrical plug connector comprising a metal screw shell having at one end a finger grip through which circuit wires may be passed into said shell and having at its opposite end a centrally perforated conducting cap provided with an opening through which one of the circuit wires may be passed for connection to said cap externally of said shell, an insulating member carried by said cap centrally thereof, said member projecting from said cap into said shell and having a passage through which another of the circuit wires may be passed to the exterior of said shell and a contact carried by said insulating member to which the latter circuit wire may be connected externally of said shell.

1,346,861. FLUID-PRESSURE GOVERNOR. WALTER V. TURNER, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Dec. 18, 1918. Serial No. 267,263. 7 Claims. (Cl. 303—85.)

1. The combination with a main reservoir of a fluid pressure brake system, of an additional reservoir and a governor device operated according to the opposing pressures of the main reservoir and a conduit having a fluid pressure a predetermined degree less than full main reservoir pressure and operating when the main reservoir pressure slightly exceeds the opposing pressure to supply fluid from the main reservoir to the additional reservoir.

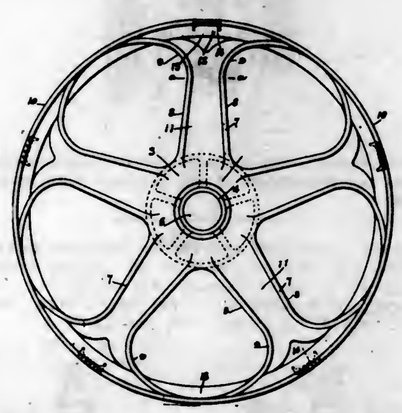
1,346,862. WEIGHING-SCALE. AARON VANDECAR, Syracuse, N. Y., assignor to Colonial Machine Company, Inc., Syracuse, N. Y., a Corporation of Delaware. Filed Aug. 2, 1919. Serial No. 314,899. 2 Claims. (Cl. 265—68.)

1. In a weighing scale of the character described the combination with a frame, a weight operated plunger and retracting means therefor, of an abutment on the plunger, a rotary spindle for receiving and supporting an index finger, a pinion on the spindle, a segmental rack pivoted



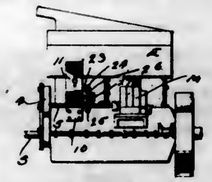
to the frame and engaging the pinion and a spring for holding the rack against said abutment independently of the plunger to cause said rack to follow the plunger in its movement against the action of the retracting means and a counter weight acting upon the segment against the action of but with less force than that of the spring.

1,346,863. WHEEL. GEORGE WALTHER, Dayton, Ohio, assignor to The Dayton Steel Foundry Company, Dayton, Ohio, a Corporation of Ohio. Filed May 19, 1919. Serial No. 297,994. 14 Claims. (Cl. 21—69.)



1. A metal wheel consisting of a felly, spokes and a concave-convex hub having an inwardly projecting flange forming an axle bearing, a self-cleaning bearing entrance outwardly adjacent said bearing, an annular flange within the concavity of the hub forming a bearing support, and an annular flange concentric with the axle bearing extending inwardly adjacent the concavity of said hub and forming one element of the brake mechanism of said wheel.

1,346,864. WHEEL. GEORGE WALTHER, Dayton, Ohio, assignor to The Dayton Steel Foundry Company, Dayton, Ohio, a Corporation of Ohio. Filed May 19, 1919. Serial No. 297,995. 11 Claims. (Cl. 21—69.)

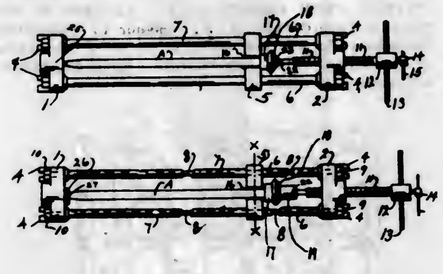


1. In a metal wheel, a hub having inner and outer portions and an enlarged intermediate portion, a longitudinal aperture extending through the hub and an annular aperture extending outwardly therefrom into said enlarged portion and laterally into the inner portion of the hub, strengthening walls interposed between said hub portions, and spokes and a felly supported thereon.

1,346,865. WHEEL. GEORGE WALTHER, Dayton, Ohio, assignor to The Dayton Steel Foundry Company, Dayton, Ohio, a Corporation of Ohio. Filed May 19, 1919. Serial No. 297,996. 9 Claims. (Cl. 21—69.)

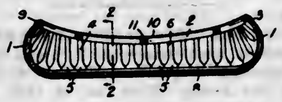
1. A metal wheel consisting of a hollow hub, channeled spokes and a rim, said spokes being tapered outwardly from the hub, and having a portion thereof curved aperture extending through the hub and an annular apertion of an adjacent spoke, a portion at their outer ends curved laterally to form the juncture with the rim of the wheel, and a portion extending radially from the hub between the curved portions of the spokes.

1,346,866. AUTOMOBILE-PUMP. WILLIAM F. WARREN, Shelburn, Ind. Filed Jan. 28, 1919. Serial No. 273,557. 2 Claims. (Cl. 103—61.)



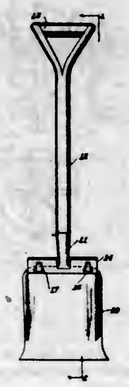
1. In a motor, the combination with the crank case and the crank shaft, of a magneto bracket secured to said crank case and situated adjacent one end thereof, a magneto mounted on said bracket, a magneto shaft extending from said magneto toward the other end of the motor, means for connecting said magneto shaft to said crank shaft, a gear wheel keyed to the magneto shaft intermediate its ends, an inverted L-shaped bracket carried by the crank case so as to overhang the magneto shaft adjacent said gear wheel, a pump situated on the inverted L-shaped bracket, and means for operating said pump through said gear wheel.

1,346,867. STOP OR SET SCREW. NILS RUDOLF MARTIN WEIBULL, Bofors, Sweden. Filed Oct. 16, 1919. Serial No. 331,252. 7 Claims. (Cl. 85—1.)



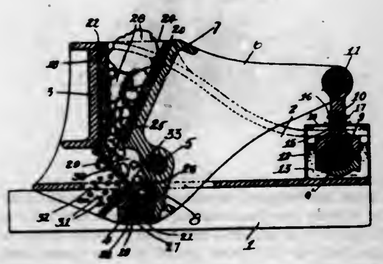
4. Stop- or set-screw consisting of a screw and a loose point coöperating with it, the said point having a spherical upper surface, placed against the lower end of the screw, while the lower part of the point is provided with an edge, the said point being connected to the screw by means of a bent wire.

1,346,868. ARBOR-PRESS. KIRKE R. WILSON, Buffalo, N. Y. Filed Jan. 9, 1920. Serial No. 350,425. 3 Claims. (Cl. 29—85.)



1. An arbor press adapted to assemble and disassemble a gear with a shaft, comprising a frame, including terminal members and spacing members, each of said terminal members having a central core and holes near the outer ends of said terminal members, a clamping screw in threaded engagement with one of said bores, parallel members holding said terminals in fixed spaced relation, a yoke crossing said parallel members and fixed in position with relation to said terminal members, said screw having a ball bearing end for frictionless contact with said shaft when removing the same from said gear.

1,346,869. CANOE. ADOLPHE YELLE, Cheneville, Quebec, Canada. Filed Jan. 15, 1920. Serial No. 351,633. 3 Claims. (Cl. 9—6.)

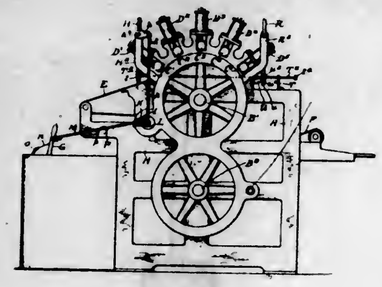


1. A canoe, skiff or the like, comprising a plurality of gunwales secured at their ends to the usual stem posts; a plurality of ribs secured to the said gunwales, said ribs having a wide intermediate portion with parallel sides adapted to contact with the adjacent rib, and the entire length of said wide portion, whereby the bottom of said canoe would be entirely closed and the sides provided with a plurality of slots or openings formed between said ribs; and a cover over said ribs, substantially as described.

1,346,870. SHOVEL ATTACHMENT. JOHN ZAOKIPNY, Baird, Ontario, Canada. Filed Nov. 7, 1919. Serial No. 336,466. 3 Claims. (Cl. 294—60.)

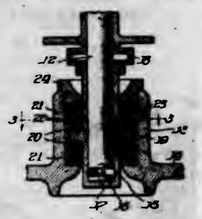
1. A shovel attachment of the character described comprising a recessed body, L-shaped in cross-section adapted to grip over the upper edge of a shovel blade, links pivoted to the front side of said attachment, and means for securing said links against said shovel.

1,346,871. CRUSHER. HERMAN P. ANDREESEN, Chicago, Ill. Filed Apr. 30, 1920. Serial No. 377,827. 7 Claims. (Cl. 83—54.)



4. A crusher embodying therein a double action jaw member mounted for swinging movement, spaced crushing portions thereon, spaced stationary crushing portions with which they coact, the crushing portions on the swinging jaw member and the stationary crushing portions forming spaced pairs of crushing portions, and a sizing device arranged intermediate said spaced pairs of crushing portions.

1,346,872. SAFETY MECHANISM FOR IRONING-MACHINES. WILLIAM BARTHOLOMEW, Chicago, Ill., assignor to Troy Laundry Manufacturing Company, a Corporation of New York. Filed Dec. 10, 1914. Serial No. 876,534. 6 Claims. (Cl. 74—46.)

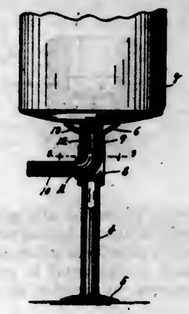


1. The combination with a machine having moving parts exposed at a plurality of places, of a device for controlling the operation of the machine, a safety guard for protecting each of the exposed places of the machine, means operatively connecting said safety guards with said device to

actuate the same to stop the operation of the machine when any of said guards is moved and means extending

from said guard to a remote part of the machine for manually moving the guard to actuate said device to stop the operation of the machine.

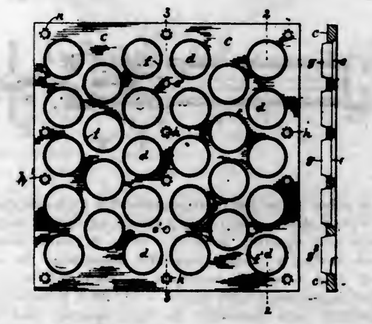
1,346,873. HEAT-PREVENTION MEANS FOR EXTRACTORS. WILLIAM BARTHOLOMEW, Chicago, Ill., assignor to Troy Laundry Machinery Co., Ltd., Chicago, Ill., a Corporation of New York. Filed Nov. 3, 1917. Serial No. 200,028. 10 Claims. (Cl. 64—48.)



2. In a centrifugal extractor, the combination of a resilient spindle bearing bushing having a laterally extending flange, a bearing member engaging said flange to take up gyratory motion, and metal means associated with said bearing member and an adjacent element to permit relative movement therebetween to reduce the amount of friction.

1,346,874. RESISTANCE MATERIAL. HARRY T. BELLAMY, Oak Park, and BURTON T. SWEELY, Cicero, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 16, 1918. Serial No. 262,852. 8 Claims. (Cl. 106—12.)

1. A compound having a high electrical resistance at high temperatures and comprising talc, silica sand, ball clay, and a glass binder.



1,346,875. BOILER-STAND. OLAF S. BURMAN, Minneapolis, Minn. Filed Feb. 18, 1920. Serial No. 359,592. 2 Claims. (Cl. 126—363.)

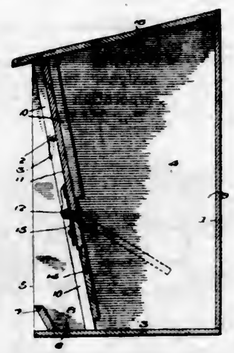
1. The combination with a boiler, of a stand for supporting the boiler and provided with a transverse opening and a vertical passageway leading from said opening through the top of the stand, a pipe coupling extending into said opening, and a nipple connection secured to the

boiler extending through said vertical passageway and having screw-threaded engagement with the pipe coupling.

1,346,876. MEANS FOR HOLDING IMPRESSION-PLATES UPON HEATER-BEDS. CHARLES F. BURROUGHS, East Orange, N. J., assignor to Composition Machinery Corporation, Newark, N. J., a Corporation of New Jersey. Filed July 15, 1919. Serial No. 310,994. 5 Claims. (18—16.)

5. The combination, with a heater-bed having a plane surface, of a series of dies adapted to rest upon said surface and a holder having perforations adapted to receive the base of each die and provided with means for securing it upon the heater-bed, and a "force" having a plane surface, a series of counterpart dies adapted to sit upon said surface, a holder having perforations adapted to receive such counterpart dies, and means for securing the said holder upon the "force" with the counterpart dies in register with the dies upon the heater-bed.

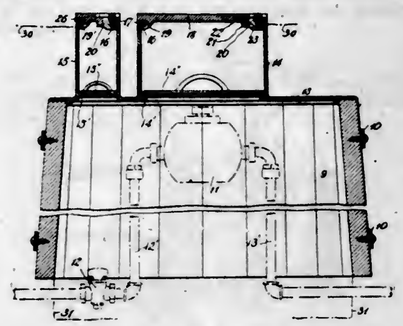
1,346,877. FILLER-CAP FOR RECEPTACLES. CHARLES F. BURROUGHS, East Orange, N. J., assignor to Composition Machinery Corporation, Newark, N. J., a Corporation of New Jersey. Filed Jan. 15, 1920. Serial No. 351,697. 5 Claims. (Cl. 18—59.)



3. A screw-cap for receptacles, the said cap being molded of plastic material with a screw-thread therein,

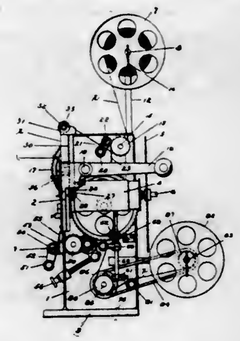
and a plate of packing material molded into and locked within the material of the cap at the top of its socket and the margin of a plate extending under the bottom of such screw-thread and retained in place thereby.

4. The method of molding a screw-cap for receptacles with a packing-plate locked in the top of the socket, which consists in placing the plastic material in a suitable mold, applying the packing-plate to the surface of such plastic material and pressing such packing-plate upon the plastic material with a "force" of less diameter than the packing-plate, thus causing the periphery of the packing-plate to extend into the wall of the socket to hold the plate permanently in place.



1,346,878. STOCK-FEEDING DEVICE. HAROLD C. M. CASE and WILBUR J. CARMICHAEL, Urbana, Ill. Filed Sept. 7, 1917. Serial No. 190,187. 1 Claim. (Cl. 119—53.)

A stock-feeding structure comprising bottom, side and back portions joined to form a feed-receiving receptacle; backing strips arranged on the sides; stop members also arranged on the sides and spaced apart in parallelism from the backing strips to form guides; a front section slidably disposed in the guides; means for maintaining the slidable section at different heights in respect to the bottom portion; a door secured to the front section and having its lower edge in spaced relation to the bottom of the trough and engageable with the stop members to limit its forward swinging movement; an extension on the bottom portion and projecting beyond the plane of the stop members, an upstanding member on the extension and arranged in spaced relation from the stop members and constituting, with the sides and bottom portions and the door, a trough in front of the door; the door normally lying at an angle to the vertical to maintain itself in engagement with the stop members and swingable away from the upstanding member to increase the size of the opening between its lower edge and the bottom; and a cover member movably secured to one of the portions and extending beyond the vertical plane of the bottom extension to protect the trough.

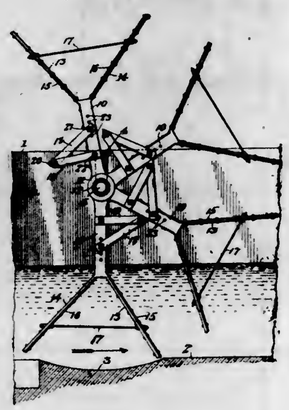


1,346,879. METER SERVICE-BOX AND HOUSING FOR CURB-COCKS. DWIGHT P. CHILD, Quincy, Ill. Filed Mar. 5, 1918. Serial No. 220,564. 5 Claims. (Cl. 137—13.)

3. The combination with a horizontal service pipe, of a vault into which the horizontal end portions of said pipe extend, a meter between said end portions and within the vault, a service cock on one of said horizontal end portions, a cover for the vault, separate upwardly extending necks on the cover in alinement with the meter, and cock respectively, separate lids on the upper ends of said necks

located substantially at the ground line and locks for said lids, substantially as described.

1,346,880. MOTION-PICTURE MACHINE. JOHN DARBY, Summit, N. J., assignor to Francis B. Griffin, New York, N. Y. Filed Mar. 16, 1916. Serial No. 84,510. 6 Claims. (Cl. 88—17.)



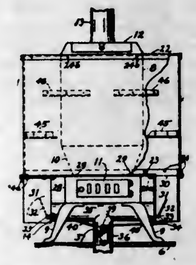
1. A motion picture machine including in combination picture projecting means, means for guiding the film past the projecting means, film feeding means including devices for intermittently feeding the film, and means for forming a reserve film loop at one side of the projecting means and comprising a longitudinally slidable rod and a film engaging roller mounted thereon, said roller in one position of said rod forming part of the film feeding means.

1,346,881. FISH SCREEN OR GUARD. GALEN J. DIXON, Bishop, Calif. Filed Mar. 22, 1920. Serial No. 367,587. 4 Claims. (Cl. 210—174.)

3. A fish guard comprising a shaft; a series of independently movable frames rotatably mounted on said shaft; each frame including a pair of arms longitudinally spaced on said shaft and having divergent end members, the angularity of the advance end member of each arm with respect to the main portion of the arm being less than that of the rear member, transverse blades connecting each pair of arms; and abutments on each frame adapted to engage a preceding frame and lift the latter to a point where it falls by gravity.

4. A fish guard comprising a shaft; a series of independently movable frames rotatably mounted on said shaft, each frame including a pair of arms longitudinally spaced on said shaft and having divergent end members, a trans-

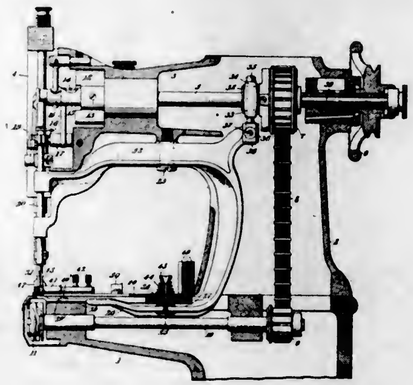
verse blade connecting each pair of arms on the advance side thereof and extending substantially throughout the length of said arms, a transverse blade of less height con-



necting the rear members of each pair of arms; and abutments on each frame adapted to engage a preceding frame and lift the latter to a point where it falls by gravity.

1,346,882. ELECTROPNEUMATIC CONTROL. GEORGE P. FINNIGAN, Richmond, Va. Filed Aug. 4, 1913, Serial No. 782,923. Renewed Mar. 15, 1919. Serial No. 282,947. 76 Claims. (Cl. 246—63.)

5. In a mechanism, such as described, a body member having a portion adapted to be placed in communication with a train pipe under pressure, the body member being provided with an outlet communicating with a region of lower pressure, a valve for closing communication between the said portion and outlet, opposite parts of the valve being in communication with train pipe pressure whereby it is maintained in such position; electro-magnetic means comprising a member of magnetic material for bringing about a reduction of pressure adjacent one part of the valve with consequent movement thereof, the said portion and outlet then communicating with consequent reduction of train pipe pressure, and means for closing the said outlet after the valve has moved whereby reduction beyond a determined amount is prevented.

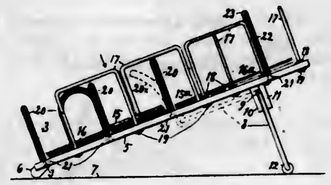


1,346,883. STOVE ATTACHMENT. SALVADOR H. FREDERICK, St. Paul, Minn. Filed Jan. 3, 1920. Serial No. 349,327. 9 Claims. (Cl. 126—80.)

1. The combination with a heating stove, of a jacket spaced about the stove and having a perforated top, and a bottom fitting about the stove close by the base thereof, said bottom having two apertures each with a tube depending below it outside the base of the stove and provided each with a valve, a T-shaped pipe having its arms connected one with each of said tubes and its leg extended down through the floor and arranged to receive fresh air, a valve in said leg above the floor, and operative connection between said valve and the valves in the

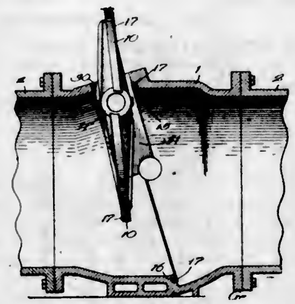
tubes, whereby the latter valves will close or open automatically in reverse order to the closing and opening of the valve in the leg.

1,346,884. SEWING-MACHINE. CHARLES F. GRAY, Sierra Madre, Calif., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Mar. 24, 1919. Serial No. 284,789. 6 Claims. (Cl. 112—137.)



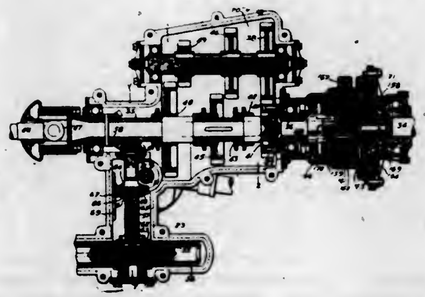
2. In a sewing machine, the combination with an endwise reciprocating and bodily laterally movable needle, means for imparting said movements to the needle, a feed-dog, and means for imparting feeding movements to said feed-dog in timed relation with respect to the lateral movements of the needle, of a binder, and means for actuating said binder to maintain a substantially constant relative position with respect to the lateral positions of said needle.

1,346,885. PROCESS OF PREPARING PRINTING-PLATES. ALBERT J. HAIN, Lakewood, Ohio. Filed June 11, 1917. Serial No. 174,049. 4 Claims. (Cl. 95—5.7.)



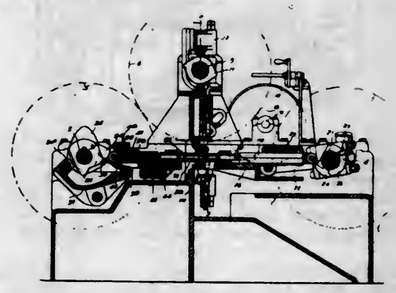
1. The method of preparing plates for printing reproduction of an image consisting in forming upon a plate uniform isolated protecting areas of minimum size, and increasing the size of said areas in every region of the plate in accordance with the value of the light or shadow in that region of the image to be reproduced.

1,346,886. POSTING-TRAY. LARS B. HALVERSON, Sioux Falls, S. D. Filed Feb. 19, 1919. Serial No. 278,091. 1 Claim. (Cl. 211—37.)



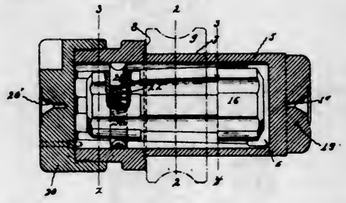
A posting tray having paper guards formed of coil-springs and shaped as arches; said arches having their legs secured to the base of the tray by screws passed through the base and screwed into the spring coils forming the lower ends of the legs of the arches.

1,346,887. VALVE. GEORGE W. HEALD, Chicago, Ill. Filed Feb. 21, 1919. Serial No. 278,553. 6 Claims. (Cl. 251—11.)



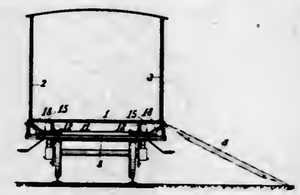
1. In combination, a substantially cylindrical valve casing, a disk-valve extending completely across said casing to close the passage through it, means for pivoting the valve to the casing at the point of its maximum diameter, the casing having a housing arranged in a plane transverse to the axis of the casing, the internal length of the housing being slightly greater than the diameter of the valve, whereby the valve may be withdrawn bodily from the casing without being shifted from the plane it occupies when closed, and a cover for closing the housing.

1,346,888. TRANSMISSION MECHANISM. HERBERT T. HEAD, Pittsburgh, Pa. Filed Aug. 28, 1915. Serial No. 47,782. 15 Claims. (Cl. 74—97.)



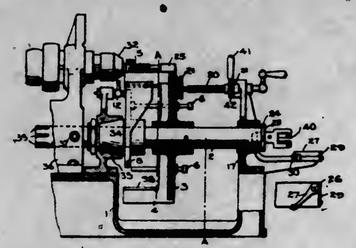
1. In combination with a transmission mechanism, a driven shaft, a load responsive device responsive to variations in the speed of the driven shaft of said mechanism for controlling the operation of said mechanism, and manually actuated means for controlling the operation of the mechanism and for rendering the load responsive mechanism ineffective.

1,346,889. NUT-MACHINE. ERNEST HOLLINGS, Cleveland, Ohio. Filed Aug. 20, 1917. Serial No. 187,306. 3 Claims. (Cl. 10—78.)



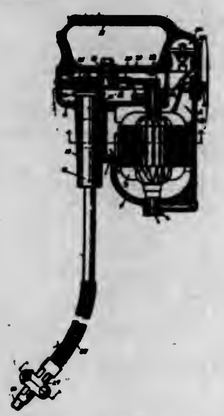
1. A nut machine, comprising a die block, reciprocating tools, a cam shaft for actuating said tools, and a lever operatively connecting said shaft and tools, said lever being arranged to serve as a reservoir for lubricant.

1,346,890. EXPANDING ARBOR. EMIL HOTTINGER, Philadelphia, Pa., assignor to Hess-Bright Manufacturing Company, Philadelphia, Pa., a Corporation of Delaware. Filed June 30, 1919. Serial No. 307,594. 17 Claims. (Cl. 82—44.)



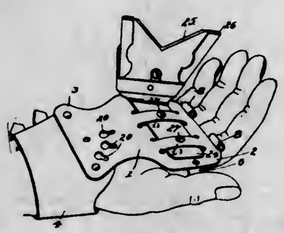
1. The combination with an elastically expansible arbor provided upon its exterior with a work seat, there being a chamber within said arbor, of an expander located wholly in said chamber and capable upon its movement to expand the same and adapted to be moved by the impact of a blow upon the end of the arbor.

1,346,891. RAILWAY-CAR. LIBERAT HUWYLER, Goldau, Switzerland. Filed Nov. 7, 1918. Serial No. 261,546. 7 Claims. (Cl. 214—85.)



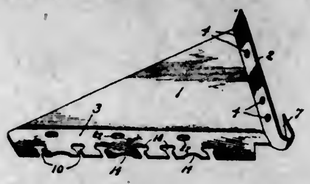
1. In a railway car, a skid having rollers on opposite sides near each end; skid supporting members under the car, including horizontal guides in which said rollers operate and also including inclined guides for said rollers, and gravity acting switches in the angles between said horizontal and inclined guides.

1,346,892. TURRET-LATHE. SZYMON JACHIMOWICZ, Geneva, Switzerland. Filed June 25, 1918. Serial No. 241,866. 11 Claims. (Cl. 29—47.)



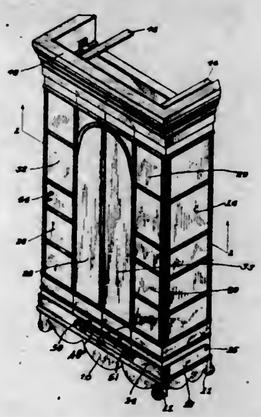
1. In a turret lathe, the combination of a live spindle with a chuck thereon, a turret spindle with a disk provided with means for holding tools fixed thereon, a rotatably mounted member for guiding axial motion of said disk, means for axial shifting of said disk and means for oscillating guiding member and therewith the disk.

1,346,893. GRINDER. CORWILL JACKSON, Kalamazoo, Mich. Filed Apr. 29, 1918. Serial No. 231,301. 15 Claims. (Cl. 74—14.)



15. In a grinder, the combination of a frame adapted to be manually supported and manipulated relative to the work, a spindle on said frame, power means on said frame for oscillating said spindle, a chuck, and a coiled spring between said spindle and chuck adapted to flex, and adapted to yield under excessive resistance to the driving stress on the spindle and to constitute a cushioning member between the frame and the work.

1,346,894. HUSKING, SNAPPING, AND SHOCKING DEVICE. FREDERICK JACOBS, Cincinnati, Ohio. Filed Sept. 19, 1919. Serial No. 324,739. 3 Claims. (Cl. 294—25.)



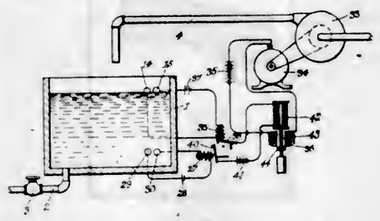
1. A device of the character specified, comprising a plate, means for securing said plate to the hand, a second plate hingedly secured to said plate, and prongs secured to each of said plates, said prongs being so disposed as to coöperate for gripping purposes.

1,346,895. SWITCH-BOX SUPPORT. STEPHEN GORDON JOHNSON, Detroit, Mich., assignor of one-half to Leon L. UTTER, Detroit, Mich. Filed Oct. 8, 1919. Serial No. 329,399. 3 Claims. (Cl. 248—18.)

1. A switch box support comprising a body generally trianguiar in form and having perforated flanges along two edges, said flanges being in planes at right angles to each other, one of the flanges being adapted to be secured to a structural member and the other flange to a switch box, the latter flange being at an oblique angle to the body of the support.

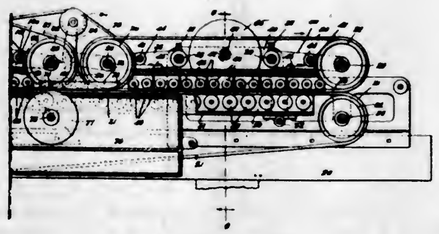
1,346,896. COMBINATION-BED. FRANK JUSZCZAK, Hagewisch, Ill. Filed Oct. 15, 1919. Serial No. 330,688. 1 Claim. (Cl. 5—37.)

In a folding bed, the combination with a base adapted to rest upon the floor, a hollow rectangular frame intimately engaged at the rear of said base and adapted to be positioned thereover, means for holding said frame when in a vertical position, means for releasing said frame, a pair of supports rigidly engaged at the extreme end of said frame, an ornamental cover removably engaged at the end of said frame, a wire mattress supported by said frame, stretcher rods extending lengthwise of said frame at the sides, side elements engaged with said frame, bolts whereby said side elements may be secured to the end elements of said frame, a plurality of plates engageable with the front of said frame, bolts carried by said plates at the top and bottom thereof whereby they may be secured in position, means for locking the outermost of said plates when in an engaged position, and means for releasing said outermost plate whereby the locking means for the other of said plates becomes accessible.



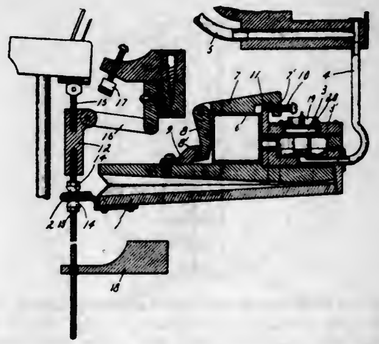
1,346,897. COLLAPSIBLE TUBE. CLIFFORD G. KING, Providence, R. I. Filed Feb. 20, 1920. Serial No. 360,203. 5 Claims. (Cl. 221—60.)

3. A collapsible tube, comprising a nozzle, a removable longitudinally-slidable cap in said nozzle, said cap having a side delivery-opening and a flanged head, the inner end of said cap being slotted and provided with projections



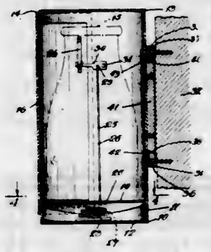
arranged to engage the inner surface of said nozzle, and a cap threaded to said nozzle and arranged to lock the slidable cap in closed position.

1,346,898. FLUID-FLOW-CONTROL MECHANISM. JOHN MCLEAN KINGSBURY, New York, N. Y. Filed Feb. 7, 1916. Serial No. 76,626. Renewed June 2, 1920. Serial No. 386,047. 5 Claims. (Cl. 137—68.)



3. In combination, a vessel, means for feeding a conducting liquid to said vessel, electrical means for starting the flow of liquid, electrical means for stopping the flow of liquid, an electric circuit arrangement for each of said electrical means, the circuit arrangement for the starting means terminating in two stationary separated terminals disposed at the desired minimum level in said vessel, and the circuit arrangement for the stopping means terminating in two stationary separated terminals at the desired maximum level in said vessel, the respective circuits being closed by the contact of the liquid with said terminals, the liquid acting as part of the circuits.

1,346,899. MACHINE FOR MAKING BOXES. LEON E. LA BOMBARD, Chelsea, Mass., assignor to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed Feb. 20, 1918. Serial No. 218,319. 33 Claims. (Cl. 93—49.)

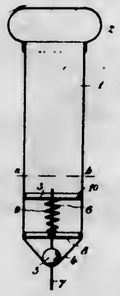


2. A machine of the character described comprising a pair of parallel bars, rolls supported by said bars, a blank-supporting belt mounted on said rolls, the upper edges of the bars extending above the plane of the tops of the rolls to provide edge guides for insuring travel of the belt in a straight path, and means coöperating with said belt for making boxes, said belt having a thickness to prevent it from being laterally buckled by the guides.

1,346,900. PNEUMATIC AND CONNECTION FOR PNEUMATIC PIANO-PLAYERS. WALTER LANE, Holland, Mich. Filed May 19, 1917. Serial No. 169,668. 6 Claims. (Cl. 84—56.)

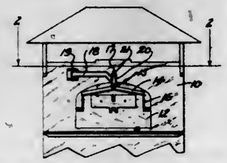
1. In a structure of the class described, the combination with a suction chest having a port in its front side, of a pneumatic comprising a relatively fixed member disposed below said chest and having thereon a forwardly facing keeper disposed at the rear of said chest, a valve casing secured to said pneumatic and disposed on the front side of said chest and provided with a port registering with the said port thereof and with an upwardly projecting lug, a clip bar disposed to rest on said chest and provided with a lug depending in front of said lug on said valve casing, a keeper engaging member pivoted on said clip bar to engage said keeper and the rear side of said chest, and a screw disposed through said lug on said clip bar to engage said valve casing lug, whereby said pneumatic is detachably secured to said suction chest.

1,346,901. BOTTLE-HOLDER. ROCCO LOZZITTO and LOUIS MOSS, New York, N. Y. Filed July 11, 1918. Serial No. 244,393. 2 Claims. (Cl. 232—42.)



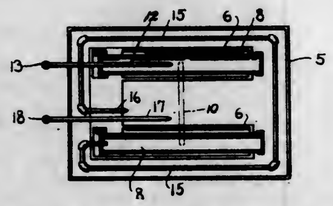
1. A holder of the class described including a casing having a swinging door, a false bottom mounted for vertical tilting movement adjacent the bottom of said casing, means constructed and arranged to be brought into operation by the downward tilting of the false bottom when an article is placed thereon for locking said door when the latter is closed, and automatic means to prevent the downward tilting of the false bottom when the door is open and to permit such tilting when the door is closed.

1,346,902. SEALING APPARATUS. ANDERS LINDAHL, Hässleholm, Sweden. Filed Oct. 9, 1919. Serial No. 329,546. 1 Claim. (Cl. 120—116.)



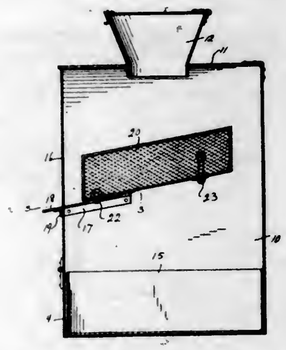
A sealing wax applying device comprising a pipe section having a restricted outlet, a plate arranged transversely

the pipe section to provide a support for a stick of sealing wax, a valve for closing said outlet, said valve having a stem projecting through and beyond the outlet in one direction and through said plate in the opposite direction,



a spring for maintaining the valve normally seated, and a second plate arranged transversely the pipe section between the first mentioned plate and outlet, said second plate serving to limit the opening movement of the valve.

1,346,903. CRANE-HINGE FOR MUFFLE-FURNACE DOORS. GEORGE W. LINDSAY, Denver, Colo., assignor to Denver Fire Clay Company, Denver, Colo., a Corporation of Delaware. Filed Sept. 23, 1918. Serial No. 255,328. 5 Claims. (Cl. 16—106.)

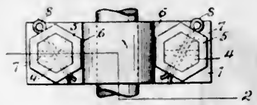


1. A mounting for muffle furnace doors comprising in combination with a furnace and its door, a crane hingedly mounted at one end on the furnace and having a swivel connection at its other end with the door the crane portion of said swivel connection being positioned above the door, whereby the door may be swung out beneath the crane.

1,346,904. BURNER. WILLIAM G. LUTTINGER, Jerome, Ariz. Filed Apr. 23, 1919. Serial No. 292,038. 1 Claim. (Cl. 158—92.)

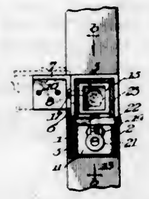
A burner of the class described comprising, in combination, spaced tanks, each of said tanks being closed, a connection between the tops of the tanks whereby one of said tanks discharges into the other, a nozzle leading from a source of water supply and discharging within one of the tanks through an end thereof and extending axially of the tank a material distance therein, the walls of the nozzle within said tank being perforated, a conduit leading from the second tank and terminating in a nozzle positioned between the tanks and extending inwardly thereof and in close proximity thereto, said conduit leading from the end of the second tank corresponding to the end of the first tank through which the nozzle extends, said conduit extending around the tanks, the portions of the conduit, the nozzle and the tanks being substantially coplanar, and an oil nozzle positioned between the tanks and in close proximity to the first named nozzle, the discharge end of the first named nozzle being inwardly of the discharge end of the second named nozzle.

1,346,905. COAL-SCREEN AND ASH-SIFTER. TIMOTHY MCGOLDRICK, Lincoln, N. H. Filed Nov. 5, 1919. Serial No. 335,921. 1 Claim. (Cl. 83—60.)



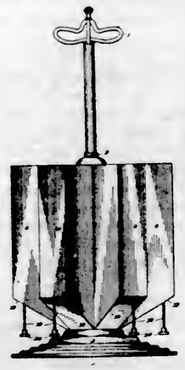
A screening device of the character described comprising a casing having an opening in its front wall, an apron secured to the casing, and extending through said opening, said apron inclined toward the top of the casing and having extensions on its rear end portions to provide spaced parallel inclined tracks, a screen receptacle disposed between said tracks in spaced relation thereto, said receptacle being open at its top and one end, an axle mounted on the bottom of the receptacle adjacent said open end, rollers on the end of said axle adapted to engage the tracks to movably support the open end portion of said receptacle adjacent the apron, and operating means carried by the other end portion of said receptacle.

1,346,906. DRAFT-HOOK. IRA H. MONTELIUS, Portland, Oreg. Filed Jan. 5, 1920. Serial No. 349,493. 2 Claims. (Cl. 24—232.)



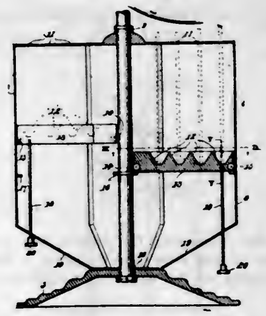
1. In a device of the character described, the combination of, a hook of common type having a flat surfaced head, and a member having a flat surfaced head pivoted in sliding engagement with the flat head of the hook, also having forked parts extending downwardly between the hook shank and bill a desired distance, said forked parts being provided with angled wings extending outwardly alongside the opposing surfaces of the hook shank, in position to engage the opposing surfaces of the shank as the member swings to and fro on its pivot, for the purposes indicated.

1,346,907. BOLT-LOCK. SWENEY MUNSON, Fowler, Colo. Filed Jan. 17, 1919. Serial No. 271,589. 1 Claim. (Cl. 151—32.)



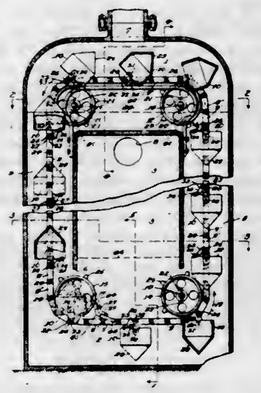
In a bolt lock, the combination with an angle plate, of a bolt extending through one flange of said plate and having a head other than circular bearing against said flange, a collar embracing and fitted to the sides only of said bolt head and at one side having a bearing against the other flange of said plate, the other side of the collar being clear of said plate, and a pin insertible through and removable from the collar and the head of said bolt while the collar is in the locked position, substantially as set forth.

1,346,908. BED-RAIL FASTENER. MORRIS B. OKUN, Chicago, Ill., assignor to The Seng Company, Chicago, Ill. Filed Mar. 3, 1916. Serial No. 81,861. 13 Claims. (Cl. 5—55.)



1. A bed rail fastener of the character described comprising a housing made of a single blank of metal having a top wall, two side walls and an end wall, said end wall being adapted to abut a corner post, said end wall having an extension thereof forwardly along one side wall, said extension having a longitudinally extending bracket adapted to receive an end rail.

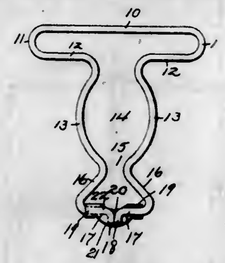
1,346,909. DINING-CUTLERY HOLDER. ANDREW ONUFRYK, Rochester, N. Y. Filed Mar. 12, 1920. Serial No. 365,217. 5 Claims. (Cl. 65—65.)



3. In a cutlery serving stand of the class described, a revolubly mounted casing composed of radial compartments having transversely elongated slots in their top walls, vertically movable slides disposed within said compartments and having pockets in their upper faces alined with said slots, means for vertically moving said slides, an upright standard arranged centrally of said casing,

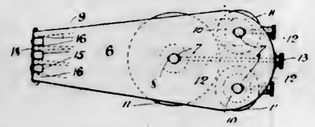
and anti-friction means upon the ends of said slides engaging said standard and the outer walls of said compartments.

1,346,910. FLUIDAL APPARATUS. MILLARD P. OSBOURN, Philadelphia, Pa. Filed July 3, 1919. Serial No. 308,600. 8 Claims. (Cl. 230—16.)



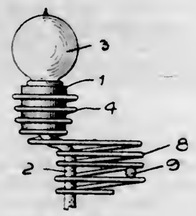
6. In an apparatus for operating upon fluidal materials of different densities, the combination of a container for containing such materials in different strata, movable means for conveying the fluidal material of the lesser density through the fluidal material of greater density whereby said conveyed material is exposed to pressure, stationary means operable on said movable means for delivering and exposing said compressed material to active material of different density.

1,346,911. BUTTON-LOOP. CARL E. PETERSON, Montclair, N. J., assignor to Eastern Tool & Manufacturing Company, Bloomfield, N. J. Filed May 3, 1920. Serial No. 378,577. 2 Claims. (Cl. 24—245.)



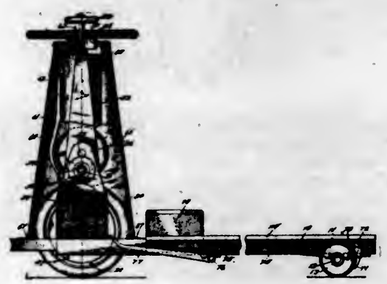
1. A button loop comprising a pair of spring arms forming a contracted portion near one end of the loop, the arms being divergent beyond said portion and being then bent inward so that they abut, the inwardly bent portions having their ends bent outward relative to said contracted portion, and a clip with sleeves on its ends in

which the inwardly bent portions of the wire loosely fit and freely slide, the clip having on each side a flat



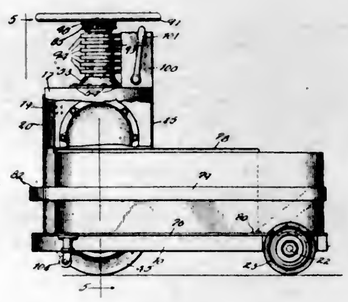
arcuate portion connecting the sleeves, said portions covering the ends of the wire and forming a depressed part for the reception of the shank of a button.

1,346,912. RUBBER STAMP. FREDERICK PITMAN, East Kew, Victoria, Australia. Filed Feb. 7, 1919. Serial No. 275,562. 1 Claim. (Cl. 101—111.)



In a stamp of the character described, the combination of a sheet metal casing having at one end a movable closing member provided with openings, a plurality of transverse spindles supported in the side walls of said casing, one of said spindles being located in the medial longitudinal plane of the casing and the other two spindles being disposed above said first named spindle in a common transverse plane of the casing, disks supported on said spindles, smaller disks associated with said first named disks, the larger disks projecting from the top and bottom wall of the casing, type bands trained over said smaller disks, bridge members traversing the end of the casing adjacent the removable closing member, and a plurality of threaded stems engaging the spindles and projecting through the casing, said threaded stems being adapted to adjust the distance of said spindles from said closing member independently of each other to permit of tensioning or releasing of the type bands.

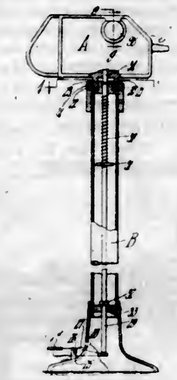
1,346,913. LAMP-SUPPORT. FRANCIS M. ROSENFELD, New York, N. Y., assignor, by mesne assignments, to Diamond Electric Specialties Corp., Newark, N. J., a Corporation of New Jersey. Filed Feb. 21, 1919. Serial No. 278,497. 2 Claims. (Cl. 248—42.)



2. A lamp support comprising two coils arranged end to end in a continuous strip of wire, the diameter of one coil being greater than that of the other coil, said coils having parallel axes and being disposed eccentrically with respect to each other.

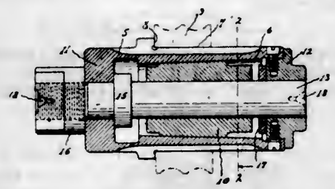
1,346,914. MOTOR-VEHICLE. HERBERT J. SAUVAGE, Chicago, Ill. Filed Aug. 4, 1915. Serial No. 43,511. 34 Claims. (Cl. 180—26.)

1. A motor vehicle embodying a load receiving platform, a traction wheel connected with the platform and rotatable on horizontal and upright axes, a steering column with which the wheel is connected, said column movable with the wheel about said upright axis, a motor supported by the column and operatively connected with the wheel for rotating it on such horizontal axis, and a support upon which the operator may stand at any point around the column.



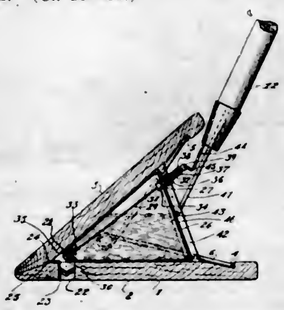
1,346,915. TRACTOR. HERBERT J. SAUVAGE, Chicago, Ill. Filed June 16, 1917. Serial No. 175,071. 22 Claims. (Cl. 180—26.)

1. A motor vehicle embodying a supporting structure, an upright frame, a traction wheel journaled to the frame, a motor for driving the traction wheel, said motor being supported by the frame, a bearing disposed between the frame and the said structure adjacent the upper end of the frame for receiving the end thrust of the frame and for supporting the said supporting structure, and a lateral thrust bearing disposed between the said supporting structure and frame and spaced from the first recited bearing, said motor being disposed above the said traction wheel and intermediate the said bearings.



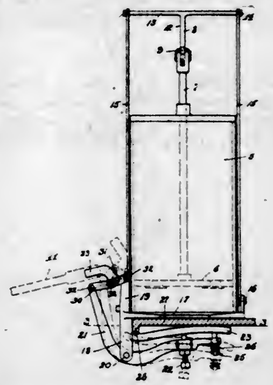
1,346,916. STRIP-PUNCHING APPARATUS. BENJAMIN M. SHANKLIN, Springfield, Mass. Filed Nov. 5, 1918. Serial No. 261,196. 10 Claims. (Cl. 164—86.)

1. In a strip punching apparatus, two depressible punches, a frame depressible toward said punches, a punch actuating member carried by said frame and slidable therein from a position wherein it is effective to engage one of said punches to a position wherein it is effective to engage the other of said punches on depression of said frame, a stationary frame, and means carried by the latter



to shift said member from one position to the other, said means including connections to permit relative movement between said frames.

1,346,917. EXPANDING ARBOR. CORTIS F. SHERMAN, Hartford, Conn., assignor to Hess-Bright Manufacturing Company, Philadelphia, Pa., a Corporation of Delaware. Filed July 11, 1919, Serial No. 310,088. Renewed June 7, 1920. Serial No. 387,158. 6 Claims. (Cl. 82—44.)

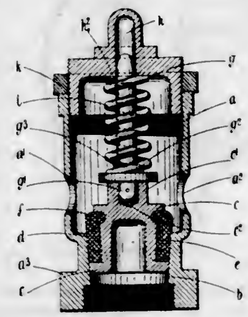


1. An expanding arbor, comprising a shell having elastic side walls, provided on the exterior with a work seat, the walls of the shell forming a closed chamber, a guiding bar carried by the end walls of the shell, and a weighted expander plug mounted on said bar for reciprocation within the chamber and adapted to act upon the elastic side walls for expanding the same and the work seat.

1,346,918. FLOOR-POLISHER. EUGENE L. SNYDER, Canton, Ohio. Filed Apr. 16, 1920. Serial No. 374,364. 6 Claims. (Cl. 15—51.)

1. A device of the character described including a polishing head having two converging side members, a handle pivotally connected to said head, a strip of fabric located around said side members and over the free ends thereof and a spring mounted between said side members and engaging the end portions of said fabric strip.

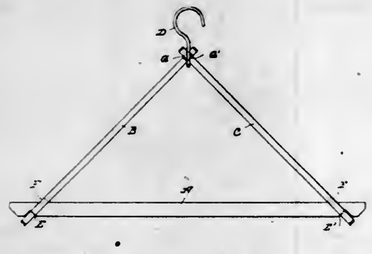
1,346,919. TIRE-PUMP. CHARLES M. STARR, South Bend, Ind. Filed May 10, 1919. Serial No. 296,172. 6 Claims. (Cl. 248—30.)



4. A clamping means including a support, a clamping lever mounted on the support and in part extending beneath the same, an elongated curved bearing head carried by the lever, and means for vertically adjusting the bearing head with relation to the lever and to permit a tilting movement thereof.

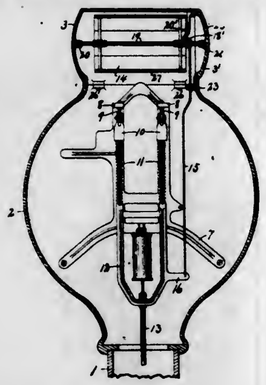
1,346,920. HAIR-CURLER. HERTHA STEINACHER, New York, N. Y. Filed Feb. 16, 1920. Serial No. 359,084. 1 Claim. (Cl. 132—18.)

A hair curler, consisting of an elongated coil of resilient wire of normally straight form and having an end provided with a reëntrant longitudinal recess, and an opposite longitudinal projection of rigid material adapted for engagement with said recess to hold said coil in annular form, and a cover for said coil of wire.



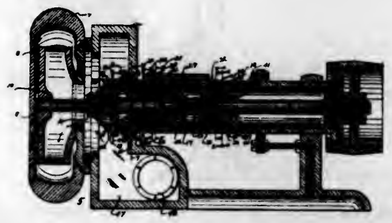
1,346,921. AUTOMATIC VALVE. EDWARD TERRY, London, England. Filed Jan. 22, 1919. Serial No. 272,591. 1 Claim. (Cl. 137—53.)

An automatic valve in which the valve is of truncated conical form provided with a rabbeted or recessed portion



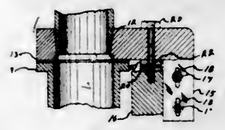
for the reception of a ring or band of rubber or other resilient material and with an annular groove or recess at the upper end of the said rabbeted portion into which groove the said ring or band engages and in which the valve stem is formed separately from the valve and engaged therewith at the lower end by means of a step bearing of large surface and at the upper end enters a recess forme din a screw cap or cover a spring being arranged directly upon the stem between a collar on the stem the valve and the cover for enabling the desired degree of tension to be applied to the valve substantially as herein described.

1,346,922. COLLAPSIBLE HANGER. LAYTON WATTON TOWNSEND, Hamilton, Ontario, Canada, assignor to Henry Aitchison Chilman, Hamilton, Ontario, Canada. Filed Jan. 22, 1920. Serial No. 353,238. 1 Claim. (Cl. 211—13.)



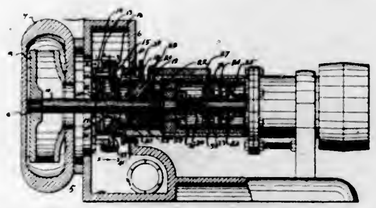
A collapsible hanger, comprising a bottom or base section which is provided with two notches at or near its lower ends, two side or supporting sections provided with elongated slots in one end thereof for receiving and holding the base section, notches formed in the upper ends of said side or supporting sections which adapts them to interlock with each other, together with a hook which embraces the upper ends of said sections for holding them rigidly together and forming means for supporting the hanger proper, all substantially as shown and for the purposes described.

1,346,923. ADVERTISING DEVICE FOR WEIGHING-SCALES. WILLIAM J. VANDERCAR, Cohoes, N. Y., assignor to Colonial Machine Company, Inc., Syracuse, N. Y., a Corporation of Delaware. Filed Feb. 28, 1920. Serial No. 362,081. 2 Claims. (Cl. 40—28.)



1. In a weighing scale of the character described, the combination of a dial case, a supplemental case mounted upon the top of the dial case and provided with an opening in one side, and also having a movable end wall to permit access to the interior thereof, a vertical reciprocatory frame within the dial case, a drum rotatably mounted within the supplemental case and movable across said opening, a ratchet wheel on one end of the drum, a pawl engaged with the ratchet wheel and a rod connecting the movable frame with said pawl to cause the rotation of the drum step by step one tooth space at a time at each successive movement of the frame in one direction.

1,346,924. CENTRIFUGAL PUMP. ARTHUR R. WILFLEY, Denver, Colo. Filed June 13, 1919. Serial No. 303,891. 10 Claims. (Cl. 103—43.)



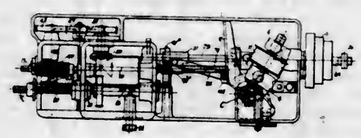
1. A centrifugal pump whose casing is provided with an opening through which the runner shaft passes, said opening being in communication with the runner chamber, and two coöperating members spaced from the runner in the direction of the shaft, and mounted adjacent said opening, one member being connected to rotate with the shaft and having a bladed cavity in communication with said opening, the other member being non-rotatable and having a face in close proximity to the bladed cavity of the rotary member.

1,346,925. STANDPIPE CONNECTION FOR CENTRIFUGAL PUMPS. ARTHUR R. WILFLEY, Denver, Colo. Filed June 16, 1919. Serial No. 304,502. 11 Claims. (Cl. 285—1.)

11. The combination with a pump casing and stand pipe, of an interposed disjointing collar, adjustably mounted on the framework of the pump.

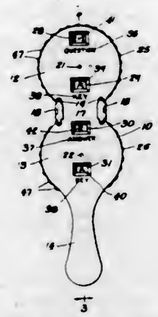
1,346,926. CENTRIFUGAL PUMP. ARTHUR R. WILFLEY, Denver, Colo. Filed June 30, 1919. Serial No. 307,799. 7 Claims. (Cl. 103—43.)

1. A centrifugal pump, whose casing is provided with a suction opening and an opening through which the shaft passes, said pump having a member inclosing an auxiliary chamber around the shaft, which last named chamber is in communication with the runner chamber and also with said shaft opening, a second member located in the auxiliary chamber, one of the said members being connected to



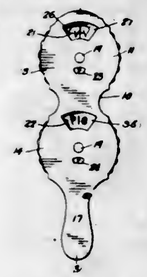
rotate with the shaft, and the two members being constructed to coöperate to form a water seal between the two members at the outer portion of the auxiliary chamber to prevent the passage of air from the last named chamber toward the runner chamber.

1,346,927. TRAILER. SIDNEY B. WINN, Lapeer, Mich., assignor to Lapeer Tractor Truck Company, Lapeer, Mich, a Corporation of Michigan. Filed Aug. 23, 1918. Serial No. 251,046. 6 Claims. (Cl. 280—33.1.)



1. In combination, a trailer of the single truck type, a movable rest member carried by the forward end of the trailer and adapted to move to and from a position to form a support for such end when the trailer is detached, and brake mechanism for the truck, said mechanism having connection with said rest member operative to apply the brakes when said member is placed in rest position, said mechanism also including means for applying such brakes at will while the rest member is out of such position.

1,346,928. MACHINE FOR FORMING GROOVES OR FLUTES IN TWIST-DRILLS AND THE LIKE. ISAAC HENRY WRIGHT, Manchester, England, assignor to Smith & Coventry Limited, Manchester, England. Filed Aug. 4, 1917. Serial No. 184,465. 3 Claims. (Cl. 90—15.)

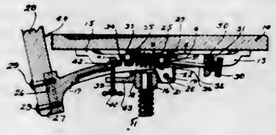


1. A machine for making twist drills comprising a work carrying mechanism including a work spindle, a turret rotatably mounted upon said spindle on an axis which is oblique to the axis of said spindle, a plurality of work holding members mounted on said turret, a cutter, said turret being adapted to rotate during the cutting operation of the drills, means for automatically moving said turret about the work spindle to successively present the surfaces for grooves in each drill to the cutter, and means for automatically moving the turret about its oblique axis for presenting successive pieces of work to the cutter.

1,346,929. EDUCATIONAL DEVICE. ISIDOR ZION, Ridgefield, N. J. Filed May 26, 1919. Serial No. 299,913. 2 Claims. (Cl. 35—12.)

1. An educational device of the class described comprising a suitable holder, and a pair of disks or dials movably mounted in said holder on independent supports, one of said disks or dials being provided with question data and the other with answer data.

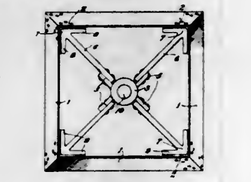
1,346,930. EDUCATIONAL DEVICE. ISIDOR ZION, Ridgefield, N. J. Filed Dec. 29, 1919. Serial No. 347,889. 8 Claims. (Cl. 35—9.)



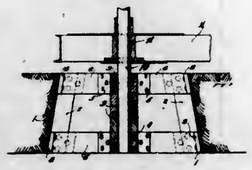
1. An educational device of the class described comprising a holder composed of two approximately similar parts, attaching devices secured to each of said parts for detachably connecting the separate parts of the device, disks or dials rotatably mounted on the attaching devices of one of said parts, said disks or dials being located between the separate parts of the holder and protruding beyond said parts to permit of the manipulating thereof.

1,346,931. CORN-HUSKING CYLINDER. OTIS ADAMS, near Rio, Illinois, assignor of one-half to Fred Cooper, near Rio, Illinois. Filed June 17, 1918. Serial No. 240,358. 1 Claim. (Cl. 130—5.)

A corn husking apparatus comprising a driving shaft, a rotary cylinder geared to said driving shaft, said cylinder comprising a plurality of circular disks, a plurality of circular rods symmetrically arranged and spaced approximately the diameter of the rods, secured to the peripheries of said disks, the portions of the disk intermediate the rods being concave, and a similar cylinder yieldingly mounted in meshing engagement with said first mentioned cylinder and driven thereby, the rods of each cylinder having a rolling action on the rods of the other cylinder.

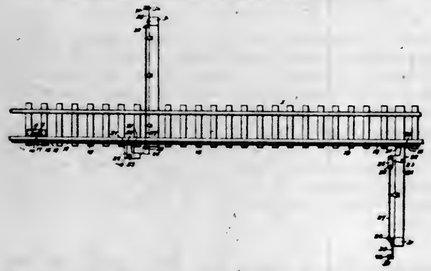


1,346,932. CHAIR. HARRY A. ATWOOD, Milwaukee, Wis. Filed Mar. 23, 1920. Serial No. 367,993. 5 Claims. (Cl. 155—157.)



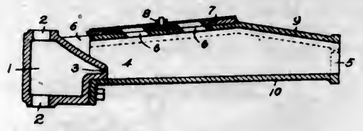
1. A chair iron comprising a seat portion supporting frame, a chair back supporting member having its inner end pivotally connected to said supporting frame and its outer end connected with a chair back portion, a projection on the inner end of said chair back supporting member above its pivotal connection with the supporting frame, a spring tension rod connected with said support-

ing frame and having its rear end rearwardly of the pivot of said chair back supporting member, and a cushion spring having one end pressing against said projection and its other end pressing against the rear end of the tension rod.



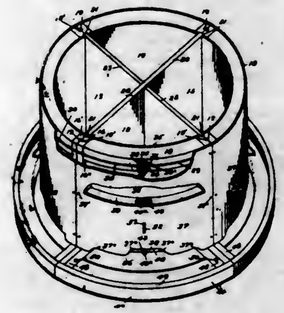
1,346,933. ANCHOR FOR STUMP-PULLING MACHINES AND THE LIKE. HARRY E. BARBER, Green Cove Springs, Fla., assignor, by mesne assignments, to The American Clearing Company, Hamilton, Ohio, a Corporation of Delaware. Filed Aug. 22, 1919. Serial No. 319,134. 9 Claims. (Cl. 189—90.)

6. An anchor of the character described comprising a body portion rectangular in cross section and having upwardly converging walls, radial arms having angular heads at their outer ends seated in the corners of said body portion and rigidly secured thereto, a bearing arranged centrally of said body portion and rigidly secured to the inner ends of the several arms, and a shaft mounted in said bearing.



1,346,934. AUTOMATIC SIGNAL-ACTUATING MECHANISM FOR RAILWAYS. SAMUEL FARRIS BASHARA, Houston, Tex. Filed Mar. 15, 1918. Serial No. 222,728. 5 Claims. (Cl. 246—313.)

4. An automatic signal actuating mechanism comprising a housing located adjacent the rail, a plunger positioned and adapted to be depressed within the housing and having a head with which the car wheels are adapted to contact, a laterally projecting pin on the plunger, a guide plate in which said pin is adapted to reciprocate vertically, a bell crank lever pivoted on said plate and having a horizontally arranged slot to receive said pin, said lever having operative connection with a signal arm.

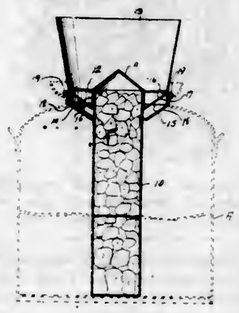


1,346,935. METHOD AND APPARATUS FOR PRODUCING A COMBUSTIBLE MIXTURE. SAMUEL G. BAIGEL, Pittsburgh, Pa., assignor to John M. Haverty, trustee, Pittsburgh, Pa. Filed Sept. 24, 1919. Serial No. 326,050. 9 Claims. (Cl. 158—118.)

9. In a gas burner the combination of a mixing chamber a gas chamber having a nose projecting into one end of the mixing chamber and having an outlet adapted to direct a stream of gas lighter than air and having a width greater than its depth or thickness into the mixing chamber at a point adjacent to the bottom of said chamber, said mixing chamber being provided with ports

arranged to direct air for combustion into the chamber above the plane of flow of the gas through the mixing chamber whereby the gas and air for combustion are free to mingle by reason of their difference in specific gravity, and means for regulating the flow of air into the mixing chamber.

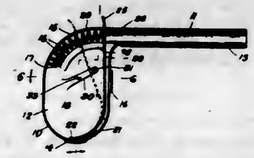
1,346,936. ANIMAL-FEEDER. CHARLES F. BROWN, South Ridge, Kans. Filed Feb. 21, 1919. Serial No. 278,459. 2 Claims. (Cl. 119—54.)



1. In a feeding receptacle, the combination with a compartment for the feed, having a discharge opening and a vertically movable valve plate having its ends parallel with the sides of said opening, a vertical stationary guide rod located equi distant from the ends of said valve plate and acting to hold the valve against rocking movement, a snubbing block connected with said valve plate and slidingly mounted, and a compression spring on said rod bearing upon the upper end of the snubbing block.

1,346,937. MILK COOLER AND STRAINER. LEWIS F. BUTMAN, Randolph, and CHANCY E. BIXBY, Barre, Vt. Filed Aug. 22, 1919. Serial No. 319,200. 3 Claims. (Cl. 31—14.)

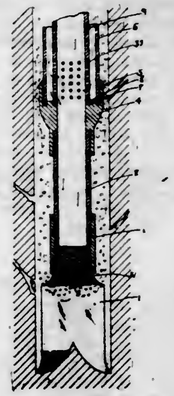
1. A device of the character described comprising an ice receptacle adapted to be disposed within a milk can and having a removable cap at its upper end, an annular receiver surrounding the cap and projecting above it, a wire gauze strainer attached to the lower edge of the receiver and extending to the cap, the receiver having an annular flange extending downward below the strainer, and an annular member formed to fit snugly upon the exterior of the last named flange and having a portion extending downward and inward toward the ice receptacle but spaced slightly therefrom when in operative position.



2. A device of the character described comprising an ice receptacle adapted to be disposed within a milk can

and having a removable cap at its upper end, an annular receiver surrounding the cap and projecting above it, a wire gauze strainer attached to the lower edge of the receiver and extending to the cap, the receiver having an annular flange extending downward below the strainer, and an annular member formed to fit snugly upon the exterior of the last named flange and having a portion extending downward and inward from the ice receptacle but spaced slightly therefrom when in operative position, the upper edge of the annular member being outwardly turned and beaded.

3. A device of the character described comprising an ice receptacle adapted to be disposed within a milk can and having a movable cap at its upper end, an annular receiver mounted upon and surrounding the cap and projecting above it, a strainer attached to the lower edge of the receiver and extending to the cap, and a deflector formed to detachably engage the lower portion of the receiver and having a portion disposed below the strainer and extending downward and inward from the receiver into a position adjacent to but spaced slightly from the ice receptacle to thereby deflect the milk discharged from the reciver into contact with the wall of the ice receptacle.

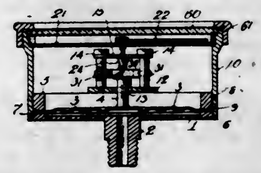


1,346,938. TOY PISTOL. ARVID F. CARLIN, New York, N. Y. Filed Aug. 19, 1919. Serial No. 318,482. 4 Claims. (Cl. 124—12.)

1. A toy pistol of the class described made from a single sheet of metal fashioned to form a barrel portion and a handle portion, means for securing and holding said barrel and handle portions in position, a trigger member movably mounted in said handle portion, and a movable catch device formed integrally with said handle portion and adapted to operate in connection with said trigger member.

1,346,939. METHOD OF SAMPLING. ROBERT E. CARMICHAEL, Damon, Tex. Filed Dec. 1, 1919. Serial No. 341,667. 2 Claims. (Cl. 255—1.)

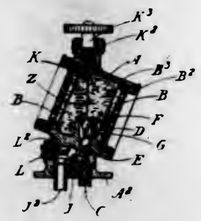
1. A method of raising the cuttings from an earth boring drill to the surface comprising forcing a stream of flushing liquid downwardly through the drill stem and through channels in the bit to the bottom of the hole, forcing downwardly outside of the drill stem a current of compressed air, forcing the same into the drill stem toward the lower end thereof and causing the air to pass



downwardly through the bit to unite with the flushing liquid and lift the cuttings and flushing material to the surface outside said drill and drill stem.

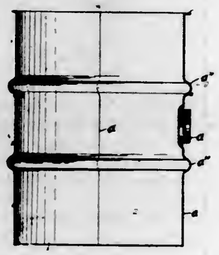
1,346,940. APPARATUS FOR BINDING FRACTURED BONES. ASA W. COLLINS, San Francisco, Calif. Filed Oct. 28, 1919. Serial No. 333,968. 2 Claims. (Cl. 128—92.)

1. In means for tightening a band around a fractured bone, said band having a loop and strap extending from one end thereof, a traveling member, means for securing the strap to said traveling member, a screw on which said traveling member travels, means for supporting said screw, and a finger pivoted on said supporting means and having a slot through which said strap extends.



1,346,941. PRESSURE-GAGE. ERNEST B. CROCKER, Stratford, Conn., assignor to The Ashcroft Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 13, 1919. Serial No. 270,807. 4 Claims. (Cl. 73—110.)

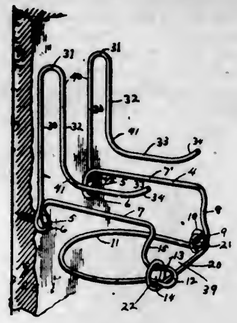
1. In a pressure gage, a base member having an annular shoulder, a case to which the base member is fitted



for said shoulder to rest against the edge of the case, a ring fitting in said case, a diaphragm held at its edge between said base member and ring, a pin carried by said diaphragm, a frame member supported by said ring, said pin working freely through an opening in said frame member, supports carried by said frame member, a yoke fulcrumed upon said supports, an arm carried by said yoke and having a portion arranged in the path of movement of said pin, a pointer, an arbor therefor, said arbor having a spiral portion, said arm arranged to engage and work against the surface of said spiral portion.

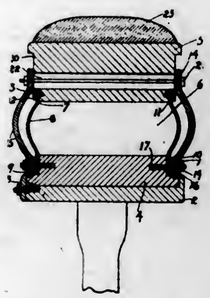
1,346,942. SIGHT-FEED LUBRICATOR. WILLIAM WILSON DOUGLAS and STEPHEN LESLIE BAILEY, Bristol, England. Filed May 12, 1919. Serial No. 296,365. 4 Claims. (Cl. 184—96.)

1. In a sight feed lubricator, the combination of an inclined chamber provided with a glass end, an inlet for oil in the lowest part of said chamber, a nozzle projecting into said chamber from said inlet, a non-return valve in said inlet, a regulating valve in said nozzle, a spring tending to keep both said valves closed, a spindle having an adjustable engagement with the chamber wall opposite said nozzle and arranged to control said regulating valve, and an outlet in the highest part of the chamber.



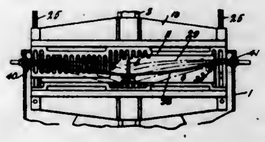
1,346,943. METHOD OF PROTECTIVELY COATING SHEET-METAL CONTAINERS. CHARLES T. DRAPER, Cleveland, Ohio, assignor to The Draper Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 10, 1916. Serial No. 102,890. 10 Claims. (Cl. 113—112.)

1. The method of protectively coating sheet-metal containers having finished metallic portions, which consists in sealing the finished portions thereof, cleaning said container and dipping it to obtain exterior and interior immersion in molten metal until an adhering exterior and interior covering becomes attached thereto, and thereafter removing the sealing member while the adhering metal is still hot, substantially as set forth.



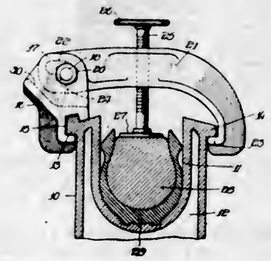
1,346,944. OBJECT-HOLDER. GEORGE W. DRIGGS and FRANK R. HENKE, Elyria, Ohio. Filed Apr. 26, 1919. Serial No. 292,890. 3 Claims. (Cl. 248—20.)

1. In a device of the class described, the combination of eyes for screws, supporting members connected to said screw eyes and extending therefrom, a spring-mouthed loop for holding bottles or the like and means for connecting said supporting members and said loop together, a bar eye formed at each end of said loop, a bar hinged in one of said eyes for connecting the ends of the loop



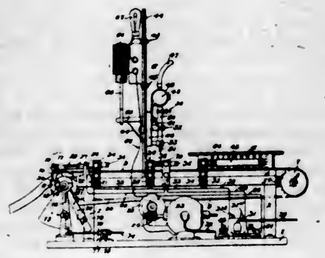
together, said eyes for screws, said supporting members, said inter-connecting members and said bar eyes and said loop all made of a single piece of wire.

1,346,945. PNEUMATIC TIRE. CHARLES DROUET, Houston, Tex. Filed Apr. 4, 1919. Serial No. 287,439. 3 Claims. (Cl. 152—35.)



1. A pneumatic tire comprising an inner rigid rim adapted to be detachably secured to the rim of a vehicle wheel, a solid outer rim of rigid material spaced from said inner rim, annular resilient diaphragms connecting said rims in air tight relation, a rigid plate secured to each side of said inner rim outside said diaphragm and slidable on said outer rim and rods passing through said outer rim and said plates to retain said plates slidably on said outer rim.

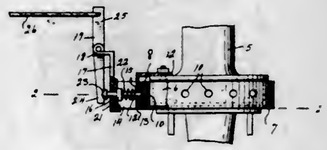
1,346,946. PROCESS OF SHAPING AND TEMPERING METAL. THOMAS J. FAY, Brooklyn, N. Y., assignor to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Aug. 11, 1915, Serial No. 44,875. Divided and this application filed Aug. 16, 1917. Serial No. 186,462. 9 Claims. (Cl. 266—6.)



9. The process of treating a metal plate which comprises heating the same to a temperature above the upper critical point, clamping the plate between suitably shaped forms, and passing the clamped plate through oppositely directed streams of water and into baths of oil and water.

1,346,947. CLAMP. WALTER R. FONTAINE, Chicago, Ill., assignor to Western Vulcanizer Manufacturing Company, Chicago, Ill., a Copartnership consisting of Herbert K. Wheelock, Frank A. Weller, and Walter R. Fontaine. Filed Aug. 27, 1919. Serial No. 320,117. 8 Claims. (Cl. 18—43.)

1. A clamp comprising a retaining arm adapted to engage a relatively fixed flange, a clamping arm pivotally attached to said retaining arm and bodily movable with respect thereto, said clamping arm also being adapted to engage a relatively fixed flange, and means for retaining said arms in the positions in which they engage said fixed flanges.

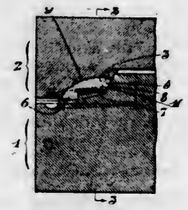


1,346,948. BATTERY-FILLING MACHINE. LOUIS A. FREEDMAN, New York, N. Y. Filed June 19, 1917. Serial No. 175,666. 17 Claims. (Cl. 226—99.)

1. In a machine of the class described, a battery shell holding receptacle, a pair of shafts, a pair of endless chains connecting said shafts to form a carrier for the battery shell receptacle between them, mechanism for intermittently rotating one of said shafts and means for driving said shaft rotating mechanism, means on the battery shell receptacle and means on the shaft driving mechanism for coincidently completing an electrical circuit to cause the filling mechanism to discharge solution into the battery shells.

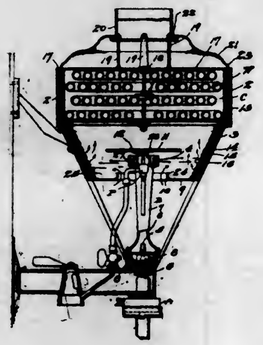
1,346,949. HOLDER FOR MOTOR-VEHICLES. HARLON O. GIBSON and ELMER F. AMES, Wayland, N. Y.; said Gibson assignor to said Ames. Filed Nov. 8, 1919. Serial No. 336,666. 5 Claims. (Cl. 188—31.)

5. The combination with a vehicle rear axle housing and brake drum, a supplemental holding drum carried by and surrounding the periphery of the brake drum, a series of openings in the periphery of the supplemental drum, of a segmental bracket plate secured to the axle housing, one end of said plate extending in angular relation to the plate and parallel to the periphery of the holding drum, a supporting member having diverging arms, the ends of said arms being connected to the ends of the angular portion of the plate, a fulcrum secured to the intermediate



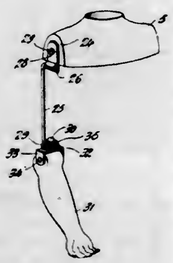
portion of the supporting member, said fulcrum extending beyond the bracket, a spring pressed dog slidably supported by said angular portion and supporting member, a lever carried by said fulcrum and adapted to engage the dog, and means connected to the other end of said lever for forcing said dog through an opening of the holding drum into engagement with the brake drum.

1,346,950. ASH-CONVEYER. ALEXANDER GIRTANNER, New York, N. Y. Filed Apr. 16, 1919. Serial No. 290,546. 2 Claims. (Cl. 137—75.)



1. In an ash conveyer, the combination with a tubular member formed in sections, of a sectional lining covering the lower inner surface of said tubular member, one of the sections of said tubular member being provided with an opening for the insertion and removal of the lining, a plate closing said opening, and an ash inlet in said plate.

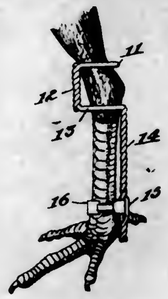
1,346,951. MOLD FOR FORMING ARTIFICIAL TEETH. THOMAS F. GLENN, Ardmore, Pa., assignor to The S. S. White Dental Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 1, 1917. Serial No. 183,840. 2 Claims. (Cl. 32—6.)



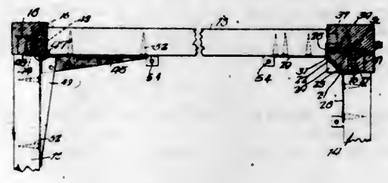
1. A tooth-forming mold having a mold cavity providing relatively angular surfaces forming the lingual face of the tooth and having a tongue or projection extending into said cavity, and having overhanging members inclined forwardly in parallel relation with one of said surfaces.

1,346,952. WATER-HEATER. NELSON G. GORMAU, New Orleans, La. Filed July 3, 1917. Serial No. 178,464. 14 Claims. (Cl. 263—9.)

1. In a water heater, a casing, a water container in the upper portion of the casing, said casing having a lower part fashioned with downwardly converging walls, and a burner within the lower part of said casing.



1,346,953. DOLL. EDWARD R. GOULD, New York, N. Y. Filed Apr. 12, 1916. Serial No. 90,732. 4 Claims. (Cl. 46—40.)



1. A device for connecting parts of dolls comprising a member having side portions carried by one of the doll parts and adapted to embrace the other doll part, and a strand passing through the second named part and said side portions, said strand having headed end portions engaging said side portions, and the intermediate portion of the strand being crimped to draw said side portions into frictional engagement with their respective contacting parts, substantially as described.

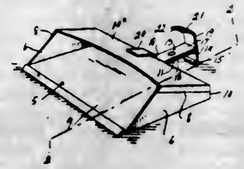
1,346,954. ANTISETTING DEVICE. ANDREW M. GRIFFEY, Meeker, Okla. Filed Apr. 17, 1920. Serial No. 374,638. 2 Claims. (Cl. 119—97.)

1. A device of the character described comprising a member formed from a single piece of wire having a loop adapted to encircle the leg immediately above the joint, a second loop spaced from said first mentioned loop and adapted to encircle the leg immediately below the joint, a connecting portion separating said loops and holding them in rigid and fixed relation, an arm bent at an angle to the second-mentioned loop and adapted to extend downwardly along the leg, and a fastening member on said arm to encircle the leg and hold the device in operative position.

1,346,955. FURNITURE. AUGUST J. GUSTAFSON, Maywood, Ill. Filed June 24, 1918. Serial No. 241,499. 10 Claims. (Cl. 45—48.)

1. An article of furniture comprising legs, rails connecting same and a corner fastener engaging the two rails connected to a leg and entering into a mortise and tenon engagement and having a part insertible laterally into the mortise.

1,346,956. TOY AEROPLANE. PERRY T. W. HALE, Portland, Conn., assignor to Martin C. Hillery, Hartford, Conn. Filed June 12, 1919. Serial No. 303,745. 1 Claim. (Cl. 244—23.)

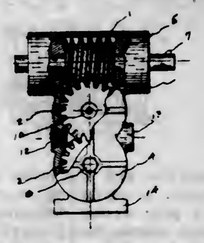


A toy aeroplane comprised of four similar rectangular frames, each frame being covered near its ends with fabric, detachable means securing three of said frames together edge to edge so as to form a hollow triangular body, and detachable means securing the fourth of said frames flatwise transversely across one end of one of the frames forming said body.

1,346,957. EXPANDER. ALBERT E. HANSEN, Elkhart, Ind. Filed Jan. 19, 1918. Serial No. 212,572. 1 Claim. (Cl. 153—80.)

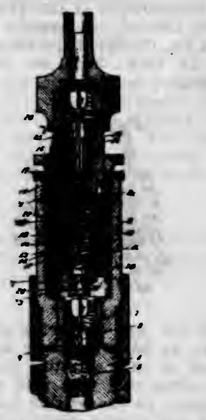
The combination with an expander body having an elongated slot extending lengthwise of the barrel portion thereof, a screw extending through the bore of the body threaded at one end and having a tapering cone at the other and provided with a pin extending radially therefrom into and movable through the elongated slot in the body, a nut into which the screw is threaded swiveled in an open recess in the body, segments surrounding the cone and held in yielding contact therewith and provided with arrow-heads, the body having radial sockets to receive and guide said arrow-heads as the segments are radially expanded by the endwise movement of the screw and the cone therein, the body having externally threaded portion, and an adjusting nut adapted to be screwed upon said threads for adjustment for the various lengths of couplings.

1,346,958. DUSTPAN. CLARENCE ATWOOD HAZEN, Talent, Oreg. Filed Apr. 7, 1920. Serial No. 371,961. 1 Claim. (Cl. 65—20.)



A dust pan having a bottom, two sides, a back and a top, a resilient arm secured at one end portion to the bottom of the pan and terminating adjacent the front portion of said pan, the other end portion extending beyond the back of the pan in the plane of the first mentioned end portion and having its extremity extending downwardly in right angular relation to the arm to provide a foot, and a resilient U-shape member secured to the upper surface of the second mentioned extended end portion of the arm, one arm of said U-shape member being disposed in engagement with a portion of the back of the pan and extending toward the other arm, the end of the first mentioned arm being extended in right angular relation to said arm into engagement with the top of the pan and coöperating with the supporting arm through the medium of the back of the pan to provide a brace, the second mentioned arm of the U-shape member coinciding with the foot of the supporting arm, said second mentioned arm being curved toward the first mentioned arm and extending beyond the top of the pan, said second mentioned arm providing a handle and a supporting claw, and coöperating with the first mentioned arm to provide a foot-hold.

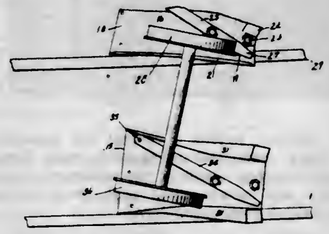
1,346,959. REFRACTORY COMPOSITION AND PROCESS OF MAKING SAME. ARTHUR T. HINCKLEY, Niagara Falls, N. Y., assignor to National Carbon Company, Inc., a Corporation of New York. Filed Oct. 9, 1919. Serial No. 329,605. 3 Claims. (Cl. 106—11.)



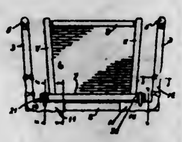
1. A refractory composition comprising fully shrunk, graded carbon particles in mutual contact, and a ceramic bonding material proportioned substantially to fill the interstitial spaces.

1,346,960. GEAR-PUMP. BENJAMIN W. HURD, San Francisco, Calif. Filed Sept. 24, 1919. Serial No. 325,874. 3 Claims. (Cl. 103—44.)

1. An internally reduced drive gear pump having a liquid tight case with an inlet and an outlet, said case inclosing a pair of meshing helical gears and a worm designed to rotate in said case; the worm shaft axis to be at right angle to the axis of the gears and to mesh with and drive one of said helical gears for the purpose of reducing the speed and increasing the power.



1,346,961. INDICATOR FOR PNEUMATIC TIRES. JOHN L. JACKSON, River Forest, Ill. Filed Feb. 13, 1920. Serial No. 358,519. 10 Claims. (Cl. 116—34.)

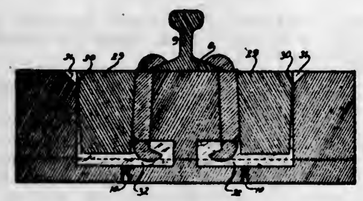


1. An indicator for pneumatic tires comprising a cylinder adapted to be connected with the air tube of the tire, a piston in said cylinder normally retracted and adapted to be projected by tire pressure, and an annular seat in said cylinder adapted to coöperate with said piston when the same is projected, to prevent the escape of air.

1,346,962. CAR-REPLACER. JOHN JACOBSON, Rockford, Ill. Filed Oct. 7, 1919. Serial No. 329,035. 4 Claims. (Cl. 104—269.)

1. A car replacer comprising a block having an inclined top, means for holding said block in juxtaposition to a rail, and a removable block for supporting the high end of the inclined block, whereby to be substituted by a supporting block of different size to properly accommodate the inclined block to the size and shape of the rail.

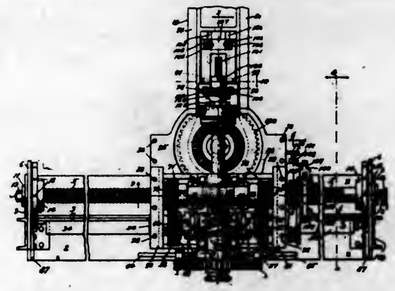
1,346,962. INFANT'S CARRIAGE. GUSTAF O. JOHNSON, Elkhart, Ind. Filed May 15, 1918. Serial No. 234,662. 4 Claims. (Cl. 296—30.)



1. In combination with the frame and swinging seat back of a vehicle, a reinforcing member having a base portion and a post section extending angularly therefrom, said base portion being adapted to be fastened to a transverse member of said frame and said post section being adapted to be fastened to an upright member connected with said frame, and a hinge member projecting from one portion of said reinforcing member and adapted to serve as a bearing member for said swinging seat back.

1,346,964. AUTOMOBILE SPARE-TIRE LOCK. COLVIN L. JOHNSON, Chicago, Ill., assignor to Johnson Automobile Lock Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 27, 1919. Serial No. 285,418. 4 Claims. (Cl. 224—29.)

1. A spare tire lock embracing slidably interfitting clamping jaws, an adjusting screw engaging said jaws, means pivoted on said adjusting screw for operating the same to adjust said jaws with respect to one another, and means on one of said jaws adapted to engage and lock said pivoted means to hold the adjusting screw locked gainst movement.

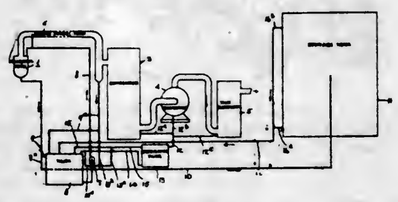


1,346,965. RAILWAY-RAIL FASTENER. EDWARD A. KEHN. Denver, Colo. Filed Feb. 8, 1919. Serial No. 275,735. 7 Claims. (Cl. 238—353.)

4. A tie member, having a central rail base-engaging part and being chambered on opposite sides thereof to receive rail-fastening devices, the chambered portions adjacent the rail base-engaging part being reduced in width to form bottom shoulders.

1,346,966. COAL-MINING MACHINE. SEWARD N. MIGHELL, Chicago, Ill. Filed July 10, 1916. Serial No. 108,351. 7 Claims. (Cl. 262—30.)

1. In a mining machine, the combination of a portable track, a main frame supported upon and movable longitudinally of the track, a cutter bar mounted on the main frame, a cutting chain supported by the cutter bar, a non-rotative main feed screw mounted in fixed relation to the track, threaded nut mechanism rotatively mounted on the main frame and in threaded engagement with said main feed screw, a main drive shaft rotatively mounted in the main frame and adapted to be operatively connected with a source of power and with said cutting chain, for driving the latter, means for operatively connecting said main drive shaft with said threaded nut mechanism, for moving the main frame with respect to the main feed screw and track reversible gear mechanism upon the main frame and connected with the main drive shaft and adapted to operatively connect said shaft with the source of power for reversing the direction of rotation of the main drive shaft, and means for changing the direction of rotation of said threaded nut mechanism with respect to the direction of rotation of the main drive shaft.



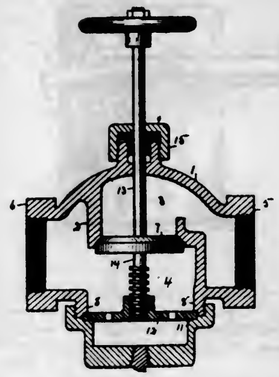
2. In a mining machine, the combination of a portable track, a main frame supported upon and movable longitudinally of the track, a cutter bar pivotally mounted on the main frame, a cutting chain supported by the cutter bar, means for operating the cutter bar upon its axis, a non-rotative main feed screw mounted in fixed relation to the track, threaded nut mechanism mounted on the main frame and in threaded engagement with said main feed screw, a main drive shaft rotatively mounted in the main frame and operatively connected with a source of power and with said cutting chain mechanism for driving the same, means for operatively connecting said main drive shaft with said threaded nut mechanism, for moving the main frame with respect to the main feed screw and track, cutter bar operating means comprising pawl and ratchet mechanism operatively connected with said last-mentioned connecting means and with the cutter bar, for operating the same, and means for changing the direction of rotation of said threaded nut mechanism with respect to the direction of rotation of the main drive shaft.

3. In a mining machine, the combination of a portable track, a main frame supported in movable relation to the track, a cutter bar mounted on the main frame, a cutting chain supported by the cutter bar, a non-rotative main feed screw mounted in fixed relation to the track, threaded nut mechanism rotatively mounted on the main frame and in threaded engagement with said main feed screw, a main drive shaft rotatively mounted in the main frame and operatively connected with a source of power and with said cutting chain, for driving the same, means for operatively connecting said main drive shaft with said threaded nut mechanism, cutter bar operating means comprising pawl and ratchet mechanism operatively connected with said last-mentioned connecting means and with the cutter bar, for operating the same, means for reversing the direction of rotation of the main drive shaft, and means for changing the direction of rotation of said threaded nut mechanism upon the main feed screw.

4. In a mining machine, the combination of a portable track, a main frame supported in movable relation to the track, a cutter bar mounted on the main frame, a cutting chain supported by the cutter bar, a non-rotative main feed screw mounted in fixed relation to the track, threaded nut mechanism rotatively mounted on the main frame and in threaded engagement with said main feed screw, a main drive shaft rotatively mounted in the main frame and operatively connected with a source of power and with said cutting chain, for driving the same, means for operatively connecting said main drive shaft with said threaded nut mechanism, cutter bar operating means comprising pawl and ratchet mechanism operatively connected with said last-mentioned connecting means and with the cutter bar, for operating the same, means for disconnecting the main drive shaft from the cutting chain, and means for changing the direction of rotation of said threaded nut mechanism upon the main feed screw.

5. In a mining machine, the combination of a track member, a main frame mounted in movable relation to the track member, a cutter bar supported by the main frame, cutting chain mechanism upon the cutter bar, a main driving shaft rotatively mounted in the main frame and operatively connected with a source of power, a threaded main feed screw fixed to the track member, threaded nut mechanism mounted on the main frame and in threaded engagement with said main feed screw, means for operatively connecting the threaded nut mechanism with the main driving shaft, for enabling the main frame and the track member to be moved relatively to each other, cutter bar operating means comprising pawl and ratchet mechanism operatively connected with said last-mentioned connecting means and with the cutter bar, for operating the same, means for operatively connecting the cutting chain mechanism with the main driving shaft, and means for reversing the direction of rotation of the nut mechanism, to change the direction of movement of the main frame and track relatively to each other.

1,346,967. METHOD OF AND APPARATUS FOR RECOVERING AMMONIUM CHLORID. MAX E. MUELLER, Youngstown, Ohio. Filed July 21, 1919. Serial No. 312,314. 7 Claims. (Cl. 23—21.)



1. In a method of recovering ammonium chlorid and other fixed ammonia salts resulting from the carbonization of coal, the steps which consist in repeatedly passing a limited body of aqueous and tarry liquors in contact with the gaseous products of such carbonization, prior to the cooling thereof and extraction of tar therefrom, the temperature being kept above that at which much water vapor condenses from such gas, and replacing such liquors gradually with similar fresh liquors from the cooling and tar-extraction stages.

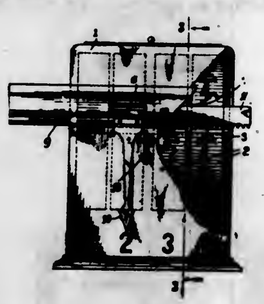
3. In apparatus for recovering values from coal gases, the combination with the gas main leading to a condenser and tar-extractor, of means adapted to circulate a mixture of aqueous and tarry liquors through said main, a storage and separating tank, and connections for diverting a portion of such liquors from said circulating means to said tank.

1,346,968. VALVE. DANIEL R. MURPHY, Uniontown, Pa. Filed Aug. 16, 1919. Serial No. 317,932. 6 Claims. (Cl. 251—43.)

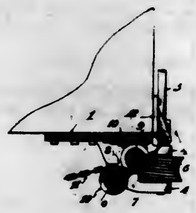
5. A valve having in combination a case or shell having a diaphragm or partition having an opening therethrough, the case or shell having ports connected respectively with the chambers on opposite sides of the diaphragm, a valve controlling the flow of fluid through the diaphragm, and having a main stem and a threaded auxiliary stem, the case or shell having an opening in line with the opening

through the diaphragm, said opening being slightly larger than the valve, a disk having a threaded opening therethrough for the reception of the auxiliary stem and arranged in a seat formed in the wall of the opening in the shell and a cap for said opening and adapted to clamp the disk on its seat and hermetically close said opening.

1,346,969. ADVERTISING-FRAME. FRANK NEWHOUSE, Denver, Colo. Filed Feb. 10, 1919. Serial No. 276,061. 2 Claims. (Cl. 40—146.)



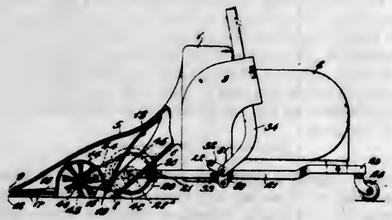
1. An advertising card-holding device, comprising a base, a frame member extending upwardly therefrom and having a front opening for exposing the matter on the card, the frame being cut away in the rear and carrying a glass plate, there being a space in the cut-away part of the frame to receive the card in the rear of the plate, a stationary card-retaining strip positioned across the bottom of the frame to provide a pocket between the strip and the glass plate for one end of the card, and a movable retaining member at the top of the frame to hold the other end of the card.



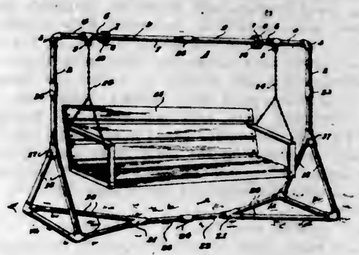
1,346,970. TICKET-ISSUING DEVICE. JOHN F. OHMER and JOHN F. OHMER, Jr., Dayton, Ohio, assignors to Ohmer Fare Register Company, Dayton, Ohio, a Corporation of New York. Filed Mar. 22, 1919. Serial No. 284,426. 19 Claims. (Cl. 211—33.)

12. In a device of the character described, a casing, means for supporting within said casing a plurality of series of tickets, the tickets of each series being different from the tickets of the other series, a device to control the withdrawal of tickets from the several series and comprising a housing, having an opening along its inner edge

to receive tickets of the several series and to permit said housing to move relatively to said tickets, said housing projecting beyond the front wall of said casing and having a discharge opening therein which may be moved successively into alinement with the several series of tickets, and having its upper and lower walls cut away adjacent to said opening to permit the ticket to project therefrom in a position to be grasped by the operator.

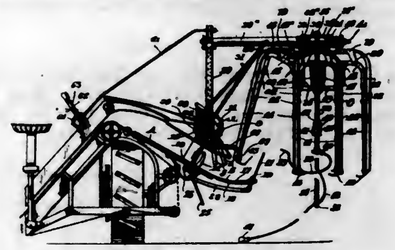


1,346,971. CAR-BRAKE. BRYAN J. O'NEILL, Peoria, Ill. Filed Oct. 28, 1918. Serial No. 259,912. 3 Claims. (Cl. 74—120.)



1. A brake mechanism for railway cars including in its construction, in combination, an arm mounted between its ends adapted to rock and having an extension each side of its axis of movement, a brake-chain adapted for attachment at one end to the brake beam of the car, its other end lying between the said extensions of the arm and attached to a fixed portion of the car.

1,346,972. SUCTION-SWEEPER. WILLIAM V. ORR, Cleveland, Ohio. Filed Jan. 17, 1917. Serial No. 142,837. 8 Claims. (Cl. 15—60.)

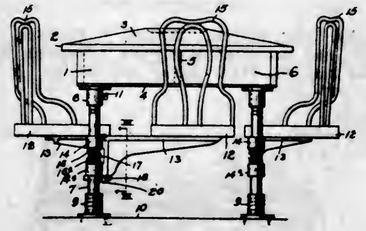


2. In a suction cleaner, a frame having floor-engaging carrying wheels, a casing supported by said frame and having a collecting nozzle formed with a downwardly facing inlet mouth, and an operating handle, said handle being connected to said casing and frame by movable means which upon forward movement of said handle relatively to said casing and frame will raise said casing.

1,346,973. SWING. PATRICK W. PADDEN, Maumee, Ohio. Filed Apr. 9, 1920. Serial No. 372,439. 3 Claims. (Cl. 155—58.)

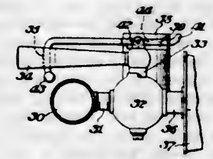
1. A swing supporting frame comprising a structure composed of connected pipe sections and formed to include a relatively wide base portion and an upper horizontal supporting section, a spring structure mounted within said horizontal section, cables connected with said spring structure extending outwardly and downwardly from said section, and a swing structure connected with the lower ends of said cables.

1,346,974. SHEAF-SHOCKER. WILLIAM HUMPHREY PERRIN, New Liskeard, Ontario, Canada, assignor to Perrin Shocker Manufacturing Company, Limited, New Liskeard, Ontario, Canada. Filed Feb. 14, 1917. Serial No. 148,603. 14 Claims. (Cl. 56—412.)



1. In a sheaf shocker and in combination a sheaf supporting mechanism, said sheaf supporting mechanism comprising a plurality of hook members arranged about a center shaft and rotatable about said shaft and abutment means against which the butts of the sheaves impact when carried by the hook members, said abutment means having a free space above it to permit the heads of the sheaves to overhang it in up-ending said sheaves, substantially as described.

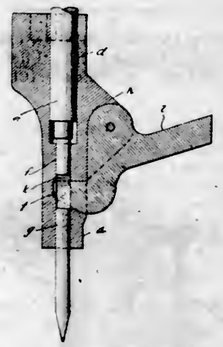
1,346,975. NUT-LOCK. ALECK PETRIW and ALECK PETLAK, Goodeve, Saskatchewan, Canada. Filed Mar. 20, 1920. Serial No. 367,336. 1 Claim. (Cl. 151—6.)



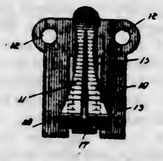
The combination with a bolt having a threaded shank provided with longitudinal peripheral grooves, of a nut having a socket extending inwardly from one of its side faces and provided with a slot centrally of the socket providing communication between the socket and the bore of the nut, a transverse partition secured centrally within said socket and having a central slot, a cross key slidable in the slots of the nut and the partition and having a cross head upon its outer end outwardly of the patrition and arranged at all times within said socket, and a spring encircling said cross key and normally pressing the same inwardly for seating reception within one of the longitudinal grooves of the bolt shank when the latter is coincident with the slot of the nut, a portion of the cross head of said cross key being maintained slightly spaced from said partition so as to permit the insertion of the end of a nail or like instrument thereunder for prying the cross key outwardly so as to release the inner end of the latter from the longitudinal groove of the bolt shank, the wall of said socket being provided with a depression for reception of one end of the cross head of the cross key when the latter is pried outwardly so as to assist in maintaining the same in released position.

1,346,976. SCHOOL-DESK. GEORGE L. RANKIN, Munhall, Pa. Filed Aug. 18, 1919. Serial No. 318,071. 3 Claims. (Cl. 45—31.)

1. The combination of a school desk having a plurality of sides and a top affording a working face from each of said sides, a leg including a vertically adjustable section at each corner of the desk, and chairs pivoted on the vertically adjustable leg sections, whereby the adjustment of the leg sections effects a simultaneous adjustment of the elevation of both desk and chairs.



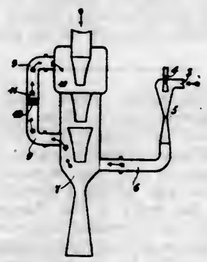
1,346,977. FLUID-COCK. JOHN REPETTO, Philadelphia, Pa. Filed Aug. 28, 1918. Serial No. 251,782. 3 Claims. (Cl. 251—165.)



1. A device of the character described comprising, a casing, a valve therein and having a stem, a stationary plate arranged near the casing and provided with a slot, said slot having its outer wall provided with notches, and a lever pivotally connected with the stem and having a portion thereof adapted for movement away from the casing to engage a selected notch in said outer wall.

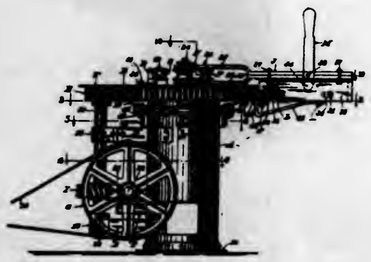
1,346,978. TOOL-HOLDER. JOSHUA J. RILEY and ELMER E. BLACKSTONE, Pontiac, Mich. Filed Oct. 27, 1919. Serial No. 333,835. 3 Claims. (Cl. 121—32.)

1. A tool holder for the purpose specified, having in combination, a barrel adapted to guide a tool, a tool reciprocatable in said barrel and provided with a recess at its sides, a tool retainer in the form of a bell crank pivoted to the barrel and having a portion at one end adapted to engage loosely in the recess of the tool but allow the tool to reciprocate, the other end of the bell crank forming a handle, pressure against which serves both to hold the tool to the work and the fork in engagement with the tool recess.



1,346,979. BUCKLE. EUGENE W. RUTHERFORD, New Haven, Conn., assignor to The Shoe Hardware Company, a Corporation of Connecticut. Filed Jan. 10, 1919, Serial No. 270,461. Renewed June 5, 1920. Serial No. 386,925. 4 Claims. (Cl. 24—69.)

3. A buckle comprising a plate with spaced flat side members, an intermediate resilient member having a free end which is bent into substantially semi-circular form, and a manipulatable tongue provided transversely with a closed slot adjacent one end which is adapted to receive the bent free end of the resilient member, said tongue having a straight edge adjacent and parallel with the slot which is adapted to coöperate with the flat side members of the plate to retain the tongue in either a closed or an open position.



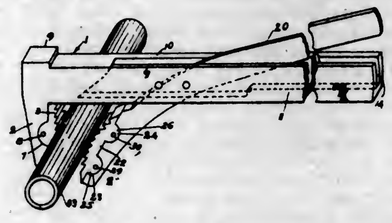
1,346,980. APPARATUS FOR EXHAUSTING AIR AND NON-CONDENSABLE GASES. ARTHUR EDWIN LEIGH SCANES, Ashton-on-Mersey, England, assignor to The British Westinghouse Electric and Manufacturing Company, Limited, a Company organized under the laws of Great Britain. Filed Oct. 10, 1916. Serial No. 124,854. 6 Claims. (Cl. 230—13.)

1. In an air and non-condensable gas exhaust apparatus, a multi-stage water ejector, a steam ejector con-

nected for discharge to a stage of said water ejector other than the initial stage, and a passage for delivering fluid from said stage around the initial stage to the inlet thereof.

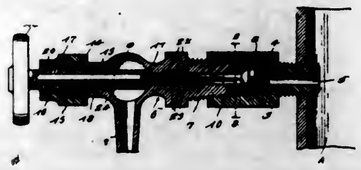
1,346,981. PIPE AND ROD BENDING MACHINE. BERNHARDT SCHENK, Chicago, Ill. Filed Dec. 29, 1919. Serial No. 348,005. 5 Claims. (Cl. 153—45.)

1. In a machine of the nature specified, the combination of a support, a spur gear wheel mounted on said support, said spur gear wheel consisting of an annular band, said band having on its external periphery gear teeth, said band having on its inner periphery an annular flange, a multiplicity of brackets extending from said support, studs extending upwardly from said brackets, and rollers mounted on said studs, said rollers having peripheral grooves engaging the inner annular flange of said spur gear wheel, mechanism for imparting rotative movement to said spur gear wheel, pipe-bending mechanism mounted above said spur gear wheel, said bending mechanism including an arm, manually operating means on said arm for connecting said arm to said spur gear wheel and automatically operating mechanism for disconnecting said arm from said rotating spur gear wheel.



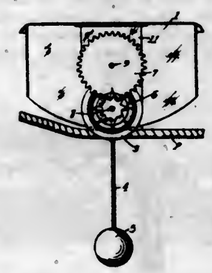
1,346,982. ATTACHMENT FOR FOUNTAIN-PENS. CARL SCHWARTZ, Sheboygan Falls, Wis. Filed Mar. 15, 1920. Serial No. 365,832. 7 Claims. (Cl. 120—84.)

1. In combination with a writing device, having a pair of longitudinally extending grooves, of a slidable retaining clip, and groove engaging fingers extending from the clip and slidably disposed in the grooves.



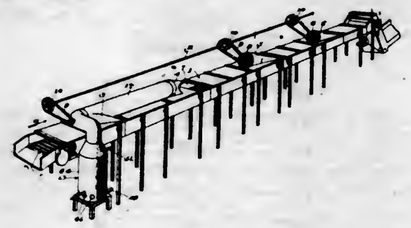
1,346,983. ADJUSTABLE PIPE-WRENCH. JOSEPH SHAFFER, McKittrick, Calif. Filed Dec. 30, 1918. Serial No. 268,972. 1 Claim. (Cl. 81—79.)

An adjustable pipe wrench comprising, an L-shaped main member with its long arm or handle part of channel form, the said arm having a plurality of transverse perforations in the walls of the channel, the perforations in one wall being threaded and co-axial with those of the other wall; a second rigid handle part having a straight portion to lie flat in the channel of the main member and being bodily curved outward and toward the short arm of the main member and coöperating therewith to form pincer jaws; the said second member having a pivot hole; and a pivot screw severally adjustable into any of the alined perforations in the main handle forming part and passed through the perforation in the curved handle member whereby the straight portions of



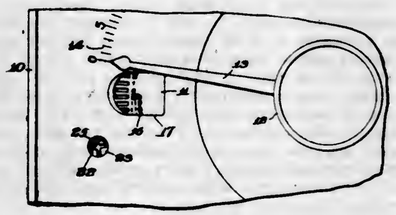
the handle members can be collapsed together in the unobstructed position of the jaws, said pivot providing for relative longitudinal adjustment of the handle members and separation of the jaws.

1,346,984. GAGE-COCK. EDWARD J. SHEARER, Colton, Calif., and MARSHALL M. OWENS, Lordsburg, N. Mex. Filed July 18, 1919. Serial No. 311,710. 1 Claim. (Cl. 277—27.)



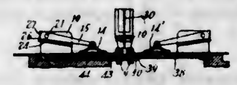
A gage cock comprising a boiler connection having an internally threaded chamber therein, a one-piece valve body including an externally threaded inner end and an externally threaded outer end, said inner end being fitted in said chamber and combining therewith to form a valve-housing, said valve body also including a main valve seat, a supplemetal valve seat and a passage, this passage connecting the main valve seat with the supplemental valve seat, said valve body also including a water outlet and a valve bearing in communication with said main valve seat, a main valve in said valve bearing, this main valve being tubular and cylindrical from its inner end to a portion adjacent to its outer end, this outer end portion having a handle thereon, and an externally screw threaded portion between said handle and the cylindrical portion of the main valve, the hollow of this tubular valve terminating in an abutment, a nut in threaded engagement with the outer end of said one piece valve body, said main valve having screw threaded engagement with said nut and thereby being longitudinally movable to and from said main valve seat, and a one-piece supplemental valve including a head and a stem, said stem being straight and having all its parts of substantially equal lateral extent, this stem extending through said passage and through the hollow of said main valve and normally abutting against said abutment so that the latter normally holds said supplemental valve out of the supplemental valve-seat, but permits the supplemental valve to close when said main valve is opened a predetermined extent, said valve stem being longitudinally slidable in the tubular portion of said main valve to permit the latter to move longitudinally from its closing position after the said supplemental valve has closed and ceased to move.

1,346,985. MECHANICAL VEHICLE. HEIJIRO SONODA, Yakima, Wash. Filed Sept. 24, 1919. Serial No. 325,861. 1 Claim. (Cl. 46—48.)



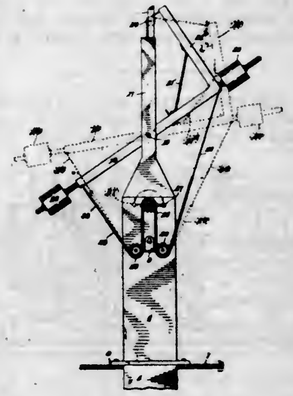
A toy vehicle comprising a body member and a single roller for engagement with an exterior surface, said body wholly mounted above said exterior surface, and weights attached to said body straddling said surface below said surface for balancing said car.

1,346,986. APPARATUS FOR DRYING FRUIT. GEORGE T. STAMM, Upland, Calif., assignor to Fred Stebler, Riverside, Calif. Filed Nov. 29, 1915, Serial No. 63,934. Renewed Sept. 29, 1919. Serial No. 327,258. 11 Claims. (Cl. 34—12.)



7. An apparatus for treating citrus fruit comprising a conduit, a fire box, a fuel-burner in the fire box, means to discharge the hot products of combustion from the fire box into the conduit, and means to convey fruit through the conduit beneath the discharge of the hot products of combustion to thereby dry and color the peel of the fruit.

1,346,987. SCORE-KEEPING APPARATUS. EDWARD STEIGERWALD, Philadelphia, Pa. Filed Feb. 2, 1920. Serial No. 355,717. 3 Claims. (Cl. 235—90.)



1. Apparatus of the character described including a supporting structure providing a slideway; a resilient slide in frictional engagement with said slideway; and indicating means having a portion for engaging and moving said slide lengthwise of said recess and capable of compressing and thereby passing said slide, said slide having plus and minus symbols thereon; substantially as described.
